The fact is, that's exactly what Panhandle Eastern and Citizens Gas have wanted to do for a long time. On September 10, 1956, Panhandle filed a petition with the Federal Power Commission in Washington asking permission to drop Detroit from its line service so that it could more adequately serve the Middle West. Detroit has other gas sources. A month later Citizens Gas applied for 20 million more cubic feet capacity so it could use the gas thus released. Had the Commission acted in time, we would have more than enough gas, probably, for this week's demands.

Trouble is, it takes a long time to move a Government commission. The FPC staff, we understand, already has approved this expansion. But now a man called the examiner, must study and act on it. After that, the Commission itself may act. But there are a lot of other similar petitions pending, and it could take many months, perhaps years.

It occurs to us that since Congress just now seems highly interested in conduct of our various Federal commissions, they might include study of the Power Commission's efficiency and speed—or lack of it—in their investigations.

As soon as the Federal Power Commission says so, we will get more gas. Perhaps our Indiana Senators and Representatives could help in an effort to get some action.

Shops were closed, people have been out of work, because of what looks very much like a lot of paper shuffling in Washington.

Fifty Years in Show Business for a Great American Comedian

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. PRICE. Mr. Speaker, recently a majority of the Members of the House and Senate of the United States paid tribute to a great American actor who, through 50 years of a brilliant career, brought happiness and laughter into the hearts of millions of his countrymen. The legislators showed their personal appreciation of the contribution Jimmy Durante has made to the American stage by autographing a testimonial book which has been presented to him.

The autograph book expressing happy birthday felicitations was sent to Jimmy Durante on the occasion of his 65th birthday. As the book was presented the Las Vegas, Nev., Sun of February 9 carried the following account of Durante's remarkable career:

(By George H. Maines)

"Good night, Mrs. Calabash, wherever you are."

One dark night in 1909, through the dank, yellow mists that came up from the East River and covered Chinatown in New York, came the tinkling notes of a piano—running, bouncing notes, jazz notes.

They were a happy prelude to a career that has spanned 50 years in show business—the career of Jimmy Durante, who was a kid in a black sweater when Doyer Street in Chinatown was flooded by fog and jazz music.

"A bunch of boys were whooping it up in the Malemute Saloon."

Only it was the Chatham Club and it was Jimmie's first night club and it was important that he play loud, over the voices of singing waiters, clattering glassware, and shuffling feet.

"The starry-eyed kid at the musicbox was playing a ragtime tune."

And Jimmy, who will celebrate his 65th birthday tomorrow at the Desert Inn remembers with starry-eyed nostalgia.

"I was born at 90 Catherine Street on February 10, 1893, a few yards from Chinatown, near the Bowery in lower Manhattan.

"Now I don't exactly remember that event, but when I was 12 my folks wanted me to take piano lessons, classical piano lessons, that is. I remember a Professor Fiori who taught me, but a pal of mine, Joey McLaughlin, liked jazz and encouraged me to play it.

"It was at 15 that I got my first job down in Chinatown, N. Y."

"Dreamy, dreamy Chinatown."

Jimmie's parents weren't pleased with his choice, but there was glamour in Chinatown and jazz notes softened by the mists through which walked such men as Irving Berlin, then a singing waiter, and George White, a Postal Telegraph messenger boy whose "Scandals" productions made Broadway history.

Summers Jimmy played at Diamond Toney's at Coney Island, where his first week's pay of $25 was given to his mother. He often made, with tips, as much as $75 a week in the Chatham Club and the skells of the nearby Bowery knew him as a soft touch.

"Coney Island Down the Bay."

It was at the poor man's Palm Beach where Brooklyn juts into the Atlantic Ocean that Jimmy met a wide-eyed kid named Eddie Cantor. They became fast friends, working together at Kerry Walsh's place and cavorting after hours. Then came Maxine's in Dodgertown, the "toughest night spot in Brooklyn, but the police closed it in 1912 and I was out of work."

HARLEM BABY STRUTS ALONG

Jimmy's next job was at the Alamo, a downstairs club at 125th Street, near 7th Avenue, in Harlem, New York. There he started playing the piano for $45 a week, working from 8 p. m. to daylight. He stayed there for 5 years, solidifying his knowledge of his art and meeting great artists of his day who helped him along the road that would eventually lead him to the pinnacle of show business.

He grew up with music, lived and breathed jazz, and ecstatically pounded out the song hits of his times, and it was at the Alamo in 1915 that a man named Eddie Jackson cakewalked into his life.

Eddie's dad had come from Russia. His name was difficult to pronounce so he made it Jacobs and left it to Eddie to switch to Jackson.

It was not until 1917, however, that Jimmy, playing at the College Inn in New York, officially joined forces with Jackson. Jackson was appearing at Solar's Garden with a shimmy dancer named Dot Taylor. Jimmy got agent Al Davis to book them at his club, and, when Miss Taylor left the team, Jackson went to work for Durante.

That year saw the formation of Jimmy Durante's New Orleans Jazz Band. Drummer was Johnny Stein. Jimmy's first attempt at comedy was an attempt to razz Stein. This made a hit with the customers and Durante's career as a comic took partial form.

In 1921 Jimmy married Jeanne Olsen, a lovely singer who looked for a job, through an error, at the Alamo. The couple lived on 23d Street in Manhattan and Durante worked extra hard, saving money so they could move to an apartment on West 52d Street, in a swankier part of town.

They rented a room to a drummer, Jack Roth, and his wife. Roth is with Jimmy today.

Royalties came rolling in when Durante teamed with Chris "Ballin' the Jack" Smith and saved enough for him to spend his first vacation on Clear Lake in northern California.

The Durantes spent many happy days in this area until Jeanne's death in 1943.

Engagements at the Nightingale Club in New York, the Green Lake resort in the Catskills, then Durante took the plunge and became part owner of the Club Durant (minus the "e" due to a sign-maker's error) and was on his way as an entrepreneur.

Society of the day mistakenly thought automobile tycoon W. C. Durant, founder of General Motors, built the place as an exclusive club for the rich.

The club on W. 58th Street, east of Broadway, had a grand opening loaded with mink, sable, champagne, and its complement, caviar, but the mistake was found out and on the second day nobody showed up except a few died-in-the-wool nightclub hoppers.

However, word spread that Jimmy Durante really owned the club and it became a popular part of a circuit that included Texas Guinan's, Harry Richman's, The Montmartre, Bernstein's Kentucky Club, the Lido, the Mirador, and other spots.

Damon Runyon, Sime Silverman of Variety, Mark Hellinger, and other top newspapermen made a habit of dropping in. Durante, Jackson, and a singer, Harry Harris, were the entertainers. They were the "entertainer's entertainers" and show-people crowded into the Club Durant. Among them was a soft-shoe dancer, Lou Clayton, who had an interest in a night club.

The time was propitious, for Harry Harris wanted to retire. He sold his 25 percent interest in the Club Durant for $3,000 and the team of Clayton, Jackson, and Durante was started in 1923. Although Clayton died in 1950 on the day of the Jewish New Year, in spirit, the team has never been broken up.

Said Clayton once: "God gave Jimmy his great talent. A thousand Lou Claytons could never have put that talent into this man. I loved him, and I knew then, as I know now, that he was a true genius in his own way."

This appraisal of Durante is shared by many, vouched for by everyone who had had a chance to come into his life.

Eddie Jackson has been with Jimmy 40 years; Jack Roth about 35 years; Lou Cohen, his manager, and Jackie Barnett, his writer, for more than two decades. Pianist Jules Buffano has worked with him for 18 years.

One of the high spots of the team's activities was Duffy's Silver Slipper in Manhattan, but radio sent Jimmy to the top. In 1933 Jimmy got $5,000 a week to appear on the Chase and Sanborn Coffee Hour.

This was the beginning of an era that was to see Jimmy making half a million dollars

yearly. The Government, various charities and his old pals got much of it.

Jimmy's association with Gary Moore from 1943 to 1948 made his name a household word. He was one of the first stars to realize that too much exposure on TV could hurt an actor's popularity. At one time he refused to sign a TV contract which guaranteed him $200,000 yearly for 10 years.

Now, at 65, Jimmy plans to keep going so the boys can be working too.

His friend, Abe Lastfogel of the William Morris agency, can get Jimmy all the work he wants. His pal, Seymour Weiss of the Hotel Roosevelt in New Orleans once said, "I'd rather have Jimmy Durante than all of the stars in the entertainment world."

Jimmy will slow up, he claims, and work at selected places like Jules Podell's Copacabana in New York; Hal Halper's Chez Paree in Chicago; the Fontainbleau's Rondez Room at Miami Beach; Havana's Casino de Paris at the Hotel Nacionale; the Desert Inn; Mert Wertheimer's Riverside in Reno; and the Del Mar, near San Diego.

Slow up?

"Good night, Mrs. Calabash, wherever you are."

President Must See To It That Mr. Mack Faces Law

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. LOSER. Mr. Speaker, one of the most timely editorials that has come to my attention in some time appeared in the Nashville Tennessean a few days ago. It very pointedly refers to the shameful shenanigans of a member of the Federal Communications Commission brought to light by the special committee of the House.

The very distinguished chairman of this committee, the Honorable OREN HARRIS, of Arkansas, and his associates on the committee are doing an excellent job, and this splendid editorial should be read by all the Members of the Congress. It follows:

PRESIDENT MUST SEE TO IT THAT MR. MACK FACES LAW

For shameful shenanigans it is difficult to top the story now coming to light, piecemeal, concerning Mr. Richard A. Mack, Federal Communications Commissioner.

President Eisenhower, who appointed this Florida Democrat-for-Eisenhower to high public trust in 1955, professed in his press conference yesterday to know too little of the case to pass judgment at this point. Not so for a pair of House committee members who have watched firsthand the disclosures of undue influence.

Chairman OREN HARRIS, Democrat from Arkansas, and Representative JOHN B. BENNETT, Michigan Republican, have seen enough that one is convinced criminal procedures are in order while the other declares Mr. Mack should resign or be removed.

In the circumstances, we must agree with the former view—Mr. Mack should be prosecuted. And those circumstances, as thus far brought to light, are:

Mr. Mack, since his appointment, has received from one Mr. Thurman A. Whiteside, an old friend, loans totaling $2,650 which he has admitted he was never expected to pay back. Mr. Whiteside now insists that all but $250 has been repaid and that proof of this has been turned over to the House investigators. If such proof exists, the House group has not been able to find it in its files.

In addition, Mr. Whiteside has admitted giving Mr. Mack—cost free—a one-sixth interest in an insurance firm which has earned for the Commissioner $9,822 over a 4-year period. The fact that this insurance firm did business with National Airlines, which successfully vied with three other petitioners for channel 10 in Miami, was a happenstance, we presume.

Mr. Whiteside admits that he talked to his old friend concerning National's interest in the franchise, but one wonders just how much talking had to be done when a firm which was contributing directly to the Commissioner's purse was asking for his vote.

That National got that vote is a matter of record. Mr. Mack joined three other Commissioners in overriding the recommendation of an FCC examiner to award the license to the airline. How an airline happened to be interested in a television station has yet to be explained. The businesses are not exactly related.

Yesterday, still stranger circumstances were testified to by Mr. Whiteside. He also gave Commissioner Mack a firm called Andar, Inc., from which Mr. Mack has received $4,340. And the reason he gave his old friend this firm, says Mr. Whiteside, was so Mr. Mack could pay him back some of the money he has been lending him.

There are all sorts of side mysteries in this yarn—like the inability or unwillingness of Mr. Whiteside to explain the source of $75,000 in one of his bank accounts. And like Mr. Whiteside's insistence that he was not representing National at all, just wanted to help them along.

Hovering in the background of the affair is the shadowy figure of none other than Mr. Sherman (it's O. K. Ike) Adams, Assistant President, who has reportedly wielded a heavy hand in packing all the Federal regulatory agencies—supposedly independent of the executive—with Republicans and Democrats for Eisenhower. The law requires that all the agencies be bipartisan.

This being the case, it was not surprising that the President, in yesterday's press conference, cut off with an angry "I don't want anything more about that," questions concerning two letters which showed up in committee files disclosing that Mr. Adams, at the request of Mr. Murray Chotiner, Vice President NIXON's friend, had intervened with another of those independent agencies, the Civil Aeronautics Board.

This is not Mr. Adams' first such intervention, it is recalled. In the Dixon-Yates affair, he saw to it that the Securities and Exchange Commission postponed certain hearings which might have proved embarrassing.

And even now, it is reliably said that Mr. Adams is pulling the string to force Mr. Mack's resignation to take the heat off. That will not be a new maneuver for the Eisenhower administration either. If past performance is any indication, the administration will make no effort to prosecute Mr. Mack should he agree to step down quietly.

The Messrs. Harold Talbott and Robert Tripp Ross became embroiled in clear-cut violations of Federal conflict of interest statutes. They resigned and everything was smoothed over. There were no prosecutions.

The same thing happened in the case of Mr. Adolphe Wenzell, a Dixon-Yates consultant for the Bureau of the Budget while an official of the First Boston Corp. which, as Dixon-Yates financiers, stood to profit heavily. It was another clear-cut violation smoothed over.

Any law—conflict of interest included—is worthless if it is not enforced. It is the duty of the administration to see that law is enforced in the case of Mr. Mack. Representative HARRIS, loath to investigate this affair at the outset, now declares laws prohibiting outside interests by FCC Commissioners obviously have been violated. Let Mr. Eisenhower uphold the law he is sworn to enforce.

Then let him speak no more of Harry Vaughn and deep freezes. The general (Vaughn we mean) was a piker.

A Hungry Man's Best Friend Is Still the Mighty Potato

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 28, 1958

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article appearing in the February 20 issue of the East Oregonian. This article includes a poem, Ode to the Potato, written by Mrs. John Lauer, which vividly points out the versatility of the Oregon potato:

A HUNGRY MAN'S BEST FRIEND IS STILL THE MIGHTY POTATO

One of our local grocery stores is celebrating the fact this week that their company is the largest single purchaser of Oregon potatoes in the State. In fact, their goal for the 96 stores in their Portland division is to sell 2 million pounds of potatoes in one week.

In honor of the occasion, a potato-lovin' store employee has written the following epistle to Milord Potato:

"ODE TO THE POTATO
(By Mrs. John Lauer)

"If you want a balanced diet,
If your energy is low,
If you want a natural mineral
Rich in vitamins that grow;

"If you're too fat for comfort
Or too thin and want to gain,
Just try eating a potato,
The versatile food of fame.

"Now you can bake 'em,
Or you can roast 'em,
You can even eat 'em raw.
You can rice 'em,

"Or you can dice 'em,
Or you can grate 'em in cold slaw.
You can souffle 'em,
Or you can hash 'em,

"You can make a potato cake.
You can O'Brien 'em,
Or shoestring 'em,
Or make into potato flakes.

"A monument was dedicated piously
To God and Sir Francis Drake;
And the poor were benefited
And the rich were on the make.

"In this day of electronics
With the sputniks and satellites,
And tho we're up in the clouds now,
And our prices have soared out of sight—

"As long as we have the good earth,
And the potatoes have good eyes,
Our country will know no hunger
And our spirits will continue to rise.

"So take a tip from a housewife—
Whose budget is surprisingly low.
Buy potatoes at your local grocer's
And save yourself some dough."

Washington Report by Hon. Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my newsletter for week of March 1, 1958:

WASHINGTON REPORT

(By Hon. BRUCE ALGER, Fifth District, Texas)

MARCH 1, 1958.—A supplemental appropriations bill of $2.837 billion to get us through June produced some spirited debate. Another $175 million for the soil bank, beyond the $750 million already spent, was either "throwing good money after bad" or "being consistent, by extending aid to additional farmers," depending on your viewpoint. I opposed the increase. Additional funds ($10 million to each of 2 projects) for the upper Colorado River, the expense of 2 new "Federal cities": at Glen Canyon $12 million for housing 200 families; at Flaming Gorge $3½ million for housing 25 families. Also both have 7-lane roads planned, which in the smaller community would total 2 miles. All this as only a small part of this gigantic public reclamation and power project. This one passed also. My opposition was in the nature of protest over their spending so much more than their earlier estimate. This, of course, is all too customary in Federal planning. It's the foot in the door. Almost all power and reclamation projects greatly exceed original estimates (Uncle Sugar?). Lively debate accompanied other provisions: expanding immigration personnel ($375,000), additional U. N. contributions ($9.6 million), and more for the United States exhibit at the Brussels Fair. Causes for concern in the latter include: (1) Russia's $40–$45 million exhibit, the United States competitive stimulus, as earlier proclaimed, was revealed to be a $3½ million demountable building, whereas our beautiful exhibit building is permanent, (2) our expenditures were upped several times ($11.8 million—$2.2 million—now $9 million more) based on incorrect information, inept handling and general bungling.

Mutual security (foreign aid) was the subject of an amazing bipartisan array of public figures assembled to plead to a huge nationwide citizens group, for continued huge expenditures. Secretary Dulles said "600,000 Americans are employed as a result—the money is spent in the United States." (Is foreign aid intended as a subsidy to our industries?) Adlai Stevenson: "We must stop Russian expansion by creating strong nations and better customers. We must, in a global enterprise, push nations through stages of capital expansion so their savings expand, ending in solid economic apparatus of a modern state." (United States development took hundreds of years—also, is this the role of our Federal Government?) Reverend Dahlberg, Protestant; Rabbi Adams, Jew; and Bishop Sheen, Catholic, then gave the program the moral and spiritual backing of the church. These religious leaders, in fact, all the conference speakers, intentionally or not, revealed the anachronisms of our past Federal handouts, with strings attached, whether it be the economic, military, or political advantage we seek. One church leader claimed we have only one dimension to exemplify—the great religious and moral idea of our belief in God, individual dignity, and that government exists to serve man, not the reverse. Finally, his thought was to give the Federal money through existing religious missionary groups overseas in a true Christian spirit. Here then we'd join the church and state.

As I listened I marveled how we could all start, as Eric Johnston said, with just one purpose and reason as American citizens with love of country and come to such different conclusions. I felt the reasoning to be terribly wrong. Idealism had blinded many to the stark facts and lessons learned from giving $70 billion since World War II. Hardly mentioned was the heavily burdened taxpayer—or our present debt, or the failure of the program in so many ways. Could it be that trying to justify unconstitutional governmental activities only highlights the ideological self-contradictions? More of this later.

Former President Truman's criticisms caused many members to proclaim the total absence of facts in his statement. For example, Mr. Truman vigorously—almost gleefully—condemned unemployment, blaming the administration; yet, in 1950 when unemployment was even greater, he himself, said "a certain amount of unemployment, say from 3 to 5 million is supportable. It is a good thing that job seeking should go on at all times—this is healthy for the economic body." Well, as I see it, Mr. Truman's planned economy is not the American way. Secretary of Commerce Weeks countered by saying "the Democratic gloom and doom brigade's whole program boils down to three words: 'Sell America short'." My concern—do people see through the political charges and countercharges?

Briefs: Reuther calling Senator GOLDWATER a moral coward provoked Republican HOFFMAN, of Michigan, to compare the war record of the two—GOLDWATER, a pilot in service; Reuther (classified 3–A—Reason? married) at home leading strikes which killed 41 people (1937–46). Hoover Commission summary shows 77 percent of recommendations accepted, but Congress hasn't acted on 50 recommendations. The farm program—a $3,500 wage earner, for example, pays (in taxes) $31.79 for just wheat, corn, and cotton supports, plus higher prices in the stores on these commodities. Secretary Benson, in trying to return the farmer to a free market, now takes the beating for us all who are tired of double taxation.

Twenty Million Educated by TV

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Derry News, Derry, N. H., on Thursday, February 20, 1958, entitled "Twenty Million Educated by TV":

TWENTY MILLION EDUCATED BY TV

A recent tabulation shows that 20 million can now take advantage of educational television programs in the United States. This is the largest educational TV audience potential since the advent of television after World War II.

Educational television has grown slowly since its birth 6 years ago. At that time over 250 TV channels were set aside by the Federal Communications Commission for educational television. Only recently, however, has educational television really begun to catch on.

In fact, Ralph Steetle, executive director of the Council of Educational Television says that the recent rate of expansion in educational television is truly phenomenal.

There are, currently, 29 educational TV stations on the air and several others will begin broadcasting in the next few months. By the end of the year it is estimated that at least 50 educational stations will be in operation.

In time, all of these educational television channels will be utilized and we hope that advocates of pay television will not succeed in gaining access to any of these channels which have been reserved for educational purposes.

In fact, the Federal Communications Commission is morally obligated to keep all those television channels which were allocated some years ago free, in view of the fact that the public bought millions of sets on the assumption that television would be free, and because of the probability that pay television would drain the best shows away from free television, reducing the quality of viewing for those who could not pay the price for pay television.

Opposition to Reduction in National Guard

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement before House of Representatives Armed Services Committee by Gov. James T. Blair, Jr., of Missouri, March 3, 1958, in opposition to reduction in National Guard:

Mr. Chairman and members of the committee, I appear before you today in a threefold capacity: As the Governor of the State of Missouri and commander in chief of its military forces; as a member of a select group of State chief executives; and as an individual American citizen.

I am here because, in each of those capacities, I share with my colleagues a keen interest in the security of the United States, and, in particular, in the Army National Guard as an integral part of the first line of defense of this Nation.

The long and proud history of the National Guard is convincing evidence of its volunteer contribution to the development and security of our country. In its dual status, unique in our governmental system, it serves the States in time of peace and provides the Republic with a ready Reserve force for defense in time of war. We Missourians are exceedingly proud of our National Guard, both Army and Air, and of the service rendered to the State in times of disaster and to the Nation in combat. In my opinion Pentagon planners are prone to treat the National Guard only from an aspect of the Federal Government, while discounting its value to the States. Our presence here today is overwhelming evidence and proof of the importance we attach to any program which would unfavorably affect the guard. I am seriously concerned with the apparent attempt in certain quarters to downgrade our existing conventional forces. While I favor the increased emphasis being placed upon the development of ultimate weapons and programs designed to reinforce our country's scientific and technical leadership, it is my firm opinion that our military posture must not be weakened by further decrease of our Reserve force.

For some time, we have been engaged in the dubious procedure of reducing the strength of the Active Armed Forces. Now, the national budget for fiscal year 1959 would decrease the only effective Ready Reserve force available to the Army—the Army National Guard—by 40,000 officers and men.

Concurrently reports have reached me that the Army has developed a revised troop basis for the Army National Guard which proposes to elimination six divisions and many hundreds of nondivisional units.

Such actions can only be ascribed to our retarded entry into the space satellite arena and the consequential hysteria which would have us place all of our eggs in the missile basket at the expense of our Active and Reserve ground forces. Moreover, we cannot dispel the thought that the current situation provides an excellent cover for those whose continuing aim has been to downgrade the Army National Guard and relegate it to a secondary and minor role.

The fact that plans to materially reduce the number of units in the Army National Guard have been developed in an air of secrecy and under the cloak of security classification is most disturbing. Such action effectively precludes any attention on my part to illustrate for you the actual losses in strength and organizations which would confront us in Missouri in the event of their approval. I am aware, however, that distinguished and competent officers of the National Guard already have appeared before this body and that they have furnished you with specific information applicable to these matters.

I have always considered the National Guard in the nature of a joint venture between the Federal Government and the States. As a matter of fact, this arrangement envisaged and provided for by our forefathers is as old as our country. As in any such system, both parties share a part of the burdens, and to both, mutual advantages should flow from the common enterprise. When changes or modifications are required in this type of partnership, the necessary plans should be developed through mutual participation and cooperation. Apparently the Department of the Army does not view the guard in this light and intends to present Missouri and the other States with a finalized and completed blueprint on a take-it-or-leave-it basis. This is in contravention of existing Federal statutes which provide that changes of this nature in troop branch and allotment may not be effected without the consent of the governor of the jurisdiction concerned.

As the Governor of the State of Missouri, the National Guard is more to me than mere numbers of bodies and rosters of units; it is a living, vibrant organization made up of individuals who have volunteered above and beyond the obligation of Federal requirements and have placed themselves at the disposal of their State. It is a vested part of the community life of my State; it provides full-time and part-time employment for our citizens; it supports civic activities; it assists in preserving order, and it provides excellent training and discipline for our young men. In addition, it is a definite economic force in the smaller towns and communities which cannot be discounted.

In the State of Missouri, we have 801 officers and 7,051 men in our Army National Guard. The force is organized into 112 units and dispersed throughout 60 communities. We have a tremendous investment in State-owned armories and other facilities, together with hundreds of thousands of dollars invested in joint State-federally constructed installations. We have a competent State military headquarters engaged in the control and direction of this military force. The problems confronting the Missouri Army National Guard are our day-to-day concern. It would take vitally important and cogent reasons to convince us of the wisdom of any plan designed to cost adrift our guardsmen, eliminate our units, and charge off our investment. From any standpoint, military or economic, Federal or State, such a course cannot be supported by valid arguments.

It is my understanding that the present attack on the guard is twofold. It consists on the one hand of an attempt to reduce 40,000 members, nationwide, by means of reducing appropriations in the national budget for fiscal year 1959. Concurrently, and from another quarter is the proposed plan to eliminate six divisions and over a thousand additional nondivisional units. I stand solid against either action. I am opposed to any reduction which would decrease the number of volunteer citizen soldiers, and I am equally opposed to any plan that arbitrarily directs the destruction of organized units. Rather, it appears to me to be a far wiser course to accelerate the conversion of the units and organizations of the Army National Guard into the pentomic structure. This should be accomplished within the present framework of the guard and designed to take maximum advantage of existing personnel, equipment, and facilities. Missouri does not wish to maintain units which do not meet the requirement of support desired by the Army, neither do we wish to destroy the handiwork of years by the stroke of a Pentagon pencil.

I am aware that this committee and the Congress at large has ever been a refuge of the National Guard when hundreds have sought its destruction for the purpose of concentrating military power in the Pentagon. Today the Army National Guard constitutes the largest and most effective ready Reserve Force available to the Army. This is adequate evidence of the past wisdom and foresight of the Congress. On you rests the present responsibility of preserving this force and enabling it to perform its historic role for the country. I know that this responsibility is in good hands.

Benson, Brannan Cost Compared

EXTENSION OF REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. POLK. Mr. Speaker, in the Washington Post and Times Herald of Monday, March 3, 1958, in Mr. Drew Pearson's column, the Washington Merry-Go-Round, there is a very thought-provoking comparison between the administrations of the United States Department of Agriculture under Mr. Charles Brannan and Mr. Ezra Taft Benson. The figures are official and come from the Agriculture Department itself. I suggest the membership of the House should read this article which is as follows:

[From the Washington Post and Times Herald of March 3, 1958]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

BENSON, BRANNAN COST COMPARED

President Eisenhower's stanch defense of Ezra Taft Benson results first from the fact that Benson is a sincere gentleman with whom nobody can differ personally; second, from the fact that Ike's brother, Milton, is Benson's strong champion. Ike always relies on Milt, who served under Secretary of Agriculture Henry Wallace, for his farm advice.

However, in the latest report of the House Appropriations Committee on agriculture are some interesting figures which neither Ike, nor Milton, nor most farmers of the Nation know much about. They tell a significant story of what's wrong with Ezra Taft Benson's administration of American agriculture.

The figures are official and come from the Agriculture Department itself. They show that between the time Benson took over the Department and today he has added almost 20,000 extra bureaucrats and $1 billion of expenses. This billion does not include the cost of crop supports or the soil bank. It only covers the actual barebones operation of the Agriculture Department.

Here is a breakdown of the figures:

In 1952, the Agriculture Department budget under outgoing Secretary Charley Brannan was $706 million. Under Benson, the 1958 budget for operating the Department is $1,728,000,000.

The overall agricultural budget as Brannan went out of office, including the cost of storing surpluses, crop-price supports, and everything else was $1,045,000,000.

The overall budget under Benson today is $7 billion. This is an increase of about 700 percent.

Seven billion dollars more

The big question is, How did the overall budget jump from less than $1 billion to more than $7 billion in 5 short years, when Benson simultaneously reduced price supports from 90 percent of parity down to below 75 percent of parity?

He was reducing price supports in order to get rid of surpluses, yet his costs and his surpluses increased. What is the reason?

Though it cannot be spelled out in a few words, here is part of the answer:

1. Bureaucrats versus volunteers: Benson immediately fired the farmers' committees which were enforcing the farm-acreage program, and substituted paid bureaucrats. The volunteer farm committeemen had been paid $57 a year, chiefly for travel to attend meetings. The bureaucrats are each paid around $5,000 a year.

This not only increased Benson's budget, but it tended to put policemen in charge of farm-acreage restrictions. Volunteer farm committees did an excellent job of restricting acreage. They knew exactly what each neighbor was doing and let no one get away with anything.

But when paid bureaucrats took over, the psychology of the program shifted. It was like the Russian peasant who is always out to beat the Soviet inspector on the collective farms. So there was less compliance with crop reduction, less cooperation with the Agriculture Department.

2. Middleman's profit: Benson has operated the Agriculture Department with an eye to helping the middleman, not the farmer.

To illustrate:

In 1956-57 when Benson moved into the hog market to support the price of pork, he omitted from his hog-purchasing contract a clause which requires packers to buy hogs at parity prices. He signed contracts with the meatpackers to buy up pork, with a guarantee to take it off their hands. But he did not require them to pay the farmer a guaranteed price.

Thus, they could step into the hog market and buy below parity, and sell to Benson at a guaranteed price—which was exactly what they did. Result was that the price of hogs went below parity, the farmers didn't benefit, the packers did benefit, and the taxpayers paid out $98,600,000 supposedly to support the price of pork, while the price of pork simultaneously was going down and down.

In contrast, Charley Brannan stepped into the market to support hogs in 1949, but put a clause in his contract by which the packers had to buy hogs from farmers at parity prices. As a result, the price of hogs did not drop

below parity except on one day. Brannan then gave his surplus hams immediately to the school-lunch program, thus saving the cost of storage. The total cost to the taxpayer was $16 million.

The farmers and schoolchildren, not the meatpackers, profited.

And if you want to see who is making the big money today, take a look at the stock market quotations during last fall's Wall Street slump and see what happened to the big packers and middlemen's stocks. They went up while the stock market went down.

More on Mr. Benson's snafus in an early column.

Is There Any Real Hope for Peace in Negotiating and Signing New Agreements With Governments Whose Dogmas Preach Bad Faith and Whose Record Demonstrates It?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 10, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release on world affairs:

NEGOTIATE-NOW BOYS URGE VEILED SURRENDER

(By Edgar Ansel Mowrer)

Simultaneously with the Kremlin's vociferous attempts to split the West by offers of negotiation, many of our European friends have formed a new anvil chorus directed against the inflexibility of present American foreign policy. And they are receiving a lot of support from Americans.

Just what is it these people want?

They start with the assumptions (a) that weapon development has made impossible the use of nuclear force in international relations; and (b) that the U. S. S. R. and company is now the equal, and within a decade or two will be the superior, of the free world.

Hence—they insist—since the Kremlin is ready to negotiate, it is up to the Western Powers, and chiefly to the United States, to find "some way out of the present deadlock, for some way there must be." Therefore, far from imitating the Kremlin's intransigence, western leaders must "explore every avenue that may lead to peace."

In other words, what they want is "something fresh and new in the way of American policy." Leaving aside the questionable nature of their basic assumptions, which 5 years from now may seem just temporary superstitions, I agree that United States policy should strike out on a new line.

It will not, however, be in harmony with the most popular suggestions of the more nervous partisans of immediate negotiation with the Russians. For these suggestions—however good or bad—are essentially a rehash of former policies which have notoriously failed.

Let's look at the record.

RETURN TO 1930'S

It is now proposed, among others by Harold Stassen, that the United States accept a ban on nuclear tests, even though such tests can now be held without being detected abroad. This is nothing more or less than a return to the early 1930's when the United States extended diplomatic recognition to the U. S. S. R. in exchange for certain unenforcible promises—which were speedily violated. Yet the negotiators are still willing to trust the Kremlin.

It is urged that the western governments should offer to neutralize a united Germany. This is a return to the original occupation policy in which the West persisted for several years—until it became apparent the U. S. S. R. did not accept any form of united Germany which would not result in Communist control. Why suppose Moscow has changed—even were such a proposal to be desirable, which it is not?

Europeans and some Americans think Washington should adopt a new policy of recognizing Red China. This is a rehash of what they have been saying since Ernie Bevin's visit to that country in 1949—and makes no more sense now than then.

Finally, critics of our present policy mostly accept the view that through negotiations the West accept the Soviets' subjugation of the East European satellites as final. This would be not only a betrayal of Poland (the original united nation) and Czechoslovakia and a permanent obstacle to peace but a return to the devastating slogan current around 1945 that Russia has a right to friendly neighbors.

Leaving aside the fact that a bandit state like the U. S. S. R. has no claim to anyone's friendship, the proposal is old—and turned out to be disastrous, since without it the United States forces might have liberated Berlin and most of Czechoslovakia, with results incomparably more favorable than what we got.

No, all such proposals are attempts by certain individuals to obtain from the United States in 1958 a return to previous policies—except toward Red China—which have been tried and failed.

SIX-POINT PROGRAM

What is needed—I admit—is a new policy. And I submit the following six-point program which was recently offered to the Washington Star by a Mr. David Keyser:

1. Beef up our United States arsenal.

2. Realize we shall have neither peace nor freedom until Soviet communism is eliminated as a world power.

3. Drop any idea that we can provoke the U. S. S. R. into starting world war III. "Our biggest provocation * * * is not surrendering."

4. Plan now to give practical help next time there is a revolution behind the Iron Curtain.

5. Form national militia units of refugees ready to assist their compatriots in any new revolt.

6. Get tangible help to any rebels against communism pronto.

Here I suggest is a really new policy. It would require fortitude. Yet it is more promising than any of the veiled surrenders that the negotiate-now boys are so shrilly crying for.

Governors Oppose National Guard Reduction

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, the Governor of the State of Illinois, the Honorable William G. Stratton, came before Subcommittee No. 1 of the Armed Services Committee and made a very powerful plea for a strong National Guard. He went on record as being against a cut in the size of the National Guard of 40,000 guardsmen. He is chairman of the Governors Conference of the United States and headed the delegation of governors appearing before this subcommittee. He was ably supported by Gov. J. Hugo Aronson, of Montana; Gov. James T. Blair, Jr., of Missouri; and Gov. Theodore R. McKeldin, of Maryland.

The governor's statement is as follows:

STATEMENT OF GOV. WILLIAM G. STRATTON, OF ILLINOIS, CHAIRMAN, UNITED STATES CONFERENCE OF GOVERNORS, BEFORE SUBCOMMITTEE NO. 1 OF THE COMMITTEE ON ARMED SERVICES, HOUSE OF REPRESENTATIVES, MARCH 3, 1958

PREAMBLE

The executive committee of the United States Conference of Governors, in session at Denver, Colo., today, unanimously approved the following resolution adopted by the Western Governors' Conference:

"Whereas the Army National Guard, with a strength of 400,000 citizen-soldiers organized in more than 5,500 units, trained and equipped, constitutes the Nation's largest and most ready military force; and

"Whereas this Ready Reserve force is dispersed in more than 2,500 communities in every State, the Territories, the District of Columbia and Puerto Rico, and by virtue of this dispersion would prove to be of inestimable value in assisting civil defense agencies during the period of initial recovery in the event of a successful massive air attack on this Nation; and

"Whereas the National Guard represents the most fundamental American tradition of citizen-soldiery at the grassroots level, offering the maximum national defense against attack from within as well as from without, and at the same time offering young men an opportunity to perform their military service in their own home communities; and

"Whereas the National Guard has served the Nation, the States, and Territories with honor and valor in times of peace and war and, largely by virtue of its own initiative and determination, has achieved a high degree of mobilization readiness, and is prepared to undertake more advanced type training, and to effect necessary reorganization within existing organizational structure to properly complement the active military establishments; and

"Whereas the Department of Defense has proposed a reduction of 40,000 men from the Army National Guard and the application of a revised troop basis which would bring about the elimination of many units of the Army National Guard; and

"Whereas such action is considered to be not in the best interest of national defense as it would reduce the capacity of the National Guard of the States and Territories to render assistance in the event of emergencies or disaster; and

"Whereas such reductions of personnel or units of the Army National Guard would constitute a writeoff of many millions of dollars in Federal and State funds already invested in the National Guard and its existing facilities: Now, therefore, be it

"*Resolved*, That the governors of the 11 Western States and the Territory of Hawaii in conference assembled here at Colorado Springs, Colo., on February 24, 1958, petition the President and the Congress of the United States to take necessary actions to maintain the strength of the Army National Guard at the 400,000-man level; and be it further

"*Resolved*, That necessary action be taken to assure that any required revisions of the troop basis of the Army National Guard be accomplished with the cooperation and con-

sent of the governors of the States concerned, and that such reorganizations be accomplished within the existing structural organization of the Army National Guard; and be it further

"*Resolved*, That the secretary of this conference be directed to send copies of this resolution to the President of the United States, the President of the United States Senate, the Speaker of the House of Representatives, to the chairmen of the Armed Forces Committees of the Senate and of the House, to the Secretary of Defense, the Secretary of the Army, and to the governors of all States not represented at this conference."

Mr. Chairman and members of the committee, I appear today before this distinguished committee in my capacity as chairman of the United States conference of governors and I would like the record to show that I am accompanied by the Honorable J. Hugo Aronson, Governor of Montana; the Honorable James T. Blair, Jr., Governor of Missouri; the Honorable Joe J. Foss, Governor of South Dakota; the Honorable Theodore R. McKeldin, Governor of Maryland; the Honorable S. L. R. McNichols, Governor of Colorado, and the Honorable Robert B. Meyner, Governor of New Jersey.

As chief executives and elected representatives of our respective States, we are seriously concerned with the common defense, and vitally interested in any matter affecting our National Guard—the military forces of our jurisdictions. Our preoccupation with the National Guard is understandable, for each State and Territory has a vested interest in its own military forces. Moreover, each of the more than 2,500 communities throughout the Nation, which fosters and supports a National Guard organization, has a vested interest therein.

While military planners in the Pentagon deal only with impersonal figures, we in the States and Territories, and in our cities and towns, deal with individuals —the American citizens whom those number represent.

As governors, we are confronted with the day-to-day problems of implementing the Pentagon plans and policies as they relate to the National Guard. It is at our level of government where the impact of such plans and policies upon the people must be considered. This is something that I am certain you gentlemen, as elected representatives, understand.

The maintenance of strong ready reserve forces for our active military establishment is a matter to which, on several occasions in the recent past, the United States conference of governors has turned its attention.

As I speak to you today, I reflect the grave concern of the governors of each of our States, of our Territories and of the Commonwealth of Puerto Rico, over evidence that the National Guard will be further reduced in strength of personnel, and of reports that a revision of troop basis will result in a substantial loss of divisions and other guard units. We are convinced that any such action will dangerously weaken our national defense.

In the matter of our Nation's defense, and the problems confronting us today in this area, I would like to say that I favor the increased emphasis being placed upon the development of our nuclear and missile capability, but I also share the views of those who insist that we must maintain a balance in our military forces and that there is distinct weakness in any plan that neglects existing conventional forces as nuclear and missile programs are being developed.

This Nation must keep its leadership in the fields of military science and engineering, but this must not be done at the expense of our existing conventional forces, including a strong and adequate reserve force.

As a former Congressman, I am aware that we have a strong National Guard today as a vital part of the country's deterrent force for peace only because the Congress through the years has insisted on maintaining and providing for this important segment of the defense team. While the Constitution provides in times of peace our National Guard shall be maintained as a State force, it has developed as this country's strongest ready reserve force.

It is the feeling of those of us who are concerned with our military reserve programs, especially the role of the National Guard on the defense team, that the reserve program of the Army has been unrealistic and lacking in stability. There have been vacillations in the program—first a program for a million young Americans to be trained and a National Guard of 600,000; and then, in recent months, a complete about-face with a reduction in all of the reserve forces.

I have the impression that the Army doesn't really know what it needs or wants in the way of a Reserve. A few short years ago the Army was calling for a massive Reserve force. The Congress met this request by:

1. Requiring that persons entering active Federal service participate in Reserve training upon release from active duty;

2. Authorizing a 6 months active duty training program for those who entered the Reserve components without prior military service.

This active duty training program, unpopular at the beginning, became an unqualified success only after the original Pentagon plan was modified by this committee 1 year ago by reducing the period of obligated Reserve service.

And, now—the Army has suddenly decided that it requires a much smaller Reserve force. It appears the planning, for the most part, is to meet those Reserve requirements from men released after 2 years of active duty who have a continued obligation to participate in Reserve training. To my mind, this puts the prior servicemen in the same unfortunate position in which they found themselves during the time of the Korean conflict, when those who had previously served were again called upon to leave their homes, families, and jobs for more military duty, while hundreds of thousands of others rendered no military service whatsoever.

A year ago I strongly favored a program requiring 3 consecutive months of basic training for all young men who volunteer for service in the National Guard or Reserve. This is a program that would be unanimously accepted by every mother and father, the educators, church groups, veterans' organizations, industries, and the young men themselves. It is economically sound, as 35 percent or more young men could receive basic training for 3 months at the same cost which is now in the budget for 6 months training. I advocate the 3 months' training program and commend it to you for your serious consideration, and, I hope, speedy affirmative action.

I believe I can best convey the thoughts of the Nation's governors by briefly expressing my views as they pertain to the National Guard of my own State, and by placing before this committee certain facts and figures as they relate to the Army National Guard of Illinois.

During the current fiscal year, as of February 11, 1958, a total of $4,795,250 in Federal funds has been apportioned to the State of Illinois to support its Army National Guard.

For the period July 1, 1957, to June 30, 1958, a total of $2,903,216 in State money has been appropriated.

In addition, both the Federal Government and the State of Illinois have substantial investments in armories. Illinois has 50 armories located in 42 communities. Forty-three armories were built wholly with State funds, and seven with Federal and State matching funds. The total investment is over $23 million. Illinois expenditure is $21,776,501 and the Federal Government expenditure is $1,223,499.

More important, however, is the investment of time and dedicated service over the years of the officers and enlisted men who serve in our National Guard, and the demonstrated support rendered to National Guard organizations by the thousands of communities of which they are a part.

Permit me to show you just what return the Nation and our State receive from this investment.

The Illinois Army National Guard has a strength of 11,000 officers and enlisted men. Over 90 percent of these officers are veterans of World War II or Korea, or both of these conflicts. A high percentage of our noncommissioned officers have had active duty in World War II and Korea.

The major organization of the Illinois National Guard is the 33rd Infantry Division. Our nondivisional units include a regimental combat team and an antiaircraft artillery group. In all, 166 units are located in 42 communities.

The activities of the Illinois Army National Guard are supported by a hard corps of 614 full-time employees, all but a few of them hold key positions in units, and who would enter active Federal service with their unit, in event of mobilization. This full-time staff is an important element in our defense force.

In my years as Chief Executive of the State, I have observed the training of our National Guard. I have noted, particularly in the past 3 years, a vast improvement in its training. I am aware, for example, of the fact that a great many of our Guardsmen give willingly of their free time far in excess of that required to qualify for pay.

In the past 5 years 1,558 officers and enlisted men from Illinois took leaves of absence from their civilian pursuits and attended Army service schools to increase their professional capabilities.

A large number of our young guardsmen are qualifying for appointment as second lieutenants through participation in our officer candidate school. These men we must depend upon for leadership in a future disaster or war.

I am proud to report to this committee that during the period September 1, 1956, to August 31, 1957, 165 units of the Illinois National Guard were each inspected three times. The inspections were the annual general, the field training, and the ordnance technical inspections. On these inspections 83.5 percent of these ratings were "very satisfactory" or better—39.1 percent were rated "superior," and 29 percent rated "excellent."

The only thing that is really important in a program as vital as national defense is the result obtained. Just what has been the return on the defense dollars, Federal and State invested in the Illinois National Guard?

The records prove the Illinois National Guard has reached a high level of training and a high degree of mobilization readiness. It is prepared within the limitations of time and Federal restrictions to perform its Federal mission as a ready reserve force.

This in itself, in my opinion, constitutes a high return on the investment. But, there is yet an added dividend that accrues to the State.

It is a source of great comfort to me and all Governors as well as the people that we have a trained military force that on a moment's notice can be mobilized to serve in a disaster. Our National Guard is such a force—organized, dispersed, trained, equipped, and fully competent to render efficient service.

The mission of our National Guard is to train for combat, and that it is doing, and

doing well. This is evidenced by the reports on field training last year when United States Army inspections rated 75 percent of the 4,454 Army National Guard units inspected with ratings of "very satisfactory" or better. United awarded "superior" ratings totaled 121.1 percent and 32.3 percent were rated "excellent." But we would be less than realistic if we failed to admit that in the event of a surprise nuclear air attack on this country every military organization would have to be pressed into service to assist civil-defense agencies during the initial recovery period. This is a most reasonable assumption for until some recovery has been made, most of our military forces would probably be immobile, unable to function in their military mission. Let no Pentagon planner take a head-in-bag attitude in this regard. There is no doubt in my mind that in the event of successful enemy air attack, the most effective immediately available force during the recovery period will be our National Guard.

In every State we are relying upon our National Guard to assist in the initial recovery, for I know of no other force better dispersed, or better organized, equipped, and trained to establish field hospitals, mass-feeding kitchens, to rebuild bridges, control traffic, provide needed communications, and perform hundreds of other emergency functions.

We must not forget that the National Guard gives a twofold return on every Federal and State tax dollar we invest in it. Any reduction of personnel or wholesale elimination of units would weaken our existing military position, and could mean the difference between life and death for millions of our fellow Americans in the event of a nuclear attack. Moreover, the reduction of personnel and of units would further limit opportunity for young men to undertake voluntary military training, and would place the burden of service again directly upon the shoulders of those who have already performed 2 years of military training, if our enemies were to undertake limited or "brush fire" actions in the future as they have in the past.

If the 360,000 Army National Guard strength proposed in the fiscal year 1959 budget is approved, the Army National Guard in my State will be reduced to a point where effective unit training will become exceedingly difficult and the efficiency of this force in being will be greatly impaired. This is a matter of grave concern to me and the members of the governors conference.

I am aware that as tactical concepts change and more advanced type weapons become available, certain changes in troop basis are necessary, not only in our active Army, but in the reserve components. I desire that changes be made in our National Guard to assure that it will properly complement the Army organizations, and further, to assure that it will be properly trained and equipped to fight effectively and to survive on a battlefield where nuclear weapons may be made ployed. I urge that these changes be made as rapidly as possible, but that they be executed within the framework of the existing National Guard.

There is no logic in any plan that will deactivate or reduce an established unit of one component in a community where it has long enjoyed support, and subsequently at some later date activate a unit of another reserve component. Any such plan is lacking in wisdom.

There is no logic in a plan that will write off the tremendous investment that the Federal Government, the States, and communities have in the National Guard. This is a matter of tax sense, of judicious use of public funds. I am fearful that some Pentagon planners are not always as aware of economic problems as are, fortunately, the Membersof the Congress. As governors, of course, we are acutely aware of the tax load our people bear.

In closing, may I say, on behalf of the governors of the States and Territories, that the members of this committee, experienced as you are in military matters, will make an objective appraisal of any plan that forces a further reduction of our National Guard. I know that this committee will act in the best interest of the Nation's security.

It is with our Nation's security uppermost in our minds that the United States conference of governors strongly opposes any action which will weaken or destroy the National Guard, and we recommend for your consideration and support:

1. That the National Guard and Reserve program be stabilized through firm planning and implementation.

2. That no Federal agency with fiscal powers be permitted to limit or reduce a defense appropriation once made by the Congress.

3. That the enrolled strength of the Army National Guard be fixed and maintained at a minimum of 400,000.

4. That sufficient funds be appropriated and expended to support that strength.

5. That the active duty for training of young men without prior service be for a period of 3 consecutive months of basic training instead of the present 6 months period.

6. That a minimum of 50,000 3-month trainees be authorized for the Army National Guard and that sufficient funds be appropriated to support the program.

7. That all units presently in the Army National Guard structure be maintained. These units to be converted or redesignated as required to provide pentomic or other type units needed in the missile age. Thereafter, units rendered surplus to be released by the States.

8. That conversion of present infantry and armored divisions to the pentomic type division be authorized by the Army without further delay.

9. That all National Guard units be maintained at the same levels of strength, equipment, and amount of training.

Mr. Chairman and members of the committee, I wish to express the appreciation of the members of the United States Conference of Governors for this opportunity to appear before you on a matter which we consider of such vital importance to the Nation. It is our fervent hope that out of these hearings will come a stabilized program for the National Guard and Reserve, with sufficient funds to support the program.

Thank you for the courtesy you have accorded me today.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

The Outlook for Science in America

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. MARTIN of Iowa. Mr. President, on Saturday, March 1, the Massachusetts Institute of Technology conducted a regional conference on the outlook for science in America. Dr. James R. Killian, Jr., president of Massachusetts Institute of Technology, who is on leave to serve as special assistant to President Eisenhower for science and technology, made an important address at the closing session of the conference.

Science and technology will play an increasingly important part in the lives of all of us. It was my good fortune to hear Dr. Killian's address, and I believe it is of such importance that I am requesting unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNDERWRITING THE FUTURE STRENGTH OF AMERICAN SCIENCE AND TECHNOLOGY

(Address of Dr. James R. Killian, Jr., special assistant to the President for science and technology, at a dinner of the regional conference of Massachusetts Institute of Technology, Saturday evening, March 1, at the Shoreham Hotel, Washington)

I derive deep satisfaction in the opportunity tonight to rejoin my MIT colleagues in welcoming our friends and guests to this regional conference and in sharing in this discussion of America's future scientific strength.

My position and experience here in Washington have reinforced my conviction that MIT is a major component of our Nation's scientific resources and progress, and that she bears an immense responsibility to maintain her long-established role of being a pace-setting institution and one of the world's great centers of scientific research and education.

The fact that I could go on leave of absence to accept my present responsibilities here in Washington and the fact that so many other members of MIT's faculty and administration have been active in public service continues the strong tradition and policy of the institute that it has an obligation not only to be strong in its program and activities in Cambridge, but to be generous in making its people available when there is a need for their special talents in the public service. When members of its staff, such as myself, enter the public service it throws increased burdens on those who remain in Cambridge. These burdens they have accepted in good spirit and with great competence, and it should be emphasized that those who pick up these extra burdens are also making important contributions to the Nation. Our chancellor and acting president, Dr. J. A. Stratton, is doing a magnificent job in administering both his office as chancellor and the office of the president. Under his skilled and steadfast leadership the institute is experiencing no loss of momentum; in fact under his able and firm leadership it is moving steadily ahead.

My remarks tonight are directed at the theme of this meeting. In fulfilling this assignment I wish to dwell on the importance of balance and proportion in our national scientific effort. I include technology as well as science in my discussion because they are so closely related and interact upon each other in such profoundly important ways.

Let me make my conviction immediately clear that the United States today is scientifically and technologically strong and growing stronger. I do not believe that we have lost our technological leadership, nor that we are predestined to lose it in the future—provided we do not fail to remedy our weaknesses. We have great strength, we have great resources. We also face relentless, able competition that demands of us poise, high-quality performance, and indefatigable effort.

The first industrial revolution was ushered in by Great Britain. As one of my MIT colleagues has observed, the United States leaped over the first industrial revolution and ushered in the second. Is Russia leapfrogging over the second industrial revolution and moving swiftly toward a third, leaving the United States still preoccupied with the second? It is in the light of this that I discuss our present concerns about the future. The launching of sputnik and our growing knowledge of the great educational and technological advances in Russia has given many people the idea that the Soviets have achieved a technological superiority over us. In my conviction they have not. In many fields the Soviets have been pushing rapidly ahead, as for example in rocket propulsion, oceanography, theoretical mathematics, space medicine, and certain phases of electronics.

But while this has been taking place the United States has also been making progress. We continue to be outstanding strong in nuclear physics, in solid-state physics, in polymer chemistry, and in high-speed calculating machines. In high-energy nuclear physics the Soviets are developing fast and may indeed grow to excel. But in low-energy nuclear physics which is directly related to applications, the outstanding position of the United States is beyond dispute.

What Russian progress has shown is not that leadership has passed from the United States to the U. S. S. R., but that we must expect in the future more examples of Russian challenge to our scientific and technological leadership. Clearly the problem before us is not our leadership in technological strength today; the challenge we face is of the maintenance of this position tomorrow against the challenge of the surging technological revolution occurring in the U. S. S. R. and other countries.

Within our lifetime we have seen how scientific leadership moves from one place to another: in the 1920's and on into the early 1930's, a majority of the fundamental scientific discoveries were made in Europe, and then there was a shift. In the 1930's and on the United States became outstanding. After having obtained very few Nobel prizes in science before 1930, the United States has received more than half of those awarded since 1945.

What are some of the things that we must do to maintain our great relative strength in science and technology?

Let me look at some of the requirements for sustaining and augmenting our research effectiveness. We must currently give attention to at least five requirements.

The first of these is the need to make the adjustments in the level of support of research necessary to offset inflation and to meet new needs and opportunities. Administration proposals now before Congress call for a substantial increase in research funds for a number of Government agencies and departments. Simply to increase public funds for research, however, is not enough. There must also be an increase in the support provided by private agencies—industry, foundations, and individuals.

Second, we need to stabilize the support of research by both public and private agencies. Starts and stops, ad hoc commitments, and modification of research programs have at times kept the national effort off balance, and have occasionally served to dissipate our efforts rather than to augment them.

Third, we seek to achieve a national policy and program for the provision of large scientific instruments, as for example in nuclear physics. Such a national policy and program seems essential if we are to achieve the best distribution of our financial resources. It is recognized that in a number of experimental research fields, our ability to maintain world leadership depends on the availability of new and more powerful research tools. Not only do we need new instruments; we also need to modernize existing research instruments and to find ways to more fully employ machines which we now have.

Are there areas which need more effort and support, as for example, geology, geophysics, meteorology, oceanography, materials research and propulsion? The overlapping or converging areas which involve the participation of more than two sciences are increasing in importance, for example, biophysics and biochemistry, and the application of information theory to neurology and linguistics. There seems to be accumulating evidence that the life sciences are going to be one of the great areas of interest and discovery in the years ahead and warrant increasing attention.

Of course, in pointing out areas which may need more emphasis and support, we must not forget that the direction and course of science is largely determined by the imaginative individual scientist following his own interest and making his own determination of what is most challenging.

The next area which we must give special attention to in the period immediately ahead is our organization pattern for scientific research. We have come to think of basic research as finding its natural home in the university, and indeed the university seems to be the best instrument for conducting basic research. This has not always been true, and we may well be entering a period when other forms of organization will compete with the university in the field of basic research. A few great industrial laboratories have strong basic research programs and an increasing number of government-operated

or government-sponsored laboratories conduct basic research as indeed they should and must.

Recognizing that other nonuniversity organizations have a compelling need to enter the basic research field, we nevertheless need to give careful attention to the overall pattern of our basic research effort. Research is an essential part of the effort of a university because the education of scientists must be carried on in an atmosphere of research and through their participation in research activities. If basic research moved out of the universities, we would certainly reduce our capacity to educate future scientists. Indeed as Dr. James B. Conant has pointed out, every time we remove a scientist doing basic research from a university, we reduce our capability to train future scientists. As we extend our total national program of research, we need to keep clearly in mind the importance of basic research to the educational strength of our universities and make sure that we do not create a pattern which tends over the long pull to attract basic research away from the universities.

But we must also recognize that our research needs are going to require special kinds of institutions separate from the universities. This comes about largely because of the magnitude of equipment and facilities required for much of modern research. The great particle accelerators required by nuclear physics are reaching such size and cost that they no longer can be financed by a university or limited in their use to a single institution. This is becoming true in other fields. In a recent report by the National Academy of Sciences Committee on Meteorology on needs for research and education in meteorology, it urged the establishment of a National Institute of Atmospheric Research which could provide the research facilities on a scale required to cope with the global nature of the meteorological problem as described in this report. These facilities would include "modern scientific and technological tools such as a large-scale, high-speed electronic computer, a meteorological flight squadron, a laboratory for fundamental research on techniques for probing the atmosphere by electromagnetic radiation, and a laboratory for fundamental research on the use of satellites and rockets as probes of the atmosphere." As envisioned, such an institute might be sponsored by a group of universities and would offer opportunities to university scientists and graduate students, but it would be an autonomous institution standing separate from any single educational institution and planned to serve all institutions responsible for research and education in meteorology. Other examples could be cited where we need to find new institutional patterns and relationships to provide research facilities adequate to deal with modern research techniques but too expensive to be confined to a single institution. We must develop the counterparts of the research institute in Germany and the U. S. S. R., but we must do it by properly relating them to our universities, and thus avoid a serious weakness in the foreign institutes.

It is also increasingly clear that within institutions it is going to be necessary to create groups of a size sufficiently large to be effective in achieving an integrated approach to certain complex scientific and technological problems. We need to think of how we can establish institutes within educational institutions which make possible a multiple-discipline attack on a problem. MIT has sought to do this through interdepartmental laboratories, as for example the research laboratory of electronics or our nuclear science laboratory. These regroupings and consolidations of research activities bring special problems of finance and organization that will require careful attention at the national level in the years ahead. The need for such integrated groups of sufficient size and scope to effectively tackle many of our problems in science and technology should never, however, overshadow the importance of the individual scientist who is working alone or in small groups. He needs to be afforded the opportunity to work in this fashion, and we must find ways to insure him freedom to do so and adequate support. It sometimes proves easier to get support for a project for a large laboratory than it does for the individual scientist working independently with his own graduate students.

In addition to policies affecting basic research, intensive attention must be and is being given to improving the collection and dissemination of scientific, technical and engineering information.

One of our most immediate tasks is to find mechanisms to make more generally known to the scientific community the availability of information already in hand. While we have problems of collection we have greater problems in distribution. The Librarian of Congress reports that a check of the Library's science receipts, against Knizhnaia Letopis, the Soviet national bibliography, indicates that "60 percent of the Soviet materials currently published in the natural sciences and 41 percent of those published in technology are being obtained by the Library. Of the 930 Soviet periodicals (titles) issued in 1950–54, the Library received 501 or 54 percent." The Library of Congress has come to be a great national library of science.

It must be added that there is not enough coverage by the total national translating activity of the significant material being produced by the Soviet bloc. Some 40 Soviet scientific and technical journals are presently being translated: 20 by the Federal Government and 20 by commercial concerns. In addition, a large number of abstracts of the Soviet literature are being produced in selected technical fields. Translation coverage is particularly inadequate in the fields of biology, physics, geophysics, electronics, and the earth sciences.

As efforts are being made to improve Government procedures and efforts in the collection and dissemination of technical information, we need at the same time to give attention to nongovernmental services. We need to find a way to increase the support of numerous United States scientific journals so as to expedite the publication of scientific papers. The situation is such that considerable delays attach to the publication of scientific papers.

Next, we must encourage and provide for the study of the Russian language by increasing numbers of American students. Not only do we need more people who can do the translating that we need; we also need more scientists who can read Soviet scientific publications for their own benefit. A recent estimate indicates that of all the items now published in the field of science in the world, about half are published in English. The next largest number are published in Russian.

In the field of education there are many improvements available to us for strengthening our scientific and engineering education. The liberal arts colleges are the principal sources of candidates for our graduate schools of science. Recent studies have emphasized how remarkable has been the success of a number of small liberal arts colleges in preparing men and women to become distinguished in science. This points to the importance of still further strengthening the teaching of science in this type of institution, and thus attracting more college students to major in science and to proceed on to graduate school. Increasing the number of science majors in the liberal arts colleges is one of the quickest ways available to us to increase the number of scientists. This will require better laboratory equipment and facilities for these colleges and better professional opportunities for their science professors so that able ones can be attracted and held. It will require, also, an attitude in these institutions that does not underrate science—an attitude, as I shall emphasize later, that sees an understanding of science as one of the requirements of effective, liberal education in our technological society.

Next, we face the requirement that our American schools of engineering and our institutions of technology command more understanding and support. We witness the much-needed mobilization of national understanding and effort on behalf of medical education. We must achieve a comparable national effort in behalf of schools of science and technology, where inadequacy can be as perilous to the national welfare and safety as inadequate medical education.

Until now our chief reliance in engineering education has been on undergraduate preparation, a system which has not universally risen above the training of technicians. While there will long continue to be an appropriate and essential place for the really professional 4-year undergraduate engineering program, it must be supplemented by expanded graduate study in engineering.

Many industries have been ahead of the colleges in recognizing this need. As a consequence, they have evolved training programs of their own to carry their engineers beyond the levels of their 4-year undergraduate education. If we had the graduate-school capacity to handle these men, it would be more appropriate and advantageous in the long run for them to receive their advanced training in the university, rather than in industry. The engineer, no less than the scientist, can benefit from an atmosphere of uncommitted research, and our technological advance would be more certain if top graduates of 4-year engineering courses proceeded on to graduate study.

Against the higher compensation and other attractions offered by industry and other noneducational organizations, engineering schools are now more vulnerable and more in danger of serious deterioration than other educational institutions using scientists. They are more vulnerable, even, than the schools and departments of science. The scientist finds himself at home in our academic environment. This environment is not the natural habitat for engineers, whose professional work lies so much in industry and in the field.

The engineering schools are especially vulnerable now because their young and imaginative graduates and teachers—especially those in the advancing, growing fields of technology—are more in demand for noneducational employment than any other group in our educational institutions.

If engineering education is to meet this challenge and reverse or even retard the spreading scarcity of quality in engineering schools, it must find a way to make engineering schools a more attractive environment for topflight engineers and thus for topflight teaching of future engineers.

Even though their enrollments have been down, the teaching loads in our engineering schools—exceptions exist, of course—are very high, with the result that their faculties have too little opportunity for the creative work that leads to further professional development both as teachers and engineers. An informed observer recently estimated that only 10–20 percent of our engineering schools had average teaching loads as low as 12 hours per week or less. When we reflect upon the fact that these institutions are hard-pressed to maintain their present level of staffing, we can readily surmise how difficult it will be greatly to increase enrollments and to enlarge graduate study without further burdening faculties and without a reduction in the quality of education.

The success of engineering education in attracting and holding more first-rate teachers will depend upon accelerating the development of more and stronger graduate programs. The graduate school and the research associated with it can provide engineer teachers with the opportunities for professional activities and growth as engineers which they now find chiefly in practice outside of educational institutions. In those engineering institutions where strong graduate schools exist and where there is a fruitful alliance with basic science, an environment satisfying to first-rate engineers has been better achieved.

We must achieve this advance in the education of engineers if engineering is to achieve a professional quality and status comparable to that of medicine or law. We will not have solved our engineering manpower problem until we educate more engineers who unmistakably fulfill our society's standards of true professional excellence; men who have a profound understanding of their specialty, coupled with a broad and human culture. The development and growing numbers of this kind of highly educated engineer will serve to make engineering the profession it must be if it is to attract and hold its proper share of high talent.

Next, in my platform for maintaining our technological and scientific leadership is the correction of the popular image of science.

Because science is required for the maintenance of military strength and because it has made spectacular contributions to the development of weapons, it has come to be thought of with disportionate emphasis on its military significance. This distortion needs correction, and it is heartening to note current efforts to reemphasize the humane values of science and to underscore its immense contributions to the good life and the good society. Through medicine—through the creation of a better environment—through its contributions to a higher standard of living and of life—through its enhancement of man's dignity by its enlargement of his understanding—through the values it has established for our society—science has come to be one of the great humane and constructive forces of our time.

The best description of science that I know comes not from a scientist but from a philosopher—Charles Frankel. "Science," says Professor Frankel in his eloquent book, The Case for Modern Man, "is an example par excellence of a liberal art—a deliberate, selective reordering of experience, which releases men from the narrowness and urgency of their routine affairs, carries them beyond the limitations and accidents of their lives, and makes it possible for their commerce with the world to have scope, order, and systematic consequences. It has been used as an instrument of * * * war, but its primary function is more humane and, as it were, aesthetic. And its relation to practice is the relation of any fine and liberating art—it carries men beyond the foreground of their experience, and enlarges the dimensions of human choice by acquainting men with the alternative possibilities of things * * *"

And to this description can be appropriately added the following observation of Dr. Warren Weaver of the Rockefeller Foundation. The facts, he said, "do not support the concept of science as some sort of super creed, magical and mysterious as it is all-powerful, arrogant from its successes, and avid to invade and conquer, one after another, all the fields of human activity and thought. This viewpoint does not justify the notion that science is so special as to be unique, as well as so curious as to be incomprehensible. This does not depict scientists as strange creatures who are in one sense so objective, judicial, and precise as to be incredible, and in another sense so apart from life as to be selfish and sinister.

"On the contrary, these descriptive comments picture science as the servant of man, not his master; and as a friendly companion of art and of moral philosophy. This is a science that is the way it is because man wants it to be that way. It is a natural expression of both his curiosity and his faith."

If we can make science understood in the terms of Frankel and Weaver, we can gain much for science and culture. We can still further break down the antagonism between the domain of science and the domain of the humanities and social sciences, with the result that both will join together to further man's wisdom and understanding. It is this concept of science as a servant of man, and as basically a humanistic discipline, that helps to strengthen my optimism about progress being real and technology benign.

It is important that this image of science be clearly seen as well as its image as a builder of weapons. This is another objective, this image of science in its true humane proportions, that we need to achieve as we seek a balanced science program for the future and a proper place for science in our national life.

With these examples of some of the current opportunities and problems facing us, let me conclude by emphasizing the great responsibility which rests upon American science today in the light of the extraordinary opportunities which have been given to participate in the formulation of national policy. The growing linkage of science and technology with Government demands of scientists a new order of poise, steadiness and statesmanship. The current emphasis on science, if it is not to cause reactions adverse to science, also requires of the scientific community humility and a sense of proportion. It requires of scientists a recognition that science is but one of the great disciplines vital to our society and worthy of first-rate minds; a recognition that science is a partner—sharing and shouldering equally the responsibilities which vest in the great array of professions which provide the intellectual and cultural wealth of our society.

In touching, however, superficially, upon the special responsibilities of scientists to walk humbly as their responsibilities increase, I also am expressing my faith in the growing opportunity of science not only to deepen our understanding and enlarge our views of the world—not only to enhance our sense of beauty and order—not only to augment our power and wealth—but also to minister humanely, benignly, and responsibly to the needs of our fellows, our Government, and our country.

Man of Courage

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. COTTON. Mr. President, the leading editorial in the March 2 edition of the Sunday Star, entitled "Man of Courage," commends the steadfastness and forthrightness of Ezra Taft Benson, Secretary of Agriculture. It says some things that have long needed to be said. It also quotes from an excellent speech concerning Secretary Benson delivered in the House of Representatives by my able colleague from New Hampshire, Representative PERKINS BASS.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAN OF COURAGE

Spring seems to be coming a bit early this year for Ezra Taft Benson. At any rate the chilling winds which have been blowing over the Secretary of Agriculture are being tempered a bit by a warming political climate.

For one thing, farm prices were up 2 percent in February—a total increase of 8 percent over a year ago. For another, more and more Congressmen are beginning to speak out in Mr. Benson's behalf.

Of course, a determined band of midwestern Republicans are still after Mr. Benson's scalp. They say, and they may be correct, that Mr. Benson and the Benson program will cost the GOP from 20 to 30 House seats in November. Even if they are right, however, a lost battle does not mean the loss of a war. It looks as though Mr. Benson may be winning the war.

Farm prices are improving. The President is backing him to the hilt. And his supporters in Congress are beginning to rally around. Representative BASS of New Hampshire has just made an excellent statement of the case for Mr. Benson—a speech which was warmly endorsed by a surprising number of his colleagues. It is too bad, from the point of view of the taxpayer, that Mr. BASS' remarks cannot be published in full. They should be read. The heart of the speech, however, is in these two paragraphs:

"When our taxpayers realize what farm price-support programs are costing, and what the costs mean to them individually; when they realize that they (the support programs) are a failure and will not solve the farm problem, then they will be strong for Benson's proposals.

"Secretary Benson has courageously proposed a way out of this nightmare of economic nonsense. It is the way of more flexible and lower agricultural price supports. It is the only way that leads toward an ultimate solution."

For our part, we welcome this budding support for Mr. Benson. We welcome it because we believe that the Benson program will be proved right in the long run—right for the farmer and right for the consumer. We also welcome it because Mr. Benson is something of a rarity in public life, and it would be a shame if he were to be sacrificed on the altar of political expediency.

He is a man of courage. More significantly, he is a man of principle and integrity. As the election draws nearer every demagog in the land will be yelling for his head. But this will not divert Mr. Benson from his chosen course. He firmly believes that he is right, and that in the end he will be proven right. Considerations of political expediency (short-range expediency in our judgment) will not move him. This makes him something of an uncommon man on our political scene. Our country needs more like him, not fewer.

Immovable Mr. Benson

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a timely editorial which appeared in the Wall Street Journal, Monday, March 3, 1958, entitled "Immovable Mr. Benson."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of March 3, 1958]

IMMOVABLE MR. BENSON—HE STANDS STEADFAST AND SURE BEHIND A FRIEND NAMED IKE

(By Albert Clark)

WASHINGTON.—How does Ezra Taft Benson, though almost down to his last friend, manage to hang on to his job?

The simple answer, but not the explanation, is that his main surviving friend happens to be a man named Eisenhower. But this alone cannot account for the Benson paradox. What then, is the source of the embattled Secretary of Agriculture's strength with his Chief in the White House?

The explanation perhaps, lies in the almost mystical relationship between two men who think they are right, or at least that their opponents are wrong. Thus convinced, Mr. Benson refuses to resign for the sake of political expediency; and Mr. Eisenhower, who can be a stubborn man, "stands like a stone wall," as one Benson foe put it, between his farm chief and Republicans who want to fire him.

To understand the Eisenhower-Benson story, one could go back to a Minneapolis hotel room in the fall of 1952. One of candidate Ike's advisers, now a key member of the White House staff, explained the GOP candidate's farm philosophy. With prophetic accuracy, this Ikeman forecast that, as President, Mr. Eisenhower would compromise on most things, but not on the farm price-support question. General Eisenhower, he said, was convinced that the solution to the farm problem lay in less Government instead of more.

In another hotel, this time in New York City, an apostle of the Mormon Church was ushered into the office of President-elect Eisenhower. Mr. Benson had been invited by Mr. Eisenhower's advisers to talk with him about becoming the first GOP Secretary of Agriculture in 20 years. Up to then, the two men had never met. The President-elect's caller insisted he did not want the job. Besides, he had been a Taft Republican.

Mr. Eisenhower's only question: Would this make any difference in doing his job? Mr. Benson replied in the negative, and a new member of the Eisenhower team was chosen. Thus began the personal relationship that has now lasted more than 5 years.

RELIGIOUS ZEAL

To the agriculture job, Mr. Benson brought all the religious zeal of the Mormon churchman. Even his foes testify to his honesty; they only argue that his policies are wrong or, often more candidly, that Benson will cost the party votes.

To all this, Mr. Benson argues, publicly and privately, that increasing Federal intervention in farming not only is economically unsound, it is morally wrong. Moreover, he is convinced that if one is right, and sticks to his beliefs, ultimately the voters will be with him. And he presents his case with all the evangelical sincerity of a Billy Graham.

The strong moral tone of Mr. Benson's approach to his job showed up in his latest reply to new demands for his political scalp.

"I have a responsibility which I take seriously," he said. "As long as God gives me strength I shall continue to do all within my power to help our farmers. * * * I am convinced that the American people desire to see programs based on sound principles in agriculture."

So convincing is Mr. Benson, or at least so apparently sincere, that farm audiences have been known to boo him when he rose to speak, applaud him lustily once he had finished. Through all the criticism, Mr. Benson has never departed his course, though on occasion even he has been forced to give ground to the potent farm bloc. Indeed, one Washington observer, with not much exaggeration, recently remarked that "Benson is the only member of the Eisenhower administration who still talks like he did when he first came to Washington."

THE MORAL VIEW

The key to the Eisenhower-Benson kinship lies not only in the nature of Mr. Benson but in the nature of Mr. Eisenhower. Like his farm Secretary, the President also takes a moral view of his job, and this approach shows up vividly on question of farm policy. Moreover, Mr. Eisenhower more than once has given the quick boot to a subordinate tinged with wrongdoing; but he can become stubbornly loyal to an official he believes to be right even though out of favor with the politicians.

One interesting aspect of the President's farm views also is his apparently broad knowledge, even in technical detail, of what essentially is a complicated subject. Mr. Eisenhower's critics often accuse him of not being well briefed, even in some instances of not particularly caring. He once, for example, referred to "the Federal Reserve Board and all that stuff." At one of his recent press conferences he had difficulty remembering even the name of the credit-managing agency, finally settling for the Federal Board.

But when it comes to farm matters, the President speaks with unusual conviction and apparent knowledge of what he is talking about. The latest example was at Mr. Eisenhower's most recent press conference. To a question about whether he intends to obtain Mr. Benson's resignation, the President not only defended the embattled farm boss but launched into a philosophical discussion of the farm problem itself.

The purpose of all farm programs, he said, is to help the farmer. He noted that many programs have been tried, none of them with complete success. But by and large, he went on, "this administration believes, certainly I believe, that we are going to be better off the more we can free farmers from regulations and the more they can participate in their own activities * * * under the general influence of economic forces that apply to the rest of the economy."

As to Mr. Benson personally, the President characterized him as "a man of acknowledged courage and honesty in his great effort to find proper, reasonable, sensible programs that can be recommended by the Congress."

BADLY MISTAKEN

"Now, I think this," Mr. Eisenhower emphasized, "when we find a man of this dedication, this kind of courage, this kind of intellectual and personal honesty, we should say to ourselves, 'We just don't believe that America has come to the point where it wants to dispense with the services of that kind of person.'" Thus, Mr. Eisenhower reasoned that people who want him to fire Mr. Benson are badly mistaken.

Whether Mr. Benson's job is as secure as the President's sentiments suggest is questionable, at least. The men who want to oust him also are dedicated men—dedicated, that is, to the proposition that Benson must go. In any event, even if Ezra's last remaining friend happens to be President, the campaign to get him goes on unabated.

Senate-Approved Postal Rate and Salary Legislation

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 4, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial which appeared in the Washington Evening Star on Monday, March 3, 1958, concerning the Senate-approved postal rate and salary legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMPROMISE OR ELSE

Tempering initial elation over the Senate's forthright approval of higher postal rates, including a temporary 5-cent rate for first-class mail, is the realization that the postage bill has been tied to a highly controversial postal pay measure. It is true that the administration has urged that postal fees be increased along with postal salaries—but the pay raise proposed by the Senate is far greater than President Eisenhower had suggested. There is serious doubt that the President will accept a postal pay boost double that which he had recommended.

The President and Postmaster General Summerfield justifiably have been concerned over the ever-mounting postal deficit, now climbing toward the billion-dollar mark. That is why they have insisted on higher postage coincident with higher pay. The Senate-approved bill would increase postal revenues more than $700 million a year. But the pay hikes for postal workers and for classified employees voted by the Senate would more than offset the increase in revenues.

Furthermore, the Senate pay plan would discriminate unfairly in favor of postal employees as against classified personnel in other departments of the Government. Whereas 1 million classified workers would receive an increase of about 7.5 percent, postal employees would get an average of 12.5 percent. During the debate in the Senate, administration spokesmen indicated that the President might go along reluctantly with an 8.5 percent raise for both postal and classified employees. They expressed belief, however, that he would not accept any higher raises for either group—and that he strongly believes that no favoritism should be shown either group.

It is clear, therefore, that the pay issue will have to be resolved in conference, if it is resolved at all. The House already had voted for pay increases for postal and classified employees so high that a Presidential veto has been predicted. It should be easier to resolve in conference the differences between postal rates than those arising over pay proposals. The House has approved rate increases substantially the same as those approved by the Senate—except that the Senate wisely has indorsed a 3-year 5-cent charge for first-class mail, as compared with the 4-cent fee proposed by the House. The 5-cent rate would apply only to out-of-town letters. After 3 years a 4-cent fee would be charged for all first-class mail, as the House has recommended. The additional revenue

from the 5-cent rate would be used to improve postal services.

Congress should face the rate and pay problems with a determination to reach a compromise that will not meet with a Presidential veto. The Senate's approval, at long last, of a reasonable postal rate increase provides a supreme opportunity for Congress and the President to deal effectively with the enormous postal deficit. And, simultaneously, the opportunity is at hand to adjust Government pay to a level that will help to stabilize Federal employment and promote governmental efficiency. The chance to achieve these things should not be lost through petty bickering and politics.

Federal Taxes Reduce State and Local Revenue

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. THURMOND. Mr. President, the Index-Journal of Greenwood, S. C., published in its edition of February 24, 1958, a most informative discussion of the relationship between Federal and State taxation written by the able columnist, George E. Sokolsky.

I ask unanimous consent that the article, entitled "Federal Taxes Cut State, Local Revenues," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Greenwood (S. C.) Index-Journal of February 24, 1958]

THESE DAYS

(By George E. Sokolsky)

FEDERAL TAXES CUT STATE, LOCAL REVENUE

One problem that must be solved sooner or later is the relationship betwen Federal and State taxation. The Federal Government takes so large a share, what with income and payroll taxes and excises that State and municipal governments find themselves hamstrung. Local taxers realize that the load is getting too heavy and no politician desires to add the straw that will break the camel's back.

When one realizes, for instance, that in 1957 the Federal Government took out of New York State $15 billion and put back into the State $289 million, it is truly a frightening situation. The reason, for instance, that so many educators want Federal aid for education, which ultimately will mean control of education, is the Federal taxes being so high, the States and municipalities are running short of money for this and all other services.

Way back in 1910, Senator HARRY F. BYRD's father, Richard E. Byrd, speaker of the House of Delegates of Virginia, opposed the income tax and the State of Virginia did not ratify the 16th amendment. Speaker Byrd, with rare prophetic vision, foresaw what this tax would do and what he then said has come to happen. He said:

"It (the 16th amendment) means that the State must give up a legitimate and long-established source of revenue and yield it to the Federal Government.

"It means that the State actually invites the Federal Government to invade its territory, to oust its jurisdiction, and to establish Federal dominion within the innermost citadel of reserved rights of the Commonwealth.

"This amendment will do what even the 14th and 15th amendments did not do—it will extend the Federal power so as to reach the citizen in the ordinary business of life. A hand from Washington will be stretched out and placed upon every man's business; the eye of a Federal inspector will be in every man's countinghouse.

"The law will of necessity have inquisitorial features, it will provide penalties. It will create a complicated machinery.

"Under it businessmen will be hauled into courts distant from their homes.

"Heavy fines imposed by distant and unfamiliar tribunals will constantly menace the taxpayer.

"An army of Federal inspectors, spies, and detectives will descend upon the State. They will compel men of business to show their books and disclose the secrets of their affairs. They will dictate forms of bookkeeping. They will require statements and affidavits. On the one hand the inspector can blackmail the taxpayer and on the other, he can profit by selling his secret to his competitor.

"When the Federal Government gets a strangle hold on the individual businessman, State lines will exist nowhere but on the maps. Its agents will everywhere supervise the commercial life of the States. * * * I am not willing by any voluntary act to give up revenue which the State of Virginia herself needs, nor to surrender that measure of States rights."

To this, one only needs to add a few sentences of the Declaration of Independence, written by another and earlier Virginian, Thomas Jefferson:

"He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and to eat out their substance."

It is surprising that the meeting of Governors each year does not forcibly demand that Congress call a convention of States to deal with this problem before it is too late. For if we reach the point of no return, State and municipal governments will not be able to tax at all and all our local institutions will be controlled by swarms of wasteful and bossy officeholders, out of Washington, who will rule over us as though they were our masters, just as we saw them in the horrible OPA days when we were told what to do with things we bought and paid for.

We shall cry out more and more loudly against this plague of double taxation as the recession continues, for we must ask ourselves where the money is to come from. Not only are Federal taxes high but they are insolently collected, and as the Internal Revenue Service grows more honest and efficient, we realize what a monster we have created against ourselves.

Pay Television

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial relating to the controversial issue of pay television, entitled "Let the Public Decide," published in the Washington Evening Star of yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET THE PUBLIC DECIDE

The question of free TV versus fee TV is one for the televiewing public to decide. The Federal Communications Commission was justified, therefore, in planning a 3-year test of television-for-pay. But a request by the House Interstate Commerce Committee for a delay until Congress specifically approves such an experiment has resulted in postponement of the test at least until after Congress adjourns. Actually, the FCC has plenty of authority now to sponsor the test. The congressional request for delay, therefore, was out of order. The FCC's decision to comply with the request is understandable, however, in the light of current investigations of the agency's operations.

The House group acted after spokesmen for the free-TV industry strongly opposed the proposed experiment. In fact, several of them asked for an outright ban on pay TV, largely on the ground that the fee system would encroach on the right of the public to free television programs. But the FCC has made it plain that it is not weighing one system against the other with a view to substituting one for the other. Its attitude is the sensible one that if the public demonstrates in the test that it wants the opportunity to choose, on a particular day, between competing programs offered by fee and free TV, it should have that opportunity. And the fact that there would be competition for the public's favor in the programing of entertainment, public events and other attractions should tend to assure the TV fans of higher quality programs than have been offered at times in the past.

Truth About the Red Moon

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Apendix of the RECORD an article entitled "White Slaves Plant the Red Moon." The article came to my attention following its publication in a newspaper in Germany. I had the article translated by the Library of Congress.

I believe this article will be of interest to a great many persons.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[Source: German weekly Welt Am Sonnabend (World on the Weekend), October 26, 1957]

WHITE SLAVES PLANT THE RED MOON

HERE IS THE TRUTH ABOUT OUR SCIENTISTS

(Reported for Welt Am Sonnabend by K. in der Beek)

A weak beep, beep, heard by all radio stations of the world, has revolutionized the face of our world overnight. Signals sent out by the Russian moon baby—the satellite sputnik have torn the curtain between the earth and the space and have shown to shocked humanity the way into the universe. How was this sensational achievement of the Russians possible?

President Eisenhower was forced to declare that German scientists have essentially helped the Russians in the construction of the earth satellite. The Moscow Sender

promptly rejected this statement. What is the truth? In between.

Among the 6,000 German scientists and engineers who were deported to the Russian research centers in 1946, there was a man called Adalbert Bärwolf. In his book Prayer is the Only Help (Muth Publishers, Düsseldorf) he clearly answers the question to what extent German scientists had participated in the construction of the sputnik.

Immediately after the collapse, the Red army succeeded in establishing the names of all those scientists who used to work in the German Rocket Research Center at Peenemünde. The Americans did the same in their zone of occupation of Germany. But while the Americans hunted for big names and tried to win for themselves some famous individual, the Russians would go about the matter systematically. They would spread their dragnet over every man who used to work in rocket research: scientists, engineers, technicians. The Raabe Institute near Bleicherode played a special role. It is there that the rocket constructor Gröttrup rallied the specialists from Peenemünde. At first it did not matter if they were the tops or the underlings. The selection would be made later on, some place in Soviet Russia.

On October 22, 1946, at 4 a. m., the big haul started. Open trucks loaded with furniture and household articles, among them men, women, and children, moved fast on East Berlin's streets. In just one resettlement action 6,000 German specialists were brought to Soviet Russia. Trains with both passenger and freight cars were waiting at the East Berlin's railroad station.

In the darkness of the October night flashlights glimmered; Red army soldiers surrounded the place with a circle, each man standing close to the other, with bayonets on their rifles. When the transport was reloaded into trains with Russian gage tracks, 92 trains were counted.

Six thousand German specialists, 20,000 deported family members. The dragnets were without loopholes. Then the booty of brains was distributed: some were brought to Monino, others to Mitishi, Kimri, Sagorsk, Podberesje, Sovrino, Obirolovka, Ustashkov. The most valuable catch of the haul: The V-2 team Dr. Eitzenberger and Dr. Buschbeck, the rocket specialist Dr. Schulz.

The German scientists and researchers lived as white slaves, 3,000 kilometers away from their homeland, in a strange, mysterious, obscure country. Little devilish tricks made their lives annoying and brutal.

After a few months the Russians separated the brains from the puppets (tools). Now the reward was measured with achievements; premiums of all kinds, tricky and with a definite aim, were given. These premium regulations excited wild envy and ill will among the Germans.

Suddenly, a man in a black coat would appear: "Come over to the chief's office." There questions are put: "You did it in such and such a way, why not like this? Do you want to hide something?"

No piece of paper is allowed to lie around in the office: this is sabotage. Early in the morning paper is distributed, every sheet numbered. At lunch break everything has to be surrendered, drawings go to department 1—the secret deposit room. Then they are distributed again and so it goes, 2 or 3 times a day; in addition, the speed of work is hectic and hard pressed.

All of a sudden the work is interrupted. All drawings and designs are sent to Moscow. There Russian teams work toward the same objective.

Now they continue the research started by the Germans on the basis of the material received. This is the basis of Moscow's allegation that the sputnik is a product of the Soviet scientific genius. Naturally, the Germans are not told where their work went. but they learn about it by accident or because of limited experience of the Russians in this field. Suddenly an inquiry would come back because the Russian team in Moscow could not understand one thing or another. And now the Germans know what is wrong with the Russians:

Whenever a bold idea or a free handling of a problem by the Germans break the frames of the Russian routine scheme, Russian researchers become unsure.

In America Wernher von Braun has risen to fame. In this reach for the third dimension, the German working team under Dr. Schulz is (von Braun's) counterpart in Russia.

Dr. Schulz, Albring, and Gröttrup has developed the Russian rocket which can easily cover the intercontinental distance of 3,000 kilometers.

The Braun rocket and Schultz rocket are based on the same principles: their basic concept is a liquid-fuel rocket. Braun's projectiles are full of complex and splendid solution. On the contrary, Schultz' way of working is simple, nearly primitive. His genial idea aims at reducing the material used. He lets his rocket rise slowly, so slowly that the high speed is not reached until the air—30,000 meters high above the ground—becomes so thin that the air resistance does not present a problem any more. Schulz launches his rocket directly from his assembly bench in the underground plant. He has increased the fuel capacity by nearly 100 percent; he created an easily separable connection between the warhead, which can fly independently, and the fuel container which is thrown away by the warhead when the height of 30,000 meters is reached.

This is the revolutionary idea which made the sputnik circle the earth. Sputnik is nothing else but a warhead which, by proper setting of its instruments, can be brought to the place previously calculated according to the law of ballistics.

The rocket which shot sputnik into space is only a technical development of Dr. Schulz' genial idea and of his conical rocket.

Bärwolf's white slaves have both planted the Red moon, and made its start possible.

After the Germans had worked in Russia for 4 years, the Soviets knew enough. Their scientists had taken off the cream by directing the genius of the German researchers into their own workrooms. In 1952 the works were finally over. The Germans were not needed any more. In the middle of Russia an Iron Curtain fell down around their lives. Moscow put the brains of the German scientists under quarantine. For 2 years they stayed in their camp villages; 2 years in an agony of waiting. Two years without any work—until the Russians knew that the living contact of the scientists with the results of their work had faded.

Then, in 1954, the time arrived. Until a few hours before the crucial moment their return was kept secret from the Germans. Then, out of the 6,000 specialists who were taken to the East as white slaves in 1946, 5,959 were sent back home. Only 50 remained in Russia. Whether they returned to Germany or stayed on in Russia, whatever their achievements and their life's work—a veil of Russian silence fell over their fates.

The Harried Boss

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Harried Boss," which appeared in the Denver Post of January 9, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HARRIED BOSS

Referring to the article in the Denver Post, issue of December 29, informing the people that a new bill is to be introduced in the January session of the Colorado Legislature by State Representative Ben Klein, Democrat, of Denver, to raise salaries of State officials, judges, and other employees of the State government. I criticize his action.

The people of the State of Colorado are overburdened with taxes at the present time. The greater number of them are having to skimp to the bone to provide themselves and their families with food, clothing, pay their rent, and other necessities they must have in order to live with any degree of comfort and well-being.

Today, we find that legislatures and city governments all over the United States have no compassion nor consideration for the taxpayers of our Nation, the forgotten people, whose money is taken from them with the greatest of ease in order that officials of our governments can live in luxury and let the taxpayers barely exist.

What to do about it is a question that the taxpayers will have to look into, if justice is to be done them.

ALBERT D. NELSON.

DENVER.

Fake Tax Cut

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely editorial which appeared in the Washington Daily News, February 8, 1958, entitled "Fake Tax Cut."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAKE TAX CUT

A tax cut, if you believe everything you hear, has much in common with the old-time patent medicines which would grow hair, remove corns or gravy stains, cure rheumatism, catarrh, cancer, dandruff, and consumption.

A tax cut is similarly advocated by a lot of quack economists as a remedy for a variety of evils to which our economic flesh is heir. Last year it was good for inflation. This year it will help business.

Taxes should be as low as possible—lower than they are now—on the theory that the man or woman who earns money should have the right to keep some of it and spend it as he pleases.

But it isn't taxes primarily that make business good or bad. It's the way taxes are spent or, more accurately, what the Government uses for money.

Most current tax proposals, including those of business leaders who should know better, blandly ignore the spending angle. Few suggest seriously that Government expenses be cut so that taxes can be cut. On the other hand practically everyone in authority wants to spend more.

Taking in less and spending more is a hard trick for the private citizen, but it isn't so hard for the Government, which controls the money supply.

The Government can just print the money and, no matter by what fancy name you call it, that's what deficit financing amounts to.

This printing-press money is, in effect, counterfeit. It dilutes and degrades the supply of honest dollars, making each one of them worth proportionately less. If a dollar bought 6 loves of bread before, under this printing-press inflation it buys 5, or 3, or 1. The housewife trying to stretch a paycheck over the family bills knows how this works.

It is bitterly ironical—or maybe just a characteristic con-game principle—that most of these funny-money panaceas have as their principal advocates people who are trying, or think they're trying, or say they're trying, to help the underprivileged—those with low incomes.

Low-income families are the first and worst victims of inflation. Faced with rising prices, they simply have to go without their normal food and shelter.

And deficit financing doesn't cut taxes, anyhow. It merely postpones them, and not for long. The sky-high taxes of today result from past deficit financing which multiplied the costs of government, along with everything else.

A tax cut with a balanced budget should help business. A tax cut which started the Government printing more money might give business a temporary flush and it might not.

It certainly would further dilute the dollar, causing further inflation. It would take the immediate cost of this unsound pump priming out of the hides of the poor people whom these big-talking economists think they are—or say they are—trying to help.

Federal Troops at Little Rock

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. THURMOND. Mr. President, the fact that the administration made a shocking mistake in sending Federal troops into Little Rock last September is becoming more widely recognized every week. Not only was this display of force dangerous as an assault on constitutional government; it was also a classic example of administrative ineptitude.

Some of the legal aspects of this heartrending situation are discussed by the able columnist, Holmes Alexander, in an article entitled "President's Civil-Rights Allies Wavering," and published in the News and Courier of Charleston, S. C., on February 28, 1958.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT'S CIVIL-RIGHTS ALLIES WAVERING
(By Holmes Alexander)

WASHINGTON.—Is there such a thing as Federal common law? The confirmation proceedings of W. Wilson White, a Philadelphia lawyer, to be assistant attorney general for civil rights may take an interesting turn on this seemingly obtuse point of constitutional law.

It would be an overstatement to say that Mr. White, who did the research work on President Eisenhower's Little Rock proclamation, may be denied confirmation. But he seems in a fair way toward being denied a unanimous decision, or even a decision that connotes a Senate vote of confidence in the President of the United States.

Southern Democrats will certainly continue to question, if not forthrightly oppose, this nomination. Conceivably, they may be joined by the same western Democrats who last year refused to accept the administration's suspension of jury trial in the civil-rights bill. And it is even more possible, if this issue catches fire, that some of the western Republicans who supported the President on civil rights may leave him on this one. Nothing fails faster than a losing cause. The Little Rock episode is now a fiasco of backfire and ineptitude. Senators may be willing to scuttle the whole works which, from first to last, have been botched at the White House and the Justice Department.

Mr. White personally has not made anybody angry with him. He was doing a routine job for former Atty. Gen. Herbert Brownell in digging up law under which some 2,500 of the toughest fighting troops in the country plus 10,500 National Guard men were sent to quell a civil disturbance in which a mere forty-odd arrests were eventually made. This was swatting a fly with a sledge hammer, but more than that it was taking action under the bar sinister called common law and not by either the Constitution or the written statutes. There was this dialog in the Senate Judiciary Committee where Mr. White was being heard:

Senator ERVIN. "I was asking you whether there was to your knowledge any statute, any Federal statute, which undertakes to give the President specific and expressed authority to use the armed forces of the Nation or the National Guard of any State to enforce a court order?"

Mr. WHITE. "Not to enforce an order, Senator, but to prevent the breakdown of law and order when an order is threatened."

Senator ERVIN. "Now, under the law generally * * * it is the duty of the United States marshal to enforce court orders."

Mr. WHITE. "Well, the duties generally of the marshal, of course, do that."

Senator ERVIN. "Now, was any effort ever made in this Little Rock situation to enforce the order * * * through the instrumentality of the United States Marshal?"

Mr. WHITE. "To answer it specifically, I would say 'no'."

White went on to argue, in effect, that without benefit of constitutional authority or statutory law, the President as commander in chief can do almost anything to preserve law and order. Senator ERVIN contended that even while wearing this military hat, the President is bound by his oath of office. The President cannot skip over such steps as: (a) Calling upon disorderly mobs to disperse; (b) requiring the United States marshal to perform his duty; (c) waiting for the United States marshal to deputize able-bodied civilians to help him at the duty; or (d) following the lawful procedures in any action.

ERVIN said: "While nobody can deny the President the right to act as commander in chief in these cases, Congress has undoubtedly the authority to say how he shall act as commander in chief."

The issue is the same one which tripped up President Truman a decade ago when he acted from temper, as it is supposed that Mr. Eisenhower did, and tried to seize the steel mills. In Mr. Truman's case there was a prompt appeal, and the Supreme Court ruled against the President in language that clearly applies today:

"The President's power, if any, to issue the (seizure) order must stem either from an act of Congress or from the Constitution itself * * * the Constitution is neither silent nor equivocal about who shall make laws which the President is to execute. The first section of the first article says that 'All legislative powers herein granted shall be vested in a Congress of the United States * * *'."

By common law we usually mean an unlawful practice which has persisted over a period of time and is socially acceptable by sufferance, not by approval. That's no way to run a country.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the first of a series of eight articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY
PART I: INDIANS AND EARLY HISTORY
(By KENNETH A. ROBERTS, Member of Congress)

Indians, first to reap benefits in the Coosa-Alabama River basin, dominated the virgin valley for nearly three centuries.

Their role in the area's history dates back to an ancient tribal town named "Coosa," located on the west bank of the river in what is now Talladega County.

It was at Coosa that Hernando DeSoto, the Spanish explorer, rested his men and horses during his ramblings in the Coosa River Valley. He had entered the valley in 1540 by crossing the river in the present St. Clair County.

Traveling south, DeSoto later fought, near the Alabama River east of Selma, what has been called the bloodiest battle ever waged between whites and Indians on the North American continent. But it was far from the last such fight.

In the 18th century, Bienville, French former governor of Louisiana colony, found his way into the Coosa Valley. In need of a post among the Creek Indians in warring with the French, Bienville in 1714 built Fort Toulouse.

From this fort at the junction of the Coosa and Tallapoosa Rivers, Bienville was to conduct an extensive missionary campaign among the Indians. The effort would foreshadow the first permanent white settlement of a large Alabama area.

More white men were drawn to the Coosa basin. Andrew Jackson's warring with the Creeks during the War of 1812 brought him deep into the valley.

He built Fort Strother on the Coosa in the land which would become St. Clair County; he used the river to move his flatboats southward, ultimately to fight the Battle of Horseshoe Bend.

It was the beginning of the end of the Indians' bountiful life in the woods and valleys of the Coosa basin. When Jackson vanquished the Creeks, the Coosa River became the line beyond which the Indians could not wander.

In 1818, the last Indian fight west of the river was fought because a handful of Creeks,

refusing to obey the treaty, were roaming along the wrong side of the river and were killing the new white settlers.

Shortly thereafter, in 1819, Alabama became a part of the Union. First capital of the new state was Cahaba, near the Alabama River in Dallas County.

From DeSoto's entry into the Coosa Valley to Alabama's admission to the Union had been an eventful 279 years. The mighty Coosa-Alabama waterway and its first inhabitants had been a significant part of it all.

Next: Steamboats and Freight.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the second of a series of eight articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY
PART II: STEAMBOATS AND FREIGHT
(By KENNETH A. ROBERTS, Member of Congress)

Paddle wheels churned the placid waters of the Coosa-Alabama River in the 19th century as steamboats heralded the arrival of the basin's most colorful era.

The steamboat *Harriett* in the fall of 1821 ushered in the era. Numerous boats followed.

The *Coosa* steamboat ran between Greensport, in Calhoun County, and Rome, Ga. Later, on the Alabama, a 155-foot stern wheel snag boat, the *Wm. J. Twining*, was put into a service by the Government to remove snags and keep the waterway clear.

Economic and social development which had clung to the meanderings of the river and its tributaries at the turn of the century now took on new increase under the influence of the paddle wheelers.

Even before the War Between the States, industrial products were transported. Iron produced in Calhoun County, for instance, was flatboated to market in Wetumpka.

During the war, the riverway helped move the materials of destruction and even the battles themselves ultimately reached the Coosa-Alabama's banks.

An intriguing incident was when Cummins M. Lay (father of the organizer of Alabama Power Co.) steered the steamboat *Laura Moore* from Rome to Mobile to prevent Union forces from taking it. The harrowing trip was the first and only by a steamboat through the rapids of the Coosa.

Later, in the 1870's the Government made improvements on the river.

Saffold Berney, a chronologer of the day, reported this result on the Alabama: "The work done has resulted in clearing the channel of dangerous snags and overhanging timber; in improvement of the worst bars. * * * Boats run by night as well as by day, at all stages of water."

In 1890, an estimated $10 million in freight was carried on the Alabama River. Three large steamboats were making regular weekly round trips between Montgomery and Mobile.

On the Coosa, water travel was less ambitious. From Greensport to Rome, steamboats navigated at all seasons; but south to Wetumpka, the river's 142 miles was a tortuous route, with varying pools, high shoals, and jagged rocks.

If these obstacles could be removed, leaders reasoned, the river could be navigable from Rome to Mobile. Interest in such a plan sparked creation of the Coosa-Alabama Rivers Improvement Association by William Patrick Lay and other valley residents.

The Government in the eighties built a series of low-lift locks and dams on the upper Coosa, but they were determined impractical and were abandoned. Upland silt settled in the stream beds, making them too shallow for large boats, and railroads began assuming most of the responsibility for hauling freight.

A hopeful era was dying and a blossoming dream had received its first disappointment.

Next: Strength of a Dream.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the third of a series of eight articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY
PART III: STRENGTH OF A DREAM
(By KENNETH A. ROBERTS, Member of Congress)

The sanguine dream of a fully developed Coosa-Alabama River has proved its durability.

It has withstood depression, wars, and three-quarters of a century of delays, setbacks, and near failures.

But the dream persists. It is shared by many groups—Alabama Power Co., the United States Government, the Coosa-Alabama Rivers Improvement Association, chambers of commerce, city and county governments—and by many men, from Congressmen to businessmen.

The dream gained sustenance when, in 1870, the United States Army Corps of Engineers began investigating the practicability of improving the Coosa and the Alabama Rivers.

But the first Federal project, authorized in this era of bleakness for the South, fell short of expectations. A series of low-lift navigation locks and dams, built on the upper Coosa, were found to be impractical and were abandoned.

Alabama Power Co. was an early part of the Coosa dream. Organized in 1906 to facilitate development of the river, the company had to overcome Government refusal to make survey material available before it finally obtained the right to build a dam on the Coosa. In 1914, following a long struggle to get money for the project, Lay Dam (named for Alabama Power's organizer, William Patrick Lay) was completed north of Clanton. Plans were already underway to build more dams.

But the plans ran aground in 1912 when President Taft denied Alabama Power's application to erect a plant south of Clanton. Taft said such applications should await creation of a Federal agency to act upon such matters and he contended that enabling legislation should let the Government tax waterpower.

A fight to maintain State rights ensued and it was 1921 before the power company got its second license. The waterpower bill of 1920 had not included the Federal taxation idea and the way was paved for Mitchell Dam.

This dam completed, the company began more constructions. By 1930, it had a third dam on the Coosa (Jordan, above Wetumpka) and three other dams on the Tallapoosa, which merges with the Coosa to form the Alabama River.

Meanwhile, the Corps of Engineers made its surveys. Then, in 1934, it entered a report calling for a system of locks and dams on the Alabama River and on the Coosa above the existing dams; and for locks in the three existing dams.

A 9-foot-deep channel for navigation upstream to Rome, 650 miles above Mobile, and for additional power, was recommended.

The fiber of the dream seemed more stable. But the road to fulfillment lay ahead, rough and shaky, in the indefinite future.

Next: Boost for the Coosa.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the fourth in a series of articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY
PART IV: BOOST FOR THE COOSA
(By KENNETH A. ROBERTS, Member of Congress)

Congressional action of a summer day in 1954 assured activity which can turn the Coosa-Alabama River Basin into a second Ruhr Valley.

The historic event evoked comment from the Secretary of the Interior and from the President. In Alabama, it caused sheer jubilation.

Here is the background for the event:

In 1941, the United States Corps of Engineers, which had been studying the Coosa-Alabama for a number of years, submitted a report calling for comprehensive development of the basin's water resources in accordance with plans of the Chief of Engineers.

Congress approved the program in the River and Harbor Act of 1945, thus authorizing development of the river system for navigation, flood control, power, and other purposes. The work would be done by the Federal Government.

Then, Alabama Power Co.—which had built three dams on the Coosa and had long shown interest in the river's growth—reentered the picture. Now, the company said, it was ready to further develop the power potentialities of the river.

The company proposed to build a series of new dams, if the Federal Government would relinquish its plans to do something similar. Federal officials agreed.

In June of 1954, the 83d Congress cleared the way. It suspended operation of the Rivers and Harbors Act so Alabama Power, and not the Federal Government, could build the dams.

Secretary of the Interior Douglas McKay hailed the action as an endorsement of the of the partnership principle. President Eisenhower, in his 1955 state of the Union speech, called the Coosa River development as example of Federal Government working with private industry to coordinate developments.

Alabama newspapers, Congressmen, and civic leaders were unanimously joyous. Not only would the river system be improved as early as practical, but the work would be done by an Alabama concern.

Alabama Power applied for license to build four new dams—near Centre, in Cherokee County; near Ohatchee, Calhoun County; at Howell Mills Shoals, south of Pell City; and near Wetumpka—and to rebuild and heighten the Lay Dam north of Clanton.

Last fall, Federal Power Commission gave final approval to the multi-million dollar project and Alabama Power said it will begin work shortly on the Weiss Dam near Centre.

Next: Navigation the Goal.

Businesslike Reform

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. ROGERS of Florida. Mr. Speaker, I would like to call to the attention of the House an editorial from the Evening Star, March 4, 1958, Washington, D. C.:

BUSINESSLIKE REFORM

In his budget message last January, President Eisenhower told Congress that legislation now pending "to place Government appropriation requests on an accrued expenditure basis should be enacted, in accordance with the recommendations of the Hoover Commission. This is a businesslike approach." The President was referring in that instance to budget reform legislation that had bipartisan sponsorship and won unanimous Senate approval in the first session of the 85th Congress. Companion legislation, differing only slightly, is scheduled for House consideration this week.

In brief, the legislation would restore to Congress a "power of the purse" which historically is considered one of its proper responsibilities. It would do this by placing appropriations on a year-to-year basis, although not limiting the existing power of legislative committees and of Congress to authorize long-term programs or projects. Federal agencies would be required, however, to submit annual progress reports to justify additional fund requests. Under current budgetary procedures, Congress has in many cases appropriated total funds for Federal projects and has exercised no further control or review over the timing or the effectiveness of actual spending. One of the results has been the carryover of huge unexpended balances which may be disbursed without regard to sound budgetary considerations in any year. Some of these carryovers remain available for years, through changes in administrations and in both domestic and world conditions. Recent attempts at governmental economy through reducing appropriations were nullified by expenditures from carryover appropriations.

Opposition to the pending legislation has come principally from the House Appropriations Committee and from agencies having a large reservoir of carryover funds. Significantly, however, in addition to Senate approval and indorsement of the President, the proposal has the unanimous backing of the House Committee on Government Operations and indorsement of the Director of the Budget and of the Controller General. The House bill specifically proposes a trial period until July 1, 1961. The legislation should be approved.

Statement Opposing Financial Institutions Act of 1957

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF MILTON O. SHAW, SAVINGS AND LOAN COMMISSIONER OF CALIFORNIA, BEFORE THE BANKING AND CURRENCY COMMITTEE OF THE HOUSE OF REPRESENTATIVES, WASHINGTON, D. C., FEBRUARY 4, 1958

My purpose in appearing before this committee is to oppose certain sections of the Financial Institutions Act of 1957 which I believe invade the rights of the States, and to oppose certain recent proposals of the Federal Home Loan Bank Board which, it would appear, would completely take over the rights of the States as regards savings and loan associations.

My name is Milton O. Shaw. My residence is Los Angeles, Calif. I am now and have been for the past 4 years savings and loan commissioner of the State of California. I have served in the division of savings and loan of the State of California for more than 27 years, having successively held the positions of chief examiner, assistant commissioner, acting commissioner, and commissioner. I am a graduate of Ohio State University in business administration. I have been a certified public accountant for more than 30 years. During the year 1957 I was president of the National Association of State Savings and Loan Supervisors and am now a member of the executive committee of that organization. Also during the year 1957 I was appointed to and served as a member of the Federal Savings and Loan Advisory Council.

CALIFORNIA HAS THE MOST

California has a greater volume of savings and loan association business than any other State in the United States. The total assets of State associations in California are now approximately $3,300,000,000. California is the first State in the United States to have the assets of its State savings and loan associations exceed the $3 billion mark. In addition to this huge total for State associations in California, Federal associations now operating in the State have total assets of $2,700,000,000.

Nearly all of the California savings and loan associations have their accounts insured up to ten thousand dollars by the Federal Savings and Loan Insurance Corporation. I would like to emphasize to you that the Federal Savings and Loan Insurance Corporation has not been called upon to make good a single dollar of loss as a result of insuring any State association in California since the Federal Savings and Loan Insurance Corporation was organized in 1934.

I would also like to point out that the California laws governing savings and loan associations are quite comprehensive and in many respects are more restrictive and provide greater safeguards than do the laws govering Federal savings and loan associations.

In this presentation first I would like to cover those items now in the Financial Institutions Act of 1957, S. 1457, which seriously invade the rights of the States.

1. Title VI, section 404 (c) authorizes the Federal Savings and Loan Insurance Corporation "to impose such conditions to insurance, which conditions may be conditions precedent or conditions subsequent, as it may deem necessary." This provision would give the Insurance Corporation unlimited authority. Any provision authorizing conditions precedent should define the scope of any such conditions and should require that such conditions be applied uniformly to all associations. Unlimited authorization for conditions subsequent should be eliminated. All insured associations should be governed by the same laws and regulations and special conditions which could be applicable to particular associations and could be without limit as to duration should not be sanctioned.

The last sentence of section 404 (c) provides "any such conditions heretofore imposed are hereby validated." This sentence would, of course, have the effect of validating ex post facto all agreements which the Insurance Corporation has required of the various associations as a condition for the granting of insurance. By this provision you gentlemen are being asked to validate agreements without knowing the nature of the agreements you are being asked to validate.

Let me tell you about one of these conditions which seriously affects State associations. For a period of years the Insurance Corporation has required new State associations applying for insurance to agree that such new association will transfer to reserves 25 percent of its income before paying the investing public interest on its money. Now let's analyze this provision. The prevailing rate of interest paid to savings account holders in most California areas is currently 4 percent per year. A newly chartered association cannot hope to obtain sufficient money to operate profitably without paying a rate equal to that paid by all others. In order to have a net profit sufficient to pay 4 percent and transfer this 25 percent to reserves, the association must make a net return on its loans of at least 7.3 percent. So that you may understand, to the 4 percent paid on savings must be added the cost of doing business, which for a new association is 2 percent plus approximately 1.3 percent in order to meet the 25 percent of earnings transfer requirement. Of course, this assumes that the new association will have all of its money loaned out, which it should not do. In such a situation, a new association cannot have the protection of any FHA insured or servicemen's guaranteed loans in its portfolio, because of their low rates. It must seek high-rate, high-risk loans. This committee, I know, has been vitally concerned about the high cost of home financing. You are being asked by this very provision either to put new State associations out of business or that the cost of financing homes be tremendously increased. This is only one of many conditions imposed on new associations by the Insurance Corporation. In fact, new conditions not heretofore used are always being devised by the Insurance Corporation, and no applicant for insurance can know in advance what conditions it will be required to meet. I am advised by counsel that in imposing these conditions the Federal Savings and Loan Insurance Corporation is acting totally beyond its statutory authority. Certainly if these agreements which have been extracted from the new associations asking for insurance of accounts are valid, there is no need to ask the Congress at this point to validate them.

2. Title VI, paragraph 404 (e) (p. 221 of the bill) gives the Insurance Corporation unlimited authority over mergers and transfers. Under this proposal approval of said Corporation would be required should a State-insured association sell even one loan to another State-insured association. Such a transfer could not affect the insurance risk and the provision is unnecessary. No loss to the insurance corporation is believed to

have resulted from existing laws and procedures regarding mergers and transfers.

It seems incontrovertible to me that the interest of the Insurance Corporation should be limited to the protection of its insurance risk. I believe that as far as State chartered associations are concerned any requirement of approval by the Insurance Corporation of mergers and transfers would be an invasion into matters which should be determined by State law. In any event, any regulation or law on these subjects should be concerned solely with the safety of the continuing or acquiring institution as tested by the adequacy of its reserves, and let me point out a standard requirement applicable to mergers and transfers in California. No mergers or transfers are approved unless the reserves of the acquiring association equal or exceed 9 percent of total savings accounts after the transaction is effected.

3. Section 403 (c) (6) of the bill gives the Insurance Corporation the right "To adopt and amend bylaws and to adopt, amend, and require the observance of such rules, regulations, and orders as may from time to time be deemed necessary for carrying out the provisions or purposes of this title or for the protection of its insurance risk." This new provision is, in my opinion, too broad and delegates to the Insurance Corporation powers and rights which should be reserved to the Congress. The law itself should limit the subjects upon which rules and regulations may, from time to time, be issued and not leave such broad powers in the hands of a governmental corporation which, as you know, is now an independent agency and responsible directly to Congress. Under such a broad authorization, rules, regulations and orders could be promulgated which would adversely affect only State-chartered savings and loan association. A blank check such as this should not be signed by Congress.

Let me now proceed to the new and startling recent proposals of the Federal Home Loan Bank Board, which, if enacted, would take away most of the rights of the States regarding savings and loan associations.

1. The Home Loan Bank Board requests an amendment to subsection (d) of section 4 of title IV of the Federal Home Loan Bank Act which would add a new provision giving the Board authority to regulate the sales plans and practices and the advertising of uninsured members of the district Federal home loan banks. It has never been my understanding that the district Federal home loan banks are in any way concerned with supervising or regulating the member institutions. These banks are supposed to do a banking business for members. In ordinary practice the bank will establish a line of credit for a member institution and make the loans or advances to that member upon submission of adequate collateral. The Board cites as a need for this authority the practice of giveaways for opening or increasing savings accounts. It is difficult to understand what effect the use or nonuse of giveaways by an association would have on the collateral which is submitted to the banks as security for advances. I submit that this is merely a reaching out for power by the Board and the only justification is a desire on the part of the Board to control the uninsured State chartered bank members.

Let me now proceed to the Board's proposal to add a new subsection (k) to section 403 of title VI dealing with the capitalization of a State-chartered mutual-type institution. This, in effect, is an attempt by the Board to control the form of corporations within the various States. I would like to point out that the capitalization of a State-chartered mutual institution includes the addition of considerable capital, always not less than 2 percent of savings accounts, and that this additional capital which goes into the association is permanent, is nonwithdrawable and must remain with the association as a guaranty that no savings account holder will ever have any loss on his account. Thus a considerable additional protection is provided not only to the Insurance Corporation but to the savings account holder. Therefore, not only is the insurance risk not increased, it is materially lessened, by the introduction of this new capital. The loose statements of the Board on this subject are that the reason for this proposal is the problem of assuring adequate protection to the interests of the mutual shareholders. As a matter of fact, by this proposal the Board is seeking to prevent the mutual shareholder from having additional protection. This proposal approaches this subject in a backhanded manner and provides that no State-chartered association may issue any security not having the same characteristics as a security of such institution previously issued and currently outstanding. I submit for the committee's consideration that during the many years I have been in the savings and loan division there have been numerous capitalizations of mutual-type associations. There has never been any loss to the Insurance Corporation as a result of the capitalization of any such association. The reserves of the mutual institution continue for the life of the association in the same capacity for which they were created, and in every case the guaranty or permanent stock has acted as an additional protection to both the Insurance Corporation and the savings account holder. There has not been one valid reason given that would justify this proposal and I ask that it be refused by this committee.

3. The Board has also asked that a new provision be added to section 404, which would require the approval of the Insurance Corporation for the establishment of a branch by any State-chartered insured savings and loan association. In this proposal we have another serious attempt to impair the jurisdiction of the State. So far as I have been able to ascertain, no claim has ever been made by the Insurance Corporation that the licensing by the States of branches has ever jeopardized the insurance risk. In fact, there are many States which do not permit branches at all, and in other States the approval of branches is severely limited by law.

As far as California is concerned, if we have any Federal law limiting branches it should be one to limit branches of Federal associations. In California we have adopted standards which must be met by all associations seeking branches, and the requirements of law are exacting. An applicant for a branch in California must file a formal application setting forth the facts which will support the legal requirements, which include a showing that the area is not now adequately served; that the association's financial program is sound; that it would be in the interest of the association to have the branch and that the public convenience and advantage would be promoted. Also a public hearing must be held at which any person has a right to appear and orally, or in writing, show cause why the branch application should not be approved. Briefly, I would like to enumerate the standards that the division of savings and loan enforces in California. We require that there must be 25,000 population per savings and loan office; an association must have more than 7 percent of reserves and capital to savings accounts, and the association must have assets of at least $3½ million ($5 million for the larger cities), in order to qualify for 1 branch.

In the Los Angeles metropolitan area I have been able to get the Federal Home Loan Bank Board to agree to substantially all of these standards. In other parts of the State of California the Federal authorities have no standards for the approval of branches and I can cite numerous examples of Federal associations being approved where a State association cannot qualify, and in fact a number of Federal branches have been approved in identical areas in which, within a few months prior thereto, a branch of a State association was denied by me because it failed to meet the standards.

4. Now with your permission I would like to direct your attention to the Board's proposed amendment to section 407 which would give the Board power to issue an order of removal against any director or officer of a State chartered savings and loan association. Under this proposal it becomes a Federal criminal offense if after the issuance of such order of removal such director or officer participates in any manner in the management of the State chartered association. Hearing and the limited judicial review provided would coming afterward. This preemptory manner of removing officers and directors of State chartered associations is not given to the State officials of the State of California. Therefore this would not be merely a transfer of power from State authorities to the insurance corporation but it would be a transfer of the powers of shareholders and management of these associations themselves to the insurance corporation. In addition to other reasons, this proposal provides that directors and officers may be removed for engaging in unsafe and unsound practices. Neither the law nor the Board has ever defined what constitutes unsafe and unsound practices. It would be impossible for the management of an association to know in advance what practices might be termed unsafe and unsound by the Board.

Let me state right here that so far as California is concerned we in the division of savings and loan are more frequently in touch with the management of associations and we are in a much better position to know whether the affairs of the associations are being conducted properly than are members of the Federal Home Loan Bank Board in Washington. We are perfectly capable of acting in cases where officers and directors violate their trust and I submit that this is another case of reaching out for power over State associations. This proposal should be rejected.

Finally I would like to suggest that the provisions already contained in the bill as well as the various new proposals be carefully screened with a view to eliminating those provisions which give the Federal Home Loan Bank Board blanket power so that our savings and loan associations will be governed by law rather than by men.

Theodore Roosevelt

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to pay tribute to a great President of the United States, inaugurated 53 years ago today. His party is my party—the Republican Party, and the man is Theodore Roosevelt. I would like my remarks to appear in the Appendix of the RECORD.

Few men are without ideals and dreams. Theodore Roosevelt was what so many of us would like to be. He was

fearless and had infinite courage; a high sense of honor, and was dedicated to raising the standards of public life by refusing to let personal cost deter him from public service. He was a man of action always. It was not possible for him to wait for things to happen. This characteristic manifested itself early in his life. Whatever the endeavor or task, he gave it his best.

It was Theodore Roosevelt who recognized the fact that America must prepare for the new forces at work in the world. Things were changing in 1900, just as they are now. It was incumbent upon us to begin to enforce the Monroe doctrine. We could no longer confine ourselves to devoting our energies solely to internal affairs and a larger role in international affairs was slowly but certainly being thrust upon us.

April 10, 1899, Theodore Roosevelt addressed the Hamilton Club in Chicago. I find his remarks timely today:

I wish to preach not the doctrine of ignoble ease but the doctrine of the strenuous life. Far better it is to dare mighty things, to win glorious triumphs, even though checkered by failure, than to take rank with those poor spirits who neither enjoy much nor suffer much because they live in the gray twilight that knows not victory nor defeat.

We must remember not to judge any public servant by any one act, and especially should beware of attacking the men who are merely the occasion and not the causes of disaster.

In the capital of Illinois, Springfield, on July 4, 1903, Theodore Roosevelt had this to say:

A man who is good enough to shed his blood for his country is good enough to be given a square deal afterward. More than than no man is entitled to, and less than that no man shall have.

This great President of our Republic lived as he believed. Life was an adventure for him, a great one and full of fun, too. These things and many more too, are why he is beloved by Americans and spoken of as Teddy Roosevelt by so many of us. I am happy and privileged to serve as a member of the Centennial Commission honoring him.

Unique Antelope Valley

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 29, 1958

Mr. HIESTAND. Mr. Speaker, a unique development in defense spending comes to light in the operation of an Air Force flight testing and production facility in California. This project, identified as Air Force Plant No. 42, is located at Palmdale in Los Angeles County just 60 miles north of the city of Los Angeles in the vast booming Antelope Valley.

In this unique project the Department of Defense has provided a jet aircraft center—a bargain from the taxpayers' point of view.

In this unique example of organizational ingenuity, the Department of Defense has brought together large, highly competitive aircraft-manufacturing companies: Convair, Lockheed, North American, Northrop and soon Douglas—to make use of flight-testing facilities on a joint occupancy basis resulting in savings of millions of dollars.

A unique management team: a committee of Defense Department and aircraft company personnel establish operating procedures for a single installation, thus insuring maximum utilization of expensive facilities which otherwise might have to be quadrupled.

This unique location in the great Antelope Valley, surrounded by desert and mountains, conforms to security defense standards and dispersal policies.

Unique weather conditions permit an average of 360 flying days a year, free of smog, fog, and overcast.

Uniquely designed for efficiency and maximum use, Air Force Plant No. 42 at Palmdale is self-contained, complete with utilities independent of any municipal system.

Unique planning, in cooperation with local civic leaders, assures safety and favorable community relations. A mile wide buffer strip surrounds the airport, zoned to permit complementary industrial development but to exclude high density commercial and residential buildup.

Unique in its air field equipment, scientifically designed buildings, and runways more than 2 miles long, Air Force Plant No. 42 at Palmdale is the last word in efficency in flight testing and assembling jet aircraft.

Unique in its location close to the great Edwards Air Force Base with its vast dry lakes, its equipment and scientific experimental facilities and relative convenience to the great airframe and parts factories of southern California, it is also convenient to the extensive scientific centers like Caltech and others. Adequate community facilities and housing at very reasonable costs have been installed together with schools, highway, rail, and air service.

This unique defense installation in the Antelope Valley constitutes a commendable military, industrial, and civic achievement in the interest of national security and is a tribute to the far-sighted leaders in all three of these fields who made it possible.

The Development of Creative Minds

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following letter from a constituent on a subject of particular concern at this time when recent scientific achievements have made us aware, as the writer points out, of our dependence on creative minds. I am sure that Mr. Redpath's remarks will be of interest to all my colleagues:

NEW YORK, N. Y., *February 24, 1958.*

Hon. HUGH J. ADDONIZIO,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. ADDONIZIO: I have read with great concern the article in yesterday's New York Times by John W. Finney, reporting the position within the United States Navy against the promotion and other important recognition of Rear Adm. Hyman G. Rickover, developer of the first atomic submarine.

The events of the past year have revealed our country's dependence on the contributions of creative minds, particularly in the rapidly growing margins of human knowledge where new scientific theory is being applied. Up through the present time we know too little about the combinations of factors that result in the development of these rare creative capacities or genius. Still lacking assembly lines from which we can assure a flow of geniuses, our American society's defense, in many areas, is especially dependent, for a long time in the future, on the accidents of personality, reflecting in the genius.

I believe that basic ethical principles dictate individual and group monitoring of the tendency (unfortunately prevailing in most of us in some areas) to criticize those individuals whose ideas or even personal habits differ from our own. Without implying that any individual is automatically right because of his difference, or the converse, that a group is automatically wrong in exercising those responsibilities for criticism, I believe that the preservation of civilization, as we have come to cherish it in the Western World, depends to a great extent on society's capacity to identify, incorporate, and recognize the cost of the contributions of the genius.

For the gifts of genius, manifested in any field including sciences, arts, and even religion, have more often than not been produced by anguished, even tortured individuals whose personal lives outside the areas in which their genius manifests itself evoke little appreciation from those nearest to them. Their loneliness and lack of appreciation compounds so as, often, to render more difficult that portion of their genius which must be applied not just by themselves but with the cooperation of others. To the threat that is often involved in the new idea which they have conceived is added the personalized resistance or antagonism which their isolation makes easy for others to feel.

I do not presume to know the extent to which any of the above thinking may apply in Admiral Rickover's case. If any does I hope it might be accepted as a more generous and perhaps scientific way of accounting for the resistance among his professional associates to the attempts of a mind of high creative capacity and proven patriotism to help apply the results of his own individual genius, harnessed to the group of scientific personnel who help bring into existence our atomic submarines.

There is much talk about the costs involved for the country in interservice rivalry. Apparently in company with a good many closer observers and abler minds I know of no easy single way of remedying this admittedly dangerous situation. However, we increase the jeopardy to which we are already exposed if we allowed our national attention to be limited to the costs involved in interservice rivalry and pay no attention to the less obvious but equally important factors at work in intraservice rivalry, as exampled by Admiral Rickover's career in the Navy.

I hope that you may do everything in your power to make certain that within every branch of the Armed Forces everything possible is done to assure the development in greater numbers and continued usefulness of creative minds of his caliber.

Cordially yours,

ROBERT U. REDPATH, Jr.

Help Clean Up Smut in the Mails

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HOLLAND. Mr. Speaker, in the report of the Committee on the Judiciary of the United States Senate on juvenile delinquency, it was shockingly disclosed the extent to which ponography has reached our young children, and the terrible influence such filth has on their conduct. After holding hearings in New York, it was estimated that the traffic in erotic photographs, illustrated playing cards, phonograph records, movies, slides, illustrated books, and pamphlets totaled $300 million to $400 million a year.

Although we have many groups in the city of Pittsburgh, in addition to the churches, trying to combat the indecent literature, the purveyors of filth still require strong legislation that will reach the peddlers of smut, not only in the mails but by personal car, truck, American Express, or any other means used. The receiver as well as the sender and the manufacturer should be made responsible.

I am pleased to place an editorial that appeared in the Pittsburgh Catholic entitled "Help Clean Up Smut in Mails." It covers this subject very thoroughly, and I am sure that every Congressman will support any legislation to break up this $300 million business that is destroying the morals of our young people.

HELP CLEAN UP SMUT IN MAILS

When the Army post-exchange magazine racks overseas were being polluted with filthy reading matter, Father Patrick O'Connor revealed that disgraceful fact first and exclusively for the Catholic press in an article he wrote for the NCWC News Service. As a result, and despite some very red faces among the Army brass, the indecent publications quickly vanished.

Last week, NCWC News Service uncovered a more startling scoop. As printed in the Pittsburgh Catholic and other diocesan papers, the story told of the latest and more dastardly scheme of the "sewer salesmen" to defile and corrupt the youth of our land.

A slimy syndicate doing more than $300-million-a-year business is now flooding our homes, here in Pittsburgh and in every other city and town in the United States, with pornographic material so vile it would make Satan himself blush while he danced with glee.

Through mailing lists diabolically gathered from the innocent victims themselves, this dirty deluge is directed chiefly at unsuspecting teen-agers.

And it is delivered, at the expense of all taxpayers, through the United States mails.

But don't blame your mailman. Postal officials are well aware of the evil that rests in the mail pouch that reeks. But they must operate according to the law, since the purveyors of pornography operate cleverly within the law. The only remedy is to change the law, to put some teeth into it, sharp enough to frighten off or to kill off the merchants of immorality.

And that is where you and you and you and you come in. If you are the parent of one or more teen-agers, naturally you have a vital, personal interest in protecting our youth. So, too, if you are a grandparent, an uncle or an aunt. If you are one of the targets—a teen-ager concerned about saving your own immortal soul—then it is your soul which is involved.

But parent, relative, teen-ager or not, Catholic, Protestant, or Jewish, you have a stake in this, our America, and an interest in guarding its freedom and its liberties.

Public sentiment, as aroused by the Catholic press, cleaned out the rotten reading matter in our PX's abroad. Surely, public sentiment is more concerned about the defilement of our youth right in our own homes, and at Government expense, to boot.

Write your Senators and Congressman now. They are your Representatives. Tell them to enact the kind of laws you want to protect your children and to save your country. As FBI Chief J. Edgar Hoover points out:

"Too often the purveyor of filth reaps a rich reward as a result of lackadaisical public opposition to his evil occupation. Public opinion and coordinated action can sound the death knell for the obscene material peddler."

Snow, Flood, and Dams

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very thought-provoking editorial which appeared in the Boston Daily Globe on February 26, 1958:

SNOW, FLOOD AND DAMS

The worst is not likely to happen now, but it could. Water content in the snow of the upper Connecticut and Merrimac Rivers basins is one and a half to three times the normal amount, say the Army Engineers.

In Franconia Notch, which feeds the Merrimac, there are in places 120 inches of snow—the equivalent of 12 inches of water.

The odds are that no great damage will accrue. Ordinarily, frost, alternating with thaw, permits melting to be gradual. But winter, though it may have unpleasant surprises in store, is definitely on the wane. The daily mean temperature in Boston normally rises above freezing February 27; which is tomorrow.

If the next few weeks should be as unseasonably warm as the last two have been unseasonably cold, there could be serious trouble.

That New England's flood-control protection was inadequate became evident 3 years ago when waters, unloosed by the backlash of Hurricane Diane, did damage of more than a half billion dollars.

Programs were set in motion thereafter in the basins of the Connecticut, Blackstone, and Thames Rivers, but nothing was done to add needed protection in the valley of the Merrimac, which had suffered relatively little from that storm.

Army engineers recommended more reservoirs in the basin of this river. But when Massachusetts asked Congress to appropriate funds for these it was refused because New Hampshire would not agree.

That State, where the reservoirs would be built, saw it would lose tax money from the flooding of wide areas for the projects whose chief benefits would accrue to Massachusetts. Last year the two States signed a compact, under which the Commonwealth will compensate New Hampshire for 70 percent of the loss she will incure from the construction.

A Merrimac River Flood Control Commission has been set up by the two States to determine what the Commonwealth shall pay for currently planned and future reservoirs, and to simulate public interest in such projects.

The Army engineers presently plan a project of two dams at West Hopkinton, N. H., on western tributaries of the Merrimac River. Money has been appropriated and $1,200,000 has been asked for next year.

But it is uncertain whether the administration's decision to start no new flood-control projects now will prevent this appropriation. Even if it does not, the development of added protection in the Merrimac Valley will be painfully slow.

The last dam in this basin was completed in 1946. Those at West Hopkinton, as things now stand, will not be finished until 1964.

The odds are somewhat against a bad flood in the Merrimac Valley this year. Many winters and springs may pass before there is serious trouble. But swamping waters did $46 million damage on this river in 1936. (Army engineers say this could have been reduced by three-fourths if the West Hopkinton dams had been in existence).

The worst could happen anytime, nevertheless. It would be highly desirable, as Massachusetts Congressmen should be made aware, to speed up this construction. Why is it that in flood-control projects we are seldom forehanded? It should not require a major disaster to make us carry out urgently-needed improvements.

UNCLE DUDLEY.

Leveling-Off Period

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. DAGUE. Mr. Speaker, it is quite often that we cannot see the woods for the trees, and our preoccupation with the endless game of politics so often colors our statements and our judgment to the extent that we fail to evaluate the true state of our affairs. In the present instance the feverish activity of some folks to try to talk us into a depression has dulled our awareness of the true facts of the economic situation.

The editor of my hometown paper, the Downingtown Archive, underscores this unbalanced thinking by reference to a local employment situation where a firm has recently laid off 100 employees while still retaining on its rolls twice as many people as were employed less than 3 years ago. The editor points out:

We are thinking (or being told to think) in terms of the recent cutback rather than in terms of total gain of our economy in past war years.

The full text of this splendid editorial is included in full as follows:

LEVELING-OFF PERIOD

Despite former President Harry Truman's Cry Wolf speech, we find it hard to believe that this Nation is in serious financial difficulty at the present time.

We can go along with the former President's point that a drop in business, production, employment is a drop, call it what you will. But, to get panicky because our economy has not remained at its postwar peak is ridiculous.

To illustrate our point, we can take one local industry, Beloit Eastern Corp. In November 1955, Beloit acquired ownership of the former Downingtown Manufacturing Co. facilities. At that time, the plant employed about 285 persons and, at that time, there was no talk about a recession.

Beloit expanded their production facilities with new buildings and additions. The work force rose to close to 800. Two months ago approximately 100 employees were laid off. The same plant that 28 months age (when there was no talk of recession) employed less than 300 persons, today employs well over 600.

This situation is not peculiar to Beloit Eastern, it is happening all over the Nation. But, most of us are losing sight of this fact. We are thinking (or being told to think) in terms of the recent cutback rather than in terms of the total gain of our economy in postwar years.

Although there are some contributing factors to these recent cutbacks, the main reason is overexpansion of production facilities which allowed supply to catch up with demand.

Of course, the basis of our economy is that supply and demand should counter-balance each other to set the price of a particular product. But supply and demand are never in perfect harmony, there is always more of one than the other and they operate in more or less of a leap-frog fashion.

As we see it, there is little that Government can do to effectively change the present situation short of creating an artificial demand by offering to buy all the surplus products that the Nation's industry can produce at specified minimum prices—sort of a farm price-suport program for industry.

This idea is ridiculous. We would soon have tremendous stockpiles of everything imaginable, with no possible way of getting rid of them.

Rather than look on the Nation's present financial status as a recession we look on it as a leveling-off period, a period that is inevitable if we are to have a sound capitalistic economy.

Family Life

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I extend my remarks in the RECORD relative to a belief and concern I have for the family in remaining the center of American life.

Often I have read from wise men that if one look at the family life of a nation, you will know many other things about it, its strength and weaknesses.

Lately I have been reading of the serious incidents occurring in our schools in different parts of the United States. My reactions have not been approving. I cannot help but wonder if one had the time to examine the backgrounds of those involved, the evidence disclosed would overwhelmingly point to laxity and callousness about the family unit, and in many instances family living as I know it would be nonexistent in a great number of cases. As a defense counsel for many, many years, I have seen what the lack of respect, absence of authority in the family, does to young boys and girls or young men and women.

Some schools of thought it seems consider acknowledgment of the sanctity of the home as out of step with today. A person who adheres to this belief is thought to be old fashioned. Be that as it may, as the father of eight, I know the need for a close family unit. Many virtues are needed in meeting the challenge today if our future leaders are to have the principles we know to be right. Infinite love, patience, understanding, intelligence, and commonsense and a genuine interest in our children's life are but some of the cardinal ingredients necessary, if these children are to mature into solid citizens, possessed with a steadfast belief and faith in God, Almighty, and a primary desire to serve God, country, and State with honor and devotion.

Parents are confronted with the need to be constantly alert to influences which seek to destroy the ideals we endeavor to inject into our family life.

This week's Washington Post and Times Herald reported that information released recently by the Kinsey Institute for Sex states there is an increasing frequency of illegal abortions in the United States. I was heartened however to note that Dr. David Allman of Atlantic City, N. J., who is president of the American Medical Association, does not altogether agree with the statistics released by the Kinsey Institute.

There are other signs to make the picture brighter. I wish to commend and congratulate a family in my constituency, Mr. and Mrs. Walter W. Fulton, of 8035 South Emerald Avenue, Chicago, on the arrival of their ninth child. The Fulton's with their nine are one up on the Byrnes since we are only eight.

The father of this fine family is a Democrat precinct captain and I knew him when I was a Republican precinct captain.

I sincerely hope that Walter Fulton is successful in finding that they are "cheaper by the dozen."

This family is a wonderful example of the kind of family life needed. The Fulton children have the security of a united family. The more examples we have of family life as the Fultons live it, the better it augurs for the future of our country and the moral fiber of our citizenry.

Whether we have one or a dozen children, parents must offset the avenues leading to delinquency with plenty of healthy, wholesome family living.

I commend the Southtown Economist for giving such wholesome news coverage on the first page of its Sunday edition, February 23, 1958. The Fultons indeed can feel gratified.

United States Relations With Latin America

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. GREEN. Mr. President, a few days ago the Senate had the privilege of hearing a very cogent analysis of the situation among our neighbors to the south. The analysis was made by the junior Senator from Florida [Mr. SMATHERS].

The situation among our Latin American neighbors is very serious. As the junior Senator from Florida pointed out so ably, they have come to feel that the United States is paying far more attention to the rest of the world.

The facts are that we have neglected our own neighborhood, and no man can be strong unless he is respected and liked in his own community.

The Washington Post and Times Herald yesterday reviewed the speech of the junior Senator from Florida in an editorial. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR RESTIVE NEIGHBORS

Is the United States, through blindness and apathy, letting its prestige dip to a perilous low in Latin America? The recent elections in Argentina and Guatemala both showed a troubling common element. Candidates most friendly to the United States trailed badly, while extremist critics of this country surged in strength. A survey of 20 Latin diplomatic missions in Washington, taken by United Press reporter Henry Raymont, shows dismaying results. Speaking off the record, Mr. Raymont reports, the diplomats "are frustrated and bitterly critical about what they term the apparent lack of interest of the men guiding United States foreign policy."

In a searching and cogent speech, Senator SMATHERS, of Florida, put his finger on the crux of the matter: economics. Latin America, rich in resources, is an area in a hurry to raise living standards, rub out illiteracy and forge stable political institutions. Our neighbors want loans—and a fair chance to trade in the United States market. The United States has everything to gain by helping. Nearly every dollar that goes to Latin America comes back to the United States in the form of purchase of our goods.

Yet, as Senator SMATHERS points out, this country seems to be drifting aimlessly in its response—and, by inaction, inviting Soviet trade penetration into our very back yard. The State Department has drenched in cold water most Latin suggestions for a broad development program, without suggesting much of an alternative. Further, it is widely believed that Argentina and Brazil were denied credits in Washington because both

countries are determined to develop some resources by government monopolies. Is it any wonder that both countries resent this seeming dictation and are tentatively looking east for help denied in Washington? Isn't it a sad commentary that more help was given the anti-American Peron dictatorship than the pro-American Aramburu provisional regime in Argentina?

In the marts of commerce, there is grave danger that the tourniquet of protection may choke off interAmerican trade. The United States has wisely given its blessings to the creation of a Latin American common market. Yet, while urging free trade elsewhere, the Government has boosted "voluntary" oil import restrictions and is considering a sharp increase in lead and zinc tariffs—all primary Latin export commodities. Senator Smathers has suggested some form of direct subsidy for domestic industries, in distress, rather than the indirect subsidy of a tariff. This may not be the best solution, but at least there ought to be a conscientious search for a less mischievous remedy than the wailing off of our ports. Palpably, there is need for constructive discussion. Much can be done, if the problem is faced. There are, Kipling said, 100 ways to build a tiger trap and all of them are good. The important point is to recognize that a menacing tiger is afoot.

Loans for Development of Asia and Africa—Plan by Senator Monroney

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Loans for Development of Asia and Africa—Plan by Senator Monroney," written by Raymond P. Brandt, chief washington correspondent of the St. Louis Post-Dispatch, and published in the issue of that newspaper for March 2, 1958.

I make this request because of the fact that this is a statesmanlike proposal. The distinguished junior Senator from Oklahoma has come forward with an idea which will get us away from the giving of grants in our foreign economic-aid program, and instead will substitute long-term loans on a low-interest rate basis.

I think the suggestion of the Senator from Oklahoma is not only statesmanlike, but worthy of the consideration of the Foreign Relations Committee in its discussion of the foreign aid bill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of March 2, 1958]

LOANS FOR DEVELOPMENT OF ASIA AND AFRICA—PLAN BY SENATOR MONRONEY—NEW AGENCY UNDER WORLD BANK PROPOSED TO MEET NEEDS OF UNDERDEVELOPED AREAS—AN ANSWER TO COMMUNIST ECONOMIC SCHEMES THREATENING TO ATTRACT LOYALTY OF MAJORITY OF MANKIND

(By Raymond P. Brandt)

WASHINGTON, March 1.—With hopes of stopping the propaganda here and abroad about Uncle Sugar and Uncle Shylock, Senator A. S. MIKE MONRONEY proposed this week the creation of a second mortgage international bank that could first reduce and perhaps eventually end congressional appropriations for American economic aid to underdeveloped countries.

After 18 months of study, the Oklahoma Democrat came up with the first detailed plan for meeting the Kremlin's long-term, low-interest loans to newly independent nations that are long on manpower and natural resources but short on dollars and other hard currencies.

As a member of the House Banking and Currency Committee more than 12 years ago, MONRONEY participated in the establishment of the International Bank for Reconstruction and Development, usually called the World Bank, under the Bretton Wood agreement. As a member of the similar Senate committee, he is chairman of the International Finance subcommittee which will hold hearings in about 2 weeks on his proposal for an International Development Association, to be closely allied with the World Bank.

In summary, the new banking organization, capitalized with a billion dollars in hard currencies supplied by the countries underwriting the World Bank, would have the following objectives:

1. Long-term loans, up to 40 years at 2 percent, repayable in local or soft currencies to supplement the World Bank's hard currency loans, limited to a maximum of 20 years at rates from 4 to 6 percent.

2. Maximum use of foreign currencies available to the United States through the sale of agricultural surpluses and other programs by devoting a portion of these currencies to such loans.

3. Placement of the loans in a way to eliminate any possible implications of interference with national sovereignty.

During his study of the foreign economic aid problem, MONRONEY first thought it would be necessary to have a Bretton Woods type of conference to create the auxiliary World Bank. After talks with administration and World Bank officials, he came to the conclusion that with bipartisan American support, the World Bank directors had or could be given ample authority for its establishment. The resolution he introduced this week merely says that it is the "sense of the Senate" that consideration should be given to the establishment of the Development Association. Witnesses scheduled to be heard on this resolution include Treasury Secretary Robert B. Anderson; Under Secretary of State Christian A. Herter, and his economic deputy, C. Douglas Dillon; President Eugene Black of the World Bank; economists and private bankers.

Black, whose private banking reputation was impressive before he became head of the World Bank, has cautiously said for publication that the MONRONEY idea is one the World Bank should explore. He has consistently favored multination loans over bilateral arrangements for public development projects.

MONRONEY has not been able to get the support of Secretary of State John Foster Dulles for favorable action on his resolution at this session of Congress. There are several reasons for this. The first is that the Eisenhower administration is concentrating on getting the full $3,942,100,000 authorization for the mutual security program the President has recommended for next fiscal year. The second is that the Monroney resolution asks the Senate to approve the transfer of the uncommitted $300 million voted last year to the development loan fund to the proposed international bank.

Furthermore, MONRONEY has not endeared himself to Dulles by saying that if he cannot get the initial $300 million away from the International Cooperation Administration fund, from which not a single loan has been made, he will ask Congress to reject the administration's request for an additional $625 million for the ICA loan fund and appropriate the money directly to the proposed International Bank.

From the practical parliamentary and political viewpoint, it does not appear that the new bank could be established this year, even if the Senate acted favorably on the Monroney resolution. Although the United States supplied 30 percent of the original capital for the World Bank, and as a result has 30 percent of the voting strength on the board of directors, it would probably require 2 or 3 years before the World Bank could have a billion-dollar auxiliary in shape to make sound soft-currency loans on approved projects.

It would be logical and practical, however, for the Eisenhower administration and the Democratic Congress to follow through on the Monroney proposal as a long-term proposition, while the economic aid parts of the present mutual-security program are gradually tapered off.

MONRONEY told the Post-Dispatch that as he envisaged the new bank's operations, full and immediate use could be made of the World Bank's trained personnel and its comprehensive studies of economically sound projects in specific countries throughout the world.

"The World Bank and its personnel," he said, "command the highest respect. Because its loans are in hard currencies for relatively short periods at comparatively high interest rates, many countries cannot meet its terms. But if we could make use of the soft local currencies the United States has accumulated from its foreign-aid programs, and from the sale of agricultural surpluses, together with the soft-currency deposits and credits of the other free and the uncommitted countries, second mortgages would make new World Bank loans practicable."

Walking over to a huge map of Asia on his office wall, MONRONEY pointed to the northwest part of India, where it joins western Pakistan, and said:

"One of the world's great trouble spots is in the relationships between India and Pakistan. The root of this trouble is far more than Kashmir. The struggle is for the use of the waters of the six-river watershed that originates in India and Tibet and goes down through Pakistan.

"If India alone developed the waters of this great river system, Pakistan would perish through loss of the water necessary for its economy.

"For more than a year, engineers of Pakistan and India have worked together on a joint plan for a huge TVA type of development for this section of Asia. The program probably would cost around $400 million. As a hard-currency World Bank loan, requiring payment in 20 years at 4 percent interest, this would not be bankable.

"Under the International Development Association, the plan could be financed with safety to the tremendous good of two countries whose disagreements threaten trouble in the Far East.

"As a second-mortgage operation, the IDA could take perhaps 50 percent of the $400 million loan, subordinating it to the first claim of the World Bank, which would take the primary loan. The secondary loan would be for 40 years at 2 percent interest, repaid not in dollars or hard currency, but in the local currencies of India and Pakistan. This would be on better terms than the Russians and their satellites are offering.

"In designing the dam and other works, the IDA could lend funds for engineering in German deutschemarks. It could furnish funds for earthmoving equipment in French francs, with certain dollar or hard currency additions to make the loan attractive to the

French. Cement could come from some 10 countries, purchased in local currencies. Thus with a worldwide shopping list, wise banking administration could make full use of local currencies, including those accumulated from the sale of our agricultural surpluses, which will run into the equivalent of several billions dollars over the next 5 years."

MONRONEY said other members of the World Bank could individually contribute local currencies they have on hand, such as India's block sterling credits in England. This, he said, would give flexible and judicious use of many presently frozen assets.

In a greatly limited way, the development loan fund of the International Cooperative Administration could theoretically make loans of the sort MONRONEY described. The basic difference between the development loan fund and the IDA is that ICA loans, when made, will be bilateral between the United States and the borrowing country while the IDA loans would be multilateral, with the responsibility diffused among the countries now supporting the World Bank.

MONRONEY argues and many administration officials concede that the present bilateral arrangement on much of the present foreign aid, military and economic, is the reason the United States is called Uncle Sugar and Uncle Shylock. The arrangement also permits the Communist propagandists to proclaim that the American economic aid program is a thinly disguised operation for economic and military domination of the uncommitted, underdeveloped countries.

Adlai E. Stevenson had a similar idea to MONRONEY's in his speech this week to the national conference on the foreign aspects of United States national security. He did not specifically endorse the second-mortgage world bank but his ideas could be included in the IDA proposal. He told the gathering assembled by Eric Johnston:

"I think it is time we coordinated our economic efforts with our friends instead of going it alone. The whole of the industrialized free world has the same interest in seeing the underdeveloped areas make the transition to self-sustaining growth while maintaining their independence.

INTERESTS IDENTICAL

"Our interests are identical. This is a global enterprise, and it should be organized on that basis. For Western Europe and Japan this coordination would give a badly needed sense of common constructive purpose at a time when military problems alone seem to hold the center of the international stage. Moreover, coordination would also make possible useful contributions from some of the smaller States of the free world.

"I do not believe it is necessary to commingle all our funds to set up a single international fund. But the governments of the free world should gather, assess what they are doing, and make common cause in enlarging their efforts in both technical assistance and the supply of capital. Before the NATO conference, I suggested that the Organization for Economic Cooperation in Paris might offer a useful gathering place for this new enterprise. That Organization, a product of the Marshall plan, has the flexibility, the staff, and the tradition of constructive purpose to do the job. I am confident that from such collaboration a new spirit would emerge in the free world, a new sense of the powers and constructive possibilities of democracy, annuity based on hope rather than fear.

"Against the background of an enlarged and stabilized American program, weaving together the great resources of the industrialized nations, giving play to private as well as Government initiative, we could well invite Mr. Khrushchev to coordinate his efforts with ours if he is really interested in the economic development and political independence of these less-fortunate countries. Such cooperation—and I hope we leave no stone unturned in our effort to cooperate—could avoid the waste and hazard of blackmail that results from competition in this kind of effort. And if the Soviets are not interested in joining our international effort, such an offer would at least unmask the motive behind their assistance."

OPEN TO CHANGES

MONRONEY is open to changes in his proposal, saying details can be worked out after the hearings before the full Banking and Currency Committee or the International Finance Subcommittee.

"I am convinced that most of the objections to the secondary bank can be ironed out." he said, "We will seek the testimony of the best authorities we can find. The proposal can and probably will be modified and improved, but I believe the time is right to make a dramatic change and improvement in our methods of handling foreign economic aid.

"No footall coach could use the same old plays year after year in the same conference without winding up in the cellar. What is true of football is also true of foreign policy.

"The Communist economic penetration has been concentrated in the areas where we are the weakest—the countries of Asia and Africa, especially those which make up the periphery of the Communist geographical hegemony. These nations are currently the most susceptible to political and economic infiltration. Many have broken the bonds of Western colonial power only within the last 10 to 12 years.

"The greatest desire of these nations is economic independence and control of their own affairs. Our aim should be to regain the initiative from the Soviets. We need to finance them in a way that is proof we have mutual interests at heart rather than any desire for economic or military control. This I believe can be handled best by an international arrangement.

"The United States has more to gain from international development than merely forestalling Soviet strategy. As more nations break through the development barrier and are able to join the select group of countries with rising living standards, the market for western goods will simultaneously expand."

DECIDED IN COMMITTEE

The fate of the Monroney plan at this session of Congress will be decided by the committee hearings and by the votes in both Chambers on President Eisenhower's $3,942,100,000 mutual security recommendation. The committee hearings will disclose whether the administration officials are ready to endorse publicly the second mortgage international bank. Debates on the mutual security recommendation will reveal the extent of congresisonal criticism of the economic aid portion, particularly the development loan fund, for which $300 million was urgently requested at the last session, and from which the first loan is yet to be made.

The Unemployment Situation

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. DAGUE. Mr. Speaker, in considering anything having to do with the national economy and unemployment in an election year it is necessary to discount heavily the part that politics will play in any negotiations looking toward a remedy. A leading daily in my district, the Daily Local News of West Chester, Pa., made some pertinent observations in its editorial of February 27 entitled "Jobs or Politics." The high point in the editorial was the reference to Senator MARTIN's letter to Governor Leader, of Pennsylvania, in which he pointed out that the Governor should avail himself of existing Federal programs before looking for additional funds from the national level. At the same time, the majority of the Pennsylvania Republicans in the House suggested that the Governor should use his not inconsiderable influence with the congressional Members of his own party to try to release bills now tied up in committee, which are designed to alleviate the very conditions over which he professes an understandable concern.

The editorial referred to is included in full with these remarks as follows:

JOBS OR POLITICS?

With an estimated 435,000 people idle in Pennsylvania, the unemployment situation is growing more serious daily. Concerned with the problem is Gov. George M. Leader who has been traveling over the State trying to whip up interest in his crash plan to put people back on the job. He was in Pittsburgh Monday night, and next Thursday he will be in Philadelphia.

But things aren't going as smoothly as one might expect. The governor ran into a nasty snag when he invited the Pennsylvania delegation in Congress to meet with him in Washington today to discuss the situation. A few days ago Mr. Leader received a reply to his invitation from the Republican side of the delegation. In part it said: "Jobs, not political pow-wows, are the vital need in Pennsylvania's economically depressed areas at this time."

The Republicans then proceeded to inform him how Democratic Members from Pennsylvania have failed to cooperate with the President's program to create jobs. "Consequently," the tart communication concludes, "we reject your appeal for a political parley. Such a call appears to be further evidence of your unwillingness to act in areas where you, as governor, have authority to do so."

As if this were not enough to impress the governor, Senator EDWARD MARTIN added his own volley in a letter. He wrote: "Might it not be well to put Pennsylvania's house in order in terms of maximum use of available Federal funds to create job opportunities, in view of the Federal Government's accelerated program to help our people?"

From the other side of the political fence, the governor called the Republicans' rejection of his invitation to talk things over, an intensely partisan action.

So while there will be no pow-wow in Washington today so far as the Republican delegation in Congress is concerned, neither will there be any jobs created. The unfortunate part of the situation lies in the fact that such feuding between Harrisburg and Washington does nothing for the jobless in the way of paying the rent or putting meat on the table.

Senator MARTIN, in his letter, laid his cards on the table and, in effect, called both the governor and the Democratic delegation in Congress to account. Doubtless there is a way out of the present dilemma, but it can't be achieved through bickering on the part of

Pennsylvania's two political elements. The Senator's plea for Pennsylvania to put its own house in order can hardly be overlooked in these difficult days. The jobless, in the meantime, twiddle their thumbs and wait.

A Chemical Engineer Visits the U. S. S. R.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 4, 1958

Mr. HUMPHREY. Mr. President, among the increasing number of Americans who have recently visited the U. S. S. R. is Prof. Edgar L. Piret of the department of chemical engineering at the University of Minnesota. In the December 1957 issue of Chemical Engineering Progress, Dr. Piret reports on his visit. His article is entitled "A Chemical Engineer Visits the U. S. S. R."

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CHEMICAL ENGINEER VISITS THE U. S. S. R.

(By Edgar L. Piret, department of chemical engineering, University of Minnesota, Minneapolis, Minn.)

Recently, as a member of a five-man technical mission[1] arranged by the United States State Department, I had an opportunity to visit and study for a 3-week period the large peat industry of the U. S. S. R. It was also possible to visit Soviet institutions of education and research, including several devoted specifically to chemical engineering. This paper will serve as background for a later report on chemical engineering in the U. S. S. R.

Soviet engineers and professors were always cordial, open, and informative in their discussions. The officials place no restrictions on the taking of pictures and several requests to see laboratories and special items of interest were granted. As a consequence, the trip proved most interesting and informative. The fact that we were official guests of the Ministry of Fuel and Power undoubtedly eased these visits greatly.

A visitor to Russia will frequently and most forcefully be struck by the seemingly sudden Soviet scientific development, and by the sharp contrasts in advancement which he sees. He will find it difficult to draw conclusions, because at one moment he may see a modern laboratory or apparatus of advanced design, yet in the next moment he will see equipment, a design, or working methods of several decades ago.

Perhaps a more startling experience is to discuss a right up-to-the-minute engineering subject with a Soviet engineer thoroughly familiar and up to date in his field, and then a few minutes later suddenly discover that despite his obvious good will, intelligence, and high education, this same engineer's knowledge of the true economic, social, and political conditions in the United States is highly inaccurate and out of date by 25 or more years.

In several laboratories, I noticed very recent issues of American chemical engineering and chemical journals and it was easy to talk with Soviet chemical engineers and other technical men about modern engineering problems—for example, a theoretical or experimental aspect of the unit operations. They were well informed, talkative, and described their interests and problems in education and research in an open, stimulating manner.

In almost terrifying contrast because of its significance, I saw not a single American or, for that matter, English or other West European newspaper or popular magazine on sale in any hotel lobby, railroad station, department store, bookstore, or bookstand.

One sees many such American items even in the lesser cities of France, Finland, Germany, Italy, Sweden, etc. Lack of interest in the United States or inability to read English[2] most certainly is not the cause of this conspicuous absence of information. Time and again in the U. S. S. R., I (and others of our group) was asked by people in the streets, by students and others, for any American book, magazine, or even scrap of newspaper that might have wrapped a package in our luggage.

When I speak of English language and Western European publications, I am of course excluding such newspapers as the French Communist Humanité, Moscow News (published in Moscow), copies in libraries, books by James Fenimore Cooper and other classics of years ago, and especially what to me were obviously carefully selected volumes of highly unrepresentative Western writers. These publications unfortunately leave the Soviet man with the erroneous impression that he is well informed about the outside world. He does not even know that he doesn't know.

Thus, on one hand we see that the Soviet engineer has ready access to, and uses, the latest technical literature of the West. On the other hand, the same man has no effective access to our newspapers, or even to our most popular magazines or representative contemporary literature. Most tragically, what I did hear on every hand about our country and its people was highly inaccurate and warped. It recalled to me the parallel situation I met in Germany in 1936.

The need for a broad and early flow of information and understanding is all too clear.

Certainly, the people I came in contact with professionally in the Soviet Union are intellectually capable of better understanding us and our way of life, given more information. So there is a chance that efforts in that direction would result in substantial gains.

It is generally known that the U. S. S. R. is now, in a highly planned and vigorous manner, concentrating much effort on the technology and mechanization of its basic industries. Also, it appeared to me that Soviet Government policy is to give the highest priorities—and to support on a scale unprecedented in world history—to its scientific, engineering, and industrial research and development personnel and laboratories. Still more significant, because of the certainty of the effects within 10 to 15 years, is that this expansion of industry and of basic and of applied research is now being supported with a vigorous modernization and expansion of the educational centers for the training of engineers and scientists. Automatic control and the use of recording instruments seem to be particularly emphasized in the chemical engineering educational program.

The present status of Soviet science and engineering, as related to that of the Western World, is of course difficult to assess accurately in a short visit to the country. But it was evident to me after having seen several laboratories—and particularly after observing in detail the methods and the scale with which they are carrying on the peat industrial research program—that the Soviets have, in that field at least, advanced to where they are using modern engineering techniques, modern methods of industrial product and process development, and modern managerial techniques.

For example, we were shown an extensive laboratory program in which comprehensive and accurately taken data were being used to calculate economic optimum for projected processes. For other similar projects several pilot units were testing the laboratory results. Surprisingly, several large-scale semiworks operations were also being run in parallel to decide, under essentially full-scale conditions, the costs of competing processes. Within a single ministry and program the Soviet system allows for the evolution of more than one process all the way up to and including full-scale production. Each stage is evaluated in terms of rubles/ton, including such items as raw materials, labor, transportation, amortization of plant, amortization of equipment, safety clothing, etc. The only items I have found missing were interest on capital and social security.

The concentration of effort and of funds on technical education, research, and development for heavy industry and for the military is inevitably taking place at the expense of the living standards of the people.

Certainly the people of Moscow, Leningrad, and of the smaller towns and villages I saw have a Spartan or less existence. They see few, if any luxuries. The living standards of the Russians are far below our own, but as far as I could tell, these standards were not so low as to provoke violent discontent. Most Russian people simply have no knowledge of the conditions in the outside world. Their basis of comparison is their past. After all, the history of Russia has always been an unhappy one, with oppression and grinding poverty the lot for nearly everyone.

The Russian people I saw in the cities were adequately, if only roughly clothed and seemed adequately nourished. It was stated that a great improvement in clothing had occurred in the past 3 years.

The accompanying table shows that he lot of the young Russian engineer is today poor when compared with his American counterpart. For example, about 10 percent of a young Soviet engineer's monthly salary is gone when he buys a single pair of very ordinary quality shoes. A similar pair of shoes would cost a young American less than 2 percent of his monthly salary of $475. A good pair of shoes is practically unobtainable for the young Russian since he would have to pay nearly 2 weeks salary for them. A small Volga car, whose equivalent here would cost the young American about 4 months salary, represents so many months of work (15) for the Russian that it is clearly out of reach.

The table appears to show that as far as his monthly earnings are concerned, the starting salary of the young Russian engineer is only a little above that of other workers in the country. However, special privileges of many kinds typically reserved for select groups in the Soviet system, status, and earnings potential as indicated in the table make the young engineer's situation an enviable one when compared to others in Russia. He is also at a decided advantage relative to highly trained professionals in nontechnical fields.

Then, too, if he, for example, manages to become a staff member and ultimately a pro-

[1] Sponsored by the Iron Range Resources and Rehabilitation Commission, State of Minnesota.

[2] Sixty-five percent of the students in the Soviet institutions of higher learning study English, according to the recently released report on Soviet education by the United States Office of Education.

fessor at an institute of engineering education, he achieves not only one of the most remunerative positions, but one held in highest honor in the community.

The Russian of the cities must be particularly conscious of the educational and technical advancements of his country which are displayed before him in the form of elaborate, permanent educational exhibitions intended to excite him with their implied promises for the future. High buildings, ornate subways, and immense stadia also feed emotional hungers. Amusement parks are lined with posters showing industrial production curves, with increasing slopes for the future, and slogans inciting the Russian to greater efforts (much like our own wartime posters). There are no advertisements increasing his appetite and urging him to buy. Nor is knowledge of the outside world, or of what he does not have, available to disturb him from his tasks. The Russian citizen is apparently expected to feel that he has considerable economic freedom since he can within his organization criticize work methods, foremen, etc. Political freedom he has never had and probably does not miss. Morality is identified with the good of the party and religion is mere superstition.

The decision to concentrate much effort on education for science and engineering, on research and development, etc., at the expense of other facets of national life, is, of course, a result of policy decisions which can most easily be imposed on a nation by decisive authority from above.

The new buildings of the University of Moscow represent one recent, peak result of such a policy. This large group of structures located on the Lenin Hills overlooking Moscow, cost $300 million to build. This is a recent project, built in 1949–53, and consists of a main 32-story building and 36 other buildings situated in a parklike area of some 800 acres. With its 43 elevators, marble halls and corridors, it is impressive. Its design, however, leaves much to be desired from the viewpoint of efficiency. The main point to be noted is that this new University of Moscow, with its 23,000 students, trains scientists exclusively—chemists, physicists, mathematician, geographers, geologists, etc. The literary and other less favored faculties are still located in the antiquated, crowded buildings of the old university in downtown Moscow. This new palace of education-for-science on Lenin Hills, the many well-supported institutes for engineering, education, and research, and the incentive of high rewards are clear indices of the great value which the Soviet Government attaches to the advancement of science and engineering and to education for these fields.

All this concentration on technology, of course, fits in with the materialistic philosophy of the Communists. However, it should not be inferred that there is no cultural activity. A visit to the ballet at the Bolshoi Theater or to an outdoor performance at the Kyrov Stadium, or a recalling of modern Soviet composers will quickly show that this is not so. I was told that there has been a most extensive development over the whole country of many schools of music and that there is a strong interest in poetry. The paintings that I did see, however, appeared completely unimaginative and stagnant. The multitude of crowded bookstores and bookstalls lining the main streets of Moscow, of Leningrad, and other towns we saw is indicative of a wide interest in reading.

One sees in city parks, along highways, in the subway stations, and also in small towns, statues and posters showing a young man or girl studying a book. These apparently are ideals to which the Soviet youth is exposed. The presence and significance of such statues is less surprising when one is informed that in the last 40 years the Soviets have raised themselves by their own bootstraps to increase the number of students in their schools from less than 10 million to more than 34 million today and that universal secondary education is planned by 1960. Illiteracy has been essentially eradicated. A new nation has taught itself within 2 generations, young and old alike, to read and write and has produced in 1955 young scientists and engineers at double the rate of our United States of America—the most advanced and powerful industrial Nation of the world. Today Russia is reported to have 70,000 or so doctors of philosophy in science and engineering.

There are now 33 Soviet universities and a multiplicity of technical institutes and research organizations which inevitably have affected and will continue to raise the scientific and technical skills of the Russian.

A visitor naturally searches to find the incentives used to promote so much advanced study and research in the U. S. S. R. The answer came quickly. Money and prestige, as might be expected, are the incentives used even in Russia today. They are a measure of the value of the individual's contribution to the state.

A Soviet student enters a higher technical school through severe competitive examinations and is considered to be working for the State as he would in an industrial plant. There are no tuition fees since last year, and all successful students have substantial scholarships. Retention of these scholarships (as well as their amounts and privileges) is related to scholastic performance, as is the job to which the graduating student has access. As has been pointed out, the rewards available to the engineering graduate—and particularly to the engineering educator—are considerable.

The directions in which the best talent tends to flow under such circumstances are obvious and the effect upon the quality and number of high-grade engineers and scientists available to the nation follows.

Our own industrial experience has demonstrated, in no uncertain terms, that it is essential for a corporation to have a strong research and development program if it is to maintain its position relative to competition. Our earnest competition for the future is no longer largely between corporations: it is between our Nation and the U. S. S. R. It is a challenge to each one of us.

The effects of the Russian policy for education and research on the development of the Soviet State are already clear. If the United States invests heavily in better education and basic research it can be certain of a high return in a few years in the welfare and material wealth of the American people. It is a good investment even without considerations of national security. Its achievement, however, will take more than investment.

IMPRESSIONS THAT REMAIN

The high personal qualities and drive of the men who received us in their laboratories and plants.

The burdens evident in the faces of the people we saw in the villages—a reminder of our common humanity, problems, and hopes, and the need for justice and for peace in the world.

Two Hundred and Tenth Anniversary of the Birth of Gen. Casimir Pulaski

EXTENSION OF REMARKS
OF
HON. ROBERT W. KEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. KEAN. Mr. Speaker, we in New Jersey know well the name of Casimir Pulaski, for we have named a monumental skyway which soars over the meadows between Jersey City and Newark in his memory.

Today, March 4, marks the 210th anniversary of the birth of Pulaski, that great Polish patriot and hero of the American Revolution.

General Pulaski is a fine symbol of the brave people of Poland and the people of Polish ancestry who have contributed so much to the cause of freedom over the centuries. His entire life was spent fighting for the traditions of freedom which we all cherish.

From the days when Pulaski fought so bravely in the American Revolution, we Americans have had a friendly feeling for the Polish people and sympathy with their struggles for liberty.

The Polish people were one of the first in Europe to show a liberal spirit and, in spite of continual attacks by their neighbors, that spirit of liberty has persisted.

Those who live in that land and those here and abroad who take pride in their Polish descent pray for that day when tyranny will be wiped out and the principles of freedom for which General Pulaski fought so valiantly will again be restored.

The American Legion and American Rights

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. KRUEGER. Mr. Speaker, correspondence has previously appeared in the CONGRESSIONAL RECORD between National Commander John S. Gleason, Jr., of the American Legion, and Mr. John D. Silvera, a past post commander in New York, on the subject of civil rights. In order to complete this exchange of correspondence, I include the following letter:

FEBRUARY 27, 1958.

Mr. JOHN D. SILVERA,
670 Riverside Drive,
New York, N. Y.

DEAR MR. SILVERA: This will refer to your letter of February 2 addressed to me, which I have read in the CONGRESSIONAL RECORD. To date I have not received your letter of February 2 at this headquarters. I am impelled, however, to reply inasmuch as you have made your comment public.

The American Legion has, from the time of its organization, accepted into membership honorably discharged war veterans of all races and of whatever creed. The national constitution does not permit discrimination on either score.

Article IV, section 1 of the bylaws of the national constitution provides that each post of the American Legion shall be the judge of its own membership. Upon this principle of autonomy, the entire organization is built. Because of the autonomous operation which the American Legion has, I do not have any authority to order an American Legion post to permit or refuse to permit the use of its post facilities to any group except subversive groups.

With reference to the matter of post No. 214 in Jackson, Miss., there is not presently any

action pending before the national organization submitted to us by either the department of Mississippi or the post. As a past post commander, you should know that if there is any injustice in the withdrawal of any charter for whatever cause or in the trial of a member, there is recourse under the constitution of the American Legion. There are channels through which grievances can be adjudicated and any post or member has the right of appeal all the way to the national executive committee, which is comparable in this regard to the Supreme Court of the United States.

The American Legion is pledged to maintain law and order. The American Legion supports and professes the obligation of all American citizens to abide by laws and regulations promulgated by duly constituted courts and agencies of the Government. The American Legion does not and has never sanctioned the willful disobedience by any citizen or group of citizens of the law of the land.

The American Legion is dedicated to the rehabilitation of sick and disabled veterans of all races and creeds; to care for the children of America of all races and creeds; to the development of an ever stronger Americanism amoung our people of all races and creeds; and to service of all races and creeds for community, State and Nation. In these areas we are most active, and I believe successfully so. As long as we devote our attention to programs based on the above objectives, we shall continue to render great and valuable service to the whole Nation.

Sincerely yours,

JOHN S. GLEASON, Jr.

Marketing Margins for Dairy Products, Beef and Pork, United States and Sweden

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. ANFUSO. Mr. Speaker, as chairman of the Consumers Study Subcommittee, data on marketing margins have been made available to me showing the comparative marketing margins for dairy products, beef, and pork in Sweden and in the United States in recent periods.

Because of the greater distances involved in the United States as compared with Sweden, transportation charges take a larger part of the consumer's food dollar in this country. Also, in the United States a much higher percentage of the pork is processed into cured and manufactured products than in Sweden. This is a factor in the larger percentage of the consumer's dollar going for packing and wholesaling pork in the United States.

There are, of course, other factors which limit the direct comparability of these data. They are of interest, however, for ready reference and are as follows:

Marketing margins for dairy products, beef and pork, United States and Sweden

[Percent of consumer's dollar]

Commodity	Sweden, spring 1954 [1]	United States, April–June 1954 [2]
Milk (bottled and sold through retail stores):		
Farmer's share	62.6	45.0
Transport, wholesale margin, etc.	23.6	55.0
Retail margin	13.8	
Retail cost	100.0	100.0
Butter:		
Farmer's share	68.5	[4] 65.0
Transport, factory cost, etc.	21.4	18.0
Wholesale margin	2.2	
Retail margin	10.1	17.0
Retail cost	100.0	100.0
Cheese:		
Farmer's share	57.9	[4] 45.5
Transport, factory cost, etc.	14.4	37.9
Wholesale margin	4.5	
Retail margin	23.2	16.6
Retail cost	100.0	100.0
Beef:		
Farmer's share	[4] 72.8	[5] 62.5
Packing plant, wholesale margin, etc.	8.2	16.0
Retail margin	19.0	21.5
Retail cost	100.0	100.0
Pork:		
Farmer's share	[4] 70.0	[5] 53.3
Packing plant, wholesale margin, etc.	8.7	21.7
Retail margin	21.2	25.0
Retail cost	100.0	100.0

Citizenship Responsibility

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. McGOVERN. Mr. Speaker, one of the finest statements that I have seen on the moral responsibility of American citizens to the cause of good government is a sermon delivered by the Reverend N. L. Langholz, pastor of the St. John American Lutheran Church, of Sioux Falls, S. Dak. The sermon was delivered on November 4, 1956, just prior to the general election of that year.

Entitled "ABC's for a Responsible Christian Citizen," the sermon by Reverend Langholz was awarded the George Washington honor medal in the spiritual division by the Freedom Foundation at Valley Forge.

American democratic principles rest on a religious foundation. Jefferson recognized the firm relationship between moral and political values when he penned the words:

We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain inalienable rights.

As Reverend Langholz points up so well in his sermon, the American citizen not only has certain moral and political rights, but he also has very real responsibilities that he must heed if democracy is to function. I believe that the members of Congress will be interested in reading the award-winning sermon by Reverend Langholz which follows:

A B C's FOR A RESPONSIBLE CHRISTIAN CITIZEN

(Rev. N. L. Langholz, pastor at Sioux Falls, S. Dak., St. John American Lutheran (1957 winner of George Washington Honor Medal, presented by Freedom's Foundation, Valley Forge, Pa.))

Text: Matthew 5: 13–16.

Next to the weather, politics is probably the most discussed topic of the day. We citizens of this beloved United States of America often complain about politics and Government, but we often fail to realize that we are the ones whose responsibility it is to look after them. So often we have been, like Little Boy Blue, under the haystack fast asleep. It is high time for us to wake up to review again the A B C's for responsible Christian citizenship; for Christians should be responsible citizens, citizens of the highest type.

First of all, Christians are responsible citizens by Divine plan. Christ, in our text, says that we are to be the "salt of the earth * * * the light of the world." You and I are living in this world. We are social beings who are dependent upon government as God's way of maintaining order, and we are therefore indebted to government.

Paul says in Romans 13: "Let every soul be subject unto the higher powers. For there is no power but of God; the powers that be are ordained of God. Render therefore to all their dues: tribute to whom tribute is due; custom to whom custom; fear to whom fear; honor to whom honor." J. B. Phillips translation (Letters to Young Churches) probably makes it even clearer: "The Christian and the civil law. * * * Every Christian ought to obey the civil authorities, for all legitimate authority is derived from God's authority, and the existing authority is appointed under God. To oppose authority then is to oppose God, and such opposition is bound to be punished.

"The honest citizen has no need to fear the keepers of law and order, but the dishonest man will always be nervous of them. If you want to avoid this anxiety just lead a law-abiding life, and all that can come your way is a word of approval. The officer is God's servant for your protection. But if you are leading a wicked life you have reason to be alarmed. The 'power of the law' which is vested in every legitimate officer, is no empty phrase. He is, in fact, divinely appointed to inflict God's punishment upon evildoers.

"You should, therefore, obey the authorities, not simply because it is the safest, but because it is the right thing to do. It is right, too, for you to pay taxes for the civil authorities are appointed by God for the good purposes of public order and well-being. Give everyone his legitimate due,

whether it be rates, or taxes, or reverence, or respect."[1] Thus God's holy spirit speaks to us through His instrument, Paul.

We sometimes take for granted the things that the Government performs for us, and are not fully appreciative of them; for instance, conservation of our natural resources which we need so much for living—water, oil, various ores, and so on; conservation of the beautiful parks of our Nation where we can spend vacations or weekends of relaxation and inspiration; fire protection; police protection; and a host of other items. We take these things so for granted. And yet think what it would be without them.

Dr. Sven Lerfeld, of Copenhagen, Denmark, at a recent theological conference at Augustana College, Sioux Falls, S. Dak., said that during World War II when the Germans invaded their country, they took away all police protection. He stated that "this was the worst form of oppressive persecution * * * not knowing when your home might be robbed * * * not knowing when your wife or daughter might be viciously attacked * * * not knowing when someone might decide to murder you; for when there was no policing * * * no punishment * * * crime ran wild. We don't realize the blessing of the policeman on his beat, the patrol car roaming the streets. And one could take so many phases of the government's work, and go through similar questions. How would we like to be without it?"

Sometimes it takes the freshness of a foreigner's belief in America to shake us from our Little Boy Blue or Rip VanWinkle sleep. When people come from a land where there has been little freedom, little privilege, little opportunity, and land on the shores of this land of liberty, they realize what the blessings of American Government are. One can just see the joy on their faces as they spot the Statue of Liberty, symbol of American freedom; or as they, weeping, kneel and kiss American soil for the first time.

Christian citizens, we need to maintain good government for our own welfare. Think what it means to have a Government that gives us freedom of the press, freedom of speech, freedom of religion.

The American Credo[2] outlines many of the political and economic rights which protect the dignity and freedom of the individual here in our beloved America:

Right to worship God in one's own way.
Right to free speech and press.
Right to assemble.
Right to petition grievances.
Right to privacy in our homes.
Right of habeas corpus—no excessive bail.
Right to trial by jury—innocent until proved guilty.
Right to move about freely at home and abroad.
Right to own private property.
Right to free elections and personal secret ballot. (Which we Americans have just had the privilege of doing!)
Right to work in callings and localities of our choice.
Right to bargain with our employers and employees.
Right to go into business, compete, and make a profit.
Right to bargain for goods and services in a free market.
Right to contract about our affairs.
Right to the service of Government as a protector and referee.
Right to freedom from arbitrary government regulation and control.

[1] Letters to Young Churches, J. B. Phillips, the Macmillan Co.
[2] "American Credo" of Freedom's Foundation, Valley Forge, Pa.

Ours is a "Constitutional Government designed to serve the people." These are the things the forefathers of our country fought for. These are the things our gallant Armed Forces have sought to defend. These are the things we as responsible Christian citizens must uphold! "To maintain the American way of life and pass it intact to succeeding generations is the responsibility of every true American", of every true Christian!

Our Nation was founded on the fundamental belief in God. We as responsible Christian citizens must ever see that these God-given freedoms are preserved in our American way of life! Christians are responsible citizens!

Think, my friends, of the privileges, and freedoms, and opportunities that are ours as American citizens, and then by contrast, look at communistic Russia.

What if we had to go about every day fearful of our speech . . . fearful that someone else, perhaps even someone in our own family, was taking what we said and using it against us . . . so that just because of a few words we would be liquidated or shipped off to a far Siberia?

Think of the privilege of reading newspapers which can be free to express their opinions. In Russia the Sioux Falls Argus-Leader would not have dared to say something against the Governor of its State, as the paper so freely did this past week. Whether or not we agree with what we read—we glory in the fact that we have the privilege to read these things!

And what it means to have freedom of religion, to worship as we please, whether we be Protestant, Catholic, or Jew. To be able to gather together week after week here in the house of God to sing our praises to Him and to hear His Word . . . what a great American privilege this is.

Sometimes, as in East Germany and the satellite countries, this privilege has to be taken away before people realize its worth. Church members who show up only occasionally at church show that they do not realize the great privilege which is theirs to worship the God who created them and preserves them * * * who redeems them and sanctifies them. How we as Christian citizens must work to maintain these great religious privileges which are ours as Americans.

We Christians are under the command of Christ. We have been given the power to be the kind of people the world needs. We have been forgiven, enlightened, strengthened. Luke tells us in Acts 1: 8 the words of Christ: "Ye shall receive power after the Holy Ghost has come upon you, and ye shall be witnesses unto Me * * * unto the uttermost part of the earth."

We are indebted to Christ to use this power for the good of the world He loves. Christ has made the debt we owe Him payable, in part, to others. We are debtors, Scriptures tell us, to all men.

Yes, by divine plan we Christians are to be responsible citizens. And we are also to be responsible citizens for a divine purpose.

First of all, to let God's will be known. Our text says: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

What is God's will in relation to citizenship? He wants us to understand the issues in politics. He wants us to have a knowledge of the candidates. He wants us to discover what proportion of our self should be given to the government—in the service of the country and of its people—and the people of the world.

The Christian should be the highest type of citizen. We discover what God's will is for our life, and then we want to share what His will is for others. "We are not to hide our candle under a bushel basket, but we are to put it in a candlestick on the lampstand, so that it might give light unto all."

We should let our light shine, by expressing our convictions, through party activity, by being an example to others.

We Christians are responsible citizens for the purpose of letting God's love be shown. "We are the salt of the earth * * *" Salt must be applied and used if it is to do any good.

Motivated by the spirit of Christ, we should be willing to sacrifice self-interest * * * willing to show a concern for others. We should honor the office which people hold. As responsible Christian citizens we should take advantage of our privilege to vote. We should confer by writing and in person with one's representatives in office, and let them know of our Christian convictions on issues. We should be willing to assume responsibility by functioning in a political party * * * by serving in public office * * * by paying taxes. Yes, it costs; but again we ask, would we like to be without these government services?

Christians are responsible citizens by Divine plan. We are in the world. We are under the command of Christ. We Christians are responsible citizens for a divine purpose * * * to let God's will be known * * * to let God's love be shown.

We have been discussing the fundamentals, the ABC's, of Christian citizenship. Now, following the pattern of our ABC books of childhood, let us take each letter of the alphabet, and let each letter of it be a directive to us in being more responsible Christian citizens.

A: Accept both the rights and duties of a citizen as a trust from God, and as an opportunity through attitude, word and deed to influence others toward accepting goals for which the Christian strives.

B: Believe that all authority is from God, that men and nations owe supreme loyalty to Him alone, and that He will weigh their conduct on the scales of His justice.

C: Consider the interest of other persons and groups as fairly as you do your own in taking sides on any political issue, resisting appeals to prejudice and rejecting extravagant promises that cannot be fulfilled.

D: Devote time, effort, and funds to the work of the political party of your choice or of some nonpartisan group dedicated to the promise and the practice of good government.

E: Examine carefully, in the light of Christian teachings, the claims for and against both the issues and the candidates which invite your support, as well as the groups and interests which support them and what they hope thereby to gain.

F: Face jury duty, military service, cooperation with law-enforcement officers, and attendance at open meetings of lawmaking bodies as being among the rightful duties of a citizen.

G: Give candidates and officials, especially representatives in the lawmaking bodies, the benefit of your Christ-minded thinking on issues needing discussion.

H: Honor public officials as men to whom God has entrusted special responsibilities as His agents to promote the well-being of their fellow men, yet if necessity arises, humbly remind them of their accountability to the Lord of heaven and earth.

I: Inform yourself on the workings of your government: the principles on which it rests, the structures it uses, the pressures that bear upon it, and the ways in which it reaches its decisions.

J: Judge men and parties not so much by their promises or even by their professions of religion as rather by their performance under the responsibilities and temptations of power.

K: Kindle enthusiasm for responsible participation in governmental affairs, en-

couraging qualified men and women to offer themselves as candidates for elective and appointive governmental positions.

L: Let the love of Christ for the forgotten, the friendless, and those with little power or influence guide you in taking a stand on issues.

M: Make certain that church and state do not become intermixed, and insist that the church not use powers of state to achieve church objectives, and that the state not use the church for its ends.

N: Nurture and promote attitudes of loyalty, patriotism, pride in citizenship, and love for country, but do not let these become and excuse for prejudice, oppression, or disregard for the rightful interests of other people and nations.

O: Obey all laws that are in accord with the laws of God and if necessary work to amend or to repeal any man-made laws which are out of date or opposed to God's law.

P: Pray for God's blessing of a good and honest government and for His guidance and protection of faithful public servants.

Q: Question actions and decisions of governmental agencies and officials which seem to violate Christian standards of honesty, justice, integrity, or morality, remembering that only righteousness exalteth a nation.

R. Recognize the reality and ravages of sin in human life, humbly repent of your own shortcomings, forgive those of others, and rely upon the power of the Holy Spirit to bring men to lead better lives.

S: Support conscientious, faithful, and capable public servants with words and deeds of appreciation, encouragement, and support, strengthening them to act in accord with the courage of their convictions.

T: Treasure your tax payments, made honestly, willingly, and promptly, as a means whereby you help to advance good and to curb evil.

U: Unite your efforts with those of like-minded persons and groups to seek goals pleasing to God in ways beyond the reproach of men.

V: Vote conscientiously, prayerfully, and with a discrimination based on your study of candidates and issues as this has been guided by the Holy Spirit.

W: Work for laws, practices, and attitudes that insure honesty, justice, impartiality, morality, protection for the weak and helpless, and opportunities for the full exercise of responsible freedom.

X: X is the mark to make in expressing your careful choice on the ballot you cast at each local, State, and national election.

Y: Yearn that all the rules of men would yield themselves to God and join Solomon in praying for wisdom, knowledge, and an understanding heart.

Z: Zealously study God's word, the example of Christ, and the lives of His Saints for the light they shed on the realities of political decisions and responsible Christian citizenship in the time and place to which God has called you.[3]

These are the ABC's, the fundamentals of responsible Christian citizenship. Our Lord has a plan for the governing of this world which involves us for the purpose of showing His love, by maintaining an ordered society. This year let Christians awake from their Little Boy Blue and Rip Van Winkle sleep, for we as Christians are responsible citizens.

"God save our native land
And make her strong to stand
For truth and right;
Long may her banner wave,
Flag of the free and the brave.
Thou who alone canst save,
Grant her Thy might."[4]

Amen.

Will H. R. 8002 Do What It Says?

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. FORD. Mr. Speaker, H. R. 8002, the so-called accrued expenditure appropriations bill, comes up for consideration this Wednesday, March 5. The paramount question is, will it do what it says it is designed to do? It says it will do three things. They are stated in the opening paragraph, as follows:

It is the sense of the Congress that revisions in presentation of budget estimates and estimates for deficiency and supplemental appropriations are essential in order to provide a more informative basis for the enactment of appropriations by the Congress, to reduce or eliminate the large carryover balances of appropriations from one fiscal year to another, and to bring about economy in Government expenditures. It is therefore the policy of the Congress that estimates for proposed appropriations will be determined on an annual accrued expenditure basis.

It will not do any of these things as now written. I urge all Members to consider the following facts on each of these three things:

WILL H. R. 8002 PROVIDE A MORE INFORMATIVE BASIS FOR THE ENACTMENT OF APPROPRIATIONS?

H. R. 8002 would delude the people for 1 year, and to some extent for 2 years, into thinking that a lot of money was being saved by the reduction of appropriations and the substitution of contract authority. Such a program would look attractive and painless, but the day of rude awakening would of course come in confusion and frustration.

If, for example, we had converted last year's budget to this accrued expenditure basis of making the appropriations, we could have shown a cut of about $24 billion. But it would have been completely phony.

Generally, in appropriation bills we now fully finance long-range programs for aircraft, ships, and other long-lead time items. Congress and the country know in advance just how big and expensive the programs are. Under H. R. 8002 we would follow the confusing process of changing the appropriation bills to provide the following: (a) Funds to liquidate prior contract authority; (b) funds for the regular annual functions of the Government; and (c) additional contract authority for partially completed programs and for the initiation of new programs.

This would make less effective the work of the Appropriations Committee, it would be confusing to members of the committee and to Members of Congress generally, and it would tend to conceal from the people the fiscal actions of Congress because the press would have difficulty in reporting to the people just what was happening to them under this installment-buying dollar-down contract-authority hodge-podge.

WILL H. R. 8002 "REDUCE OR ELIMINATE THE LARGE CARRYOVER BALANCES OF APPROPRIATIONS FROM ONE FISCAL YEAR TO ANOTHER"?

Yes; it will. But therein is the catch. Note the word "appropriations." That is the catch, because it says nothing whatever about what would happen to contract authority carryovers. If you will look at section 2, and the committee report, you will see that contract authority is to be substituted for appropriations for things that run beyond 1 fiscal year. What would happen there?

What would happen if the shift were made to the suggested basis of appropriating, would be the elimination of large unexpended appropriation balances—which, of course, is not cash in the Treasury—and substitution of large unfunded contract authorization balances. Under either system, the grant of authority to obligate the Treasury to future cash expenditure occurs at the outset. A fiscal system cannot change the operating realities of the vast and complex programs of the Government or the point of time at which the necessities of the situation make a claim on the Treasury. Under either system, the large carryovers—and there will be similar large carryovers under both—will consist of (a) outstanding obligations and (b) unobligated amounts. Under either system, the die is cast as to eventual payment when the obligation is created. On this important point of timing of the obligation to future payment, therefore, the proposition is essentially a distinction without a difference. The day of reckoning—the day of payment—is inevitable and, furthermore, the payment will normally occur at the same time under either system. Once the obligation or commitment sets the machinery in motion, the Congress can do little if anything to postpone the day of cash payment.

This is partial funding. And the present Budget Director, who urges H. R. 8002, is against partial funding. Here is what he stated in a letter of May 17, 1957—see CONGRESSIONAL RECORD, May 23, page 6689:

I believe we should continue to follow the sound procedure of fully funding the procurement of all items necessary for the full operation of such major things as airplanes, tanks, and ships when the initial appropriation is made. We would lose budgetary control of these programs if we adopted a policy of partial funding for such items.

This statement from the executive branch—from one who is supporting H. R. 8002—ought to be read and reread by those who advocate H. R. 8002, because H. R. 8002 would require exactly what the Budget Director says should not be done.

WILL H. R. 8002 "BRING ABOUT ECONOMY IN GOVERNMENT EXPENDITURES"?

Some of the proponents have said it would, but it will not. The people have been told it would. The Hoover Commission never said it would save a specific sum. The task force expressed a belief that about $4 billion annually could reasonably be expected to be saved. Merely a belief. No proof. No evidence. Just picked out of the air.

Now, what do they lay their belief on? The main objective of his bill, so they say, is to compel a systematic review and reauthorization each year of the large unexpended carryover balances. They suggest that, somehow, a formal, prescribed procedure for such review will bring vast savings. But not a shred of evidence to prove savings has ever been offered—because none exists.

The standing practice of the Committee on Appropriations has been to review the balances each year in the hearings in order to be able intelligently to arrive at determination of new appropriations to be added to the carryovers or balances to be transferred or withdrawn. The Budget Bureau does the same thing. Mr. Brundage—and the strange thing is that he supports H. R. 8002—made this statement in a letter of May 17, 1957 to Senator SALTONSTALL. It appears in the CONGRESSIONAL RECORD of May 23, at page 6689:

In preparing the 1958 budget we gave very careful consideration to the use of balances wherever possible in lieu of requesting new authority for 1958.

But what about the vast savings? Will the bill in its present form save money? Mr. Brundage, the Budget Director, is for the bill. And he makes up the budget. If it will save vast sums, he surely ought to be the one who could put his finger on any savings and tell us where, how much, and in what manner.

But what is Mr. Brundage's opinion as to the validity of claimed savings? Here is his opinion—and it is devastating. Here are quotes from hearings of the Committee on Appropriations of June 18, 1956:

Mr. CANNON. I would be glad if the Director would tell us how they propose by this change in the budgetary system to make a saving of $4 billion annually.

Mr. BRUNDAGE. The chairman of the task force, Mr. CANNON, said that he had estimated the $4 billion by taking 8½ percent of all the controllable expenditures per year and, quite frankly, I would rather not express an opinion on either the computation or how they got it.

Mr. CANNON. That is what we are anxious to have you do. You know a saving of $4 billion annually is a very impressive objective. * * * I would like to know how you propose to save $4 billion by this change in the system.

Mr. BRUNDAGE. I would not say we would save $4 billion in this way. I think it will save money and give better control, but I have never been willing to estimate what any savings would amount to. It is too intangible.

Mr. CANNON. This idea has been sold to the country. I am getting letters asking "Why do you not adopt this plan and save $4 billion every year?"

Mr. BRUNDAGE. I avoided mentioning any savings in any testimony or correspondence I have on the subject.

Mr. CANNON. I am not differing with you. I am not objecting. I merely want more information on the subject.

Mr. BRUNDAGE. I feel satisfied that we will save several million dollars.

Mr. CANNON. Several million?

Mr. BRUNDAGE. Yes.

Mr. CANNON. There is a great difference between several million and the $4 billion advertised. The fact that you are satisfied does not necessarily satisfy us.

Mr. Speaker, there it is in black and white. Not billions of savings. Not even millions. Just a feeling of satisfaction that it would save several million. And, Mr. Brundage even avoids any mention of that in testimony or correspondence.

Mr. Speaker, hard experience of the Committee on Appropriations over the years shows that this bill, as now written, will cost more money, not save money. It will do so partly because it requires that we return to the use of contract authority as a substitute for appropriations which run beyond 1 year.

More Junk Mail

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Kendallville News-Sun, Kendallville, Ind., which I think is particularly timely just now:

MORE JUNK MAIL

With President Eisenhower dispatching another letter to Russian Premier Bulganin, the world's attention is called again to this unique but remarkably unfruitful correspondence.

Some historian may one day wrap these letters into a single bundle and publish them as has been done with some of the memorable correspondence between great literary figures.

But he will not do it under any misapprehension that these are literary gems. Nor can it be done with the conviction that the letters represent significant progress in understanding between the two most powerful nations in the mid-20th century.

In truth, all they represent on the Russian side is one more propaganda device designed to convince the world's gullible peoples that the Soviet Union is hard bent for peace and disarmament. It is a weapon of pressure, and the Russians are quite good at initiating pressure.

On our side, the President must answer Bulganin's letters because not to do so would only compound the impression the Kremlin seeks to impart—that it is Russia which really is concerned for peace.

Since we must answer them, we try to put them to some real use by sounding out the Russians on such matters as terms of disarmament, conditions for a summit meeting, etc. But we do this without any illusion that we will get straight replies. We just play the chance that we might.

This correspondence, begun by the Russians and couched in tones which suggest a warmhearted approach to the mutual problems of two great states, merely serves as one more weary illustration of how a ruthless marauder may poison all the channels of contact between peoples who surely desire peace above all else.

Chicago's Triden League

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I will insert a few remarks of mine with an accompanying letter from the Triden League, 6313 South Harvard Avenue, Chicago, Ill.

The Triden League is a nonprofit, nonpartisan association of neighbors of the Englewood area who are interested in improving civic, social, and educational affairs of their community.

As a result of the formation of this league, the success with which they are meeting, other similar groups are being formed in various parts of Chicago. The work of this group of public-spirited men and women is of great worth to the residents of the Englewood area.

The Chicago Daily Tribune's editorial writer, Joseph Egelhof, has written many interesting and helpful articles about the activities of this splended group.

The Tribune and Mr. Egelhof are to be commended for this community service. I wish the RECORD to show a letter from the Triden League to Mr. Egelhof:

THE TRIDEN LEAGUE,
Chicago, February 26, 1958.

Mr. JOSEPH EGELHOF,
Editorial Department, Chicago Tribune, Chicago, Ill.

DEAR MR. EGELHOF: The undersigned officers of the Triden League remember with appreciation the helpful and interesting articles you wrote about our Englewood problems a few months back and we write to report progress even though there may be no point for a story.

First. Your articles enabled us to get Capt. Edwin T. LeFevour to replace Captain Brietzke. Captain LeFevour and the entire personnel of the Englewood Police Station are giving us 100 percent police coverage of the district and cooperation efficient and cheerfully—in fact they are visiting us and with us every day and evening and asking us often what more help can they give us. The district still seems to be an area which the lawless like to visit and work but the police treat them rough. Robbery with gun, strong-arm robbery, rape, attempted rape, burglary, and pocket-book snatching are still the major crimes. Notwithstanding, the police are doing all and everything they can. We could not ask more.

Second. Our escort service has grown to nearly 600 trips per month; most are middle-

aged women who work late at night, get off the bus, elevated, streetcars, Rock Island at 63d and State, and Western Indiana Railroad at 63d and Wallace Depots. We have about 40 with autos who work 2 hours once a week, escorting; and also about 40 volunteers who do desk service answering calls, etc., and about 20 young fellows who do investigating securing information for the police. Our relationship in this latter-service has proven helpful in numerous cases. It is surprising how many pick this area to commit deeds, apparently unmindful of how diligently it is now being policed.

Third. Several communities are at work now organizing similar organizations. No one gets paid for service and for some of the volunteers this is the first civic service they have rendered and seem to enjoy the work which is systemized to a couple hours per week—some give more.

Fourth. The operation goes on 6 nights per week and if you care to come out and see the persons coming in for escorts and those going and coming with their cars in use, some Friday from 6 to 10 o'clock would be a good time.

Again thanking you for the help you gave us in getting straightened out in police cooperation, we are

Sincerely yours,

TRIDEN LEAGUE OF ENGLEWOOD,
JOHN H. LYLE, *Attorney.*

The name Triden was chosen since it symbolizes the manner the members use in tackling a problem. A triden is a prod with sharp points.

The league's declaration is as follows:

DECLARATION

Every citizen has a constitutional right to walk the streets of Chicago and to carry with him, in safety, funds for his current needs. Every woman has a constitutional right to use the streets and public places in Chicago, and on those streets and in those places to be secure in her person and to be free from molestation, robbery or assault.

Now, therefore, be it known that the Triden League, and all members thereof, mutually pledge assistance each to the other and express intent to employ, individually or by concerted action, any and all lawful means necessary incuding support and assistance to law-enforcement authorities to aid and protect its members and will, by such course, make certain the security of these rights.

THE TRIDEN LEAGUE.

Ezra Has Got To Go, Says Politics

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. UTT. Mr. Speaker, under leave to extend my remarks I would like to insert the following article, entitled "Ezra Has Got To Go, Says Politics," which appeared in the advertising copy of the Laguna Beach (Calif.) Lumber Co.:

EZRA HAS GOT TO GO, SAYS POLITICS

It is a political year and of course every politician of any party must feel sorry for the farmer. Crops of all kinds are very abundant, despite controls, supports, subsidies and Government money going for the feeding of racehorses. But the political crop is colossal.

Politicians want their jobs or some other politician's job and their records are as a rule nothing with which to point with pride; rather they should be viewed with alarm. But no politician will assume blame when a goat is handy. So Ezra Taft Benson, who still clings to the idea that basic economic laws cannot be abridged for long by politics * * * is the goat.

Ezra is of course to blame for the falling off in sales of automobiles. After all, farmers buy autos and trucks and quota sales are off because Ezra Taft Benson sticks to his guns on economics.

Ezra is guilty of causing whatever slump there is in building in the United States, all because he thinks farmers deserve fair but not partial treatment by the Government. Ezra has got to go.

Ezra is at fault because the stock market cannot make up its mind which way to jump on what day. Farmers unsure of their subsidies will not speculate in stocks, so Ezra must go.

The United States Navy is having trouble getting its Vanguard off the testing ground. Undoubtedly Ezra is to blame some way or another.

It may be a thin thread of circumstantial evidence, but Ezra is the best available goat. The politicians say he has to go.

He believes in fair, impartial treatment for all segments of our economic life and thinks farmers are really honest enough as a whole to accept fairness instead of special treatment. But he's wrong. Ezra has got to go. Politicians must feel sorry for farmers. It's traditional.

But Ezra does not know this. He is honest, sincere, and right. No laws, politicians or nation can long ignore a basic law of economics, as this Nation is trying to do. Because Ezra stands up and says so and causes the faces of politicians to turn red and white by turns, he must go.

There are elections to be won. Ezra Taft Benson is standing in the way. He is right. Farmers and politicians know it. But he must go. This is a political year. Honesty and commonsense are not political assets, yet Ezra insists on sticking with them and the politicians are stuck with him. It's just too much in an election year. Ezra has got to go.

LAGUNA BEACH LUMBER CO.

If We Fall, They'll Come, Too

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. SMITH of Kansas. Mr. Speaker, last week there was held in Washington, D. C., the big pep rally for foreign aid. Some 500 persons attended this day long session at which President Eisenhower, ex-President Truman, Dean Acheson, Vice President Nixon, Adlai Stevenson, Tom Dewey, and so forth spoke. It was a gala occasion.

This meeting was "unprecedent," to use the word of Eric Johnston, motion-picture czar. Mr. Johnston says, he will organize regional meetings throughout the United States to further the purposes of this propaganda drive. There is only one basic design for these meetings; namely, to put the pressure on Congress for a $3.9 billion foreign aid appropriation when there is already $8 billion available for the doubtful purpose of foreign aid. Seldom has such a drive been made on the Congress. It certainly is unprecedented.

But while this drive was being made in Washington, the editors back home in rural America were looking at this propaganda campaign in a different light. Here is what a widely read rural editor, Mr. Ned Huycke, of the Ellsworth Reporter, Ellsworth, Kans., had to say in his editorial:

IF WE FALL, THEY'LL COME, TOO

At long last the reaction of public sentiment is beginning to penetrate the hide-bound squanderers and globetrotters at the Nation's Capital, and if some of these law makers would stay at the post to which they were elected long enough to hear the voice of the people they would receive the mandate from the taxpaying public that they are up in arms against foreign-aid spending.

Monday of this week, President Eisenhower called a meeting of handpicked politicians for the purpose of formulating a policy whereby this committee, with the President's blessing, could issue propaganda as to why "foreign aid is such a drastic necessity for the protection of our country from enemy attack."

No doubt there will be those who will become alarmed over any news which these learned men will send forth over the waves of propaganda—but to us this method of defense is getting awful threadbare and ragged around the edges. Since World War II we have been "warding off the enemy through foreign aid"; but in our opinion, had foreign aid never been conceived, we as a country and as individuals would have been much better off. The countless billions spent in the name of foreign aid have bought only blackmail, and made enemies of nations which would have accepted our leadership on an honorary basis, without the tint of scandal and envy of our country because of our boast of wealth.

It is rather late to try to right the wrong which foreign aid created for the United States in the world of nations; we can only hope that the peoples of the world will understand that the Common John Citizen of the United States is not to blame for the arrogant methods which have been in the foreground by those at the head of our Government spending. We hope that these peoples of foreign lands will understand that the common man in America is working hard for his daily wage and in addition is taxed to desperation so that money can be squandered to all corners of the world by those in power.

Here is just a word of sensible advice to the "chosen committee," and all other factions dealing with the spending of our money—we cannot take any more taxes—in fact the American public is up in arms for a cut of the already existing taxes, regardless of whether unemployment continues to rise or fall. Income taxes are pulling us, the common people, to destruction, and when we fall we will take those who are squandering our life's earnings, along with us.

His Job: Tell the President

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mrs. DWYER. Mr. Speaker, the current issue of Newsweek magazine con-

tains a very perceptive article about Dr. Raymond Joseph Saulnier, Chairman of the President's Council of Economic Advisers.

I should like to call the attention of my colleagues to one of the points well made in this article—a point frequently overlooked in the mass of debate on the floor of the House concerning the present business recession. I refer to the fact that the Federal Reserve Board, an independent agency, was responsible for the so-called tight-money policy during the period this policy was in effect. And, further, that Dr. Saulnier as the President's chief economic adviser opposed the continuation of the tight-money policy in advance of the Board's eventual decision to relax this policy.

Under leave to extend my remarks in the RECORD, I include this article on Dr. Saulnier:

HIS JOB: TELL THE PRESIDENT

Raymond Joseph Saulnier, a trim, well-groomed economics professor who is known to friends as Steve, could very likely walk through the White House press room without being recognized. Yet, as Chairman of the President's Council of Economic Advisers, he is the key figure in Washington's No. 1 political issue. Saulier, more than any one man, molds administration opinion on the course of the economy—and masterminds its current campaign to restore confidence to United States businessmen.

A deliberate, thorough, but unspectacular worker, Saulnier sees himself as a confidential aid to the President. He thus refuses all bids for TV appearances, public speeches, or press interviews. His tight schedule leaves him no time for all this, even if it weren't against his policy. He hasn't, for instance, had a chance to play golf (in the low 80's on a good day) since coming to Washington, leaving him his only other form of exercise—long walks. Nor does Saulnier join in Washington's social whirl.

BOLD FORECASTER

Saulnier's business forecasting record is one to inspire confidence. Last fall, while some of the administration were still preoccupied with holding down inflation, Saulnier played a leading role in convincing the President that the economy was slowing down and that bold budgeting for the coming fiscal year was in order. The President beefed up his expenditure programs and went ahead with heavy contract placement for military orders. Without these decisions, many economists believe, the recession might be far more severe. (But right now, some economists criticize Saulnier for trying to fight the slump with what they call a "jawbone campaign" to restore confidence.)

CEA Chairman Saulnier's job is often confused with that of special Presidential assistant Gabriel Hauge. But Hauge is concerned mainly with the practical, political problems of economic policy (for example, if the President has to decide on a tariff escape clause, Hauge checks with agencies and Congressmen affected). Saulnier's advice, more technical and theoretical, must get to the heart of purely economic problems.

Saulnier's economic views are somewhat similar to those of his predecessor, Arthur F. Burns (who still talks to the President by telephone occasionally). A graduate of Middlebury College with a doctor of philosophy degree from Columbia, Saulnier has known and worked with his predecessor for some 20 years. When Burns went to Washington in 1953, Saulnier, then teaching economics at New York Barnard College became a CEA consultant (he was made a full council member in 1955). Saulnier often reverts to his professional habits in small group discussions—taking off his watch and lecturing for a prescribed period.

QUIET BATTLER

But while politicians on Capitol Hill rate 49-year-old Saulnier as less forceful than either Burns or the last Democratic CEA Chairman, Leon Keyserling, he is no pussyfooter. He carried on a quiet but vigorous battle with Federal Reserve officials when they persisted in pursuing their tight-money policy last year even as economic trends (in Saulnier's view) called for a stimulus. He waged an equally vigorous (and victorious) fight with Budget Director Percival Brundage against a spending holddown for the current fiscal year.

"We didn't all agree with him," said a member of the Joint Economic Committee after hearing Saulnier testify on the economic situation recently, "but we were all impressed with his savvy. He's the kind of a guy who doesn't make up his mind in too much of a hurry. But when he does, he's got the guts to go to bat for his ideas."

An Urgent Problem

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. WESTLAND. Mr. Speaker, I am again calling attention to the urgent problem of the dairy farmers of my district by inserting in the RECORD a letter addressed to me by the directors of the Whatcom County Dairymen's Association on behalf of their 1,600 members.

This letter, dated February 25, 1958, indicates what is happening all over the country as far as the dairy farmer is concerned. These farmers are getting less money for their product, while at the same time their costs of operation are rising.

This is why the farmers of my district urge, as I do, that dairy price supports continue at 75 to 90 percent of parity, and that the Congress be given the opportunity to consider the dairy self-help plan.

The letter follows:

WHATCOM COUNTY
DAIRYMEN'S ASSOCIATION,
Bellingham, Wash., February 25, 1958.
Representative JACK WESTLAND,
House Office Building, Washington, D. C.

DEAR SIR: As directors of the Whatcom County Dairymen's Association representing 1,600 dairy farmers, we wish to urge you to do everything possible to maintain the present parity on dairy products.

It is a well known fact, that when the farmer's economy is affected, the entire national economy is depressed. The drastic steps being taken to lower parity to 75 percent will further reduce an already inadequate income, and aggravate national economy.

There is no justification for lowering returns to farmers who are already badly underpaid compared to other living standards, and particularly when the manufacturing and processing of their products are constantly rising through labor and equipment costs. We have just completed labor negotiations which will cost our members an additional $75,000 per year.

We are in favor of a well organized, self help plan. There is no reason to doubt but that an equitable self help program for the dairy industry can be evolved, but until such time that such a plan can be put into effect, parity prices should be maintained at the present level.

We appreciate your past cooperation, and ask that you take a firm stand to maintain parity at the present level.

Yours very truly,
WHATCOM COUNTY DAIRYMEN'S ASSOCIATION,
LYLE HUNTER.
C. M. VANDER GRIEND.
ROBERT EASTERBROOK.
WILLIAM MIZE.
HENRY F. POLINDER.

Direct-Mail Advertising and the Welfare of Small Business: The Need for Facts

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. PORTER. Mr. Speaker, how many of the 250,000 third-class permit holders are small-business men who need and deserve a measure of subsidy with respect to the direct-mail advertising they use? The Postmaster General does not know, the Department of Commerce does not know; even Harry J. Maginnis, the candid and able representative of the Associated Third-Class Mail Users, does not know.

It is high time we found out.

I do know that many small-business men in southwestern Oregon and elsewhere in the Nation will be hurt by drastic and sudden increases in the cost of sending third-class mail. I also know that many huge corporations flood the mail with third-class communications and do not need or deserve any measure of subsidy.

Attempting to draw a legislative line is a duty Congress has long ignored. If no such line can be feasibly drawn, then the rates should be increased until the users are paying their full allocated costs for the service they get, but this should not be done so suddenly as to put many valuable small-business enterprises into bankruptcy or at least into the ashcan.

I think Harry Maginnis makes some good points in the following statement he had printed on a full page of Roll Call February 5, 1958. Certainly Mr. Summerfield did not sustain the burden of proof when he proposed the drastic increase in third-class mail rates. On the other hand, as I have often told Harry Maginnis, there is also a duty on the part of the third-class mailers to bring before the Post Office and Civil Service Committees impartial evidence showing the effect of these increases on enterprises validly called small businesses and to help us draw that legislative line between those who may deserve a measure of subsidy, at least for a period, and those who should pay their full allocated cost.

Under unanimous consent, I include the following statement by Harry J. Maginnis in the Appendix of the RECORD:

NOBODY READS IT, NOBODY WANTS IT, EVERYBODY THROWS IT AWAY

This often-heard generalization refers, of course, to direct-mail advertising. Unfortunately, some Members of Congress use the phrase when attacking the advertising-sales tool of the 250,000 third-class permit holders in the United States, 90 percent of them small businessmen.

A few equally silly generalizations are:

You should hold your breath when passing a Chinese laundry.

A broken mirror means 7 years bad luck.

Gentlemen prefer blondes.

All fat people are happy.

Politicians are crooks.

ARE BUSINESSMEN IN YOUR STATE DEMENTED?

Third-class mail has existed since 1863. In 1957 businessmen put 15,700,000,000 pieces of such sales literature in the mail. They paid $281 million in third-class postage. Nobody knows for sure how many hundreds of millions of dollars were spent to create and produce this sales literature, but the amount is substantial. Enough goods ($15 billion worth in 1957) were sold to provide a livelihood for 4 to 5 million American citizens. These businessmen are proceeding on the assumption that it is not sinful to sell the goods produced by American labor and to enjoy a profit. Their use of this deferred service category mail—which is handled by the Post Office during slack periods—has been beneficial all around. They pay bleacher prices and don't expect box-seat handling of their mail. Remember these facts the next time you hear that old chestnut, "Nobody reads it, nobody wants it, everybody throws it away."

THE NEWSPAPERS AND CONSTITUENT MAIL

"All very true," Members of Congress will say, "but what about all the complaints I am getting about 'junk' mail."

The answer is very simple.

In spite of all you may have heard about the divorcement of editorial policy of newspapers from the business end, publishers still depend on the advertising dollar to keep their presses running. They are constantly after more advertising dollars and some of them don't like it one bit when the small-business man discovers third-class mail to be an ideal selling tool.

Of course, the best way to destroy competition is to tie a dirty label on it. Thus the continuing "junk" mail attacks by some newspapers. Constituents read these editorials and then write to you. Unfortunately, the 250,000 small-business firms and the 4 to 5 million Americans who make their living through direct-mail sales don't have editorial columns. Representatives and Senators rarely get a glimpse of their side of the case.

THE TRULY SAD PART OF THE STORY

For better or for worse, all these thousands of small-business firms have going for them is the undersigned and a few Members of Congress who understand the economics of the second largest advertising medium in the world. We have appeared before House and Senate committees seven times. In 1952 we did a pretty bad job. The Congress hiked the third-class rate 50 percent. The 250,000 third-class permit holders are still shouldering that substantial increase, and at a time when the administration is trying to hold down the cost of living.

Buried on some remote page of the pending postal rate increase bill is a provision which would make the increase 150 percent—yes, 150 percent. (From $10 per thousand letters in June 1952 to $25.) If this is legislation designed to help the small-business man in an era of mammoth corporate mergers, we will be pleased to distribute gratis somebody's explanation of the great gains which are about to be heaped on the little fellow.

THE SMALL BUSINESS ADMINISTRATION AND SINCLAIR WEEKS

We don't expect Members of Congress to plow through volumes of postal-rate hearings to learn what spokesmen for business in the Eisenhower administration have said on behalf of thousands upon thousands of small-business mailers.

We can save you the trouble. Neither Mr. Weeks nor Mr. Barnes has the slightest idea what will happen to the 250,000 small-business mailers if and when the 150 percent third-class rate increase is approved.

Calvin Coolidge achieved a steep increase in third-class postal rates. Within 3 years he had to come to Congress and ask for a reduction in the rate to its former level. Let's not repeat that legislative bobble.

CANINE RETRIBUTION

There's one generalization we didn't list at the beginning. It is said that "every dog has his day." It just may happen that the small-business mailer eventually will ask: Why was it too much trouble for my Representative in Congress to ask Mr. Weeks or Mr. Barnes for some facts before putting me out of business with a 150 percent increase in rates?

Putting people out of business may be a good way to improve the postal service and increase Federal revenues but we still prefer to believe that brunettes have their appeal and that there are some unhappy fat people in the world.

HARRY J. MAGINNIS,
Associated Third Class Mail Users,
Washington, D. C.

Clothing for Needy Children

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. ROGERS of Texas. Mr. Speaker, I rise today in the House of Representatives to insert in the CONGRESSIONAL RECORD a most appropriate editorial written by my friend, Jimmy Gillentine, who publishes the Hereford Brand at Hereford, Tex. The editorial is as follows:

"We certainly appreciate the public's response," said Principal L. C. Thomas, of Central School, in reference to a deluge of clothing which appeared this week as the result of an appeal to keep needy children warm.

Mr. Thomas, standing beside a small mountain of clothing, pointed out that much of it was new, no doubt purchased and brought to the school in answer to the appeal.

Like Mr. Thomas, many others of us are humble when we pause to give thanks for the bighearted generosity of people. For a brief time we are prone to forget the world's evils, the sputniks, the ever-growing toll of traffic fatalities, even the murders, sex crimes and banditry which appears in the day's news.

Most people are basically good. Their response to such occasional call is sincere and spontaneous. Hereford and west Texas may be above the general average on this score, but when we view the answer to United Fund drives and other appeals in our large cities, we find them a little different from most other Americans.

As human beings, we often malign and criticize the human race; our pastors, our newspapers and our magazines head the vanguard in this all-American pastime. When everything is said and done, though, we do have a wonderful country, and some of the finest people the world has ever known.

"The People of America Cannot Be Secure if They Are Progressively Separated From the Information That Guides the Nation's Leaders"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. PORTER. Mr. Speaker, the title above is a quotation from an important editorial in the Portland Oregonian for Sunday, February 2, which editorial is entitled "Security Should Not Be a Political Tool." The editorial also points out that "the real security and necessities of the war and postwar years in Washington have been used as an excuse to extend the practice of security into the service of interests that are purely political, departmental or personal, whereas real security embraces only national interests."

That is an excellent statement of the situation as it exists. I pledge myself to continue to do what I can to uncover such perversions of security and to denounce them for the great danger they are to our form of government. Under unanimous consent, I include the following editorial:

SECURITY SHOULD NOT BE A POLITICAL TOOL

The resolution of the major conflicts between the undeniable right of the President to withhold certain confidential matters from the legislative branch of the Government, on the one hand, and the people's right to know, on the other, is growing more important every day. Currently at issue is the Gaither report, which Mr. Eisenhower commissioned as an aid to the policy-making functions of his administration and access to which he has specifically denied both to Members of Congress and to the public at large.

First, the precedential unassailability of Mr. Eisenhower's position must be made clear. Every United States President, beginning with George Washington, has, upon occasion, found it necessary to exert the Executive's independence of the legislative branch by denying the latter confidential information. The authority to do so is essential to the principle of the separation of powers. Congress also has its executive sessions and secrets from which the executive branch and the people are excluded. Mr. Eisenhower has a point in explaining that he cannot expect responsible persons to prepare for him confidential reports unless those reports are actually to be kept confidential.

As it happens, however, the Gaither report is a poor example of executive security. Its first printing totaled 200 copies and, in the very nature of things in official Washington, a number of these got into the hands of executives who found it in their particular interest to leak essential excerpts. Some newspapermen obtained copies long enough to scan the findings and recommendations. As a result, both Congress and the public

are left with apprehensions based on second-hand reports that may or may not be truly representative of the information available to the President.

Moreover, there can be no doubt whatever that officials in the executive branch have abused their authority to withhold sensitive information. In some instances they have gone so far as to leak classified information to selected units of the press as a means of advancing the selfish interest of a single service or agency. For example, a spokesman for the Air Force not long ago passed to the New York Times a high-altitude photograph of the carrier *Forrestal*, presumably to illustrate the vulnerability of the Navy's big craft. The Pentagon, however, refused to release the same picture or any others in a series of the *Forrestal*. In November 1956, the Central Intelligence Agency leaked to favored newspapers the fact that it had given the White House 24 hours' notice that a British-French-Israeli attack would be launched on Egypt. This leak came on the eve of a congressional committee investigation of the CIA budget.

The bureaucratic attitude that results in such expedient violation of the executive branch's own security regulations is perhaps best exemplified in the following paragraph of an Air Force memorandum setting forth its information policy "lasting through mid-1958."

"Flooding the public with facts is very helpful," the memorandum advises key Air Force officers and executives. "But facts, facts, and more facts are quite useless unless they implant logical conclusions. Facts must be convincing, demonstrated living salesmen of practical benefits. These are the only kind of facts that mold opinions and channel the vibrant tensions of public thinking."

Here, in bold relief, is a shocking misconception of the Government's authority and duty to withhold only that information that could be of possible benefit to a potential enemy or a menace to the national security.

The real security necessities of the war and postwar years in Washington have been used as an excuse to extend the practice of security into the service of interests that are purely political, departmental, or personal, whereas real security embraces only national interests. Separation of powers by no means implies the complete mutual exclusiveness of the three branches of Government. Nor does it sanction in any way the exclusiveness of departments or services within a branch; it is utter folly, for example, for the Army to keep secrets from the Navy and vice versa.

Most important of all is this consideration: The people of America cannot be secure if they are progressively separated from the information that guides the Nation's leaders. In the long run, such separation is a threat to the national safety much greater than any possible consequence of a policy of free access to the Government's business.

Statement of Gov. Averell Harriman, of New York, Before the Senate Subcommittee on Roads

---

EXTENSION OF REMARKS

OF

HON. JAMES C. HEALEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. HEALEY. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD the statement made by Governor Harriman, of New York, before the Senate Subcommittee on Public Roads, on February 21, 1958:

I am grateful to Senator GORE and the members of this committee for the opportunity to appear here today.

Since taking office as Governor of New York State 3 years ago, I have given continuous attention to the improvement of our highway systems. My concern has been for both the reconstruction of existing State highways and the creation of an interstate system of expressways connecting the major centers of population and industry throughout the United States.

New York is the most populous of the States. It leads all others in manufacturing, and is the most important financial and commercial center of the Nation. New York draws visitors from all over the country and in fact the world. It is the second highest State in the number of registered automobiles, and in annual motor fuel consumption. As such, it contributes a large percentage of the revenues available to the Federal Government for highway purposes.

With these factors in mind, I vigorously supported the efforts of Senator GORE and his colleagues in the Senate and the House during 1955 and 1956 when they faced the difficult task of preparing legislation to establish a national program to meet highway needs. I believe the Gore-Fallon Act which resulted is basically sound legislation. Under its provisions, many States have been able to take long steps toward the realization of the ambitious goals set by this program.

A construction program of this size not only improves our transportation facilities, but serves as an important stimulus to unemployment and to the strengthening of our general economy. Now, with unemployment at 4,500,000 and expected to climb to 5 million this month, with production lower than in 1953–54, with steel plants operating at slightly more than 50 percent of capacity, with national spending for plant and equipment declining, it is essential that there be no scaling down of the highway construction contemplated by the act. Last week, I and 10 other governors respectfully urged the President to accelerate the highway program in order to revive activity in the vital construction and related industries. In his reply, received yesterday, the President stated that, among other measures, steps had already been taken by the Federal Government to provide greatly increased expenditures under the national highway building program. I had not been aware that the administration has taken steps to increase the program beyond the provisions of the 1956 act. And, in fact, other spokesmen of the administration have stated that the program would be slowed down. I am here today to enter objection to any reduction in the 1956 program, and to ask that it be increased.

New York State, well aware of the importance of this program, has from the start been among the leaders in getting work underway on the Interstate System, as well as on our regular urban, primary, and secondary systems. We have geared ourselves to absorb to the full our share of the apportionments established in the 1956 Federal act. The latest tabulations of the Federal Bureau of Public Roads show that New York State has $174 million of interstate projects under construction. This is a larger volume of work actually underway than any other State in the Nation. Through the advance of State funds, we are making early use of Federal assistance which was originally scheduled to be available in July but which, we have been advised, will not come to us until December. We have already opened a portion of our Empire Stateway running through the center of our State from Pennsylvania to the Canadian border. By next year, we expect to have several more major sections of toll-free interstate mileage opened to traffic.

During the design and construction of the 570-mile throughway, New York State obtained knowledge and experience in planning and building modern highways. Each section of these major expressways requires upward of 2 years of survey and design at considerable expense before actual construction is started. For this reason, it is vitally necessary that the States have firm assurance, at least 3 years in advance, of the amount of money they will have available for highway work. It is a well-known fact that, in any major construction program, a steady volume of work reduces costs and nothing is more expensive than fluctuation in the workload.

I believe it was the intent of Congress when the 1956 Federal act was passed to see to it that the various States had a firm basis upon which to plan future construction schedules. Thirteen years was set as the period within which the Interstate System was to be completed. New York State went ahead with plans and surveys on this assumption.

At the present time we have in various stages of design over $1,250,000,000 of highway plans for all of our State highway systems. Of this, approximately $580 million is for interstate projects. A program of this magnitude cannot be carried out efficiently, if we are constantly beset by uncertainties as to future Federal allocations.

It was not until midway in 1957 that we began to hear representatives of the Department of Commerce speak of the possibility of stretching the program out to 16 or even to 20 years. I feel sure that a 20-year program is just as contrary to the intent of the sponsors of this act as it is to the desires of New York State. If these expressways take 20 or more years to construct, they will be inadequate before they are completed.

We are given to understand that this talk of stretch-out is due primarily to increases in the estimated cost of the Interstate System, and a failure of revenue to meet estimates. Congress authorized appropriations of $2.2 billion for each of the fiscal years 1960 and 1961, but we are now told that the money available in 1960 will be $1.6 billion, and in 1961 will be reduced to $1.2 billion.

If these reductions are put into effect, 36 States will find that they have less to spend on interstate work than they had in 1958–59. By 1961, 46 States will have to cut back their programs as a result of shrinking Federal allocations.

This means that while New York State will receive $142 million for interstate construction in 1959, our allocations will drop to $79 million in 1960, and to $59 million in 1961. This is progress in reverse. With $580 million worth of interstate projects now under design, it is difficult to see how we can maintain a steady rate of construction based on a sharply descending scale of Federal aid.

Instead of seeking ways to preserve and to supplement the highway trust fund, the administration has advanced proposals which would deplete it by charging to it the costs of the forest-land highways and expenses incurred by the Treasury and Labor Departments incident to the interstate program. I hope that the Congress will be alert at all times to attempts to divert this trust fund from the express purposes for which it was created.

In spite of the progress we have made, New York State finds itself in a particularly unfortunate position with regard to its apportionment of mileage and funds for the National System of Interstate and Defense Highways. This position is shared by some 15 other States, all of which have toll roads designated as interstate routes. Of the 1,210 approved interstate miles within our border,

over 500 miles are a part of the New York State Thruway. The new formula for apportionment of Federal interstate funds makes clear the need and the justice of some form of compensation for those States which find themselves similarly situated. This formula, as you know, is based upon each State's percentage of the cost to complete the whole National System. In other words, New York's annual allocations will be based not upon the cost of our 1,210 authorized miles, but upon the cost of the 700 miles which remain to be built. This inequity will prevail as long as the program lasts.

When the New York State Thruway was designated as a part of the Interstate System, it was assumed that some method of reimbursement would be worked out. Reimbursement for toll roads was recommended by the President's committee, chairmaned by General Clay, which reported its findings in 1955. The 1956 Federal Act directed that the Department of Commerce conduct a study of the reimbursement problem. I understand that the results of this study have been submitted to Congress. This report will show that the cost of toll road construction on New York's Interstate system will come to approximately $1 billion. It would be a glaring injustice if no provision were made to compensate those States which, like New York, have moved forward with the construction of large portions of their Interstate networks without Federal assistance. The Federal Government would in effect be penalizing those very States which have had the foresight and the initiative to provide the Nation with the sort of major transportation system it so desperately needs.

Congressman BUCKLEY, of New York, who has consistently sought to rectify this injustice, has recently introduced a bill amending the Federal-Aid Highway Act of 1956 in such a way as to give the States having toll roads on their Interstate systems a more equitable share of Federal-Aid. This bill would permit the Secretary of Commerce to designate as part of the Interstate system other routes within the various States equal in mileage to the length of the toll roads within their borders. The cost of the construction of these interstate miles would then be added to the total cost for completing the Interstate system. I strongly recommend favorable consideration of this bill by the members of this committee.

New York State already has applied for the inclusion of an additional 453 miles in the Interstate System. These major routes are fully justified as interstate highways from a standpoint of traffic use, economic factors and defense. New York State needs and should have more than one outlet to the west. Last year, when an additional 2,102 miles was to be allocated, New York State applied, among other projects, for inclusion of major portions of Routes 17, 15, 219 and an extension of the Empire Stateway from its northern terminus to the Ogdensburg Bridge. The Department of Commerce passed over our application. If the Buckley bill becomes law, these routes can be made a part of the Interstate System. In fact, Route 17 can then be developed as part of the interstate network for its entire length, as I have consistently believed it should be. And there are routes connecting with other States which are badly needed.

In spite of our recognition of the importance of the Interstate System, New York is not concerned with this type of highway alone. We share with the Members of the Senate and the House an equal concern for the reconstruction of the many thousands of miles of urban, primary and secondary highways on the Federal aid system. This concern was spelled out in the 1956 Highway Act when Congress declared its intent to progressively increase the sums authorized for these various systems by $25 million each year through 1969.

The administration now recommends that beginning in fiscal year 1960 this program be frozen and no further increases be granted. This move we regard as shortsighted in the extreme. Now is not the time to talk of cutbacks and stretchouts. With unemployment moving steadily upward, it is more than ever necessary that the Federal Government make sure that the highway construction program is carried on at a rate sufficiently high to make it an important factor in halting the current recession. This is the time when bold action is needed. I, therefore, recommend a substantially larger increase in the appropriations for the primary, secondary, and urban systems than has been contemplated. These feeder routes, including farm-to-market roads, are every bit as important as major expressways. New York State has been able to absorb all of the Federal aid assigned to these systems. The voters of our State have approved a $500 million bond issue for highway purposes. Our design program is such that we are capable of handling substantial increases. We are ready to move ahead with the placement of contracts. Men can be put to work promptly on the job and in the factory.

Another matter I want to touch on is the matter of billboard advertising on the Interstate System. The Interstate and Defense highways will pass through some of the most beautiful areas of our Nation. For much of their distance, they will be entirely on new location, opening up vistas hitherto unseen by the public. To preserve the natural beauty of our countryside and to promote highway safety, steps must be taken to prevent billboards from cluttering up our expressways. Already, they are appearing along recently opened Interstate sections. In New York, I have recommended to the State Legislature a measure which would restrict billboards within 660 feet of these highways. It is proper that the various States take the initiative. However, since this is an Interstate System, a uniform national policy should be established. I recommend that this committee reexamine the legislation introduced last year by Senator NEUBERGER. Action now to protect our tremendous investment in new expressways is imperative.

I am convinced that the 1956 Highway Act, in whose creation this subcommittee played so substantial a part, was a most courageous and farsighted piece of legislation. But it will not remain so if it is whittled down and dwarfed from its original conception. This is a 13-year program. It makes no sense to turn it into a 20-year program. Nor does it make sense to ask the States to constantly lower their sights by reductions in the yearly apportionments of funds for construction of the Interstate System. This network is known as the National System of Interstate and Defense Highways. When we set about deciding just how badly we really need these expressways, let us not forget the word "defense." Let's not make this one more example of shortsightedness and false economy. New York City particularly needs more interstate routes for civil defense and evacuation.

New York State is prepared to do its share, as it has in the past.

As I have indicated, with increased Federal assistance, we would be in a position to expand our program and place contracts rapidly, which would not only help us to meet our highway requirements, but would be a stimulus to employment and our lagging economy.

Foreign Aid and Practical Politics

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

FOREIGN AID AND PRACTICAL POLITICS
(By David Lawrence)

RECESSION SEEN RAISING TOUGH HURDLE FOR ASSISTANCE AND TRADE PROPOSALS

Everybody knows there's trouble ahead in Congress for the foreign-aid program—and likewise for the extension of the reciprocal trade agreements. So a highpowered sales job was undertaken here this week by a group of conscientious persons in both political parties who think these projects are vital to world peace.

But, as with a lot of meritorious ideas, the proponents talk mostly to themselves. They do not perceive the considerations of practical politics that present the real obstacles.

It is not popular, for instance, to be arguing in Washington for the expenditures of large sums for aid abroad when there is unemployment and recession going on among the people back home, the promotion of whose well-being is the primary obligation of the Members of Congress.

It's not popular to talk about extending reciprocal trade agreements and lowering tariff barriers when so many constituencies throughout the country would be adversely affected if foreign goods—manufactured at lower wage costs than prevail here—were permitted to enter the United States in great quantities.

Many Senators and Representatives in both parties face a condition, not just a theory, in these matters. It's true that prominent Democrats like Messrs. Truman, Stevenson, and Acheson are joining with President Eisenhower, Vice President NIXON, and Secretary Dulles in espousing the two programs, and there are, moreover, very good arguments for these proposals. But vote-getting is something else again, and the congressional elections are just a few months away.

Who is to take care of the unemployed in these industries? What about the loss of investments in the businesses that would be injured by the breakdown of tariff walls?

It's easy enough to offer high-sounding arguments about the importance of building up foreign economies, and how the rest of the world must be able to sell their goods in our markets if we are to produce a prosperous economy for everybody. But the voters who see their textile plants hurt by a tariff are up against a concrete fact—namely, the possible loss of their jobs.

The question of tariff walls has been before the American people for many decades. A gradual reduction has been made over the years, but lately the opponents have argued not so much against changes in tariff rates—for even the present duties are not high enough to protect some industries—but in favor of some kind of quotas actually to restrict or limit imports from certain countries. The Europeans use the quota system. Even American magazines started since 1945 are kept off the newsstands of Great Britain because the Government there wishes to limit the competition with British

periodicals. The Canadian Government, moreover, put a high tax on certain types of Americal publications to discourage their doing business in Canada.

It may be thought that the opposition in Congress to the extension of the reciprocal trade agreements is inconsequential and can be overridden. The tariff question, for instance, is being linked to the foreign aid program. Members of Congress who don't want to see tariffs disturbed are likely to withhold votes from the appropriations for foreign aid as a weapon for compromise.

The effort by a well-organized group in Washington last week to create a favorable public opinion for foreign aid and for the reciprocal trade agreements is perhaps the most spectacular in a long time. But it doesn't answer the question of what happens to the Congressman or Senator who has a lot of unemployed back home and still votes for aid to foreign countries. It doesn't help the Members of Congress, either, who must fight against the importation of cheaper-made products that compete with industries in certain districts or States.

The problems are complex but not insoluble. It will cost money really to protect industries that may be affected by tariffs. They are, to be sure, as important as any casualties in the economic world ever assisted by Government before. It will cost money to help generally the unemployed at home, and when that's done the Congress may be better disposed toward the whole foreign aid project and reciprocal trade agreements.

The indubitable fact is that the current recession now is uppermost in the minds of the people and is the basic concern of all Members of Congress. Charity begins at home is an age-old slogan, and maybe it is too narrow in its implication—but, politically speaking, it is broad enough to influence a good many voters in the next election.

Franklin D. Roosevelt

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. ASHLEY. Mr. Speaker, as Americans throughout the Nation join in paying tribute today to Franklin D. Roosevelt on this 25th anniversary of his first inauguration, it is well to pause and give thought to an era that made history, following our national economic collapse only 25 years ago.

The following years of prosperity in which all our citizens shared began with the leadership of President Roosevelt—leadership that united the American people in a common bond to support his bold and courageous programs and leadership that pulled this country out of the depths of a national depression and started it up the road of national prosperity.

Franklin D. Roosevelt inherited a depression economy when he took office on that fateful March 4, 1933. Millions of unemployed stood in breadlines, millions of others worked for subsistence wages, factories stood idle, farmers were turned off their land.

"I pledge you," he said, "I pledge myself, to a new deal for the American people." And he made good that pledge. A confident people began to buy goods from a confident business that began to produce it. A new agricultural program that helped to put the farmers back on their feet had its impact in developing purchasing power for that important segment of our economy. Land utilization, conservation, reforestation, were all long-range programs that paid off in increased agricultural production providing a decent living for farmers and protecting the Nation's natural resources.

Federal bank insurance closed the tragic chapter when lifetime savings were wiped out in bank failures.

Unemployment insurance, social security, minimum-wage laws were all measures to prevent a repetition of the extreme suffering and hardships of another economic crisis.

The memorable first 100 days of the New Deal were exciting and vigorous. The legislative proposals were imaginative and were eagerly accepted by the American people.

Now after only 5 years of a Republican administration we find a parallel to that earlier era in the serious economic problems again facing us. We have mounting unemployment, an increasing rate of small-business failures, a deepening depression among American farmers, and a record high cost of living. But these problems are not being met with the vigor and determination that made history just 25 years ago. We see none of the urgency and excitement, the courage and leadership from the highest office in the land which united the American people in their faith and confidence for the present and future. From the President of the United States today, there is only vacillation and indifference to the economic suffering, with soothing assurances that everything is going to be all right. There are calls for confidence and faith—but there is no leadership to rally that confidence and faith.

This attitude is epitomized in the words of former President Herbert Hoover, who chose to repeat the same old Republican chins-up philosophy on February 22, 1958, that he stated on February 22, 1931. It is a philosophy that is as deeply ingrained in the Republican administration of President Eisenhower as it was in that earlier Republican administration of President Hoover.

Today's economic problems call for aggressive leadership from the President of the United States if we as a Nation are to meet and solve them. They call for the same kind of leadership that rallied our citizens in confidence and in faith by the man to whom we pay tribute today—Franklin D. Roosevelt.

Congress Receives America's Democratic Legacy Award from the Antidefamation League of B'Nai B'rith

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. CELLER. Mr. Speaker, on behalf of the Democratic Members of the House of Representatives, I accepted America's Democratic Legacy Award given to the Congress by the Antidefamation League of B'nai B'rith at a dinner in the Mayflower Hotel, Washington, Monday, March 3, 1958. The text of my remarks follows:

ON BEHALF OF CONGRESS REPRESENTATIVE EMANUEL CELLER RECEIVES AMERICA'S DEMOCRATIC LEGACY AWARD BY THE ANTIDEFAMATION LEAGUE OF B'NAI B'RITH, MONDAY, MARCH 3, 1958

I believe all of us here tonight recognize how significant, how profoundly moving, this moment is—and without precedent. The Congress of these United States receives the America's Democratic legacy award of the Antidefamation League of B'Nai B'rith for the passage of the first Civil Rights Act in 82 years and for the high level of debate that accompanied the passage of this act.

In recognizing Congress for these achievements, the Antifamation League of B'nai B'rith is paying tribute actually to the Nation, for Congress mirrors the Nation and only those principles can survive to which the Nation is dedicated. Let me add, too, that Congress reflects as well the weaknesses, the fears, the doubts, the prejudices, the strength, the moral fiber, the integrity, inherent in all people everywhere.

Congress is not building chambers, committee rooms, Statuary Hall, and underground passageways. Congress is 531 men and women behind whom press 170 million people who inhabit this country. There is no one more representative group in the world than the Congress of the United States and in this great debate on civil rights the Congress revealed all that is best in America's legacy.

Congress reflected each diversity of opinion and the freedom which is inherently ours to give expression to these opinions, convictions, passions and prejudices. Let it be noted the world over that while the majority conviction rested on our fundamental principle that the United States guarantees to all its citizens, regardless of race, creed, or color, equality of opportunity no one, no one, was denied the right to express his opposition to this conviction.

On the opening day of this great debate, which I profoundly hope shall serve forever as the model for Congressional decisions, I said on the floor of the House, and I believe it bears repeating:

"When there is a denial of constitutional rights to any person or to any segment of our society, it is the duty of Congress, a duty which it has shriked much too long, to provide the remedy.

"What we have before us is not a question of conscience, ethics, morality, or custom. What we have before us is a matter of rights, rights guaranteed by the Constitution, rights that have been withheld, and, as a consequence, we have done a singular dishonor to our Constitution.

"This is not to say that the acceptance of the proposals before us will be a simple matter, that the acceptance will not be painful to many in our country who have absorbed uncritically a regional way of life. The breaking of a pattern is never easy but we, the Congress of these United States, cannot permit any longer constitutional guaranties to be submerged and drowned by a pattern which has been permitted to harden and encrust the basic values of democracy.

"I personally deplore the necessity for engaging in argument which must necessarily bring pain to many Members of the House who represent a southern constituency, but if the espousal of the bill that bears my name touches the raw nerves of those so deeply and emotionally involved, I cannot retreat. It is not that I have any less affection for my colleagues from the South but rather it is I have a compelling adherence to the Constitution and to its

guaranty of civil rights to all the people, regardless of race, color, or creed. To have the color of one's skin determine whether the Constitution governs him or not is a thesis for which I can have no stomach.

"I realize the sectional differences obtaining in these fair United States. We have always had dissidence to contend with from our very beginning, when we were a mere confederation of States, but we soon learned that each section cannot have its own measuring rod. That leads along an endless trail of absurdity and confusion, which tends to national ossification. We cannot have the Constitution meaning one thing to one section and another thing to another section. Our Constitution must be one thing to all men—not many things to many men. Otherwise, we belie our history."

I believe that the debates on the floor of the House and the Senate should be required reading for all. When we keep in mind how intense, how passionate, and how deep were the emotions involved in this debate, we as a Nation have reason to be proud of the discipline, the restraint, and the scholarliness which all participants—and I stress all—exercised. I have listened to debates in the Bundestag of the West German Republic, in the House of Commons of Great Britain, in the National Assembly of France, in the Senate at Rome, in the Council of the Workers at Belgrade, in the House of the People in New Delhi, India, in the Knesseth in Israel—but never have I heard a debate in those chambers that was on a higher plane—or as dignified—or as courteous—and parliamentary—as the debate on civil rights in the House. This is a great tribute to our American tradition of fair play and free speech. It is to the everlasting credit of the Anti-Defamation League that it recognized and acknowledged the magnificent quality of this kind of debate which bespeaks to the world the real meaning of the democratic tradition. And after the great debate, sectional as it was, the ranks closed and there was no sediment of bitterness left behind.

However, let us acknowledge that the Civil Rights Act is only one step forward. It leaves many, many troublesome areas untouched. Its enactment symbolized victory in only a skirmish. There is still need to shed light in some dark places. The past history in a number of States has not been a creditable one as far as civil rights were concerned and the past seems to gnaw at the future of those States. They still remain recalcitrant. The remedy applied must be continued. I know it may bring great discomfiture, if not pain, but suffering is the price that must be paid for the prevention and the cure. While we cannot change the past, we can mold the future. This we can no longer do—preserve segregation against the tide of history. We cannot any longer accept the separate but equal doctrine to be applied anywhere in these United States, as against the imperatives of the law, as against the Supreme Court decision. If we are to have liberty, it must, in the ringing voice of Leviticus, be 'liberty throughout the land, to all the inhabitants thereof." Liberty is one thing you can't have—unless you give it to others. It cannot be the privilege of the white man alone—it must be shared with all.

It has been said that justice is the bread of the Nation, because all hunger for it—white and colored.

Indeed, justice is denied if civil rights are trampled.

To those who disparage the Negro and at the same time boast of their nobler blood, I say send your noble blood to market and see what it will buy.

To those who boast of their forebears and their better traits, I say a man can't very well make for himself a place in the sun if he keeps continually taking refuge under the shadow of the family tree.

I am not interested so much in race, color, creed, or national origin, as I am in character. Character is what you are in the dark. Character is what you do when no one is watching. Woodrow Wilson said: "Character is a byproduct; it is produced in the great manufacture of daily duty." Rudyard Kipling said, "It is not good to be a Negro in the land of the free and the home of the brave." We must so conduct ourselves as to make repetition of that thought unthinkable.

There are before the Committee on the Judiciary, of which I am chairman, 18 comprehensive bills which will carry us forward into greater realization of civil rights for all.

Let it not be thought that, having enacted the Civil Rights Act of 1957, we shall remain smugly content. This is a promise. As chairman of the House Judiciary Committee, I shall hold hearings on the bills pending—more particularly on the comprehensive bill I offered. I shall endeavor to have it reported favorably to the House. When that time comes, as it inevitably will, for the further enactment of the necessary laws to curb the still-rampant denial of civil rights in sections of this land, it is my fervent hope—I might even say prayer—in which all of you I know join with me, that once again in this most delicate of areas when we meet on the floor possessed by divergent and conflicting convictions, we will speak, persuade, and vote, in humble acknowledgment of America's democratic legacy of freely expressed opinion—without rancor and without recrimination, in fairness and openness, in the highest of American tradition.

Wisdom is knowing what to do next—skill in knowing how to do it and virtue in doing it. I am sure the Congress possesses that wisdom, that skill, that virtue.

On behalf of the Democratic Members of the House of Representatives, I accept in all humility this tribute to the Congress of the United States.

Neighborhood House Month

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mrs. BOLTON. Mr. Speaker, I am today introducing a concurrent resolution requesting the President to designate the month of March in each year as Neighborhood House Month.

Established in 1886 to improve living conditions on the lower East Side of New York City, the settlement and neighborhood house movement has grown throughout the United States so that there are now more than 700 such establishments. They are located in almost every community of over 100,000 population. In my home city, Cleveland, Ohio, there are 12 settlements.

These settlements and neighborhood houses are helping to stimulate the interest of people in cities throughout our country in the conservation of their neighborhoods and the redevelopment and renewal of their cities. It is befitting that the public be made aware of the vital contribution of these centers to the sound well-being and cultural development of the cities of America. Therefore, I am introducing this resolution to designate the month of March of each years as Neighborhood House Month. It is my hope that the Commitee on the Judiciary and the Congress will take favorable action on it during this session.

Under leave to extend my remarks, I include the resolution herewith:

Concurrent resolution requesting the President to designate the month of March in each year as Neighborhood House Month

Whereas the settlement movement in the United States was established in 1886 to improve living conditions on the lower East Side of New York City; and

Whereas the settlement house movement has grown throughout the United States so that there are now more than 700 such establishments in almost every community over 100,000 population in this country; and

Whereas settlements and neighborhood houses have enriched the lives of their neighbors of all ages, races, and creeds through skilled services and social reforms; and

Whereas the National Federation of Settlements and Neighborhood Centers, a federating body of many settlements and neighborhood houses, has for 47 years contributed much to the civic progress of our cities; and

Whereas settlements and neighborhood houses are helping stimulate the interest of people in cities throughout the United States in the conservation of their neighborhoods and the redevelopment and renewal of their cities; and

Whereas the settlements and neighborhood centers represent the voluntary efforts of citizens to improve their own environment and that of their fellow citizens; and

Whereas it is befitting that the public be aware of the vital contribution of settlements and neighborhood centers to the social well-being and cultural development of the cities of America: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the President is authorized and requested to issue each year, beginning with the year 1959, a proclamation designating the month of March of such year as Neighborhood House Month and calling upon the people of the United States to observe such month with appropriate ceremonies.

The Bogey of International Zionism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, the following article from Congress Weekly of February 3, 1958, points out the true source of the trouble in the Near East and shows how former President Truman's worthright position on the state of Israel embodies a correct view of the situation:

THE BOGEY OF INTERNATIONAL ZIONISM

A curious dichotomy has long been evident in American attitudes toward Israel. Side by side with the traditional sympathy for the Zionist cause, which attained its supreme expression in President Truman's prompt recognition of the Jewish state in 1948, there has existed in the State Department an attitude of ill-concealed hostility. Leading officials in the Department considered the creation of Israel a gross mistake, and today, while grudgingly admitting Israel's right to exist, they give vent to their

hostility by preaching the dogma that international Zionism is at the root of the troubles in the Middle East, that Zionist ambition is the chief obstacle to peace in the area. Two recent public utterances offer an illustration of these conflicting attitudes.

Former President Truman, himself a victim of much criticism for his Palestine policy, speaking at a dinner given by the World Academy of Higher Jewish Studies in Jerusalem, vigorously defended his recognition of Israel 10 years ago. "If we had been against Israel when Israel finally emerged as a living fact on the stage of Jewish history," he declared bluntly, "we would have violated our announced traditions and policies." In answer to those who regard Israel as a threat to the Arab peoples, Mr. Truman stated, "We ought not create the impression that we will not support the State of Israel. If we remain firm in the position that the State of Israel is here to stay and that a great future of relations between Israel and the Arab people is possible with good will on both sides, then I believe a just settlement can be worked out."

Nowadays, when hostile propaganda has made Israel the whipping boy for all the troubles in the Middle East, it is good to hear these forthright words. They serve as a corrective to an address by Harold B. Minor, former United States Ambassador to Lebanon and currently employed by the Arabian American Oil Co., delivered before the Southern Assembly sponsored by Tulane University. The remarks of this former State Department official are typical of the current anti-Israel line. "There will be no improvement and no peace," he said, "until the American Government and the American people face up to a distinction between an Israel as an integrated Near Eastern nation and an Israel as a goal of international Zionism. * * * An Israel supported by tremendous contributions of money and other means by international Zionism, in which force is substituted for understanding, and based on intransigence as regards United Nations resolutions and large-scale immigration, is in my opinion, untenable."

It need hardly be pointed out that Mr. Minor's assessment of Middle East affairs takes its cue from official Arab propaganda, which has long obscured the true issues. Further appeasement of the Arabs will neither cure nor mitigate the troubles in the area. The disorder in the Middle East is deep, endemic, and of long standing; Mr. Minor's tidy doctrines can do little to alleviate it. On the contrary, his mixture of distortion, animosity, and oversimplification does great harm to advancing the cause of peace.

As against the prejudiced views of Mr. Minor and other pro-Arab propagandists, we prefer to think that Mr. Truman's is the more authentic voice of America.

Newspapers and the Rights of Individuals

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein a speech made by the Honorable Cranston Williams, general manager of the American Newspaper Publishers Association, at a dinner of the Newspaper Advertising Executives Association of the Carolinas, held at Durham, N. C., on the night of February 22, 1958, which is entitled "Newspapers and the Rights of Individuals."

NEWSPAPERS AND THE RIGHTS OF INDIVIDUALS

(Speech of Cranston Williams, general manager of American Newspaper Publishers Association, at dinner of Newspaper Advertising Executives Association of the Carolinas, Durham, N. C., February 22, 1958)

This speech needs no title or slogan. I have nothing to sell this audience. For purposes of the printed advance program I have used the title "Newspapers and the Rights of Individuals." I hope I can recite some things of interest to each of you in the newspaper business and guests, all interested in the public welfare.

Most of my life has been spent in newspaper work. In my position as general manager of the American Newspaper Publishers Association, I have a better than average chance to view some fundamental problems in a perspective that gives me a view of the newspaper business as it is related to the future of our country. I promise to leave out the technical details and statistics; but I think you will be interested in some things happening today that have a direct bearing on each individual in our free society.

Members of the Newspaper Advertising Executives Association of the Carolinas know that critics of newspapers and of advertising are working overtime and those critics do not ask for time and a half. We see and hear their blasts at us on television and radio and we read in our own newspapers what they have to say. I rejoice in their freedom of speech to sound off as they please, and I hope our critics as well as ourselves will always have freedom of speech as well as freedom of the press. I emphasize that point now, and I shall come back to it in these remarks.

Self-examination is good for anybody, and I know of no business that does more self-appraisal than the newspaper business. Every time two or more editors, publishers, advertising men, circulation men or mechanical men get together they invariably discuss ways of doing their jobs better. The public every day appraises our work to the extent of buying more than 57 million copies.

I hope tonight we can do some self-examination on its broadest aspects.

Newspapers must give their readers what they want, what they expect, and what they pay for if they are to continue to exist as a free institution.

Most of us, I think, take newspapers for granted. We get up in the morning—feeling fine, feeling badly, with a headache, feeling grouchy, or feeling pleasant—but however we feel we instinctively turn to our newspaper. We expect the newspaper to be there. In the afternoon we have the same feeling of expectancy in reading our newspaper. We expect that newspaper to give us information. We would be most indignant if the newspaper did not tell us about sputniks or the explorers that are circling the globe. If we had to wait for a Government handout to get such information we would feel that our rights were being infringed. And this would be true because our Constitution guarantees to us the right to information if we demand it. We are at liberty to read, to agree, or to refute, but one of our inalienable rights is the right to have information—whether we like it or not, or whether or not we agree with what we read or hear.

The newspaper, with its news of our community, our Nation, and our world, and its advertising on all sorts of subjects about all varieties of commodities and services, preserves for us as citizens our rights which were written into our Constitution.

The phrase "freedom of the press" came into question among some at one time because there were people who said newspapers fought for freedom of the press selfishly and for their own ends. I know of no newspaper publisher who thinks that freedom of the press is a right guaranteed to him. It is a right guaranteed to the people for which the newspapers are only the trustees. As honest and alert trustees they fight for that right whenever it is in danger; but their fight is for the people and their right to know.

I think all of us are aware that there is a destructive force attacking our right to know. Governments, both Federal and State, seem to feel that the handout—the formal release in mimeographed form—is the method through which the people should be informed. Bureaus seem not to realize that those in authority in Government are there only through the will of the people and that they must perform according to the will of the people or not long remain in power in our Republic. Or perhaps it is because the bureaus realize the truth only too well and therefore seek to hide from the people their errors both of omission and commission. For such a purpose the Government handout is ideal.

None of us can accept their theory of how the people shall be kept informed. The people have the right to know everything that is going on. It is the duty of the newspaper to see that they are informed. Neither the people nor the newspapers wish made public those things which can endanger us as a Nation. There is no quarrel with Government when it attempts to keep secret information which if in the hands of our enemy could endanger us. It is different when the enemy knows something but it is kept from our people. There are many things which Government servants would hide from their masters—the people—under the guise of national security which is actually in many cases Government bungling and misconduct.

As it is with news, so it is with advertising, and most of my hearers tonight are concerned greatly and specifically with advertising.

It is not only in the realm of news that the public is entitled to have information. They have the right to know of every product, of every service that is offered legally. They have the right to know its quality, its packaging, its price. They have the right to decide as between two commodities of almost equal quality. Advertising gives that information.

I say that truthful advertising should not be suppressed. Some Federal and State governmental agencies and others outside of government say otherwise. They want to control even truthful advertising. They want to say that product A meets with their approval and can therefore be advertised, but product B does not and therefore should be banned from the public's knowledge. I know you will not agree with that theory.

Lawyers and doctors say, "We will not advertise." If that is their will, that is also their right. But when lawyers adopt a code of ethics for themselves which bans advertising should Government agencies adopt that code of ethics or canon promulgated by a private organization for a group of private citizens, to keep from the public the right to know? Yet that is being done. Only recently the Patent Office in the United States Department of Commerce proposed a rule that no one appearing before it can advertise. They base this proposed rule on Canon 27 of the American Bar Association which forbids attorneys to advertise. When the ANPA raised a question we were informed that other governmental agencies had adopted the same canon of a private organization to guide the Government in its public functions.

The Patent Office and others have no criticism of advertising as being untruthful or false or misleading. It is advertising per se to which these governmental agencies object,

guided and influenced by a canon promulgated by and for lawyers. And so the private code of a relatively small private group is being forced on others who do not accept the concept that paid advertising is something unprofessional to be avoided.

This theory of keeping from you the facts of which you should be aware has been adopted by others who seem to feel that their professional stature will be enhanced by a no advertising rule for the members of their profession. Dentists, optometrists, and, more recently, funeral directors (or morticians, as I believe they prefer to be called) are seeking to enforce upon their entire group an antiadvertising code. And because they have not been successful in their efforts through a voluntary code which they seek to enforce on all in their business, they are going to lawmakers in each State seeking force of law to put their ideas into effect.

Not all members of these groups agree with the no-advertising theory, and therefore a voluntary code could not be enforced; so resort to law seems to be their next logical step.

Those seeking to impose their no-advertising will upon the entire group would deprive the advertising group of licenses to practice. Why? Simply because, apparently, in some of these groups minorities are no longer recognized. It is the majority will which would govern completely.

In this connection a rather amusing incident might interest you. In one State powerful interests representing a segment of the optometric profession obtained the introduction of a bill to prohibit advertising by all members of that group. In due course hearings were held. Advocates of the law mustered their forces to tell the lawmakers why such a law was necessary and desirable. However, the opponents were not asleep. They also had some facts to bring out at this hearing as to the merits and demerits of the proposal. When the time for the hearing came, the opponents' spokesman presented to the legislators page after page of "news" which had been sent to the newspapers for free publication by the same people who were seeking a law ot prevent advertising: Handouts about Better Vision Week, Have Your Eyes Examined Week, See Your Oculist Week, and so on ad infinitum. The opponents' spokesman read these various gems of news and pointed out that apparently it was not advertising in itself the proponents of the bill sought to stop but merely advertising which had to be paid for. The measure was defeated—I am told amidst gusts of laughter by the legislators.

Do you believe these private groups have the right to limit your knowledge of their ability to serve you? If you should move into a new town, would you not want to know about the doctors, dentists, optometrists available—I will not say funeral directors, although the sad time comes to all of us when we need their services? Do you believe these groups have the right to keep that necessary information from you? Should a small group determine the ethics for the entire group and then seek to impose their will on every member of that group? It seems to me that each member of the group should determine for himself what he wishes to do.

It has occurred to me that this distaste for paid advertising might have some element of monopoly involved. This has occurred to me because State boards in some of these professions and in some States have ruled: no advertising may be "larger than or substantially dissimilar * * * to that used by the majority of other practitioners." It does not state that the advertising should not be misleading. It merely states that it should be similar to that of other practitioners.

Recently in South Dakota an optometrist was threatened with loss of license. Why? Because he used a 2-inch, 2-column ad, while the South Dakota board had decreed only a 1-column, 1-inch ad could be used.

These are only some of the absurdities that affect you, the public, in depriving you of your right to information about goods, wares, and services that are available to you.

Freedom of speech and freedom of the press are guaranteed in our Constitution. But remember a free press was clearly guaranteed in the Constitution of Argentina but that did not stop Perón, who, by the way, is maneuvering to get back.

Just before starting to Durham I read a book with great interest. It is called Pearl and Promise, written by a native Tar Heel, Gerald W. Johnson, a newspaperman who at one time was with the Greensboro News. Mr. John says: "So it works down to this—freedom of expression, which is inseparable from freedom of opinion, will inevitably disappear unless there is a strong and insistent demand for it; and there will be no strong and insistent public demand unless freedom of expression is obviously valuable to the public."

Further on Mr. Johnson states:

"Freedom of opinion and expression, which included freedom of the press, has no guaranteed future in the United States and the sooner that fact is faced the better for all concerned.

"The press cannot be the guarantor because a free press is the creature, not the creator of freedom. If that were not conclusive, there remains the fact that the press is divided against itself, both by the conditions under which it operates and by the tempermental qualities of its operatives. Potentially it is as effective an instrument of tyranny as of freedom and, as we have seen, some ineradicable influences thrust it in that direction. Since its power is derivative and its direction uncertain the press can hardly be considered an effective guarantor.

"As for the Constitution, it is just as strong as the people's approval of its provisions and no stronger.

"* * * We cannot rely on anything but ourselves. In the last analysis it is the people who must protect both the press and the Constitution, not the other way about.

No nation ever had a free press except one that demanded a free press. No nation ever kept a free press except one that was harshly intolerant of every tendency toward slavishness exhibited by its press. When the opposing forces operating on the press are almost equal, and it wilvers uncertainly, then the third force that will tip the scales is the weight of public opinion. When the people are convinced, or even half convinced that there is something more precious than freedom, you will find a large segment of the press agreeing with them and reinforcing the delusion; but when the people demand liberty first, and peace and prosperity second, then the press becomes a mighty engine for the defense of freedom."

Mr. Johnson says in effect that it is up to you as one of all our people to protect your freedom; that the newspapers cannot do the job alone.

The newspapers are fighters, however, for your freedom, for your right to know. Today, various newspaper organizations are strenuously fighting against the tendency of many Federal Government agencies to keep secret news about their activities. They are receiving cooperation from some Members of Congress.

There is a House Government Information Subcommittee headed by Representative JOHN E. Moss of California. For more than 2 years his subcommittee has been studying the laws of our country to find out what steps can be taken to eliminate roadblocks to free flow of information, and stop unnecessary secrecy in Government.

This subcommittee found that a so-called housekeeping statute enacted in 1789 when George Washington was President and dealing merely with custody, use and preservation of records by various governmental department heads was actually being used as authority to withhold information from the public. The Moss subcommittee therefore is promoting a bill the effect of which would be to prohibit the use of that law to keep information from the public. The subcommittee has unanimously sent the bill to the full House Government Operations Committee of which Congressman FOUNTAIN, of North Carolina, is one member.

The Moss subcommittee proposal would not interfere with the right of Government to keep confidential information relating to national security and other types of records which should be kept confidential. It would stop, however, the right of the department heads to determine that certain information should not be divulged for any or no reason. It is significant, I think, that this proposal is being strenuously opposed by all of the 10 departments of the Federal Government headed by men who form the President's Cabinet.

It is our business as newspapermen to report the facts constantly. This principle, and the preaching of it, is as vital to advertising men as to editors. It is interesting to note that when big problems arise those very Government officials that advocate withholding information from the public turn to the newspaper and other communications mediums for help in educating the public. It has never occurred to them that the public may lack education in such problems because they have not been kept informed as they should have been through a step by step report as to activities of their public servants. If the Moss subcommittee proposal is enacted into law many Department heads will find themselves in a position of being stopped from keeping much news of their activities a dark secret.

I have talked too long but I have tried to arouse you with some of the thinking not only of newspapermen but of thoughtful citizens who are disturbed over the ignoring of minority groups, the attempt by some to impose their will on others; the theory that the public has no right to know all that is happening, and the attacks that are constantly and consistently being made not only upon newspapers but upon all communications mediums.

Joseph Pulitzer, a great newspaper man, who continued to supervise several great dailies years after he went blind, gave a message years ago which will appeal to you now: "Pry into the dark corners. Turn on the lights. The people have a right to know."

Pepe Figueres Declares Defense of Human Rights a World Responsibility

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. PORTER. Mr. Speaker, a leader of the free world, now completing an outstanding term as President of Costa Rica, Pepe Figueres, gave the following interview to the Americas Daily. It appeared on their front page for February 19, 1958, and is worthy of the close attention of my colleagues, of the executive branch, and

especially of Secretary Dulles and the President:

DEFENSE OF HUMAN RIGHTS A WORLD RESPONSIBILITY, PRESIDENT FIGUERES DECLARES—OAS, UN DECLARATIONS ON RIGHTS OF MAN RECOGNIZE THAT, HE SAYS—PRAISES THE AMERICAS DAILY FOR WORK TO ACHIEVE GREATER INTER-AMERICAN UNITY

In publishing this interview, which, no doubt, will be of great interest to our readers the Americas Daily wishes to thank President Figueres for his kind words regarding our work to promote better Inter-American relations, as well as his words of encouragement for our democratic endeavor, commented in a manner which honors us by the illustrious Latin American statesman.

To questions submitted by our editors, President Figueres said:

"I am very pleased to give you, for the Americas Daily, this exclusive interview. Your newspaper has my goodwill because, in addition to fulfilling the objective necessity of informing about what goes on in Latin America, its editorial policy is within the bounds of increasingly powerful democratic currents which will eventually sweep out the few dictatorships still infesting Latin America."

Question: "What was the determining factor in your Government's decision to request the United Nations to send observers to the elections held in your country on February 2?"

Answer: "The movement which brought me to power has always maintained that human rights have ceased to be a matter under the exclusive jurisdiction of each nation, to become an international responsibility. The American Declaration of the Rights and Duties of Man, adopted in April 1948 by the Ninth Inter-American Conference held in Bogota, and the Universal Declaration of Human Rights adopted by the United Nations General Assembly in December of that same year, 1948, recognizes this fact. Among these basic rights of men, internationally recognized, is that of participating in popular elections, where balloting will be clean, secret, periodical and free. Therefore, we deemed it convenient that foreign observers, selected from a list submitted by the United Nations Secretary General, come to our country to observe the electoral process and inform that world organization of the manner in which Costa Rica fulfilled its international obligation of respecting the rights of her citizens to freely exercise the privilege of voting.

"We believe it would be advisable for other democratic nations to benefit from our experience as concerns requesting impartial observers for the electoral process from the United Nations, or the Organization of American States. Thus, a reality would become of what the aforesaid declarations of human rights have proclaimed in theory: That the observance of the basic rights of humans is a matter that concerns the international community, and not just a particular state, inasmuch as the rights of man do not have their origin in the fact that he is a national of any one country but in the fact that he is a member of the human race."

Question: "Some persons have criticized the step taken by your Government of requesting United Nations observers, alleging that this was a slight to Costa Rican sovereignty."

Answer: "I believe there is no foundation for such criticism. It is based in an absolute concept of national sovereignty which, in reality, it has never been possible to apply. Least of all now, that international law has progressed so much as to produce regional organizations like the OAS or world organizations like the United Nations. Just as individual liberty, ample as it may be, is restricted by the obligations imposed by community life, sovereignty, conceived as the right which nations have to guide their own destinies, has always been subjected to the limitations imposed by the international community, especially in the case when these international obligations have been freely acquired by the government of the particular countries.

"If Costa Rica consciously and sincerely accepted to become a part of the United Nations and the OAS, by that same acceptance she agreed to limit her sovereignty, renouncing to the unilateral decision of international matters which may fall within the scope of action of either organization.

"Human rights, as I stated in answer to your first question, are not an exclusively domestic matter of each state. They are the responsibility of the Inter-American community or of the international community, in spite of the fact that there are still insufficient instruments for either agency to protect them adequately. Those of us who truly believe that human rights should be respected, are obliged to do everything within our power so that these international organizations will actively participate in their protection.

"On the other hand, I quote, 'a good payer needs no security.' If a government is certain that it has taken all necesary measures to insure that balloting will be free—as our government did—instead of being inconvenienced by the presence of international observers, we derived great satisfaction from them. We were certain that their report could not be any different from what they rendered. That is, that the electoral process was carried out in a clean and orderly manner, with absolute respect on the part of the authorities for the free play of political parties, and for a free casting of ballots."

Question: "To what reasons do you attribute the victory of the opposition in the Presidential elections?"

Answer: "The answer is obvious: To the division of our party into two factions: The majority, which fostered the candidacy of Francisco José Orlich, and the minority, which backed the candidacy of Lic. Jorge Rossi. Combining the votes that the members of the Liberation Party cast for the mentioned Orlich and Rossi, they totaled a definite majority over the votes cast for Lic. Echandi by the four coalition groups of the opposition.

"This problem of electoral divisiveness within the Democratic Party is classic in Latin America. It is the product of a 'caudillo' heritage. It will only disappear when our citizens become amply educated in the concept of the ideological and permanent party as the organ of expression of their political thoughts.

"In the elections for members of the legislative assembly, the opposition groups were divided in two factions: That of Mr. Echandi and that of Mr. Ulate, on the one hand, and that of Dr. Calderón Guardia and the Communist, on the other. The only faction of the National Liberation Party elected the same number of deputies as all the opposition factions put together. The Rossi faction of National Liberation elected a sufficient number of deputies so that, when added to the majority group of Orlich, our party will have absolute control of the legislative power."

Question. "If the Communist Party was part of the coalition which gave the victory to presidential candidate Echandi and voted for the Calderonista slate for members of Congress, do you feel that Communist influence will be felt in the new Government?"

Answer. "As is known, in 1942 the Communist Party of Costa Rica made a public alliance with the then President Dr. Rafael Angel Calderón Guardia. From that time, control of governmental policies passed into the hands of the Communists. In our country we saw for the first time applied the methods of terrorism and electoral fraud through which the Communists gained control some years later of the eastern European nations. After a mockery was made of three successive elections, the people of Costa Rica expressed their decision to no longer support the Calderón communistic regime. It fell upon me to direct the popular uprising that, following 5 weeks of bloody fighting which left in its wage 2,000 dead, overthrew the Communists and their Calderonista allies from power.

"Since then, 10 years ago, the Communist Party has been unable to participate in electoral campaigns because the organization was outlawed. But in the recent campaign, its former associates, the partisans of Dr. Calderón Guardia, again sought their votes. The Calderón-Communist alliance was revived, except that this time, for obvious reasons, it was not made public in documents, although it was no secret, since the top leader of Costa Rican communism, Manuel Mora, made a speech exhorting his comrades to vote for the Calderón Guardia slate.

"The number of votes cast by the Communists is between 15,000 and 20,000. Lic. Echandi, having won the presidential election by a margin of less than 6,000 votes, it is logical to assume that the Communist vote was decisive for him. The Communists had denied their decision to vote for Echandi. But in a speech made yesterday, Red leader Mora admitted that he had given secret instructions to his followers to vote for Echandi, and he suggested that the opposition's victory was due to his party's decision.

"I do not know what promises Mr. Echandi may have given the Communists to get their votes. Perhaps he made none. It appears that the least the Communists expect is that their party be given legal recognition, thus permitting them to benefit from all the advantages that the law offers to democratic parties. The group that solicited the Communist vote must feel morally obliged to this recognition.

"In any event, our party retains the majority in Congress, it continues to have a program of economic progress and social justice which will permit it to face the advance of communism whether on its own or through its former allies, the Calderonistas, or its new allies, the partisans of Messrs. Echandi and Ulate."

Question: "What do you plan to do, Mr. President, when your term of office is ended?"

Answer: "What don't I expect to do, you should ask me. I have so many projects in mind, and I have so many obligations. However, I can summarize my future activities in these few words: Read, write, collaborate with my party.

"Government duties have prevented me from keeping up to date with my reading. I have dozens of books to read. I plan, also, to write three books, the outlines of which I have had in mind for some time. The first will be a historical book about 'The National Liberation War of 1948,' that is, the civil war against communism and calderonism, which had taken over the government since 1942. The second book will be about economic development problems in Latin America; and the third about inter-American relations and the fight for democracy within our hemisphere.

"Of course, I feel it is my duty to actively participate in the task which now falls upon my party, to be a responsible opposition.

"I will also devote some time to my private enterprises, which I have been unable to attend to seriously during the past 8 years."

Agricultural Men of the Year

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MACK of Illinois. Mr. Speaker, 500 farmers in Macoupin County have been highly honored for their work in soil conservation. They have done such outstanding work in stopping erosion and conserving the soil that they have been named the Agricultural Men of the Year.

I am proud of the job that these men have done in my home county and I am especially proud of my friend and neighbor, Mr. Leo Young, of Carlinville, who was awarded a distinguished service plaque for 1957 for his long and exceptional service in soil conservation.

Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Illinois State Journal on the work these men have done.

AGRICULTURAL MEN OF YEAR—MACOUPIN COUNTY'S SOIL SAVERS

For their exceptional achievements in soil conservation, we nominate the 500 farmers who worked with the Macoupin County Soil Conservation District in 1957 as Illinois' agricultural men of the year.

At a meeting the other night in Carlinville, Harley Briscoe, soil conservation district farm planner, ticked off a list of impressive accomplishments that would fill a volume.

Examples: The farmers completed 9,111 acres of conservation rotation by alternating grain and legume corps; built 58,168 feet of underground tile to give their land proper drainage; constructed 87 new ponds as means of conserving water for use in case of droughs; planted 340 rods of multiflora rose hedges, which conserve soil and moisture by acting as windbreaks. In addition, the hedges give protection to wildlife, particularly birds.

Besides this, the farmers constructed 5 miles of water diversion ridges, which are built on the principle of a terrace; built 20 drop inlets and 13 drop spillways to prevent land from being washed away by field streamlets; fenced off 288 acres of woodland; laid out 105 acres of contouring, and put in 3,609 acres of clover crops.

What makes the achievements particularly impressive is that Macoupin County is not among Illinois' most fertile areas. The county, particularly in the southern part, is hilly and the soil in some places is thin.

But these 500 farmers were not to be stayed by any disadvantages they had. They rolled up their sleeves and went to work to improve their land. Where they lacked money to carry out projects, they substituted their own brawn.

Some parts of Macoupin County, like other Illinois areas, have in past years washed badly. Because of its hilly terrain, erosion can easily occur. Only proper soil-conservation methods can stop the erosion.

Terracing where workable, diversion of rainfall, the growing of trees and hedges, the rotation of crops—all these can play an immense role in conserving soil that is prone to wash away.

These 500 farmers are wisely aware of their problem and have tackled it from a number of angles.

Probably the one farmer in the county who was most acutely aware of the importance of soil conservation was Leo Young, Rural Route 4, Carlinville, who was awarded a distinguished-service plaque for 1957 for his long and exceptional service in soil conservation.

Young traveled all over the county selling the idea of soil conservation. He was one of the organizers of the Macoupin County Soil Conservation District. He has been a member of the district's board of directors for years. And he has set an example for other farmers by adopting all the conservation techniques that could be applied to his farm. Young, indeed, deserved the plaque in recognition of his unselfish efforts in behalf of an important cause.

In whatever form undertaken, soil conservation's importance can never be overemphasized. City dwellers as well as farming people have a stake in the soil. Ninety-nine percent of the items on the grocer's shelves come from the soil.

The Journal salutes the farmers of Macoupin County who participated in soil conservation in 1957. We say keep up the good work.

Futures Trading in Onions

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following telegram, dated March 3, in which the 500 members of the Chicago Mercantile Exchange express the reasons for their opposition to H. R. 376:

CHICAGO, ILL., *March 3, 1958.*

Hon. MARGUERITE STITT CHURCH,
House Office Building, Washington, D. C.

Passage of H. R. 376 would prohibit futures trading in onions on supervised commodity exchanges. For first time sanctity of right to make supervised contracts would be abridged. This dangerous precedent could spread to all commodity and security markets. Question of why prohibition instead of regulation has never been answered.

United States Department of Agriculture has never recommended passage of this bill. The Chicago Mercantile Exchange has 500 respected members in cities throughout the United States and the following well known firms are all clearing members of the exchange. Many are members of the Chicago Board of Trade, New York Stock Exchange and Cotton and other exchanges. They have thousands of employees and customers involved daily in this essential commerce.

We urge you to oppose passage of H. R. 376.

Seaman's Lot Improves

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. SHELLEY. Mr. Speaker, my home city is San Francisco which is one of the great ports of the world. Through the Golden Gate ships of every maritime nation have sailed for generations, and the brave men of the sea have come ashore there to find their land legs.

The merchant seaman has come up in the world, I am happy to say. Through the persistent efforts of the maritime unions he has finally arrived at the point where he makes an honorable salary. His skill and courage which fit him for battles with the elements are now rewarded by suitable compensation.

The merchant seaman's life is admirably portrayed in this feature article written by Saul Pett of the Associated Press. I myself am a former merchant mariner and the economic aspect of the seaman's life is especially significant to me since I feel I have taken some small part, as an active member of the American labor movement, in improving his lot.

Under unanimous consent, I include a feature article from the Chicago Sun-Times, Sunday, February 23, 1958, describing the life, thoughts, working conditions, and economic aspects of the American merchant mariner.

SEAMAN'S LOT IMPROVES, BUT HE'S STILL A CARPING CRITIC

(By Saul Pett)

BOSTON.—Of all American breadwinners, the merchant seaman may easily be the contrariest.

At sea, he can't wait to get home. At home, he can't wait to get to sea. He always wants to be where he's not. He is an escapist, a cynic, an incurable romantic, carping critic, loyal, sentimental friend.

He brags about the vast improvements in his working conditions the last 20 years, but the ship he's now on almost invariably is a "lousy feeder." The last one was the best. The next one will be better still. But, anyway, he's through with the sea; he's going to settle down and start a chicken farm.

His moments of reunion at home are intense. Every return is a honeymoon, almost. But after 2 weeks go by he looks out the front window. He looks out the back window. He looks out the side window. He tries talking with the neighbors but can't get interested in who is getting an office promotion, who is having a baby, who is expanding his expansion attic. He goes down to

the waterfront for conversation he can understand. Pretty soon, he signs on again.

This picture of American seamen is drawn by an American seaman, Ray Grandy, 46, who has been sailing 28 years on freighters and passenger ships.

HE READS, DISCUSSES WOMEN

"To kill time at sea," he says, "the seaman reads anything he can lay his hands on—Shakespeare, comic books, or labels on cans. His No. 1 topic of conversation is comparing ships he's sailed on. His second favorite subject is women."

The incurable sailor wants the details of normal shore life only when he wants them. He goes to sea to escape them. And then he finds himself thinking, "Let's see, it's 6 hours earlier at home. The kids are just going to school. Is young Bill's cold better? Did the plumber fix that bathroom leak yet?"

Hitting a foreign port, the seaman disembarks in a hurry to get a beer, to mail letters home and, if he's single or not working hard at his marriage, to find female companionship, sometimes professional.

Often it is purely companionship he seeks. He may never leave the parlor, prefering instead merely to talk to the girls and sailors he knows off other ships.

"Seamen," says Grandy, "learn to be more tolerant of human weakneses than shore people. Having spent much time drinking, fighting, chasing women, they don't look down at the Magdalenes of the world. They realize that morals frequently are only a matter of economics."

FROWN ON PIER WELCOMES

Returning to home port, the sailor is anxious to read an American newspaper first and then call home. Most seamen, especially the older ones, frown on their wives meeting them at the pier.

"Sailors don't want their wives hanging around docks," Grandy says. "They consider this improper. You see, they like their women rough and raw except when they marry them."

In total, Grandy says, the average seaman does not drink or raise more hell than other men. But since his fun is more compressed—since it's longer for him between drinks—his fun is more intense, more noticeable.

"He also is a responsible citizen," Grandy adds. "More than 70 percent today are married. In the old days, they couldn't afford to be. Today they have families. They want their kids to go to school. They worry, for example, about things like Federal aid to education."

Grandy stands 6'1, weighs 230 pounds, has thinning brown hair, kindly gray eyes, and generally lacks any of the broken-nosed belligerence usually given to merchant sailors in grade B movies. He is highly articulate. His formal schooling stopped at the eighth grade, but he has been reading voraciously since.

He has sailed all the seas to all the continents, docked at most of the world's major ports, and at many so tiny and primitive he can't remember their names. He has shipped out as a cabin boy, ordinary seaman, able seaman, and ship's carpenter. For the last year, he has been beached, working in an elective position for the National Maritime Union, meeting ships, collecting dues, listening to grievances, calling out jobs in the Boston hiring hall of the NMU.

His union job will end in a few months and Grandy will ship out again. He can't wait—an impatience not shared but understood by his wife. She lives in their house in Old Orchard Beach, Maine, to which Grandy has been commuting from Boston since he took the NMU job.

The Grandys had three children. One son, also a sailor, was killed in a freak boxing accident at sea, which the father witnessed. A daughter is married to a seaman. A second son, Kenneth, 26, has been sailing the last few years as purser's bellboy aboard the liner *United States*. He now is determined to go into the insurance business and never sail again.

"Why should I?" he asks. "Sure, the money's good. But it means I got a house I can't live in, kids I can't enjoy, a car I can't drive, a wife I can't see."

BUT HE KNOWS

Hearing such talk, Kay Grandy smiles tolerantly. He knows he's going back to sea and he knows why.

"The sea offers me solitude, a chance to think I can't seem to find on shore. On a ship, you can always find a private corner. Standing at the forepeak, watching the bow cut the waves. Sitting on a bitt on the fantail, watching a tropical night sky where the stars are so low you wonder if the masts can slide under them.

"Sure, there's escapism involved. Leaving the dock, you know you're leaving worries and details behind you can't do anything about at sea. But there's also a kind of dignity—no crowds, no pushing around, no office politics, no small jealousies. The sea brainwashes you of pettiness.

"I like trusting and being trusted. Once in New York, I went to a bank to borrow $150. The bank wanted the story of my life and after all those questions, they wanted to know what I'd do with the money. On any ship I've ever sailed on, I could borrow $1,000 in 10 minutes and nobody'd give a damn what I wanted it for.

"Coming home is always a big thing, fresh, intense. A father or husband is never taken for granted. He's always Santa Claus to the kids. His family relationships never get stale."

Ray Grandy paused and grinned.

NOT ALL ROSES AT SEA

"I make it sound beautiful, don't I? Well, it isn't. There are any number of lousy things. All the regulations, the constant discipline, always at the beck and call of someone. The loneliness away from your family.

"People are always ready to take a sailor. He goes into a saloon in Newport News or Galveston or Bremen, there are guys waiting to roll him, cops ready to fine him. He goes to buy something and the price goes up—they figure he doesn't have time to shop around."

After 28 years at sea, Grandy has much to remember—the fire in No. 1 hold on the *Brazil*, coming up from Rio, which took 4 days to put out; the war.

But most vividly he remembers the working conditions in his early days, the company hiring boss or waterfront saloonkeeper you bribed for a job (you felt like a slave girl in the market), the $72 a month paid an able seaman, working 4 hours on, 4 off, no overtime for Saturdays and Sundays.

The food, always the food. The weevils in the flour, the maggots, the chicken that "had more sea time than the old man."

And today?

Today an able seaman is paid $353 a month for 40 hours a week and time and a half for anything over. He works 4 hours on and 8 off. (As carpenter, Ray Grandy's base is $444 a month.)

Today, by union contract, the merchant seaman sleeps only 2 or 3 to a cabin, eats well, has his choice of 2 carefully inspected meats at all meals except breakfast. He has fresh-water showers, washing machines, innerspring mattresses, fresh white bedsheets once a week, clean towels twice a week, pension and hospital plans, and paid vacations.

Social-Security Improvements Would Bolster Our Economy at Once

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. O'KONSKI. Mr. Speaker, much has been said about increasing the purchasing power of the rank and file of the American people to help overcome the present recession. So for it has been all talk and no action. Talk alone won't do the job that needs to be done.

Many fantastic schemes have been proposed but most of them unfortunately would make the rich richer and the poor poorer. Most of these fantastic schemes would also increase the taxes of the rank and file of the people and defeat the very purpose intended—namely, to give the people more purchasing power. Increasing taxes would decrease their purchasing power.

The surest and the most commendable way in which our Government could immediately increase the purchasing power of the rank and file of the people back home without increasing taxes would be to improve the social security program. This would not cost the taxpayers any money because at the present time there is a twenty-six billion dollar surplus in our social security trust.

The changes that should be made in the present social security law are as follows:

First. The minimum payments should be increased to $50 per month and the maximum should be increased to $200 per month and proportionate increases across the board.

Second. All disabled people should be entitled to receive social-security payments regardless of age rather than waiting to age 50 under the present law. The present laws should be liberalized on this point so that one does not have to be half dead to receive social security.

Third. The eligible age for men should be brought down to age 62 and the eligible age for women should be brought down to age 60. This would open up many jobs for younger workers.

Fourth. The limitation that social-security recipients can earn should be raised from the present $1,200 per year to $1,800 per year if single and $2,400 per year if married.

Fifth. Widows receiving social security for minor children should continue to draw social security even after the minor children reach 18 years of age. In fact the widows need this social security more as they get older than they do when they are younger. Under the present law when the children reach 18 years of age the widow goes off of social security until she reaches age 62. This is unfair and a severe hardship.

Sixth. All old-age pensioners should be included automatically under the social security program and receive

monthly benefits rather than the costly supervisory old-age pension system that we have at the present time.

Seventh. Veterans should not be denied social security disability benefits because they are drawing veterans benefits or vice versa. A veteran should be entitled to both social security and veterans benefits.

If these changes are made in the social security law, there will be at least a billion dollars additional annually put into the hands of the rank and file of the people of America. This would increase the purchasing power of more than 2 million of our people who need it most.

If this Congress really wants to do something to help the rank and file of our people who are having a hard time of it at the present time this is the surest and best way to do it and it can be done without increasing the taxes of the American people. If the Congress is sincere and really wants to do something for the people, here is a wonderful chance to do it.

What is more, these benefits can be paid within 30 days of the passage of these improvements and the effect can be immediate to bolster our economy. I know of no better, speedier, effective, or economical way to give an immediate boost to our sagging economy. Why not act now today?

Kalevala and the Finnish People

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. DINGELL. Mr. Speaker, the brave people of Finland have a great and glorious national tradition going back many centuries, and this tradition is preserved in its natural simplicity in their national epic, the great poem known to the world at Kalevala. This epic poem of almost 25,000 lines—of 50 runes or cantos—was probably composed at various times and put in writing by different hands. As an artistic whole it is in sympathy with the great traditions of the Finnish people. Its blend of symbolism and realism reflects the instincts of this brave people. Thus it is characteristically Finnish, both in form and in content. It is the faithful portrayal in beautiful metric verse of the folklore of the primeval Finnish race in their ancestral homes.

The date of the composition of this classic is, of course, unknown. Until the 19th century, Kalevala lived on the lips of the peasants and the simple folk. Then students and specialists of the subject collected parts of the poem bit by bit, arranged, and published them. The great importance of Kalevala was at once recognized in Europe, and by 1852 it was translated into Swedish, French, and German. Later it was also translated into English. It is almost impossible to overemphasize the importance of Kalevala in the spiritual, religious, and national history of the Finns. What the great classic epic Iliad had been to ancient Greeks, Kalevala continues to be for the Finns, as it has from the very beginning of their national history.

The people of this country have always had great admiration and sympathy for the brave, sturdy, industrious, and patriotic Finns. They have always deserved our aid and assistance. They have not only been appreciative of such aid, but have been most conscientious in repaying it, even under the most adverse circumstances. Since the end of World War II, we have extended, in grants and loans, almost a quarter of a billion dollars to them. They have already repaid a substantial amount of the portion advanced as loan.

There has always been friendly and cordial intercourse between the peoples of the two countries, and since 1950 such intercourse is being broadened to the mutual advantage of all concerned. In matters of immigration the Finns have enjoyed considerable advantage over southern Europeans. The present quota system does not permit as many Finns to enter this country as the Finns wish, but there is the hope that this quota will be liberalized and more Finns will come here. The Finns who have migrated here have become loyal and patriotic citizens of this country.

Labor Looks at Economy Today and Tomorrow

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. VAN ZANDT. Mr. Speaker, it was my pleasure to accept the invitation of Mr. Roy T. Hurley, president of the Economic Club of New York, to attend the March dinner-meeting held in the ballroom of the Hotel Astor, March 3, 1958.

It was my privilege to participate in the program of the evening and to share the speaking honors with Mr. David J. McDonald, president, United States Steelworkers of America.

I spoke on the subject "The World in the Atomic Age," while Mr. McDonald chose as his subject "Labor Looks at the Economy Today and Tomorrow."

Mr. McDonald's address follows:

A keen awareness of the honor implicit in your gracious invitation to speak here this evening is accompanied by an equally keen awareness of the obligation it imposes upon me to speak frankly and forthrightly on the crucial issues that confront us. In dispatching this obligation, I will review in rather sketchy form the long-range prospects as I see them for America and then move from that broad canvas to a more specific outline of the present year and the present problems.

In my own reading of American history, I have been impressed by the consistent recurrence of three major themes in our national life. They are, if you will, the major premises upon which we Americans build both our views and our conclusions on what constitutes the good life. These three notions are, respectively: a faith in God, a faith in the dignity of every human being and a faith in progress. Generally speaking, we have taken the notion of progress to mean very largely advances in our economic welfare.

I see nothing in the long-range future to shatter my confidence in the belief that greater progress lies ahead for all of us. Like most of my fellow Americans, I am less intrigued by the past imperfect than I am thoroughly confident in the future perfect.

The reasons for my optimism are to be found in our people and in our products. Surely there is agreement that the most important raw material to the future of our Republic is people, and we are now sure of three things regarding the American people:

1. There will be more of them, with the Bureau of the Census projecting a jump from today's 163 million to as high as 192 million by 1965 up to a whopping 208 million by 1970;

2. They will continue to leave the farm for city living and city employment; and

3. They will follow Horace Greeley's injunction by moving westward.

Putting it simply, we now recognize that the possible population increase by 1970 will be up to 38 percent over 1950 or almost 2 percent a year. If the past is prologue, we know that these Americans will demand better education, better standards of living, and better working conditions than ever before. Moreover, they will offer a market potential that literally staggers the imagination. Yet, there are certain facets about this population growth, drift, and distribution that demand intense investigation and vigorous action. Are we giving to it the kind of inquiry and the kind of action that the future requires of us? I think not and I shall give my reasons for this observation in just a moment.

Let me turn to the second aspect of the future which I called productivity. Actually, these people can live better than ever before—which is the simplest way of saying that our gross national product can continue its remarkable upsurge. In 1935 when confidence in ourselves and our future was at a peril point, the gross national production was about $72 billion. Once confidence was restored it rose to over $400 billion. Ten years from now—in 1968—it is possible that our total production of goods and services can grow to over $650 billion.

As with population, this potential for magnificent growth also poses a problem which demands hardheaded consideration.

Let me turn now to the two problems inherent in our long-range future growth. Thus far, the two major elements in my story rest in the assertion that within a decade, more and more Americans will be living better than ever before in our history. More people means greater potential markets and greater markets means greater potential sales and more sales means more production.

Statistics of population trends show increasing birth rates and decreasing death rates.

This suggests to me the need for our using every ounce of energy, imagination and production now in order that future generations will not be handicaped by burdens that we could and should have assumed. I agree with Edmund Burke, the great English conservative statesman, when he said that the political community is a "partnership between those who are living, those who are dead, and those who are to be born." Putting it bluntly, every classroom unconstructed, every highway-mile unlaid, every bridge unbuilt, every hospital need ignored—constitutes a breach of faith with the Amer-

ican people. And I state categorically that there is mounting evidence of these breaches at the present time.

The second problem involves the potential standard of living of our people a decade from now. How can we support a projected $650 billion product economy by 1968? The only way to do it is to increase the level of sales to consumers by approximately $140 billion—roughly a 50-percent increase in total personal consumption by 1968.

If this is true, then we must recognize now both the opportunities and the urgent need for an immediate upward surge in the living standards of the masses of the American people. Again, I do not think that we are moving adequately and effectively in this direction. As a matter of fact, we have experienced, beginning in the latter part of 1955, a slowdown in consumer growth and you can only assure an effective consuming mass population by providing for a stable mass working population enjoying good wages in a consistent fashion. Unemployment and underemployment eat at the very vitals of that which is essential to our future prosperity. And again I must assert solemnly that here some sectors of the American industrial leadership are derelict in their duties.

In brief summary, therefore, I see our long-range prospects as potentially magnificent, potentially the greatest period of growth in world history—provided that we make effective and immediate use now of existing resources and share fairly the fruits of our common productive efforts.

Now let me turn to the immediate present and the immediate problems. It goes without saying that the prevailing climate of business activity in America is cause for concern to our bankers, to our industrialists, and to our political leaders. As president of the one and a quarter million United Steelworkers of America, I share this concern most deeply. The last 6 months have witnessed an interesting debate by economists and financial analysts, by Government and business leaders over whether or not we are trapped in a depression or recession. I do not propose to dabble in the semantic issues of these debates.

The plain fact is—while economists quibble and politicians promise, the pace of America's mighty productive machinery grinds in slow and agonizing tempo. Across the land reports of plant shutdowns and mass layoffs grow daily in number. Already the staggering sum of nearly 5 million unemployed should convince even the most optimistic among us that the time for promises and prophecies is past—that the time for determined action is here and now.

I am highly sensitive to unemployment figures and I cannot hide concern over the fact that unemployment rose by 1,100,000 in January, which is the highest jobless figure for any month since 1950.

Knowing the snowball effect of this kind of unemployment, I cannot sit idly by and agree that this is a reasonable, sensible, or equitable way to pay for so-called rolling adjustments in the economy. Today, over 45 percent of the production capacity of the gigantic and basic steel industry of the United States stands idle. Blast furnaces, open hearths, and rolling mills capable of turning out an additional 60 million tons of steel ingots a year to meet our civilian and defense requirements, are now shut down.

Steel production, at 54 percent of capacity, cries out above the quibbling and the prophecies.

Among steelworkers, men of basic steel, ferrous, and nonferrous metal mining, and metal fabricating—over 160,000 sit unemployed, while more than 200,000 additional members of our union work short time. Those figures are as of the turn of the year. Today they are significantly higher.

The loss of purchasing power suffered by our membership alone, due to unemployment and the reduced workweek, had reached the alarming rate of about $850 million a year.

Steel industry forecasters continue to express only a hope that production may rise sufficiently in the last part of 1958 to achieve an average operating rate of about 75 percent of capacity for the year. But even if this goal is reached, the United States will have lost for the present and for the future about 35 million tons that could have been produced. This is in addition to the loss of 15 million tons that we could have turned out in the last 6 months of 1957, but did not.

During the past 6 months—as in 1949 and in 1954—our constantly rising capacity to produce has once more outrun the ability of 55 million American families to buy the goods our national economy is able to turn out.

For 2 years our soaring investment in new plants and in more efficient equipment sparked the boom which ended last summer. In 1956, capital investment skyrocketed to a record $35 billion, more than $6 billion higher than the year before. In 1957, capital investment rose still higher, to $37 billion. This tremendous expansion of production capacity created the possibility of an unprecedented growth in the output of goods of all sorts.

Unfortunately, demands from all sources are lagging behind our rising ability to produce. In fact, in many important categories, 1957 sales were falling behind the levels of a year or even 2 years before.

For example, in the first 11 months of 1957, the sale of new automobiles totaled 5½ million, a shade less than the year before. During the same period in 1955, however, over 7 million new cars were sold.

Last year new housing starts fell to less than a million for the first time since 1948. In 1956 we started to build over 1.1 million new dwelling units and more than 1.3 million during the year before.

Shipments of major electrical appliances also lagged in 1957—freezers were down, refrigerators down, ranges down.

Furniture sales fell off, and freight carloadings ran about 15 percent below the preceding year.

Retail sales have shown a frightening downward trend in recent months. As more and more families find their incomes falling, and millions more become apprehensive about their jobs and debts.

Meanwhile, manufacturing and trade inventories are near an alltime peak, higher now than at any time since 1940. As could be anticipated under these circumstances, incoming orders and the unfilled backlogs of many manufacturing concerns are now declining.

During the business slump of 1949, rapidly rising Federal, State, and local expenditures and rising automobile sales helped cushion the decline and spark the recovery. During the 1954 recession, booming home construction and rising consumer purchases did the same. But I cannot see comparable upward movements in any major area, on the basis of current production forecasts.

Housing starts now show no sign of rising appreciably above the level of 1957. Automobile production—with over 900,000 new models reported to be in dealers' showrooms and overflowing the lots—looks far from promising in 1958. In fact, industry sources now predict lower sales than a year ago.

Starting in midsummer of 1957 exports fell off to a 20-percent decline by December. Conservative estimates predict that American exports will be off something like 10 percent this year. That is a couple of billion dollars' worth of business.

Furthermore, in view of the fact that idle production capacity is greater now than in the slumps of 1949 and 1954, businessmen are revising their plans for new plant and equipment downward. An over-all drop of at least $2 billion—or about 7 percent—is forecast for 1958. Outlays by manufacturers are already expected to fall 16 percent. If demand fails to rise very quickly, these totals may well be cut still more. At the same time, our capacity to produce with more efficient machines and with fewer employees will still be rising rapidly as expansion programs for this year as well as for previous years are completed.

Although total governmental outlays will go up in 1958, there is no indication that the increase now planned will be sufficient to restore full employment and production in the months immediately ahead.

This is, in truth, a sorry picture. And I have recounted these disturbing and distressing facts—no doubt familiar to all of you—not in the manner of a Jeremiah come to rent the air with lamentation. I speak rather as one who—close to the heart of this serious business slump—looks to Government, business and labor to end this decline and spark a recovery through mutual shouldering of responsibility.

Just as the time is past for promise and prophecy, so also has time run out for words.

Instead of vainly waiting to see if the situation gets worse, in 3 months or in 6—and facing the possibility of having to cope with a much more difficult problem later on—action must be taken now to reverse the downward trend.

What can be done to spark recovery? As I see it, the health of our Nation rests on three mutually related pillars—Government, business, and labor. In mentioning the role of the Government first, I must emphasize the fact that priority in attention should not suggest that the total responsibility rests with the politicians. But it is evident that we cannot discount the role of the Government in our economy. It has great power and great resources and it has learned much from the bitter lessons of the depression and the vexing problems of a wartime economy. The Federal Reserve Board can influence directly the amount of money in circulation and indirectly the availability of that money to certain segments of the economy. Through its tax policies, it can and does significantly affect business decisions regarding expansion and individual decisions regarding purchases. Its tremendous role as a consumer of heavy equipment in a cold-war economy gives it a decisive impact on our production. But more than that, we now realize that no civilized country will revert to the days of heartless governmental "hands off." We recognize clearly the Government's role in actively fostering the common good.

It can and should do more to raise the living standards of our American families, particularly the neediest. Even in prosperous 1956, 29 percent of all families had incomes of under $3,000 before taxes, according to the Federal Reserve Board.

Furthermore, 53 percent of our families had less than $500 in cash reserves to meet emergencies; 23 percent had none at all. Surely there is neither moral nor economic justification for unused capital when so many American families are still in need of so much.

Surely there is no moral or economic reason for denying the protection intended by the fair labor standard laws to countless millions of fellow Americans who still work for less than $1 per hour.

There is no justification for the present social security rates at a time when the aged and the indigent, who constitute a growing percentage of our population, are in greatest need. Can one argue that the

present social-security system which provides only $24.50 weekly for a married couple is adequate in this day and age? Instead of cautiously moving plans out of dusty files for study, the administration might courageously move to implement these plans effectively and imaginatively.

Nor can I remain unconcerned about the housing needs of millions of Americans with modest incomes. Responsible public groups report that a national housing growth of 2 million new units a year is now required if the dream of an adequate home for every American family is to be ultimately fulfilled. This urgent problem awaits effective administrative leadership.

In the December issue of Fortune magazine we read that: "Today some 17 million Americans live in dwellings that are beyond rehabilitation—decayed, dirty, rat infested, without decent heat or light or plumbing. The problem affects all our metropolitan cities, but it is most severe in the biggest, richest, and most industrialized. The number of people crowded into slums is growing faster than the cities as a whole."

Are we going to fasten this blight irrevocably on the present generation and pass on our own dereliction to future Americans? The time for action is the present—particularly when idle plants and manpower are available.

Action is needed in the field of workmen's compensation for injuries and for death. In view of the fact that 3 out of 4 of our families have inadequate cash reserves for emergencies, it is clear that something must be done for help. It is utter nonsense to assert that 3 out of every 4 American families are shiftless, irresponsible, and careless in the handling of its resources. It is a public responsibility that must be met in part at least by public resources.

I have said little about our defenses, little about foreign aid, little about highway and school construction, but these occupy urgent positions in our scale of values and cry out for strong, courageous and immediate action. This administration must not make the mistake of 1930, 1931, and 1932 in delaying too long the forceful action needed to curtail the growing speed and gravity of the current decline.

When I suggest some things that the Government can do I particularly emphasize that nowhere do I propose boondoggling. It is our belief that much can be done by the Government that will concretely add to our Nation's permanent wealth.

The second pillar on which our economy rests is industry. I think that the lesson of the thirties will not be forgotten—that if industry asserts no signs of statesmanship in times of need, then the Government must step into the breach.

But there is much to be done and I would be less than honest not to confess my disappointments. I am disturbed and disheartened by the deliberate attempt to mislead the American people by tying every wage increase with a price increase by industry—price increases that substantially outrun the cost of wages to the industry. I am disturbed and disheartened by the insinuation that labor has demanded and is getting wage increases that have outrun productivity. Please note that in the basic steel industry, productivity—the real output rise per man hour—has actually gone up faster than the real wage gains of the worker. Between 1939 and 1957, real hourly straight-time wages went up 53 percent. On the other hand, steel productivity rose 71 percent.

The steel industry has provided a classic example of the way to make inflation inevitable. Although steel prices had already been raised $13.50 a ton in less than one year, they were hiked $6 more only last July. Actually, prices could have been cut by $6 and profits still would have compared favorably with profits earned by the industry in most prior years.

Is it not strange that in 1957, despite drastically reduced production, steel profits were higher than ever before? What we need from industry today is a consciousness of present and future needs and a realization that these needs can best be met not by raising prices and cutting production but by cutting prices and increasing production.

It can be done and it ought to be done, for we are acutely aware that new and efficient processes in the steelmaking industry, both now and in the future, will cause the production rate per man-hour to soar immeasurably.

Finally, we of labor recognize our responsibility to the worker and to the Nation at large. We ask no preferential treatment. There will be no fighting of technological change; there will be no reversal to pathetic attempts to halt the march of technology. There will be no pressures to frustrate sensible automation. Instead, we pledge a reliable labor force of 67 millions of men and women dedicated to a common effort to produce more in order that we all may live better.

Will Skimmer Work?—No One Knows

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. PORTER. Mr. Speaker, high dams and then fish migrations may or may not be solved by a skimmer device now being installed in the Deschutes River for the Pelton Dam and which may be used on the Brownlee Dam on the Snake River.

In the following article, written by the able editor of the Portland Oregonian, Herbert Lundy, and appearing in that newspaper on February 18, 1958, the skimmer is explained. This should be of wide interest to proponents of high dams.

I, myself, am particularly interested because of the fish migration problem on the Rogue River in southern Oregon and the fact that it is highly likely that the Corps of Engineers will recommend the high dam at Lewis Creek on the Rogue. If this skimmer will work it would be most welcome to preserve the salmon in the beautiful Rogue River. The article follows:

About 15,000 fall Chinook salmon and 1,200 steelhead were trapped and trucked around the Brownlee Dam construction job in the Snake River in September, October, and November. At least as many spring Chinook, probably more, went through uncounted which a coffer dam was washed out by floodwaters in the spring. The progeny of these 35,000 or more Chinook and steelhead will begin their migrations to the ocean next year. The spawn of the previous migrations will be starting out sooner.

The partial year of trucking adult fish around Brownlee disclosed to fishery men that there was an unexpectedly large and valuable spawning run of salmon up the Snake above the Salmon and Imnaha Rivers. The fish management people want to save and enhance this run. Their hopes will be pinned on the operation of a Rube Goldberg device for collecting and transporting fingerling migrants which has come to be known as a "skimmer."

The name "skimmer" is roughly derived from the principle on which it is based. This is that many young salmon and steelhead working downstream for their youth-to-adult life in the sea follow the shore lines in big bodies of water; that most others, through traveling in midstream, do not sound below about 100 feet. Hence the concept of a device to skim the small fish from near-surface areas of an impoundment, before they can be destroyed by blades of turbines or dashed to death over the spillways of a high dam.

The $3,500,000 skimmer layout will be approximately 1 mile above Brownlee Dam. It will be almost 2,000 feet long, extending from shore to shore. The fish barrier will be a steel wire mesh net. The center and major portion will be of heavy material, 120 feet in vertical depth; the wings adjacent to the shorelines will be of lighter material, adjustable so that they will continue to seal the underwater embankment as the reservoir fluctuates with its 101-foot drawdown.

The net barrier will be strung on cables, chief suspension being on the bottom cable anchored near the wings. The top cable will be floated on metal pontoons. The cables and the 120-foot-deep net will go up and down as the surface of the impoundment fluctuates. The theory is that most of the small migrants will not swim down deep enough to go under the net.

Built into the net will be 3 collector boxes, 1 at each side of the river in the wings, on the upstream side; 1 in the middle of the net. Pumps will draw water through these boxes at a volume of 100 second-feet each; the jets of water being directed upstream and to the side along the net, to form an additional attraction to the fingerlings.

In the boxes, the small salmon and steelhead will be automatically sorted for size by a grader system employing chutes and slots, similar to that in use in hatcheries. This system will direct the fish groups into holding boxes—live boxes, in angler's terminology.

At this point, if all goes well, the young fish will have been collected. From the holding compartments they will be directed through valves into an 8-inch pipe in which a current of water will convey them to tank-trucks. The trucks would haul the small fish about 15 miles, for release into the Snake River below the Oxbow Dam site.

The skimmer complex of nets, locks, pumps, valves and pipes designed to gather the small migrants and conduct them around the dam would be protected from drifting logs and ice floes by a trash boom eight feet deep and spanning the river upstream.

Two principal hazards to this mechanical means of collecting small fish would be net failure and possibility that many fish will sound and go under the net.

A simpler skimmer device than that awaiting approval by the Federal Power Commission for Brownlee Dam is the one already approved and being installed in the Deschutes River for Pelton Dam. The penstocks at Pelton will be deeply submerged at about 180 feet, and no net barrier will be tried there. The forebay is to have a maximum fluctuation of only seven feet.

The fish ladder leading from below the reregulating dam to a natural bay above the concrete arch Pelton Dam will provide upstream access to adult salmon and steelhead. On the theory that the small downstream migrants will prefer not to sound below 100 feet, and that those coming down the western shore will make their way across the face of the dam to the artificial outlet on the eastern shore, a collection box there will be stationary.

The fish will be gathered in an outlet which will use 200 second-feet of water—but return 194 feet of it to the forebay—and conveyed in a pipe carrying six second-feet

of water through the dam. This pipe will shoot the little fish into the fish ladder and they will go down that to the river below the re-regulating dam.

The skimmer device at Pelton is to go into service when the forebay is filled this spring, at Brownlee in the fall. These will be the first tests of a system worked out cooperatively by fishery and dam engineers in an effort to solve one of the major conflicts in the Northwest.

But a word of warning: If these skimmers work as well as they look on paper, they will not answer all the problems of dam passage. There is, for example, the time lag involved in salmon reaching their spawning beds. At Nez Perce site, there would be an adult salmon problem, as well. Salmon trucked around the dam would have to be put back in the Snake below the mouth of the Salmon River, since no one would know if they were bound for the upper Salmon, upper Snake, or Imnaha Rivers. But water impounded in the forebay would be a mixture of Salmon, Snake and Imnaha waters. Could the fish find their way to their home streams? No one knows.

Statement of Gov Theodore R. McKeldin of Maryland Before Armed Services Committee, House of Representatives

EXTENSION OF REMARKS
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. DEVEREUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Gov. Theodore R. McKeldin, of Maryland, before the Armed Services Committee, House of Representatives, Washington, D. C., March 3, 1958:

Mr. Chairman and members of the committee, as we approach the Ides of this March, it is no tyrannical Caesar who is threatened with destruction by the knife.

Instead, the threatened victim is that great body of devoted men, serving their States in time of peace and the Nation in time of war or of impending war—the National Guard.

Why this magnificent military organization of everready fighting men is singled out in the plotting of the Pentagon is hard to understand.

But surely the guard will not be called upon to say to the Congress in new dismay: "Et tu, Brute!"

Surely the House and the Senate will provide the necessary appropriations to maintain the Army National Guard at its presently authorized strength of 400,000 men.

Surely the Congress of the United States will not submit meekly to proposals which could destroy outstanding divisions of militia which are the prides of their respective States and which have, in times of historic peril, contributed magnificently to the security of the United States and the victory of our arms.

Mr. Chairman, the pending proposals for reduction in forces to the extent of six National Guard divisions, could deprive my State of Maryland and the Commonwealth of Virginia the old Twenty-ninth—the Blue and Grey—of D-day fame on the bloody beaches of Normandy.

There is a contract, sir—at least implied—between the Federal Government and each of the several States and commonwealths.

Section 104 of title 32 of the United States Code declares that "no change in the branch organization or allotment of a unit (National Guard), located entirely within a State, may be made without the approval of its Governor."

When the States accepted the present Federal allocations of National Guard units, it was with the understanding that such units would not—and indeed could not—be withdrawn without the consent of the governor of the concerned State.

With this understanding, the States created and organized—at the request of the Federal Government, if you please—a vital force with an interstate strength of approximately 400,000 men.

Bear in mind, if you will, that the present strength of 400,000 is a reduction of 34,000 under the strength of 1 year ago.

The proposal now is to reduce the force further to a strength of only 360,000.

I submit, sir, that this is a violation of agreement.

I submit further that it considers only those needs of the Department of Defense as viewed from the parapets of the Pentagon.

But what about the needs of the States?

What about the agreement to which each of us is a party?

Are we to be ignored in the making of decisions by which we are vitally affected?

What has happened to so suddenly reduce the importance of the Guard in the scheme of defense?

It was only 2 years ago, before this very committee that the Department of Defense insisted the Guard needed more than double its present strength.

It was within the past year that President Eisenhower said "the dual status of the National Guard * * * exemplifies that sound, traditional relationship between the States and the Federal Government, unique in our governmental system."

"This historic concept," said the President, "should be ever strengthened, never weakened."

And it was Secretary Brucker who declared that "if this great Army in which we are all proud to serve is to have the solid lasting strength to carry out its vital mission in the defense of the Nation, the National Guard must continue to play its full part with zeal and dedication."

The National Guard, sir, has been playing that full part. It is, as Secretary Brucker said, "extremely precious to all America."

Despite Secretary Brucker's oft-repeated assurance that the Army will train all young men the Guard can recruit, the Army has failed to carry out its part of the "memorandum of agreement" on the 6-months training program.

We are told that the Federal Budget would provide for only 6,000 such trainees in fiscal 1959.

But the National Guard will need 60,000 such trainees if it is to maintain its strength.

Can it be—as one is almost forced to suspect—that this studied neglect of the guard at the Washington level—this requirement for training without provision of the necessary funds—is a brass-bound effort to immediately discredit and eventually destroy the National Guard.

Let me return in this discussion to Maryland where we have allotted units of the 29th Division to practically every city and town in the State.

The units are so distributed as to be easily accessible to any place where an emergency may occur.

Even as we Governors exchanged notes on this new threat to the guard, units of the Maryland Guard were engaged in the relief of a serious emergency.

Farms and homes were isolated by snow. Roads were impassable. Milk was being dumped by farmers who could not get it to market. Many people were without sufficient food in their homes. Doctors were unable to reach patients.

I called on the heavy-equipment units of the guard to join with road crews in breaking the dangerous impasse.

The guardsmen did a magnificent job in bringing back to normal those sections of the State where they were on active duty.

I know that thousands of Marylanders, rescued from distress by those men and their big machines will view with alarm any move that would take them out of service.

Every one of our Maryland units is housed in a State-owned armory—most of them built at State expense.

Are those fine armories to be abandoned at the whim of someone in Washington?

And why, I ask you, does the Department of the Army propose to diband six National Guard divisions of dual status and keep six Reserve divisions which render no service to the States?

In conclusion, I respectfully urge your committee to support the following program:

1. Provide funds for the maintenance of the Army National Guard at a strength of 400,000.

2. Insist that the present 27 National divisions be maintained.

3. Correct two glaring weaknesses in our present system without delay:

(a) Change the regulation with respect to the 6-month trainees, as indicated above, or provide sufficient funds with which to cover this activity.

(b) Amend the law (Reserve Act of 1952, sec. 209a) to make it possible to transfer men with a Reserve obligation to units of the National Guard when requested and approved by the Governor of the State.

I thank the committee for giving me an opportunity to present my views upon this very important matter, and I urge with all the power at my command that the rights and the responsibilities of the States not be ignored. I respectfully urge again that the Congress insist upon a strength, in the Army National Guard, of not less than 400,000.

I have with me today the adjutant general of Maryland—Maj. Gen. Milton A. Reckord. If there is additional information that you need about Maryland or about the guard in general, there is no one anywhere more capable than he to give it to you.

Influence Peddling at the FCC

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. MACK of Illinois. Mr. Speaker, Commissioner Mack has finally resigned. Unfortunately, the case against the Federal Communications Commission goes much deeper than the headlines about Commissioner Richard A. Mack. I have been among the strongest proponents of a thorough investigation of the charges which have been made against Commissioner Mack and other members of the FCC. And I was first to expose Mr. Mack's interest in the now famous insurance firm. I want that investigation to continue. But we must go further than personalities and ferret out the reasons that influence peddling on the

FCC, and possibly some other regulatory agencies, has been able to flourish.

Millions of dollars worth of valuable television franchises have been parceled out by the Commission within recent years. The most important question for the House Legislative Oversight Subcommittee to decide is whether these franchises were issued, in line with the public interest, to the most meritorious applicants, or whether personal and political favoritism played a major role in the Commission's decisions.

If the channel 10 case in Miami is typical, I am afraid we must conclude that FCC concerns itself very little with the documented evidence so painstakingly—and, I might add, expensively—built up through public hearings before impartial hearing examiners.

These comparative hearings on rival applications for TV channels frequently last for years and years. The cost to the Government and to the private applicants is colossal. To communities waiting for television service, these proceedings before the FCC seem endless. If a channel fight ends with the Commission's decision, it is almost an exception rather than the rule. They usually land in court. Perhaps the frequency of court appeals is itself the best indication of the inconsistent and arbitrary fashion in which the FCC has decided these contests in recent years.

Imports Ruining Industry in Northern Wisconsin

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. O'KONSKI. Mr. Speaker, it is time that the people of northern Wisconsin and other areas of our Nation which have untapped natural resources take a look at the Washington scene to see what is happening. The present trend of encouraging imports is raising havoc and discouraging the development of natural resources in our area and in other areas similar to ours on the national scene.

For the past 20 years, our national leaders have been encouraging and financing with American money, resources in other parts of the world, which are directly competitive to our own natural resources. If this policy continues for the next 10 years, as it has the past 20 years, areas like northern Wisconsin will become ghost areas with their natural resources untapped.

At the present time we have several thousand miners in our area who are out of work. In spite of that fact, imports of iron ore are growing by leaps and bounds. The following table of imports since 1952 will clearly show why iron-ore mining in our area is in a terrible slump:

United States imports of iron ore

Year:	Long tons
1952	9,760,325
1953	11,084,185
1954	15,768,771
1955	23,443,220
1956	30,412,018
1957	34,000,000

It is interesting to note that the importation of iron ore into our Nation is duty free in every respect, with no protection to the American industry or the American worker. To give a clearer view of the picture, in 1952 foreign imports amounted to only 10 percent of our iron ore consumption. In 1956 our imports amounted to 21 percent of our national consumption. In 1957 our imports amounted to 24 percent of our national consumption. With this trend, it is estimated that foreign imports of iron ore, by the end of this year, will amount to 33 percent or one-third of our national consumption.

The rapid rise of imports has been mainly at the expense of Lake Superior ores from Wisconsin, Minnesota, and Michigan. This mining region, long the raw material backbone of the steel industry, now supplies about 60 percent of United States needs, compared with 75 percent 5 years ago and about 85 percent 10 years ago.

What is more tragic is the fact that in Venezuela, for instance, iron ore production is financed by American capital and the Federal Government gives tremendous tax advantages to these foreign investments which American producers cannot possibly compete with.

It is high time that the people of our area scrutinized very closely what our international do-gooders are doing to our area. For the past 15 years since I have been in Congress I have been trying to awaken the people of our area to these dangers that lie ahead; but unfortunately, there has been little response.

What has, and is, happening to the iron-ore industry is likewise happening to our wood-products industry in our area.

In April 1957, 30 percent of the working people were laid off in our plywood industries because of the cheap imports of plywood from Japan. At the present time, more than 60 percent of the workers in the plywood industry in America are without jobs because of the cheap importation of plywood from Japan.

When you consider that in such areas as Wisconsin, Michigan, and Minnesota, the plywood and veneer industry is the very lifeblood of their economic existence, this problem of imported hardwood plywood and veneer should give us all, including the Congress and other agencies of Government cause for concern.

Communities such as Algoma, Antigo, Ashland, Butternut, Birnamwood, Crandon, Gillette, Marshfield, Mattoon, Mellen, New London, Oconto, Oshkosh, Shawano, Sheboygan, Stevens Point, Two Rivers, Rhinelander, Wausau, and so forth, all in Wisconsin, and Newberry, Munising, Marquette, Gladstone, Grayling just mentioning a few in Michigan and numerous others in Minnesota and other areas of the Nation, all of which depend to a large degree, if not entirely, upon the plywood and veneer industry for their economic life and well being.

Many other related industries such as logging, hardboard, lumber, and so forth, also are affected indirectly by this cheap imported hardwood plywood problem.

When you consider that the American plywood and veneer worker competes each hour with a Japanese worker being paid only 11½ cents per hour, it is reasonable to say that the workers in both countries suffer hardship.

When you consider the American plywood and veneer industry competes with imported plywood from Japan that is sold duty-free for less than the cost of production in the United States, is it any wonder that plant after plant in this area is being shut down with thousands of skilled workers being thrown on the scrap heap, and numerous communities becoming ghost towns.

Examples: Japan's exports to the United States in the January–June, 1957 period totaled a 57-percent increase over the same period in 1956. Imports from Japan of hardwood plywood has increased 4,120 percent since 1951. These imports have eaten up 46.6 percent of the total American market in 1956 alone.

Consumption of hardwood plywood in the United States is up 74 percent since 1951. Low priced imports captured 99.4 percent of this 74 percent increase in consumption.

Japanese plywood industry has increased their production 400 percent since 1951, mostly with the help of American capital—American plywood industry has increased their production in the same period by only six-tenths percent since 1951.

Japanese labor cost per 1,000 square feet of plywood is $4.17 as compared to from $30 to $34 per 1,000 square feet in the United States.

These are but two examples of what is happening to the areas of northern Wisconsin, northern Michigan, and northern Minnesota. For 15 years I have tried vainly to warn the people of our area of these consequences of our foreign policy. Unfortunately, it was not until workers actually got laid off that they are now beginning to stop, look, and listen, and are beginning to pay some attention to the sad results of trying to take care of the rest of the world at the expense of American resources and the American worker.

I have introduced bills to impose a tariff on imports of iron ore and wood products. But with the leaders of both parties plugging for more imports instead of less, such bills receive little consideration. Only the rude awakening of our citizens back home will reverse this trend.

Legislation Introduced To Exempt Wheatgrowers from Overseeding Penalty for 1958

EXTENSION OF REMARKS
OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I desire to call attention to legislation introduced on March 3, 1958, by myself and the distinguished chairman of the House Agriculture Subcommittee on Wheat, Mr. CARL ALBERT, of Oklahoma.

The measure is designed to accomplish one basic purpose; that is, to exempt for 1958 from the base-acreage-loss penalty, enacted last year, the wheat producer who planted in 1957 for harvest in 1958.

The bill, H. R. 11089, represents the technically refined version of H. R. 9814, which I introduced on January 8, 1958, for the same legislative purpose.

Mr. Speaker, it was not until October 3, 1957, that the Kansas State Agricultural Stabilization and Conservation (ASC) Committee, and many other wheat-State committees, received information from the United States Department of Agriculture which spelled out specifically the operation of Public Law 85-203, the so-called feed-wheat law, as it applied to excess-wheat farms, particularly the penalties involved.

I have been a wheat farmer all my life, Mr. Speaker, and for 30 years in the Fifth District of the State of Kansas, the district which I have the privilege of representing. And I know that winter wheat operators in my area begin planting as early as August 15. Under the law governing the production of wheat, as revised in 1957, there simply was not sufficient time for the farmer to be on notice that he could be punished for overseeding through the loss of some of his base acreage.

To correct this retroactive inequity, my bill, H. R. 11089, and Mr. ALBERT'S bill, H. R. 11086, identical measures, would free for 1 year, 1958, from base-acreage-loss penalties the 1957 winter-wheat planter who planted without knowledge of the overseeding penalty. For the year 1959 and all subsequent years, wheatgrowers will be subject to the full slate of penalties for noncompliance with the wheat laws, including the acreage-loss penalty, designed to discourage wheat production in excess of allotment.

The text of the measure follows:

H. R. 11089

A bill to amend the Agricultural Adjustment Act of 1938, as amended, with respect to wheat acreage history

Be it enacted, etc., That section 334 of the Agricultural Adjustment Act of 1938, as amended, is amended—

(1) by adding at the end thereof two new sentences reading as follows: "For the purpose of establishing farm acreage allotments (i) the past acreage of wheat on any farm for 1958 shall be the base acreage determined for the farm under the regulations issued by the Secretary for determining 1958 farm wheat acreage allotments; (ii) if subsequent to the determination of such base acreage the 1958 wheat acreage allotment for the farm is increased through administrative review, or court proceedings, the 1958 farm base acreage shall be increased in the same proportion; and (iii) the past acreage of wheat for 1959 and subsequent years shall be the wheat acreage on the farm which is not in excess of the farm wheat acreage allotment, plus, in the case of any farm which is in compliance with its farm wheat acreage allotment, the acreage diverted from the production of wheat: *Provided*, That for 1959 and subsequent years in the case of any farm on which the entire amount of the farm marketing excess is delivered to the Secretary or stored in accordance with applicable regulations to avoid or postpone payment of the penalty, the past acreage of wheat for the year in which such farm marketing excess is so delivered or stored shall be the farm base acreage of wheat determined for the farm under the regulations issued by the Secretary for determining farm wheat acreage allotments for such year, but if any part of the amount of wheat so stored is later depleted and penalty becomes due by reason of such depletion, for the purpose of establishing farm wheat acreage allotments subsequent to such depletion the past acreage of wheat for the farm for the year in which the excess was produced shall be reduced to the farm wheat acreage allotment for such year."; and

(2) by striking out in subsection (h) "the language "future State, county, and farm acreage allotments" and inserting in lieu thereof "future State and county acreage allotments."

As evidence of the gross injustice and widespread protest caused by the retroactive application of the base-acreage-loss penalty, Mr. Speaker, I am including in the RECORD, an article entitled "Southwest Kansas Farmers Protest Overseeding Penalty," which appeared in the Hutchinson (Kans.) News on February 13, 1958:

SOUTHWEST KANSAS FARMERS PROTEST OVERSEEDING PENALTY

(By Don Kendall)

On September 26, 1957, most of Southwest Kansas land not laden with ripening milo was the womb for embryo wheat.

The 1958 crop, which at the present time promises to be a big one, was almost completely seeded.

In past years it had been a practice on the part of many farmers, particularly those on the high plains, to overseed their allotments in good years.

WEATHER FICKLE

The reason was obvious. Weather in fickle Kansas can't be relied upon, so the farmer overproduces in good years and hopes for the best in lean.

Since 1938, when the Agricultural Adjustment Act was revamped, overseeding has tended to increase county and State crop histories.

This, in turn, has resulted in some bigger allotments for farms, counties, and the State.

On September 26 the Department of Agriculture announced by letters to State agricultural stabilization and conservation offices the following:

"The county and State will receive only the allotted acres on excess farms and no credit will be given for acres planted in excess of the farm allotments."

In fact, the letter stated, this policy would tend to reduce farm wheat allotments because of overseeding.

Four years' production are included in computing base acreages for wheat farms. For 1958, for example, years 1953 through 1956 are used.

Beginning with the 1960 crop, as you can see, the 1958 acreage would be included by ASC offices in computing that year's allotments.

If a farm had been overseeded for the 1958 wheat crop, that farm would receive only its allotment as crop history.

The effect would be eventually to reduce base acreages. For example: A farm with a base of 100 acres would have an allotment of about 66 acres of wheat.

If that farmer overseeds his 1958 crop, only 66 acres would be entered for that year's history.

If this is pursued each year by a farmer—overplanting his allotment in 1959, and so on—it would be possible to have a radically reduced allotment by 1963.

ASC offices throughout the State have received form letters from the State to send to wheat producers.

This letter states that producers having overseeded allotments will receive notice to tear up extra acres by a certain date.

The farmer who has stayed within his allotment for 1958 will receive full credit on his farm's crop history.

PROPOSAL MADE

There has been a proposal made in Congress which would suspend this acreage penalty on farmers who overseed.

The proposal was made in bills offered by Representative J. FLOYD BREEDING, Fifth District, and Representatives HILL and CHENOWETH of Colorado.

It has been opposed on several sides by Congressmen who say it might serve to favor a few farmers at the expense of those who complied.

The fallacy in the objections, as far as southwest Kansas is concerned, is that farmers who seeded within their allotments last fall are in the minority in parts of the area.

MOST OVERSEED

Stanton County, for example, had about 145,000 acres seeded in and around its allotment of 128,000 acres.

The policy statement of the Department of Agriculture sifted through channels and landed in the State ASC office about October 1.

Four days later the State office issued the statement to county offices.

Through a maze of interpretations by county office managers, farmers and newspapermen, the policy by which over-seeded wheat would penalize allotments was publicized.

But by that time all wheat for 1958 had been planted.

The Department of Agriculture said, "We have been receiving many reports indicating that the farmer who overplants would lose his allotment in the future an other misstatements of facts.

DISCUSSION LIMITED

"We would prefer that in discussing this matter with producers, you (ASC offices) could confine your discussion to the provisions of the law."

This policy led to the bumbling method in which the new regulation was handed out to the public.

The provisions of the law may have been clear to the lawyers who wrote them in Washington and may have been lucid to State officials.

But in many instances it was not clear on the county level and to the farmers.

The ASC recognized this on January 24 and issued the form letter to be issued by county offices to wheat producers.

Excuses that the policy came after wheat seeding apparently weren't valid.

"Those producers who are protesting," the Department of Agriculture said, "can dispose of their excess acreage by the disposal date, if they desire to be in compliance and receive diversion credit."

Port of Stockton

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. McFALL. Mr. Speaker, today in Stockton, Calif., the United States Army engineers are holding hearings important to the future of the port of Stockton, fastest growing deep-water port in the west.

The engineers are seeking information about the proposed new false river route for the San Joaquin River and they are checking the need of deepening the existing channel to 35 feet.

These studies were ordered last year by the House Public Works Committee. Members of the committee, of which I am a member, were checking the port of Stockton and its channel in person last October.

I am confident the studies will show the need and the justification for these improvements.

The port has a bright future of service to California and the Nation, but today I want to discuss its past.

I would like to pay tribute to the citizens of Stockton who mortgaged their future to develop this great port.

The port celebrated its 25th anniversary last Friday and there were glowing words about its accomplishments.

Today is it easy to agree that the port is necessary and important; the port has proven itself in time of peace and war. Twenty-five years ago, it was a different story. It required vision and courage in those days to support this fledgling venture.

When the *Daisy Gray* pushed her nose through the Delta fog in 1933, no one knew for sure that this first cargo carrier to dock at the port would not be the last.

Although the entire community is deserving of credit and praise, the larger measure of tribute must go to the small band of leaders who paved the way.

The commissioners who first directed the port were five—Irving Martin, Sr., Pliney E. Holt, Otto E. Sandman, Samuel Frankenheimer, and N. M. Brisbois.

Today, only Sandman and Brisbois are still living to see even their most optimistic dreams surpassed.

In the interim years, six other men served as past commissioners—Paul E. Weston, E. H. Wolf, Newton Rutherford, Martel Wilson, C. C. DeYoung, and Julius Blum.

And of these, only Weston and DeYoung are still here to see the product of their efforts.

Present commissioners: Col. H. E. Sanderson, W. L. Maxwell, John D. Turner, Sr., R. L. Eberhardt, and Norman E. McGurk.

They are carrying on the proud tradition of continued progress laid down by their predecessors.

First director of day-to-day port activity was B. C. Allin. He was succeeded by the late Henry Ohm.

For the past 10 years, the port director has been Elmo Ferrari, a sprinter in his undergraduate days at USF who has not slowed down since.

Today, ships flying the flags of every free nation realize the trade possibilities of the port of Stockton sending agriculture and maufacturing production of the West to the centers of the world and bringing in return needed cargo to our rapidly expanding western United States.

Central California's agricultural and industrial wealth has been economically served by the modern facilities at the port of Stockton. The five commissioners, serving without renumeration, represent the spirit of cooperation and interest that has built the port to its present enminent position.

We in the Nation's Capitol have seen great strides made in close cooperation between the United States Department of Agriculture, the Commodity Credit Corporation, the United States Corps of Engineers, the House Committee on Rivers and Harbors, and the port of Stockton officials.

We anticipate renewed progress in the handling of surplus goods, storage of grain, and providing increased trade with the free nations of the world.

With this continued cooperation of all concerned, I know that the next 25 years will prove even more rewarding to the port of Stockton and the Nation.

National Negro History Week

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an article authored by Charles J. Wartman, the distinguished executive editor of the Michigan Chronicle. The article is entitled "National Negro History Week."

At St. Leo's Parish in my district, a dinner was held honoring National History Week. At this observance, colored citizens, both Catholic and Protestant, joined with white citizens in our community to both reflect on past progress and look forward to the increased mutual understanding that will enrich our community life from our efforts to make one Christian principle of brotherhood not just a perfunctory observance, but a living vital force within our community, to be practised throughout the entire year. In addition, the dinner honored the progress of the Negro Community in our country.

Many outstanding citizens of the State of Michigan attended this stirring occasion. The chairman of the affair, Mr. Luther Keith, is an old and close friend of my family, and under his leadership this affair was once again the success that civic-minded Detroiters have come to look forward to each year.

NATIONAL NEGRO HISTORY WEEK

The observance of National Negro History Week was instituted 33 years ago by the late Carter G. Woodson and the Association for the Study of Negro Life and History.

The first observance came at a time when the American Nation was experiencing the darkest period of social reaction following World War I. Domestic insecurity and the disillusions following World War I had loosened a virtual tidal wave of reactionary thought and ideas which found fertile spawning grounds in the Ku Klux Klan, antilabor, anti-immigrant, and antiprogressive groups whichs prung up like mushrooms throughout the Nation.

The migrations of hundreds of thousands of Negroes from the South to the western, northern and midwestern cities had been met by race riots, duplications of the southern segregation system, and harsh discriminations in employment, housing, and education.

In 1923, as today, one of the standard techniques of those who were spreading hatred and bigotry was to insist that the American Negro had accomplished nothing, was incapable of learning, and was generally inferior, biologically, to whites.

It was in an effort to counteract this propaganda and to give both Negroes and whites a sense of appreciation for the Negro that Carter G. Woodson and his colleagues hit upon the idea of an annual observance of Negro history. The selection of the month of February for the celebration undoubtedly was made to coincide with the traditional historic celebrations of Lincoln's and Washington's birthdays.

It is important to note that 33 years ago a very small number of Negroes were graduating from the colleges and universities of the Nation. More than 90 percent of all these graduates were coming from the segregated Negro schools of the South. Rigid quota systems in the universities of the East, West, and North restricted Negro students to a mere trickle.

Woodson and his colleagues had still another purpose in mind. They were interested in improving the scholarship of students and professors, particularly in the field of Negro history. The Association for the Study of Negro Life and History became a sponsor and compilor of the Journal of Negro History, a scholarly professional publication of hundreds of papers, and other materials on the Negro in America, in the West Indies and in Africa. It is undoubtedly the most complete document of its kind in the world today.

The history of the Negro from 1923 to 1958 is in all probability the world's outstanding story of rapid progress in so short a time. The story of progress is interwoven with the history of the United States and the revolutionary changes in world history of which the Negro, along with all the other Americans, has been an integral part.

The Negro in America today stands on the threshold of the solution to many problems which the most optimistic observers in 1923 felt would never be solved.

As the Nation comes closer to the realization of the dream of integration, the study of the history of the Negro increases in importance. It is important to counteract the anti-integration propaganda of those who would hold back the clock and continue the stranglehold of segregation on American society. It is important because in a melting-pot society, the very strength of the society is found in the fibers of the traditions and differences which the many groups comprising the society bring to it.

The advances and achievements of individual Negroes and the group as a whole take on added significance as American democracy moves forward to a position of leadership in the free world.

Americans of all races, classes, and creeds have more reason for knowing the true story of the rise of the Negro in America. It is important that they know this story free from the cliches and stereotypes which have so tragically crippled and obstructed the efforts of Negroes to gain recognition and acceptance as full first-class citizens in the past.

It means, therefore, that the slavery interlude must be viewed in its proper perspective as an unfortunate era in the growth of the American Nation. It means also that the period of reconstruction in the South must be reappraised so that the facts of the struggle for political power, in the Nation as a whole and the South in particular, can be seen for what it really was and not the blind unthinking usurpation of the political system by ignorant blacks as it has been all too often depicted.

The harmful stories and accepted attitudes about Negroes which are a carryover from the slave period and the fabrication of those who sought to protect and perpetuate the system are still today the underlying causes for the difficulties encountered in trying to end segregation in the schools, in housing and in employment.

An honest study of factual and honest accounts of the lives of Negroes in America can go a long way to create a new climate in which to work for an integrated society.

The study of Negro life and history is important if it does no more than awaken us all to the fact that the status accorded the Negro in America is a century-long lag in public morals. In principle, the Negro problem was solved a long time ago—in practice the solution is not yet effectuated. Only openminded study of the question, even if only during a week's celebration of Negro History Week can bring us closer to the full implimentation of the principle we recognize as part and parcel of our religious heritage.

Taxed Twice

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a straightforward editorial which appeared in the Chelsea (Mass.) Record on February 28, 1958:

TAXED TWICE

The 10 percent Federal excise tax that telephone users pay for their service is double taxation.

Taxes the telephone company pay are, in the last analysis, taxes that every telephone user pays, for, like other costs of doing business, are necessarily reflected in the prices charged for telephone service.

Federal, State, and local taxing authorities levy taxes on the telephone business. They include local property taxes, Federal and State social security taxes, unemployment taxes, franchise taxes, State taxes on revenues and earnings, and the 52 percent Federal corporate income tax.

In addition to these taxes which telephone users indirectly pay as part of the charges for service, is the Federal excise tax imposed directly on users at the rate of 10 percent of the charges for local and long-distance service.

It is this excise tax which you see separately entered on each month's telephone bill, making it 10 percent larger than it would otherwise be.

You pay your excise tax to the telephone company, but the company retains none of it. The company simply acts as collector and turns over the money to the Federal Government. As a matter of fact, collecting the tax is an additional expense to the company, necessarily reflected in charges for service.

With both indirect and direct taxes to pay, telephone users are twice taxed.

This excise tax should be repealed.

Arab Boycott of Americans

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter which I addressed to Secretary of State John Foster Dulles, on February 28, 1958, on the subject of the Arab boycott of Americans. The text of the letter follows:

FEBRUARY 28, 1958.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: Again, I convey to you the protests of a great many citizens in this country against the Arab boycott of American citizens and commercial firms who travel in or do business with Israel. This action on the part of the Arab nations is tantamount to international intimidation and blackmail.

I believe it is incumbent upon the United States, in pursuance of an American foreign policy, to oppose as strongly as possible this Arab boycott. It has already earned the disapproval of the United States Senate in a resolution adopted in July 1956. It is asked that the policy of the United States be no different from that of West Germany which refused to yield to Arab threats to cease business with Israel and no different from the policy of France and Switzerland in the sense that both have resisted the boycott by instructing their representative nationals not to respond to questionnaires circulated by the Arab League, inquiring whether certain companies employ or are controlled by Jews.

Thus far our Government has taken no public stand against this Arab bludgeoning. Indeed, it seems that the silence of our Government lends encouragement to this boycott based on bigotry. Under your guidance, an agreement with Saudi Arabia was renewed whereby United States consents to screen American military, diplomatic and civilian personnel so that no Jews are assigned to the United States airfield at Dhahran.

This is tantamount to saying that American Jews are not equally protected in their citizenship. American vessels that stop at Israeli ports are denied the right to make calls at Arab ports. Ships of American registry have been blacklisted by countries of the Arab League because they sail to Israel. American planes that land in Israel cannot fly over Arab countries. American aircraft is denied flight information or any rescue service from Arab States. Beyond that, Arab diplomats accredited to the United States are directing this boycott on our own territory.

This Arab boycott has interfered with the International Wheat Agreement. The Arab League states refuse to ship their American wheat on blacklisted vessels or buy wheat from exporters who are Jews or who have dealings with Israel. You have thus far failed to take the necessary diplomatic action to the end that this discrimination might be discontinued. In a sense then, we as a nation, are forced to submit to the operation of a boycott, the effect of which is to tax Americans for wheat subsidy although a segment of the American public is barred from any participation.

The dignity of our Nation demands that representations be made to the guilty nations that the United States views with grave concern these outrageous acts.

Respectfully yours,

EMANUEL CELLER.

An Adequate National Guard and an Adequate Reserve

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, Subcommittee No. 1 of the House Armed Services Committee, which normally handles Reserve legislation, has been meeting over a period of weeks, holding hearings on the National Guard and Reserve program. These hearings were closed today and at the time of the closing of the hearings two important resolutions were unanimously adopted by the subcommittee. The first resolution concerns the National Guard and urges and gives full support from the subcommittee to a National Guard of not less than 400,000 strength, rather than a guard reduced to 360,000 as proposed.

The second resolution relates to the Reserve program. The subcommittee was unanimous in feeling that the Army Reserve should consist of 300,000 troops and the subcommittee urged that full efforts be made to prevent a reduction in the minimum Army Reserve strength of 300,000.

In other words, this subcommittee approved an Army consisting of National Guard and Federal Reserves of not less than 700,000 persons. The resolutions passed are herein set forth:

RESOLUTIONS OF SUBCOMMITTEE NO. 1, HOUSE ARMED SERVICES COMMITTEE

Whereas Subcommittee No. 1, House Armed Services Committee, has held extensive hearings on the proposal to reduce the size of the Army National Guard in fiscal 1959 from current strength of 400,000 to 360,000; and

Whereas the subcommittee has taken under consideration the proposal of the Army to develop a revised Reserve forces troop basis; and

Whereas the subcommittee has had the benefit of testimony from representatives of the Department of the Army, the National Guard Association, the Adjutant General Association, Members of Congress, the Ameri-

can Legion, governors, the governors' conference, and others: Now, therefore, be it

Resolved, That, a quorum being present, the subcommittee, by unanimous vote, recommends the following to the full committee, that:

(1) The strength of the Army National Guard for fiscal year 1959 be maintained at 400,000, exclusive of persons engaged in 6 months' active duty for training; and

(2) Adequate spaces in the 6 months' training program be provided in fiscal year 1959 for the Army National Guard, and these be not less than a total of 48,000; and

(3) Recommendations be made to the Appropriations Committee to insure that language concerning Army National Guard and Army Reserve strength be made uniform with respect to the inclusion or exclusion of 6-month trainees; and

(4) The Army be directed to proceed with the development of plans for a revised National Guard troop basis, coordinating same with the States, through the National Guard Bureau, and that prior to its approval and implementation it be submitted to the Armed Services Committees of Congress; and

(5) Sufficient appropriations be provided to maintain the strength of the Army National Guard as set forth above and that these appropriations be in addition to funds now included in the budget and not less than the following:

National Guard	$38,000,000
Active Army (appropriations: Operations and maintenance in order to support the increased strength of Army National Guard)	13,800,000
Total	51,800,000

(6) The chairman, Subcommittee No. 1, be authorized to appear before the Appropriations Committee representing the Armed Services Committee in support of the foregoing recommendations.

Whereas Subcommittee No. 1, House Armed Services Committee, has held extensive hearings on the proposal to reduce the size of the Army Reserve in fiscal 1959 from current authorized strength of 300,000 to 270,000; and

Whereas the subcommittee has taken under consideration the proposal of the Army to develop a revised Reserve Forces troop basis; and

Whereas the subcommittee has had the benefit of testimony from representatives of the Department of the Army, Reserve Officers Association, Members of Congress, and others: Now, therefore, be it

Resolved, That, a quorum being present, the subcommittee, by unanimous vote, recommends the following to the full committee, that:

(1) The strength of the Army Reserve for fiscal year 1959 be maintained at 300,000, exclusive of persons engaged in 6 months' active duty for training; and

(2) Adequate spaces in the 6 months' training program be provided in fiscal year 1959 for the Army Reserve and these be not less than a total of 34,000; and

(3) Recommendations be made to the Appropriations Committee to insure that language concerning Army National Guard and Army Reserve strength be made uniform with respect to the inclusion or exclusion of 6-month trainees; and

(4) The Army be directed to proceed with the development of plans for a revised Reserve Forces troop basis coordinating same with Reserve Forces Policy Board, and that prior to its approval and implementation it be submitted to the Armed Services Committees of Congress; and

(5) Sufficient appropriations be provided to maintain the strength of the Army Reserve as set forth above and that these appropriations be in addition to funds now included in the Budget and not less than the following:

Army Reserve	$28,000,000
Active Army (appropriations: Operations and maintenance in order to support the increased strength of Army Reserves)	7,600,000
Total	35,600,000

(6) The chairman, Subcommittee No. 1, be authorized to appear before the Appropriations Committee representing the Armed Services Committee in support of the foregoing recommendations.

Nebraska's Birthday

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. MILLER of Nebraska. Mr. Speaker, March is the birthday month of the great State of Nebraska. It was on March 1, 1867, 91 years ago, that the proclamation making the Territory of Nebraska one of the United States of America was signed by President Andrew Johnson. Nebraska thus became the 37th State in the Union.

It has been my practice for the past several years to insert into the CONGRESSIONAL RECORD a statement of facts concerning Nebraska, her past and her future.

In the long span of time the written history of Nebraska goes back for only a comparatively short period. According to the Nebraska Blue Book, the earliest records show that huge fossil beds and glacial deposits give proof that in past geologic ages this region was the bottom of an inland sea which was later elevated above the water.

At one time, a tropical climate prevailed and during a later period glaciers covered the land. Archeological explorations have uncovered considerable evidence indicating the presence of prehistoric man in the State.

It has been estimated about 40,000 Indians lived in Nebraska at the time of the earliest white visitors. Their settlements in the State must have covered a period of several hundred years. It has often been presumed the Spaniards were the first white people to come to Nebraska. That would be about the year 1541. In that far gone day, the Indians dominated the area and bison roamed the prairies by the thousands.

In later years, about 1700, French trappers began to venture up the rivers. By 1739 nearly the entire length of the State had been traveled. In those days Nebraska was an uncharted wilderness. At one time or another the region was claimed by Spain, France, and England. Eventually France established claim to the area and sold it to the United States in 1803. Following the Lewis and Clark expedition in the years 1804–6 came the story of the pioneers who carved a great State out of the prairie wilderness.

The first military post was established at Fort Atkinson on the present site of the village of Fort Calhoun, just a few miles north of Omaha. Then came the first pioneer settlement by the white man in this particular territory. By the year 1832 covered wagons had started to cross the State. The Oregon Trail, which for the next 40 years was the greatest wagon road in the world's history, was established. Other great trails across Nebraska included the Mormon Trail, the Denver Trail and the Nebraska City cutoff. Thousands of covered wagons carrying pioneers westward traveled over these trails each year until the construction of the Union Pacific Railroad made their operation no longer feasible.

Rugged frontier conditions were evidenced in Nebraska during those years when the pioneers carved their homes out of prairie sod. The pioneers faced the heat of summer and cold of winter, the marauding Indians, the droughts and prairie fires with indomitable will. Their bright vision of a new land they could call home was entirely justified.

TERRITORIAL HISTORY

The history books tells us the Nebraska region was made part of the Territory of Indiana in 1804. The following year it was made a part of the Territory of Louisiana. After 1812 it became part of the Territory of Missouri, and in 1821 it became a part of an unorganized region usually called Indian country.

Nebraska was first organized as a Territory in 1854. It included all the present State plus part of North and South Dakota and most of Montana, Wyoming, and Colorado.

STATEHOOD IN 1867

Nebraska had a long, hard fight in the effort to become a State. There was a sharp division of opinion between residents of free and slave territories and as a result many delays were encountered. In fact, many residents of the Territory were opposed to the idea of statehood. The Congress passed an enabling act April 19, 1864, and an election was held on June 2, 1866, on the statehood issue. The tabulation showed 3,938 Nebraskans in favor of statehood and 3,838 against—a margin of only 100 votes. Statehood came finally March 1, 1867.

The Nebraska picture was rapidly changing. In 1865 the Union Pacific started to build a railroad across the State. This revolutionized transportation in the area.

The passing years found more settlements starting in all parts of the State. New railroads were built. The new Homestead Law brought in people from many of the States to the east. They came in a wide variety of nationalities but these individuals blended into the communities and Nebraska was on its way.

IRRIGATION

In the western part of the State, men of vision watched much-needed water

flow down the rivers to be wasted in the sea. They organized irrigation projects in the North Platte Valley. Crops blossomed as they never had before. Irrigation spread to other parts of the State and it is still spreading.

Right now I am seeking approval of funds for other irrigation projects. Ainsworth and Farwell have been authorized but no funds appropriated to start. Mid-State is in the planning stage. They will pay back their costs to the Government. They are an investment in the future of America. In the years ahead we must conserve every possible drop of water. Additional flood-control projects are also needed.

New industries came into Nebraska. The raising of livestock grew by leaps and bounds and Nebraska ranchers now send thousands of head of cattle, hogs, and sheep to the market. Nebraska boasts of having the finest steaks in the world.

Nebraska still seeks new industries. Towns and cities have committees working throughout the year in an effort to bring in such industries.

The State government has a Division of Nebraska Resources which has done much good work in attracting industry to our State.

With the passing of years we see the need for many changes. This has become the air age and right now Nebraska is seeking to improve its airline facilities to provide new service to many parts of the State.

THE STATE FLAG

The State flag, designated by the legislature, consists of a reproduction of the great seal of the State, charged on the center in gold and silver on a field of national blue.

The design for Nebraska's seal was prescribed by the State's first legislature in 1867. The smith in the foreground typifies the mechanical arts. Agriculture is represented by shocks of grain, the growing corn and the settler's cabin. The steamboat on the Missouri River and the train represent the State's appreciation for transportation which hurried its settlement. The State Seal under the signature of the Governor and the Secretary of State must be affixed to all official State documents.

The State bird is the western meadowlark.

The State flower is the goldenrod.

The State tree is the American elm.

THE UNICAMERAL SYSTEM

Since 1937, Nebraska has had the only one-house, or unicameral, legislature in the Nation. This system was adopted by constitutional amendment and has signally successful. The unicameral is made up of 43 members elected on a nonpartisan ballot for 2-year terms. Regular sessions are held in odd-numbered years. The Lieutenant Governor of the State serves as presiding officer. The speaker is elected from the membership.

NEBRASKA'S CAPITOL

Nebraska, commonly called the Cornhusker State, has had 5 capitols—2 territorial capitols in Omaha and 3 State capitols in Lincoln. The present State capitol in Lincoln is considered one of the most beautiful government buildings in the world. Built on a pay-as-you-go basis, the Capitol cost over $10 million. It was free of debt upon completion in 1932.

The length and breadth of the building, which takes the form of a cross within a square is 437 feet. The 400-foot central tower is crowned by a 32-foot statue of "The Sower," symbolic of the State's agriculture.

Each of the building's four corners represents a cornerstone of the law. There are 18 panels in the outer court, depicting the history of the law starting with Moses and the Ten Commandments and ending with the admission of Nebraska to the Union. The series is broken on the south facade by panels representing the Magna Carta, flanked by the signing of the Declaration of Independence and the framing of the Constitution.

Eight great figures, symbolizing the ideals of culture which are protected by the law, make up the lower buttresses of the tower. They are an Egyptian Scribe for History, a Prophet of Israel for Vision, a Greek Philosopher for Reason, an Emperor for Statecraft, an Apostle for Faith, a Saintly King for Chivalry, Sir Isaac Newtoh for the Science of Nature, and Abraham Lincoln for the Liberties of Peoples.

FACTS ABOUT NEBRASKA

Nebraska has a total area of over 77,000 square miles. The largest county, Cherry, is as large as the States of Connecticut and Rhode Island combined.

Nebraska's population on July 1, 1957, was estimated at 1,426,000.

Nebraska's altitude ranges from 835 feet in the southeast to 5,340 in the northwest.

Nebraska has 22 million acres under cultivation, a larger percentage of land in farms than any other State. We have substantial irrigated acreage and over 21,000 irrigation wells.

Nebraska has approximately 1,400 industrial plants employing about 60,000 people. New plants are being added every year. Omaha, the largest city in the State, is the world's largest livestock market.

Nebraska has 17 four-year colleges and universities and 5 junior colleges.

Nebraska has the highest life expectancy rate of any State in the Union.

We have in Nebraska a people of courage, ambition, and commonsense who seek to be good Nebraskans and good Americans. They will help to keep our Nation great.

"Equality before the law," "honesty before men," and "reverence before God," are the precepts upon which Nebraska built and is building. These are the precepts which will keep Nebraska great and enduring through the years to come.

Brig. Gen. David Sarnoff

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, I wish to present for the attention of the Congress the address of Brig. Gen. David Sarnoff upon the occasion of his being awarded the highest award of the Reserve Officers Association. This presentation was made at the ROA banquet held in Washington, D. C., on February 8, 1958. General Sarnoff was ably presented by Brig. Gen. Wendell Westover and I am pleased to also include his remarks.

REMARKS OF BRIG. GEN. WENDELL WESTOVER IN MAKING PRESENTATION AND INTRODUCTION OF GENERAL SARNOFF AT ROA BANQUET, WASHINGTON, FEBRUARY 8, 1958

General Sarnoff, I am greatly honored by the assignment to speak for the Reserve Officers Association of the United States, and through its voice express the gratitude of all security-conscious citizens for your clear vision and devoted contributions to national security.

ROA does itself honor in conferring upon you its highest award.

Your acceptance of ROA's recognition brings pride and distinction to the association to which you yourself have given long support.

This citation, listing your historic accomplishments as one of America's geniuses in electronics, speaks for itself. All America knows, and our Government has recognized, your service to the advancement of American standards of communications, and, in wartime and peacetime, what you have done to preserve and protect our heritage. The Radio Corporation of America, in which you have invested your genius and your leadership, is a monument to your lifetime of accomplishment.

ROA salutes you tonight for all these things. But more than for them, ROA pays homage—General Sarnoff—to your record as a citizen-soldier. In World War I, you helped the American Expeditionary Forces to victory by advancing its wireless system. As a reservist who served beyond the call of duty in two great wars, you have exemplified the highest standards of the officers corps of the armed services, and the minute-man tradition. In the postwar years, you served sacrificially in directing the work of the national security training commission.

Of particular meaning today—in this age of sputnik and Explorer—have been your official and persistent efforts to alert the Nation, and the Government, to the dangers, the challenges, and opportunities of the cold war.

As a longtime active member of ROA, you have been an inspiration to our leadership. Your challenge to the Nation, outlined in your famous memorandum of April 5, 1955, has electrified our membership and given a new mission to ROA, and to citizens everywhere who love their country and are jealous for its safety.

General Sarnoff, it is a distinct honor to hand you this citation. Officers of ROA, Members of the Congress, other distinguished guests, ladies and gentlemen; it is my personal pleasure and high privilege to introduce to you Brig. Gen. David Sarnoff.

REMARKS BY DAVID SARNOFF, CHAIRMAN OF THE BOARD, RADIO CORPORATION OF AMERICA, BEFORE NATIONAL COUNCIL OF THE RESERVE OFFICERS ASSOCIATION OF UNITED STATES, MAYFLOWER HOTEL, WASHINGTON, D. C., FEBRUARY 8, 1958

May I express my heartfelt gratitude and appreciation for the high honor which the Reserve Officers Association has conferred upon me tonight. I thank General Westover for his most friendly introduction, and I thank the entire membership of the association for the generous citation which I shall cherish always.

The Minute Men award has a special significance for me because of the organization from which it comes. As a longtime member of the Reserve Officers Association, I have been proud to share in its trials and its triumphs.

As chairman of the National Security Training Commission for 2 years, I had an opportunity to observe, at close range, the effective work done by the association in support of its highest objective—national defense.

While the Nation's mood alternated between fitful confidence and fretful alarm, the association never wavered in its insistence upon a strong military Reserve as an indispensable part of a strong national defense program.

It is largely through the unflagging efforts of this group—and others of like mind—that the Nation now has on the statute books legislation for a comprehensive Reserve program.

Last June, in its final report to Congress, the National Security Training Commission paid a well-deserved tribute to the Reserve Officers Association for its unselfish work in promoting the Reserve program. That report noted that our country was well on the way to having "the most effective Reserve force in our history." At the same time, however, it solemnly warned against permitting any lag in the Reserve program because of lack of funds or any other reason.

In recent months, I am sorry to say, there have been disquieting signs that the Reserve program has been lagging, due to on-and-off methods of recruiting, and restrictive input for training quotas.

These signs are disturbing because in the new space age our military Reserves are more important than ever before. The emergence of the IRBM and the ICBM—far from eliminating our need for manpower—has placed new emphasis on our requirements for trained men.

If an enemy should impose a conflict upon us, we must have trained men to launch the ICBM's, to tend the radar outposts, to operate the atomic submarines, and to handle the thousands of complex tasks that are part of modern warfare.

In his illuminating articles on military power—published this week in the New York Times—Hanson W. Baldwin said: "Man is still the heart of battle. Despite all the recent accent upon new weapons and new machines, man is probably the weakest element in the American formula for security. * * * The turnover is tremendous, reenlistment rates nowhere near high enough, and far too many promising officers are resigning. All of the services are experiencing difficulty in retaining their highly trained technical men."

We need large numbers of trained men if we are to counter the insidious Communist small-war strategy of nibbling and intimidation, and prevent localized brush fires from blowing up into an appalling nuclear holocaust.

In the Communists' grim glossary of warfare, there is no such thing as an absolute weapon, unless it is man himself. Therefore, if our own young men are to meet the challenge effectively, they must be properly trained and conditioned before an emergency arises. That, of course, calls for an adequate Reserve program.

I earnestly commend the Reserve Officers Association for its continuing vigilance in working for a strong Reserve Force—a vital element in our national security. Thank you.

Sonnets and Economics

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, the following article, despite its humorous vein, should serve as a warning to all that we are having practiced upon us a new art of deception. Members of Congress, in order to properly discharge their responsibilities vis-a-vis the executive, must become familiar with this new art form. Accordingly, I commend to the attention of our colleagues the following article which appeared in the New Republic of February 3, 1958:

SONNETS AND ECONOMICS

Among poets, the exigencies of the sonnet as a verse form are professionally recognized: the man who can convey his meaning and still meet its requirements of rhyme and cadence is a stout fellow. Equal recognition is accorded by economists of all tendencies and all political affiliations to the exigencies of the annual economic report as a form of expression in their metier.

Both a sonnet and an economic report permit dividing the material into two groups, and the sounds with which the lines end are permitted to vary from one to the other. In an economic report, the opening of every section must be soothingly buoyant; later on, if there is something unpleasant that really must be said, it can be covered. To give the political necessities their primacy and their due, and yet to place the essential economic facts where they can subsequently be quoted, requires a skill and a cynicism which fellow practitioners of the politico-economic arts should appreciate. And for our culture to be broadly sophisticated, an equal understanding of the report as an art form should be encouraged among the public at large. To this end, the following pairs of illustrations are offered from this years' document:

Page 10: "The year 1957 was a prosperous one, despite the decline in the final quarter. Economic expansion continued, though at a lower rate. Production, employment, and income again attained record levels. For the year as a whole, gross national product amounted to $434 billion and personal income to $343 billion, both some 5 percent above 1956."

Page 11: "The rise of expenditures and incomes in the latter part of 1956 and most of 1957 was largely matched by an increase in prices. The physical output of goods and services rose only slightly, and throughout 1957 industrial output remained below the peak registered in December, 1956." (Industrial production, shown as the last item of the table on p. 10, shows a percentage change from 1956 to 1957 of zero, while that from 1955 to 1956 was 2.9.)

Page 4: "At the turn of the year, the economy was beginning to feel the effects of an acceleration of the placement of defense contract awards, prompted by the need to move forward quickly with programs essential to the strengthening of the Nation's defenses."

Page 12: "The sharp advance in national security outlays ended in the second quarter. * * *"

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

A Story of Ruthless Import Practices, of Growing Unemployment in the Coal and Railroad Industry, and of Hungry and Dejected People in Affected Communities

SPEECH
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. VAN ZANDT. Mr. Speaker, hearings on the bill to extend the Reciprocal Trade Agreements Act are now in their third week. Because of the long list of witnesses scheduled to testify before the Ways and Means Committee, I have decided against imposing upon the committee's time. Instead, I am taking my case directly to the floor of the House.

In past years, despite the inclination of so many Members of Congress for more liberal trade policies, the case against excessive imports of residual oil won the sympathy of many representatives of States not affected. Members of Congress from coal-producing States have, except for isolated breaks in the ranks, stood shoulder to shoulder in demanding sensible restrictions on the residual oil which—year after year for the past decade—moved from foreign refineries into the east coast markets that are traditional coal users. Through this alliance, there have been times when legislation to correct the situation came exceedingly close to passage.

I should like to present for publication in the CONGRESSIONAL RECORD what I feel is the evidence that may enable us finally to realize our objectives during the current Congress. This material is a story of ruthless import practices, of growing unemployment in the coal and railroad industries, of hungry and dejected people in communities of Pennsylvania and other coal-producing States.

Mr. Speaker, before filing these tables of comparison, I should like to recall for your information some of the warnings issued at hearings of congressional committees in 1950 after a deluge of 74,719,000 barrels of residual oil had entered our shores in the preceding year.

I testified on this matter in 1950. Here is one sentence from my statement:

> Without doubt the flooding of the United States with this cheap foreign oil that displaces coal in the industrial power and heating market is rendering a death blow to the coal and railroad industries.

While at the time such allegations may have seemed to be exaggerated, during the interim period, thousands of coal miners and railroad employees have in actuality seen job opportunities killed by import competition. They have not been able to return to their chosen professions because residual oil imports have never let up in all those intervening years.

I invite you to ask some of my colleagues from the anthracite area whether or not residual oil imports have been fatal to many mines in their region. Mr. Frank Earnest, Jr., president of Anthracite Institute, Wilkes-Barre, was a witness in 1950. So were Thomas Kennedy, vice president of the United Mine Workers of America, and Harry See, Brotherhood of Railroad Trainmen. I ask that you compare their testimony that year with current records of foreign residual oil's destructive aspects.

When the Senate Committee on Labor and Public Works issued a report on the hearings held by its subcommittee, this paragraph was included:

> The committee, on the basis of all the evidence before it, is convinced that the importation of foreign oil has had a substantially injurious effect on the coal, oil, and railroad industries of the Nation.

Yes; the domestic oil industry was also being damaged by excessive imports in those days—just as it is suffering today. The president of the Independent Petroleum Association of America testified at the hearings in 1950. The president of the National Stripper Well Association, from my State, testified. So did a host of other independent businessmen in the petroleum industry. From them and other witnesses, the subcommittees learned that, besides bringing unemployment, imports, first, imperil our national security; second, reduce the Nation's buying power; and, third, disrupt our entire fuel economy.

Here is an estimated rundown on residual oil imports into the east coast markets since the 74,719,000 barrels arrived during the year 1949:

[Thousands of barrels]

1950	120,025
1951	118,608
1952	128,070
1953	131,206
1954	128,953
1955	151,938
1956	161,124
1957	171,275

There you have it, Mr. Speaker. What about the death blow to the coal industry that I mentioned 8 years ago? Here is what a coal operator from western Pennsylvania recently told me:

> At the present time I am selling enough coal locally to keep about a dozen of my men employed. When the winter is over I will not be able to continue operations. Until residual oil from Venezuela took my business on the east coast, there was always a hopper car getting loaded under my tipple. About half of the other 30 men who used to work for me are now on relief, and the rest have migrated into other parts of the country looking for work.

Anyone who is old enough to remember conditions along the Atlantic Seaboard in the early part of World War II will recognize the danger of permitting sources of fuel to go by the boards when the world is in the state of turbulence which prevails today. Nazi submarines entered the Gulf of Mexico and sank ships within sight of New Orleans. Residents of Atlantic City and other coastal communities could stand on the beach and see the flames of torpedoed tankers leaping from the horizon into the skies. If it was so difficult to haul oil from Texas to Florida 15 years ago, how in heaven's name can we place reliance on shipments from South America in an era of snorkel submarines and jet aircraft?

Mr. Speaker, I am talking about a very important security matter. The Presidential Advisory Committee on Energy Supplies and Resources Policy recognized the serious implications of too much foreign oil. It was in the interest of national security that the Committee recommended a specific ratio of imports to domestic production—a recommendation which was included in the national defense amendment to the last extension of the Reciprocal Trade Agreements Act.

During the past week, I have discussed the coal situation with Tom Pickett, executive vice president of the National Coal Association. He reminded me that in 1954 it was agreed that a minimum level of production of 500 million tons in the bituminous-coal industry was essential to assure the capacity required for the acceleration that would be needed in an emergency period. The coal industry was below that level last year, and at the current rate of output will be off by at least 15 percent when 1958 has run its course.

American railroads today are beset with a number of problems. I do not contend that the coal-carrying lines would automatically find themselves back on a vigorous footing if residual-oil imports were reduced. I want to point out, however, that in coal equivalent the residual-oil imports last year amounted to more than 39 million tons. The resulting estimated loss to the railroad industry is $109,235,000. Given their logical share of this service charge, the Pennsylvania, B. & O., and other coal haulers would most certainly be in much better condition than they are at the present time. Here is an appraisal of current conditions on the railroads by James M. Symes, president of the Pennsylvania:

> If my appraisals of rail-transport requirements in the event of another war are approximately correct, and I believe they are, then certainly we are not now prepared to do the kind of job we would be called upon to perform—and we will not be prepared to do so if present policies with respect to transportation are continued. The same line of reasoning that caused me to indicate, 17 years ago, that the railroads could handle the expected load of World War II, causes

me to say now that they are not prepared to do what will be expected of them in the event of another war.

Under the circumstances, it would appear that Congress has a very definite obligation to enact legislation restricting the volume of residual oil that may enter the markets of the United States from foreign sources. So long as this alien product is permitted to deprive American workers of their means of livelihood, and so long as the national security is threatened, Congress is remiss in its duty if restrictions of residual oil are not incorporated into the laws of our land.

While I am hopeful that the Ways and Means Committee will insert into the trade-agreements law the provisions essential to reduce the inflow of residual oil, I place the House on notice that the necessary amendment may have to come from the floor. I request that my friends in the House be prepared to assist in accumulating the necessary votes if and when that time comes.

Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. DURHAM. Mr. Speaker, section 164 of the Atomic Energy Act authorizes the Atomic Energy Commission to enter into contracts or modify or conform existing contracts to provide for electric-utility services for a period not exceeding 25 years for the installations at Oak Ridge, Tenn., Paducah, Ky., and Portsmouth, Ohio, but further requires that such contracts shall be submitted to the Joint Committee and a period of 30 days shall elapse while Congress is in session before the contracts shall become effective.

I would like to insert in the RECORD a copy of a letter dated February 27, 1958, from Mr. Lewis Strauss, Chairman of the Atomic Energy Commission, to me, and a copy of modification No. 2 to a contract of the Atomic Energy Commission with Ohio Valley Electric Corp. for electric service to the Portsmouth, Ohio, area. This modification would extend the term of the existing contract to include an additional term of 12 months commencing on April 1, 1960, and terminating on March 31, 1961. Under unanimous consent, I insert in the CONGRESSIONAL RECORD a copy of the letter and contract modification as described above:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., February 27, 1958.

Hon. CARL T. DURHAM,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR MR. DURHAM: On February 28, 1957, modification 1 to the additional power agreement, identified as contract No. AT-(40-1)-2030, with the Ohio Valley Electric Corp. for electric service to the Portsmouth area was submitted to the Joint Committee. This modification 1 became effective 30 days after submission, on March 30, 1957, and unless extended terminates on March 31, 1960.

AEC and OVEC have agreed that the term of the additional power agreement shall be extended without any other change in the provisions and conditions, to include an additional term of 12 months commencing on April 1, 1960, and terminating on March 31, 1961. Accordingly, modification 2 to the additional power agreement has been executed.

In accordance with the provisions of section 164 of the Atomic Energy Act of 1954, there is submitted to the Joint Committee herewith, a signed counterpart of modification 2.

By its letter of February 26, 1958, OVEC has advised AEC that such of the regulatory approvals specified in section 7.06 as were necessary at that date to permit the transactions specified in this modification 2 have been secured and that such regulatory approvals were, at that date, in form and substance satisfactory to the company and sponsoring companies.

Sincerely yours,

LEWIS STRAUSS,
Chairman.

JANUARY 13, 1958.

Re: Extension of term for an additional year.
UNITED STATES ATOMIC ENERGY COMMISSION,
Oak Ridge Operations,
Oak Ridge, Tenn.
(Attention of Mr. S. R. Sapirie, Manager.)

DEAR SIRS: You have notified Ohio Valley Electric Corp. (OVEC), pursuant to section 6.03 of contract No. AT-(40-1)-2030, dated February 14, 1956, between OVEC and the United States of America, acting by and through the United States Atomic Energy Commission (AEC), (said contract, as amended by modification No. 1 thereto, being herein called the additional power agreement) that you desire to extend the term of the additional power agreement for an additional year after the date on which the additional power agreement would otherwise terminate. AEC and OVEC have negotiated the terms and conditions of such extension, and the sponsoring companies referred to in the intercompany power agreement, dated July 10, 1953, among OVEC and said sponsoring companies have consented to the execution and delivery of this agreement by OVEC.

1. AEC and OVEC have agreed, subject to the provisions of this agreement, that the term of the additional power agreement shall be extended, without any other change in the provisions and conditions thereof, to include the additional term of 12 months commencing on April 1, 1960, and terminating on March 31, 1961, unless the additional power agreement shall be terminated prior to March 31, 1961, in accordance with the provisions thereof.

2. This agreement shall become effective as a contract for electric service to AEC on the effective date of this agreement. The effective date of this agreement shall be the date on which the time shall have elapsed during which this agreement must remain on file with the Joint Committee on Atomic Energy pursuant to section 164 of the Atomic Energy Act of 1954. Until such effective date shall occur, this agreement shall constitute an agreement between us to use our respective best efforts to cause such effective date to occur as soon as practicable after the execution and delivery of this agreement.

3. AEC and OVEC recognize that, since this agreement provides for the extension of the term of the additional power agreement without any other change in the provisions and conditions thereof, (a) the provisions and conditions of the additional power agreement shall be applicable to the additional term of the additional power agreement in the same manner as if the initial term included the additional term, and (b) the conditions of performance specified in section 7.06 of the additional power agreement shall be applicable to this agreement and to the extension of the term of the additional power agreement provided for in this agreement.

4. OVEC shall be entitled to terminate this agreement by delivering to AEC, within 60 days after the effective date of this agreement, a notice in writing of its election to terminate this agreement if OVEC shall have failed to receive, within 30 days after the effective date hereof, an opinion of general counsel of AEC, in form and substance satisfactory to OVEC, to the effect that AEC had full power and authority to execute this agreement and the undertakings herein described and to obligate the United States of America, subject to the terms and conditions hereof, for all payments which may be required to be made, by reason hereof, by AEC to OVEC pursuant to any of the provisions of the additional power agreement, that the persons executing and delivering this agreement on behalf of AEC had full power and authority to do so, that all action necessary under section 164 of the Atomic Energy Act of 1954 to permit this agreement to become effective has been taken, that the provisions of this agreement do not contravene any of the provisions of the Atomic Energy Act of 1954, and that this agreement does not affect the AEC power agreement (as defined in the additional power agreement) in such manner as to cause the AEC power agreement to contravene any of the provisions of the Atomic Energy Act of 1954. In the event that OVEC shall terminate this agreement pursuant to this paragraph 4, the term of the additional power agreement shall, after the termination of this agreement, be the term which would be in effect without regard to this agreement.

5. If any of the provisions of this agreement, or any part of any provision hereof, shall be held by a court of competent jurisdiction to be invalid for any reason, this agreement shall terminate forthwith upon such determination. In such event the term of the additional power agreement shall, after the termination of this agreement, be the term which would be in effect without regard to this agreement.

If the foregoing correctly sets forth your understanding, please so indicate by executing a copy of this letter at the place designated for your signature and return the same to us.

Very truly yours,
OHIO VALLEY ELECTRIC CORP.,
———— ————, *President.*

Accepted:
UNITED STATES ATOMIC ENERGY COMMISSION.
By S. R. SAPIRIE.
January 17, 1958.

Approved:
G. L. QUINN,
Acting Director of Production, Atomic Energy Commission.
January 30, 1958.

Retirement of President Judge W. A. Valentine, of Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD,

I include the following editorial from the Wilkes-Barre Record of March 1, 1958, upon the retirement of Judge W. A. Valentine, president judge of the court of Luzerne County:

JUDGE VALENTINE RETIRES

Retirement of President Judge W. A. Valentine after 29 years of service on the Luzerne County bench and 56 years as an active member of the bar came quietly and without ceremony as he would wish it.

His distinguished career has spoken eloquently for itself. His retirement has occasioned many expressions of regret, as well as kindly appraisals of his worth as a jurist and as one who needed no title for recognition as an expert in the law.

Veteran courthouse employees recalled Judge Valentine in the years he was on the bench was not one to seek sumptuous surroundings. He seldom, if ever, requisitioned new office furnishings, equipment, or redecorating. One employee some years ago suggested he should have a new desk. Judge Valentine in typical style responded by suggesting the old desk be revarnished. It was recalled his chambers were painted only once in the years he occupied them and that was done after ceiling cornices dropped and the offices had to be refurbished.

Judge Valentine's chambers were simply furnished. They were looked upon as a place of toil. There were no ornaments. The chambers reflected the jurist's tastes and his capacity for hard work. Though his budget allowed for employment of a law clerk, Judge Valentine contented himself without such service.

His yen for usefulness continued to the last hour of his service at the courthouse. Willingly and sagely he expressed his views in answer to questions on the causes of juvenile delinquency and the possible remedies.

He expressed himself on many subjects, and not the least interesting of his convictions is the one to the effect that judges should be voted for on a nonpartisan ballot entirely apart from political parties. Like many a desirable goal, it may not be easily attained but certainly would be worth the effort.

Eyes Right

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address by Mr. William Yinson Lee, director, Eyes Right, Inc., at Overseas Rotary Fellowship of New York.

Eyes Right, Inc., is an organization which has sought to help the blind to see. It has done much valuable work in this direction.

I am pleased to include the following address of Mr. Lee entitled "The Visually Handicapped":

THE VISUALLY HANDICAPPED

(Address by William Yinson Lee, director of Eyes Right, Inc., at Overseas Rotary Fellowship of New York)

Mr. William Yinson Lee, past acting chairman of the Overseas Rotary Fellowship of New York, told his fellow members at their meeting at the New York Advertising Club on February 18 of the dramatic correction and improvement of sight which was given to a number of visually handicapped people, including some with as little as 2 percent vision (98 percent blind). He referred to the efforts of Eyes Right, Inc., a voluntary nonprofit charitable organization incorporated in New York in 1951, of which he is cofounder with Mrs. Muriel Brayman Dexter, president. Both are members of the board of directors.

In the United States there are 1,700,000 visually handicapped people. Of these, 334,000 are legally blind. It is estimated that at least 40 percent, or over 133,000 of the legally blind have enough "vision" to be rehabilitated to lives of usefulness through the use of special optical aids.

There are agencies helping the "legally blind" but Eyes Right is the only organization dedicated exclusively to aiding in the correction and improvement of vision of the "visually handicapped," which term also includes the legally blind and persons with major impairment of sight—the "blind" with residual vision—through the use of special optical aids, principally the improved telemicroscopic lenses.

The activities of Eyes Right, Inc., are opening new and expanding horizons in the home, the community and the Nation, to these visually handicapped persons, through the use of the special optical aids referred to and, equally important, making available to them the necessary personal adjustment for their fullest use. Eyes Right has the distinction of thus rehabilitating to lives of usefulness many visually handicapped persons who were previously more or less helpless and hopeless, as they had no place to which to turn for guidance or assistance.

The following are typical of scores of cases helped by Eyes Right, Inc.:

1. Two legally blind persons, N. B. and J. K., have had their sight corrected and improved with the aid of special subnormal vision lenses that they have been able to make a 400-foot 8-millimeter documentary film of some of the activities of Eyes Right, Inc. This 25-minute film is intended for showing to service clubs, fraternal organizations, and interested groups, upon request.

2. A legally blind girl, M. S., who had never read anything but Braille, can with the use of special optical aids and the new projection magnifier now read visually the smallest print and study music.

3. Retrolental fibroplasia legally blind child, A. Z., with the aid of telescopic lens and slip-on microscopic cap, can now read his schoolbooks and the writing on the class blackboard, which he could not do before. He is now living the life of a normal child.

4. Visually handicapped cerebral palsy boy, A. A., 14, had attended a State blind school for a year but was dismissed because he was not blind enough to qualify for continued training. He was not allowed to attend regular school because of his visual handicap. There was no school which he could attend. Eyes Right gave him a set of subnormal vision lenses. He can now enjoy television across the room, look out the windows of his home, distinguish people, and can see the writing on the board at school, which he could not do before. With a reading cap on his spectacles, he can now read newsprint. Parents say, "The boy has been helped toward a self-reliant and useful life." Doctor says, "You have done a great service to this deserving boy." The change in his attitude is remarkable and certainly heartwarming. To see this is a reward, indeed." He is now attending regular school.

In spite of the $150 million spent by the United States Government and the untold millions contributed by the public to private agencies for aid to the blind and the legally blind, very little is being done for the visually handicapped, whose blindness does not qualify them to receive benefits or assistance from agencies for the blind. Because of their visual handicap, a million or more of these people are unable to earn a livelihood but hundreds of thousands of them could do so, if provided with subnormal vision aids, after appropriate examination, coupled with the necessary personal adjustment for their fullest use. In addition, arrangements should be made for special reading instruction and for a psychological reorientation from the blind to the seeing world, which Eyes Right, Inc., is endeavoring to include in its program.

William T. Roy

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. CANFIELD. Mr. Speaker, when I came to work on Capitol Hill in January 1924, as a congressional secretary, I met William T. Roy, then a senatorial aide. I liked the cut of his jib, as the sailors say, and we soon became close friends.

No one was more pleased than I when 27 years ago Bill was named assistant to Lewis Deschler, distinguished Parliamentarian of the House, and every Member of our body will say "amen" to the tributes that have been accorded Bill by Speaker RAYBURN and former Speaker MARTIN and so many others as he and his beloved wife Donna leave for what all of us want to be many happy years in retirement in the Southland.

Washington newspapers today describe Bill as "the Parliamentarian with the photographic memory." He has just that and he knows every Member of both House and Senate, his background, and his record. When the Speaker or a Chairman of the Committee of the Whole House on the State of the Union, wanted to refer to a precedent or a bill or an enactment of yesteryear it took Bill only minutes to pinpoint the subject matter. It is understandable why the distinguished chairman of the House Appropriations Committe and the author of Cannon's Precedents, Mr. CANNON, of Missouri, who once was House Parliamentarian, now rates Bill alongside of Asher C. Hines and Lewis Deschler, as among the most famous of all House Parliamentarians.

Men and women, serving in the parliaments of the NATO nations, Germany, Japan, Korea, and Vietnam have called on Bill Roy in recent years for assistance in working out practical parliamentary procedures and Bill has many dear personal friends among them.

Bill has an outstanding war record, his service in the military beginning back in 1919, when he was a buck private in the army of occupation in Germany. When he returned home he became intensely interested in helping to build up a strong National Guard organization in the District of Columbia. He rose in the ranks to a lieutenant colonency and the 29th Division, which he commanded, will never forget him.

What is the secret of Colonel Bill's success? A very simple one. He loves

people. The Congress was his second home and how he exalted our national legislature, its histsory, traditions, and prerogatives. He will long be remembered for his courtesies, his patience, his understanding, his thoroughness. He stands very high in my book of unforgettable characters.

Extension of the Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of Seymour E. Harris, on behalf of the New England governors before the House Ways and Means Committee on February 28, 1958.

The statement follows:

THE EXTENSION OF THE RECIPROCAL TRADE AGREEMENTS—STATEMENT OF SEYMOUR E. HARRIS ON BEHALF OF THE NEW ENGLAND GOVERNORS BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, FEBRUARY 28, 1958

SUMMARY

I am representing the New England governors. We favor an extension of the Reciprocal Trade Agreeements (RTA), which make possible negotiations for increasing trade. The international crisis strengthens the case for RTA. Emphasis in the debates over the RTA has shifted from a program for more trade (1938) to one for solving the dollar shortage (first postwar decade) and now to one for keeping our friends.

We support the President's program with some reservations. We do not believe, as he does, that the RTA brings more jobs. In fact, by helping to destroy our vulnerable industries, it has tended to reduce the number of jobs, for the import competing industries require relatively much labor per unit of output—or dollar of output.

We insist on an escape clause (a device for revoking trade concessions if results for industry are injurious), which protects industries and regions against unwise or unpredictable results of tariff negotiations; and one which provides more rapid correctives than we have had in the past. (It took 8 years and a loss of 50 percent of the jobs in woolens and worsteds before the mistake of the reduction of tariffs in woolens and worsteds of 50 percent was partly rectified.)

We do not believe that the case for protection is nearly so great for growing as for declining industries. Hence, insofar as national policy requires tariff cuts, the growing industries should absorb the burden of increased competition out of rising markets. An overall average reduction may even be accompanied by rises when vulnerable industries are experiencing substantial losses.

Mr. Harris also stressed the point that when substantial cuts in tariffs may be followed by large imports and serious threats to a domestic industry, the tariff quota might be supported. That is to say, the Government establishes a ceiling on imports as a protection against excessive imports associated with tariff cuts.

Trade policy is one approach to the problem of balance in international economic relations. But there are serious problems to be solved, and they relate to the distribution of the burden.

By importing more, we tend to concentrate the responsibility of foreign policy on the vulnerable industries.

By providing dollars to foreigners through foreign aid or private investment programs, we tend to distribute the burden more widely among taxpayers and investors. In each instance the foreigner gets dollars.

By yielding export markets to other countries, we tend to impose more burdens on the strong export industries and less on the weaker industries that compete with foreign exporters. And we favor putting more burdens on the strong and less on the weak.

We tend to stress increased imports too much. Indeed, an inadequate aid and investment program tends to bring larger tariff concessions and more imports.

In determining the distribution of the burdens, we also have to allocate them between foreign and domestic interests. Foreigners also have to contribute towards stability by producing efficiently and containing inflation. Their balance of payments difficulties stem in part from their weak domestic policies. Inflation brings reduced exports and more imports. In addition, they often refuse to accept their share of world imports. Their restrictions are generally much greater than ours. Under the common market, Europeans may require this country to absorb an even greater share of Asiatic exports.

The most effective and most equitable approach to more imports is rising incomes, not tariff cuts. Here the rise of imports is spread widely and hence adverse effects on any one industry greatly reduced. Prosperity brought vast gains of imports since 1946, and tariff cuts failed to do so in the thirties. Hence, the need of aggressive policies to deal with the recession.

In determining trade policy the Government must integrate it with all Federal policies. Where injury is done through tax and spending policies, through farm policies (e. g., higher prices of cotton or wool and hence less sales of textiles), through merger policy, through resource policy, etc., then the Government must be especially careful not to introduce trade policies that injure an industry or region more. In fact, the case is strong for some help from trade policy.

The continued loss of textiles and the injury to New England of Federal policies are relevant issues here.

Identification: I am chairman of the New England Governor's Textile Committee and also chairman of the economics department at Harvard University. I am, however, speaking for the New England Governors and not for Harvard University. I am the author of some 30 books, several of which deal with issues of international economics, the last being International-Interregional Trade (1957).

I should say at the outset that we are not opposed to an extension of the reciprocal trade agreements. We say this even though in some instances the administrator of these agreements have been injurious to the New England economy, and particularly to the textile industry. We are impressed by the arguments used by President Eisenhower and also by Senator DOUGLAS in a brilliant speech. The emphasis here is put upon the international crisis and the increased need, therefore, for more trade with our allies and friends. The President said, and I quote, "We will fail if closed markets and foreign exchange shortages force free world countries into economic dependence upon the Communist bloc."

THE THEORY OF RECIPROCAL TRADE AGREEMENTS

In 1933 the major argument was that we needed more trade and the RTA was the way to achieve more trade. In more recent years the agreements have been tied to dollar shortage. In other words, if there is a genuine shortage of dollars, the easiest way to cure the shortage is for the United States to import more goods. Now again, the emphasis has been shifted, and this time to the international crisis and the need of tying our trade more to our friends and allies and the uncommitted neutral countries.

RESERVATIONS

Though we accept the President's general position, we do not, however, accept all the arguments. For example, and I quote, the President says, "The development of a healthy export trade has created a significant number of jobs for our working men and women." This is not a tenable position, nor was it tenable when taken by the Randall Commission. Actually, export trade does not create jobs. As a matter of fact, a higher degree of protectionism would probably give us more jobs. Indeed, an excess of exports is a stimulant to the economy and does create jobs. But this excess of exports is to be tied to the foreign aid, foreign investments and the like, not to the growth of export trade. In fact, it has been generally held that the export industries are those which provide the largest amount of output per manhour. Therefore, if we export more and import more and to this extent destroy our less competitive industries, to this extent we lose jobs rather than gain them.

Another reservation should be made, namely that so far at least the trade of the U. S. S. R. with Western countries, or nonbloc countries, has been very small. The major gains have been in trade within the bloc, though indeed there has begun to be some penetration into the neutral areas.

THE PHILOSOPHY OF THE RTA

In the past, some attention has been paid to the stake of industries protected. There has been some reluctance to reduce tariffs when the net effect would be a serious dislocation in some particular industry or area. It is true nevertheless that serious mistakes have been made, perhaps one of the most serious has been the Geneva Protocol of 1948 under which the tariff on woolens and worsteds was reduced from 45 to 25 percent. This reduction was followed by a decline of output of more than 50 percent and an even larger decline in New England. It took almost 8 years before this error was rectified to some extent.

ESCAPE CLAUSE

Many free-traders hold the position that there should be no escape clause, that is to say that if a particular tariff cut or trade concession results in large dislocations and increases of unemployment the industry or the region should have no redress. This seems to me to be an untenable position. It cannot be expected that government servants should be allowed in their negotiations to destroy an industry or greatly weaken it. Even if the negotiators have no such intention, they often do not know what the effects of a particular concession will be. Obviously, if there is not such a reservation available, the net effect is likely to be that no negotiations will take place.

Undoubtedly there is a case for the President having final authority in these matters because he alone can take a broad view. But the President should not be unconcerned over the condition of weak industries and particularly those that are losing employment steadily. On the other hand, the President should have the authority to consider the industry as a whole; and if the facts show that losses in some part which may to some extent be associated with tariff concessions are more than offset by gains in other parts of the industry, then to that extent the President might interpret the escape clause quite broadly. Above all, there is hope that it will not be necessary, as it has been in the past, to appeal for years to

get concessions and then obtain them at politically appropriate times.

THE DISTRIBUTION OF THE BURDEN

Our current international policy tends to stress the point that the United States has certain obligations to its allies and also to neutral nations. Among these responsibilities is the one to help these countries continue to improve their standard of living and their trade with this country. They must have reasonable access to our markets. Above all, we must be sure that they are not starved for dollars, given our own economic position and capacity to make dollars available and also the state of our industries.

THE WEAK VERSUS THE STRONG

In relation to the issue of the distribution of burden, I discuss first the problem of the weak versus the strong industries. In classical economics the general thesis held has been that we destroy the weak on behalf of the strong. We do not succor the weak. But there have been changes in viewpoint since those days, and the general view now seems to be that we help the weak rather than the strong. In other words, if the United States has to have more imports consistent with its foreign objectives, then the burden of absorbing increased imports should be put upon the growing industries, not upon those that are especially vulnerable to foreign competition and are already losing ground under current trade policies. It is especially wrong-headed policy to put an additional strain on any industry that is substantially losing jobs. In this connection we would argue that the gage should not be the fluctuations or the trends in output, but those in jobs. In other words, when an industry is losing, say, 5 percent of its jobs on an average year after year, there is no case for a reduction in trade barriers and there might even be a case for increased protection. In this manner the losses can be spread over a longer period and the adjustments may be made more easily.

MOBILITY VERSUS IMMOBILITY

A second issue here is related to the problem of whether or not industries and workers losing jobs can make adjustments. Where there are plenty of jobs available in the neighboring territory and economic conditions are very favorable, some movement, of course, can take place without great hardships. But in many industries this is not so. The explanation may be a heavy concentration of one industry or it may simply be the type of worker who is unwilling to move or would be very unhappy to be forced to move. The theorist often does not allow adequately for the costs involved in moving people and moving industry. At any rate, we have had many studies of which the Miernyk is the most interesting, which shows the difficulties of moving even in the midst of great prosperity. This study also shows the long periods of unemployment following losses of an industry, to some extent associated with trade policy.

THE STATE OF THE ECONOMY

A relevant problem in determining the distribution of the burden is the state of the economy. Obviously, it is easier to reduce tariffs in periods of great prosperity than in periods of recession. The reason for this is that in recessions unemployment already prevails, and any attempts to liberalize trade will increase the amount of unemployment.

Obviously, in a period, say, like 1958 it would be very difficult to put across any reductions in tariffs and there would be persistent efforts to increase the degree of protection. Obviously, also this is the time when appropriate measures should be taken to deal with a recession. This might include, for example, a drastic reversal of monetary policy, an increase in spending for defense and its related field, education, and also to some extent for welfare as well as, if the situation does not improve, a cut in taxes.

GOVERNMENT AID

Another issue relates to the contribution of Government in solving the problems of industries and people affected adversely by the economic situation. For many years there has been much talk of the possibility of governmental aid as a solution to the tariff problem. In other words, cut tariffs and help those who are injured. After several years of study after the war the State Department gave this up as a tenable policy. The point is, of course, that once an industry suffers from unemployment or loss of profits that industry will almost inevitably blame the tariff even though there may be other factors that are more important. Hence, such a program would probably be unworkable. On the other hand, we should stress the point that a program like the area redevelopment program suported both by the administration and the Democrats last year might be very helpful. Undoubtedly some losses of jobs result from trade policy and related policies or changing fashions or what not, and something should be done to help the industries and the regions that are affected adversely.

THE BURDEN ON THE FOREIGNER OR THE AMERICAN?

Those who favor more liberal trade policies tend to stress the contribution that the United States should make as against that to be made by the foreigner. But it is well to stress the point that the major restraints on trade are abroad, not in this country. We have had very large reductions in the average levels of our tariffs in the last generation, whereas most countries abroad still impose quotas, exchange control and the like. On the average, the United States is a relatively free-trade country, much more so than most other countries. In part, the shortage of dollars and the trade difficulties of foreign countries are related to unwise policies abroad which include, for example, cartels, uneconomic production, and generally a greater degree of inflation and excessive expansion than in the United States. This tends to cut exports and increase imports and bring disequilibrium in the balance of payments.

TARIFFS OR INCOME GROWTH?

One approach to the increase of trade and the increased availability of dollars is to reduce tariffs. Another approach is to raise incomes. There is no doubt in my mind but that the latter is the healthier and the most effective approach. This is so in the first place because the rise of income and the resultant increase of imports tend to allocate the burden of our international responsibilities over the population and industries widely. A reduction of the tariff, however, tends to put the burden on the vulnerable industries which are generally the weak industries. Furthermore, it is quite clear from our economic history that in the 1930's, when we had both tariffs cuts and relatively small amount of income growth, the increase in trade was small; but in the 1950's, with the great increase of income and continued tariff reduction, the rise of imports was phenomenal. Therefore, above all what we need are sane domestic policies and continued income growth. This, much more than tariffs, will bring about the expansion of trade.

THE COMMON MARKET AND EUROPEAN RESPONSIBILITIES

In determining our trade policy, one problem we have to watch is to what extent should the United States make the adjustmetns and to what extent should foreigners make them. In the present discussion of the common market this becomes a matter of first-rate importance. There is a considerable fear that a result of the common market would be that, for example, Japanese exports would be largely excluded. One of the problems confronting the United States has stemmed from the fact that the Japanese have lost their major markets in Asia and therefore increased pressure has been put upon this country to absorb the Japanese exports. In the discussions under GATT when the United States made substantial concessions, European countries did not follow suit. Now with the common market there is a great danger that the pressure on the United States would increase even more to assume a disproportionate share of the adjustments. This particular problem should be closely watched.

THE RELATION OF TRADE POLICY AND OTHER GOVERNMENTAL POLICIES

Still another aspect of the distribution of burden revolves around the relationship of tariffs and other governmental policies. The whole theory of free trade was based on the general assumption that the Government does not interfere except to a minimum degree. Of course we all know now that the Government operates on almost every facet of our economic life. Therefore, it is important to consider tariff policy in relation to all the other interferences and to assume that each industry and region will have fair treatment from the Government, given all the policies.

In this connection we have to consider, for example, the flow of Treasury cash from one region to another, not on the assumption that each region will get back just exactly what it puts in. But we do need to know what the net effect of these flows is. We also want to know what the effect of farm policy is, for example, on the price of raw materials and foods and, therefore, on the demand for products that are produced from the raw materials. We also want to know what the effect of Federal policy is on mergers which tend to have an adverse effect on some regions and some industries. Where the net effect of Federal policies is adverse, as it is, for example, on the New England economy and on the textile industry, then to that extent the case for a more liberal treatment on tariff policy becomes greater. In other words, given the need of any trade policy whether it is a decline or an increase, and generally it would be a decline, the industry or region that suffers excessively from Federal intervention should be given special consideration.

THE TARIFF QUOTA

In the textile industry we have now had a tariff quota on woolens and worsteds, that is to say, beyond imports of more than 5 percent of domestic products the tariff is moved up from 25 to 45 percent. This is a technique that can be improved by establishing quotas over shorter periods and for particular types of fabrics in order to avoid excessive disruption of the industry. The case for the tariff quota rests on the assumption that if the industry or region is guaranteed against a flood of imports, by establishing a safeguard that if the tariff is reduced imports will not be increased beyond a certain amount, then the concessions in trade are more likely to be forthcoming. The quota is particularly effective where there are very large differences in wage rates that are not offset by substantial advantages in techniques and productivity in the United States. Where the wage differential is 10 or 12 to 1, this may be an important consideration. Here there is great fear of floods of imports. This does not mean that we believe that wages should be equalized. Obviously, if wages were equalized, you would have very little case for international trade at all. Where the wage differentials are very large and particularly where the pressure of exports to a particular segment of the American economy may be very serious, there is a case for dealing with the problem through

the tariff quota. Certainly the case is not a tenable one when the industry maintains its jobs. The case is, however, strong when the industry is losing jobs at a fairly substantial rate, and where these threats still prevail. We are not trying to suggest that tariffs should be increased because the foreigner is penetrating our market. So long as the domestic producers maintain their employment, I see no case for an increase in tariffs. It is when they are losing their jobs and imports contribute to this loss that special measures of this kind are required.

A WORD ABOUT NEW ENGLAND AND THE TEXTILE INDUSTRY

Of course textiles continue to lose ground. New England has lost more than one-half her jobs since the end of the war. In woolens and worsteds the losses have even been larger. Hence the special claim of the textile industry on those who administer our reciprocal-trade agreements.

New England in the last 10 years has enjoyed a suitable share of our flourishing national prosperity. Yet despite the growth of new industries and the rise of nonmanufacturing jobs, scattered pockets of unemployment stubbornly persist. The explanation for this inconsistency lies in New England's relatively large stake in slowly growing industries, or declining industries such as textiles.

Seven rapidly growing industries accounted for 50 percent of New England's manufacturing jobs, as opposed to 61 percent for the same industries nationwide. New England had 29 percent of her manufacturing jobs in 4 slowly growing industries; the Nation, 15 percent.

Textiles are still losing ground. On the basis of wages, prices, employment, output, or profits, textiles have consistently lost ground over the last decade, both absolutely and relatively. In view of the outstanding technological advances, the shrinkage in jobs is far more striking than the shrinkage in output.

In 1957 (November 1956 to November 1957), textile employment for the country declined by 6.2 percent and all manufacturing employment by 3.6 percent, as compared to 15.0 and 5.2 percent, respectively, in New England. And if the present recession becomes any sharper than those of 1948–49 and 1953–54, further textile losses may prove to be more disconcerting than in the past.

We therefore urge Congress, the administration, and our governors to act promptly and forcefully to preserve the textile industry from further misfortune. We commend the Federal Reserve for abandoning its tight money policy, which is especially costly to a struggling, small-unit industry like textiles. And, since textiles are affected by the health of the whole economy, we hope that the Federal Government will take all possible measures to halt the current recession.

A Deputy Par Excellence

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of March 1, 1958, commenting on the retirement of Attorney G. Reuling Davis as deputy prothonotary of Luzerne County, Pa.:

A DEPUTY PAR EXCELLENCE

Retirement of G. Reuling Davis as deputy prothonotary after more than 7 years of service in that post calls for recognition of his contributions to the efficiency of that office. His ability was recognized during the tenure of Olin W. Evans, who retired in January and also by Allan W. Holman, who succeeded Mr. Evans as prothonotary.

Retention of Mr. Davis beyond retirement age was a natural consequence as was the statement by Mr. Holman, as he accepted the resignation of Mr. Davis, that "you could have continued here for the next 4 years if it had been your pleasure." No compliment more eloquent could have been paid an able and dependable aide who has all the qualifications of a principal in public office.

As well as could be expected of one who has shown that he is intent on remaining active, Mr. Davis is not retiring to a complete rest but will resume the practice of law.

He is primarily devoted to his profession, which he entered in 1918. Before he entered the prothonotary's office as deputy, he had served as a United States Commisisoner, and during World War I he was a member of a Wilkes-Barre city selective service board. He served for 7 years as a member, from 1942 to 1949, of the executive committee of the Wilkes-Barre Law and Library Association.

He has resided in Wilkes-Barre since the age of 1, or for a total of 69 years. He was born in Wilmore, Cambria County, which, incidentally, is the birthplace of former Chief Justice John Kephart of the Pennsylvania Supreme Court.

His father and uncle under the firm name of Davis Bros. conducted a chain of grocery stores in Wyoming Valley from Nanticoke to Wilkes-Barre. His father, Edward W. Davis, was vice president of the former Wyoming Valley Trust Co., and later a director of the Miners National Bank.

Time To Face Dairy Problems

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the February 13, 1958, issue of the Snohomish County Tribune, a weekly newspaper published at Snohomish, Wash.

This editorial is another example of the deep concern being expressed, not only in Snohomish County, but also in the other counties of my district about proposed price support cuts and the need for a dairy self-help plan. In fact, the problems of the dairyman is of concern throughout the Nation.

I am sure that the Members of Congress also feel deep concern, and that they will soon come to grips with these problems.

Therefore, I once again urge early hearings on H. R. 9741, the self-help plan I introduced January 7.

The editorial follows:

TIME TO TAKE DAIRYING OUT OF POLITICS

With the approach of April 1, the date the United States Department of Agriculture proposes to cut dairy supports to 75 percent of parity, increasing talk about the so-called "self-help" plan for the dairy industry is being heard. More and more dairymen seem fed up with Government-established price supports, a situation in which a bureaucrat can deprive producers of $250 million in income with the scratch of a pen.

No matter which way the pen scratches, the huge dairy surplus remains. When support prices were high, the surplus was tremendous. With supports low, surpluses are still huge. There is no guarantee that cutting the supports even farther will solve the surplus problem.

In the January issue of Darigold, official magazine of the Snohomish County Dairymen's Association, Manager W. F. Penney has this to say:

"Should this (cut in supports) take place, the effect on the Puget Sound producer base price could be tragic. The lowering of supports itself could affect the Federal order formula price by 20 to 25 cents. * * * The base price could drop as much as 70 cents per hundred-weight."

Even Congressman JACK WESTLAND, who has backed Eisenhower administration policies for the past 5 years, balked at Ezra Benson's latest caper. In a recent communique, WESTLAND tells of appearing before the dairy subcommittee of the House Committee on Agriculture in favor of a bill to maintain milk supports at $3.50 per hundredweight.

"Based on visits to dairy farms in my district of Washington State and on the many letters I have received on this subject," WESTLAND writes, "it is clear to me these dairymen are waging a losing battle. These farmers work harder, but earn less than almost any other segment of agriculture. This has been the case while the Federal Government has attempted to regulate the dairy industry.

"However, until the time comes when a permanent producer-financed and operated (self-help) dairy stabilization and production-controlled program is established, interim price supports such as proposed by this and other bills are necessary," the Congressman testified.

WESTLAND has asked Agriculture Secretary Benson to withdraw or postpone his order to cut price supports until Congress can study and act on a self-help program. He adds he is confident the Secretary will carefully consider this suggestion. We hope he does, too.

Perhaps the threatened price cuts will serve a good end. Maybe the dairymen and their representatives will come to grips with the problem of surpluses and make an all-out move to take controls away from the Federal Government. If self-help legislation is passed this year, perhaps dairy farmers will actually owe Ezra a vote of thanks for bringing the situation to a head.

Who Is Subsidizing Whom?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. BENTLEY. Mr. Speaker, at the request of certain constituents of mine, and under leave to extend and revise my remarks, I wish to include the text of an editorial from the October 1957 issue of Capper's Farmer entitled "Who Is Subsidizing Whom?" The article in question indicates that the stability in the cost-of-living index between 1953 and 1956 was due to the drop in farm

prices over the same period while manufactured prices were rising.

The editorial follows:

WHO IS SUBSIDIZING WHOM?

Since the Korean war, farmers have been taking it on the chin nobly in order to make inflation easier to live with for American consumers.

The income cut that farmers have taken since 1951 has been, in effect, a subsidy to the consumer.

While farm prices have gone down, cost of living has been going up. But consumers got their food and clothing at about the same price from 1951 through 1956.

These two essentials—food and clothing—have offset other cost-of-living items. They have served to hold the whole inflation spiral in check.

Taking into account some improvement in the last 18 months, farm prices have declined 22 percent since the Korean conflict. But had farm commodity prices gone up instead—and at the same rate as other cost-of-living items—food and clothing now would be 15 percent higher, USDA economists figure.

That's not all. If farm prices had gone up, labor, transportation, and other marketing costs would have followed suit.

Net result over the 1951–56 period would have been a really whopping burden for American consumers. Some $70 billion at least, say USDA economists.

Thus, your sacrifices have meant a fantastic saving in America's food and clothing budget since 1951. This isn't necessarily news, but publicity for the big role you have played in checking inflation needs headlining.

Many critics of agriculture have spent much time and money denouncing farm price supports. You have been lashed repeatedly for accepting subsidies.

But let's compare figures. Since 1951, price support programs have cost American taxpayers $3.5 billion. That is the difference between what commodities cost the Government and what they sold for.

But you have saved those same taxpayers some $70 billion.

Put these same figures on a per capita basis and they become even more startling.

While our whole population of 170 million has been absorbing a $3.5 billion farm-price subsidy, the farm population of only 22 million has been saving American consumers $70 billion.

That's why Capper's Farmer asks: Who is subsidizing whom?

Not only has the farmer helped hold down the cost of food with his cut in income; he also has absorbed a part of the increase in the Nation's food-marketing bill.

This food-marketing bill—the costs between the farm and the consumer—went up $6 billion from 1951 to 1956. (The bill would have increased more had farm prices gone up.) But those costs were not all passed on to the consumer. The farmer picked up a chunk of it with a $2.6 billion cut in his net income.

Farmers haven't enjoyed the beating their pocketbooks have taken while other income has followed the inflation spiral upward. But by belt tightening they have eased the Nation's financial headache.

The Nation's economy has maintained strength because farm prices haven't followed the general trend upward, economists say.

Congressman WRIGHT PATMAN, chairman of the Joint Congressional Economic Committee, during this session, asked William McChesney Martin, Jr., chairman of the Federal Reserve Board, whether it would be "ruinous" if farm prices went up as much as other prices. Martin replied: "It's certainly something we don't want to contemplate."

Before the same committee, this question was put to Oris Wells, top USDA economist: "The stable prices (between 1951 and 1956) in other words were at the cost of the farmer?"

Wells replied: "Certainly. If we had not had falling farm prices, the price level would not have been stable."

Again, before the House Banking and Currency Committee, Chairman Martin of the Federal Reserve Board said: "The great shame to me * * * was that we kept stability in the dollar from 1953 to the early part of 1956 by a decline in farm prices, which was being offset by a rise in manufactured prices.

"In other words, the stability was not balanced. It was farm products going down, manufactured products going up, and the net result being stability."

And now, rising food prices—what the Nation's economists have been dreading—have begun.

Ewan Clague, Chief of the Bureau of Labor Statistics, which puts out the cost-of-living index, says:

"In 1956 the major change in the cost-of-living index, and the reason we moved away from stability, was that food prices no longer helped us. For 4 years food prices declined, and that offset rises in rents and services and other factors on the industrial side. Then in 1956, food prices turned around and joined the others, so our index went up."

Labor is set for another round of wage increases. Many union contracts call for wage increases as the cost of living goes up. Industrial prices definitely are going higher. Interest rates are rising.

But what about farm prices? Is it fair that agriculture, because it is unorganized and without bargaining power, should bear all the sacrifice of combating inflation? Why is the Government asking for permission to drop farm price supports still lower? Is that the only way to halt the inflation spiral? Your Congressman and Senator are now home. Ask them these questions.

The Christmas I Remember

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. RODINO. Mr. Speaker, the moving story, told by Msgr. John Patrick Carroll-Abbing, of his dream of a home for boys which finally became a reality when he founded the Boys' Towns of Italy, is one worth reading.

Having had the privilege of knowing Monsignor Carrol-Abbing, one does not wonder that today many of the once homeless youth of Italy are safely sheltered in the Boys' Towns of Italy.

On a recent trip through Italy, I had the pleasure of meeting some of these boys. They expressed in simple but beautiful language the gratitude they feel for the people of the United States who did so much in helping to make Monsignor Carroll-Abbing's dream of Boys' Towns of Italy a reality. Under leave to extend my remarks, I include herein The Christmas I Remember:

THE CHRISTMAS I REMEMBER

(By Msgr. John Patrick Carroll-Abbing)

(NOTE.—It was Christmas Eve, 1944, in Naples and the "patter of little feet" in the dark was a sound to dread. In today's installment of The Christmas I Remember, Msgr. John Patrick Carroll-Abbing tells how he took the dread out of that sound and brought realization to the dreams of thousands then huddled under rags.)

It was Christmas Eve, 1944. Naples was shrouded in fast-approaching darkness. On the docks activity had ceased. The long lean liberty ships could be seen only as dark masses etched against the sky.

As I walked through the deserted streets I heard a clatter of feet behind me. A boy ran past, a typical scugnizzo, his rags flapping about him; then another panting child, then two more and finally a smaller boy, his eyes starting from his head, blood trickling down his cheek. The boys melted into the shadows, the pattering of their feet died away. Silence once more.

Who were they? What had they done? Where had they come from?

They were the children of the war. Did it matter whether only a year before one of them had lived with his mother in the sheltered protection of his little cottage home in the mountains; that another one had followed the allied armies from Sicily; that another had lived in a little country town near Salerno?

These were things of the past; now their homes were destroyed, their mothers dead, their fathers prisoners of war. They were an insignificant part of the vast army of homeless children, marching the roads of Italy, infesting the port cities, seeking but one thing: to ward off starvation.

The day before, I had been in the little town of Fondi; the dismayed villagers had told us of the gangs of youngsters who passed by. "Every day they come through on their way to Rome, whole groups of them." Cynical, tough—even the smallest of them—they were a social menace.

I walked up the hill, stepping off the sidewalk every now and then to avoid treading on the youngsters huddled together in sleep with a sack and old rags pulled over them.

After supper I sat beside the blazing fire with the United States Army colonel attached to the AMG and the captain of the port police whose guest I was and we talked of the events of the day.

The captain spoke of the gasoline drums that had been found floating in the bay. "We discovered that the kids were riding them down the sewers into the port. Until then we hadn't been able to understand how they were getting past the sentries at the gates."

The colonel was opening a package from home: a box of candy, a woolen sweater and a letter. He pointed to the kisses scribbled at the end. "My kids," he said.

We looked into the fire. It was Christmas: the feast of a child who was born in a stable. The angels were singing: "glory to God in the highest and peace on earth to men of good will." All over the world men were killing each other and children with no mother's love to warm them were sleeping out in the cold.

"What is a little Irishman doing in Italy if he can't solve a tiny problem like this?" It was the colonel, gruff and polemic as he usually was when he was deeply moved.

As I lay in bed and looked up at the painted canvas ceiling which billowed and flapped in the darkness, I thought that the colonel was right: What were any of us doing in the world if we could not try, each one in his own little way, to do something for the children who had no one to love them?

Did I dream that night? If I did I certainly did not dream that out of the little organization, that I started soon after to feed and clothe the street boys, would grow the nine beautiful Boys' Towns of Italy. I did not dream that it would be the men and women of the United States without distinction of national origin or creed who would make this possible and so give to thousands of children across the seas love, care, hope and a new chance in life.

Eugene L. Preston

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HULL. Mr. Speaker, a great newspaperman—one of the old aggressive school of American journalism—passed away February 22. He was Eugene L. Preston of the Liberty Advance and the Liberty Tribune in Clay County, Mo.

Gene Preston was a grand person. I am proud to have been numbered among his legion of friends across Missouri and the Nation.

The Liberty Tribune on February 27 carried an article on the funeral rites of Gene Preston and under leave to extend my remarks in the RECORD, I include parts of this article:

Eugene Lyman Preston, 66 years of age, and for the past 15 years, news editor of the Liberty Tribune, and the Liberty Advance, died Saturday afternoon at the Kansas City Osteopathic Hospital. His condition had become critical 2 weeks before his death.

The many persons who came to pay their respects filled the auditorium of the Liberty Methodist Church for the final funeral rites on Monday afternoon. And many accompanied the body to Fairview Cemetery for the burial.

The Reverend Gregory Poole, pastor of the Methodist Church, read first the 23d Psalm and closed with the words of Jesus as He speaks to all who follow after Him, as well as the words of St. Paul.

Following the Scripture, Mrs. J. F. McGuire sang Take My Hand, Precious Lord, accompanied on the organ by Russell Aubrey.

The Reverend Poole's message follows:

"We come this afternoon to a time when we remember endings and beginnings. We stand at the close of a very useful earthly life. One whom we love and one who served his community well has passed from our midst. When we look back over his life, we can see that it is one of service to the communities in which we lived.

"The newspaper editor plays a unique role in the life of his community. The community looks to him to be its historian, it looks to him to be its chief scribe; it looks to him to be the defender of that which is right; and it also looks to him to be the prophet of the community's future. This is an exacting task. It requires both determination and discrimination. The one whom we commemorate today possessed both of those virtues.

"Thus, we come to the close of the lifetime of this loved one, and yet as we come to this time, we some way realize that there are some things over which death has no power. We think of all this man did for the community of which he was a part, the pleasant memories, the friends he made. These are things which death cannot destroy. Mainly, when we come to consider it, these things are Gene's greatest memorial and we can be thankful for them. But let us not forget that this is also a time of beginnings. Our loved one has passed on into a new era of life. The problems, the difficulties, the sorrows, and the suffering are over. A new life has begun.

"I would have us remember this, and perhaps it shall be a ministry to our hearts in this hour: Jesus said, 'I will not leave you comfortless; I will come to you; I will send you a comforter.' Perhaps in meditating on this fact, that what we call a closing of a life is also a beginning of a life, God will be that comforter for our hearts. Jesus also said, 'In my Father's house are many mansions.' These are literally the wonderful words of life. There is power in these words.

"We are mourning here today. Why are we mourning? We are mourning not so much for one that has gone from us. We are mourning our own loss, are we not? We are mourning because we are being separated for a while from one we love, and yet in all our sorrow there is no bitterness, there is no doubt that we shall see him again. This is the sense of new beginnings that each of us posseases this afternoon. True, an earthly life has come to a close, but a new life has begun.

"Beyond our sorrow there is the comfort of eternity. Beyond both life and death there is God. Beyond this earthly ending there is a new beginning. Perhaps in meditating upon these things we shall find strength needful for the facing of this and every hour of sorrow."

Floating in the Gloating

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. YATES. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article entitled "Floating in the Gloating," by Leo A. Lerner:

I was sitting around the house reading the Fuller Brush magazine, which is a patriotic thing to do because it is an unembellished catalog of our superior standard of living, when gloating began to float in.

We had launched our own sputnik, modestly named Explorer, though perhaps it should have at least been called Explorelei, or Explorecutie, or something, with a nik equivalent to suggest the affectionate diminutive. And having launched our own sputnik, the sky was the limit for headline braggadocio and radio announcers out of breath with the wonder of it.

I was pleased, too, because a start is a start, but I wondered if all that crowing was wise. In a way, the fact that both sides have thrust power capable of sending earth satellites into the orbit merely meant that in case of war we could destroy each other, and the outcome might merely depend on which one did the biggest job of destruction first.

In all the floating and gloating that was done, nobody mentioned that the end of sober thought might mean the resumption of brag and bluster that could lead to war.

Most of the gloating had the strong tinge of politics to it and was mostly bunk. TRB, writing a week ago in the New Republic (on weekdays he is a respected reporter for the Christian Science Monitor) said that the Republican politicians were waiting for the launching of the first United States satellite like kids waiting for Christmas.

"They can hardly think, dream or talk about anything else. Radio and TV scripts for Congressmen are already canned and waiting to be released locally simultaneously with the American sputnik. Glowing interviews are ready for S-day. Republicans are grimly determined to give it the biggest celebration Madison Avenue ever prepared."

"Get the satellite up there and the heat will be off" was the motto; so that our Army pencil, 6 inches in diameter and 80 inches long, is writing in the sky, "No more urgency. No more worry about education and defense. The eggheads, now that they have produced a sputnik, had better be scrambled. We've stood them for 114 days too long."

Although Ike and the Congressmen came through with all the quotes as planned, it was the newspapers themselves that did the oddest gloating job. The stories didn't match the headlines. You had to dig into the 8-point type to find out that Dr. Wernher von Braun, the former Nazi missile expert who now heads our Army program, said that the Explorer is a rival in spirit only to sputnik, and that if we should develop a rate of progress, in speed to accomplishment, to that of the Russians, it would take at least 5 years to overtake them.

Von Braun called that fact a frightening thing, and yet no headline said: "Our Moon Up, but We're Still 5 Years Behind." That was too much to expect, perhaps, from a hopped-up newspaper community more anxious to play domestic politics than to tell the truth.

Politicians believe in running scared in a political campaign, but they are cheerful about deceiving the people into not running scared where our national safety is involved.

In this situation, politics is the Achilles heel of American power, but it always has been under all administrations.

Things are getting too serious for local politics to control foreign policy, but that's the way the sputnik bounces.

On Sunday I searched the newspapers for one fact that established the headline "United States Moon Signals Data on Mysteries of Space," but there were no facts to back up that headline, although there was much body matter to the news stories.

Whatever we find out about meteoric dust from our sputnik, there remains a need for serious housekeeping. The educational system must be rethought and revised, the military budget must be big and bold enough, the people should be made more aware of the situation (as an instrument of intelligent foreign policy) and the dangers of our weakening economy should be openly discussed as a secret weapon of the enemy.

We need what George Kennan calls social health.

The new satellite entitles us to a small hurrah, but there is work to do.

I was amused at the statement of Harlow Curtice, president of General Motors, that a tax cut would be the most help to the American economy. This is bringing forth a mouse. What he needs (and we need) is more people buying Chevrolets and Oldsmobiles and Fords, and the way to do that is not to cut taxes, but to find ways to restore our productive capacity and get people jobs.

Under the circumstances we should be willing to spend more, not less, to save our way of life. As welcome as the launching of the Explorer may be, it complicates the fight against complacency and national smugness.

Tribute to the Organized Labor Movement in St. Joseph, Mo.

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HULL. Mr. Speaker, the St. Joseph News-Press recently paid a wonderful tribute to the organized labor movement in St. Joseph, Mo., which I believe is richly merited.

Under leave to extend my remarks, I include in its entirety an editorial from the News-Press of February 24:

LABOR FOR THE BONDS

St. Joseph is proud of its organized labor. It is proud of its No. 1 man in organized labor. That man is Warren Welsh, president of St. Joseph Labor Council. It is proud of labor's newspaper organ, the St. Joseph Union Observer.

With that preamble let us ask that you who maybe are not in union labor and do not see the Union Observer, read this page here today. For on this page of the News-Press is reprinted an editorial that appeared in the last issue of the Union Observer. It carries this caption: "The Bonds Are a Must."

The Union Observer is presided over by two men whose own contributions to civic progress are not unknown. The publisher is Warren Adams, a former police commissioner. The editor is Carl Castel, also a former police commissioner. This is only one of their many public contributions.

The editors of the News-Press and Gazette have watched organized labor down the years. And remember this, this man Warren Welsh has been the dominant factor in organized labor for considerably more than a quarter of a century. No body of men and women ever had a more loyal, hard-hitting, strictly honest champion.

It may be taken for granted that the editorial views of Publisher Adams and Editor Castel reflect the views of president and coordinator Warren Welsh. We know they do. We suggest that whether you subscribe to the Union Observer (and already have read that editorial) or whether you are not familiar with the paper, please read or reread The Bonds Are a Must.

This Union Observer expression, we editors up on the hill on Edmond think, is organized labor speaking at its very best. We are proud of you Warren and Carl, of the fourth estate and you Warren W. But the line you have taken fits the pattern of what we have known of you these long years. That is one of the reasons union labor is so respected in this city of St. Joseph today.

Eligibility for Social-Security Benefits

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. FINO. Mr. Speaker, I am introducing a bill today to allow a widow who is under disability to receive social-security benefits at age 50. The present law requires that, for a widow to be eligible for benefits, she must either be age 62 or the mother of a child who is entitled to benefits under the act. This means that the widow of an insured individual receives payments during the time her children are growing up, which stop when the youngest child reaches age 18, except in the case of a disabled child. She must then wait until she reaches age 62 before being eligible for further benefits.

I think that an excellent argument can be made against this policy, based upon recent studies which have disclosed the many difficulties a person over 40 encounters when he seeks employment. A widow who has spent her youth in raising children, who attempts to enter the labor market must find added difficulties over and above those encountered by the average worker of middle or advanced age with a record of past employment. For in the great majority of cases, she lacks the experience and background necessary to qualify her for a decent job.

If this is so in the case of a widow in good health, who given the opportunity, is able to support herself, what is the plight of a widow who is physically unable to undertake gainful employment? My bill is limited to the latter class, that is widows who are disabled as that term is defined in the act and administered by the Social Security Administration—which, by the way, is a strict definition, rather stringently applied.

Mr. Speaker, as I see it, one of three fates must befall such a person. First she may be fortunate enough to have an independent source of income, sufficient to supply her needs. If she is not so fortunate, however, as most widows are not, she had the unenviable choice of becoming either a burden upon her children or whatever other family she may have, or she will become a public charge. I see no reason why a widow in such circumstances must be forced to wait until she is 62 years old before she is eligible for social-security benefits. The interim between the time when her mother's benefits close, or if she was not entitled to a mother's benefits the time at which she became a widow, and the time she reaches age 62, has been aptly described as the "valley of despair."

The 1956 amendments to the Social Security Act provided for the granting of benefits to disabled workers at age 50 and for disabled children over age 18. I suggest that it is high time we took similar action in the interest of disabled widows, who find themselves in equally distressing circumstances.

Community Action in the West

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the March 1958 issue of Sunset magazine, a publication devoted to western living. It tells how alert citizens of Springfield, Oreg., a city in my district, enthusiastically took up a tree planting proposal from Mr. Clayton Anderson, superintendent of the Willamalane Park and Recreation District—which includes Springfield within its area.

Last year, 731 street trees were planted. The project is now planned as an annual event in which resident and businessman join hands.

The article follows:

NEW TREES WILL BE BLOOMING IN SPRINGFIELD

When spring comes to Oregon this year, the streets of Springfield will be brightened by the blossoms of hundreds of young trees that never bloomed there before. To the many Springfield citizens that have joined hands to beautify their city, the display will be a special reward. Spring will also bring a renewal of the community planting project that was responsible for the new trees, a project so successful last year that it is now planned as an annual event.

Since World War II Springfield has experienced the increasingly rapid growth typical of many western towns. Her population has more than tripled in less than 10 years, to a present total of more than 10,000. To meet the demand for houses, entire neighborhoods mushroomed on open farmland, or on land skinned of its native growth by mass-production building methods. Lawns and flowers helped to soften the raw look of these subdivisions. But the new areas sorely needed trees—for the landscape value to each home, for summer shade, most of all for the appearance of permanence and the blending with established residential districts that only trees can give. Although Springfield's tree-planting plans were aimed at the whole town, the response was greatest in the newer areas.

The tree-planting proposal came from Clayton Anderson, superintendent of the Willamalane Park and Recreation District which includes Springfield within its area. (For a report on how to organize a public park and recreation district, see the April 1957 Sunset). He suggested to the Willamalane Recretation Council that they appoint a five-member, permanent "More Beautiful Springfield" committee, and that its first objective be street tree planting. Thus a volunteer committee became the sparkplug that activated the project.

To enlist and encourage neighborhood participation, the committee decided it should recommend desirable trees for street planting, and then help obtain them at the lowest possible price through quantity purchase, underwriting a part of the cost. The committee also offered to assist in planting the trees, and to furnish guidance in their later care.

Participating homeowners were asked to pay $1.50 for each tree (average height, 6 feet), and to plant and care for their trees under the supervision of the committee.

The project was launched by a brief fund-raising campaign, not only to provide the committee with money for operating expenses, but also to acquaint the public with the plan. A garden club volunteered to sell 50-cent buttons to individuals, $5 stickers to business firms; and in a 2-hour period in downtown Springfield the members raised nearly $200, a substantial part of the fund.

Newspaper stories helped enlist the cooperation of neighborhoods. Wherever people indicated an interest, committee members spoke at block meetings. They had obtained lists of street trees recommended by the University of Oregon and approved by the Springfield and Lane County planning commissions. The speakers showed color slides of street trees (both good and bad examples), and demonstrated that such things as setback laws and utility lines are factors in selecting types of trees. The goal was one-half block to 1 block uniformity in species of trees planting along the streetsides.

After a general discussion, a neighborhood leader was chosen to contact everyone in his block, take orders for trees, and collect the money. By offering trees at a below-retail price, as well as through its official recommendations, the committee exercised considerable control over the kinds of trees planted. Not every family in every block bought a tree, but the planting was completed wherever a majority of the block's residents wanted it.

A Springfield nurseryman furnished the trees at special rates and acted as planting consultant.

March 23, a Saturday, was citywide tree-planting day. The day before, 650 holes were dug by machine at designated spots; 3 stout stakes for guying each tree were de-

posited by each hole; and the trees were delivered. Stakes were donated by a lumber company.

With each tree came a mimeographed sheet of planting instructions in simple step-by-step form. In addition, committee members, garden club members, and participating nurserymen roamed the blocks, helping wherever needed.

Most of the trees planted were the flowering ornamental types: cherries, plums, crabapples, and hawthornes. Others were sweet gum, European white birch, pin oak, scarlet oak, and London plane.

Altogether, 731 trees went into the ground that day. And this year, the enthusiastic committee promises, there'll be lots more.

U. S. S. "Enterprise"

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. WILSON of California. Mr. Speaker, those of us who have followed the career of the famous World War II aircraft carrier, the U. S. S. *Enterprise*, were thrilled recently by the announcement that the new nuclear powered carrier will be named the Enterprise in honor of the Big E which at one time was the main protective shield against the Japanese in the war in the Pacific. She was Adm. Bull Halsey's flagship and has recently been relegated to the boneyard, despite the effort of the Enterprise Association headed by Bill Rubin which attempted to raise funds to keep her afloat.

A recent tribute to the *Enterprise* appeared in the San Diego Evening Tribune in a column by Neil Morgan who won the Ernie Pyle award in 1957. Under unanimous consent, I include this column as a portion of my remarks:

CROSSTOWN WITH NEIL MORGAN

NEW YORK.—There is a kinship between death and sentiment, one which I do not care to examine too closely. But it was in the room with us all day yesterday, and it was dressed in pride.

The morning began when a tired, pale man in a tweed suit walked into the big 15th floor office at Third Naval District Headquarters, near the downtown tip of Manhattan.

We came to our feet naturally—a pair of admirals, a commander with the shoulder braid of a naval aide, two civilians who had been enlisted men when the man in the tweeds was the top man on their ocean and a newspaperman. The newspaperman was just there for the funeral.

The tired man shook hands all around and sat behind the big desk and read a statement. The carrier *Enterprise* had been his flagship, not quite two decades ago.

For a while, the *Enterprise* was the only carrier between America and the Japanese. Its pilots had shot down almost a thousand enemy planes, sunk 71 ships, and probably sunk or severely damaged another 192 ships.

His statement admitted that he was old, and sick, and that he loved the ship, but that younger men with more steam in their boilers would have to do the work now.

So Fleet Adm. William F. Halsey assigned to others in the room the goal he had sought—to save the ship he loved from the scrap dealer's torch. It was a battle Halsey and the other *Enterprise* sailors had fought since the Navy announced plans to junk the gallant ship.

But sentiment like this costs money of the seven-figure kind. If the *Enterprise* was to become a naval shrine, with schoolchildren tramping curiously over its flight deck, Halsey and these other men had to raise the money.

And the admiral in the tweeds had tried for months, and now he admitted he was surprised that the country had not understood. The money had not come in. His ship, he knew, could not be saved. But he said that if the younger boys would keep trying, he would help all he could.

That was the start of the funeral.

The other men are not, men you would accure of sentiment, if you did not know. One is a New York City insurance adjuster. Another, Bill Rubin, of San Diego, the president of the Enterprise Association, sells newspapers and operates a string of stores. A third is director of athletics at the University of Pittsburgh.

The funeral was not an easy one. The day wore on into darkness as the men who loved their ship sought a way to save her. They called the Pentagon. Another admiral said there was a good chance the Navy would call a nuclear-powered carrier by the name of *Enterprise*, if these men and the other thousands of *Enterprise* veterans thought well of the idea.

Reporters came and went, stenographers typed and retyped drafts of hopeful statements; porters brought sandwiches and coffee, because no one left the room for lunch.

Finally, the old man in the tweeds shook hands all around, his eyes lingering fondly on each face.

"I'm sorry, boys," he said.

The others talked for a while. On their way uptown, they took an impetuous detour by the naval shipyard in Brooklyn to see their ship again. It was battered and scarred, still, and the scars brought memories.

And the memories brought the sentiment that bring tears to the eyes of men.

Prevailing Wages for Federal Highways

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 6, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting letter written to the United States Department of Labor by the president and business manager, James R. J. MacDonald, of the Hoisting and Portable, Power Shovel and Dredge Engineers, Local 4 and Its Branches, I. U. of O. E., Boston, Mass.:

HOISTING AND PORTABLE,
POWER SHOVEL AND DREDGE ENGINEERS,
LOCAL 4 AND ITS BRANCHES, I. U. OF O. E.,
February 3, 1958.

Mr. STUART ROTHMAN,
United States Department of Labor,
Washington, D. C.

DEAR SIR: In the January 23, 1958, issue of the Engineering News-Record, on page 114, is an article captioned "Prevailing Wages for Federal Highways."

In commenting on the prevailing wage feature of the Davis-Bacon Act being extended to the Federal-Aid Highway Act of 1956, the article quotes you as saying the Davis-Bacon Act has been "a stabilizing influence in the construction industry" and a "bulwark of protection for the working man against substandard wages."

This is a ringing endorsement of the Davis-Bacon Act and was in truth the purpose of its enactment. But, as sometimes happens, the purpose and intent of a law is nullified or distorted by the administration of the law.

Let us take a case in point. I refer to the rates of wages predetermined for Federal-aid highway construction in Washington County in the State of Maine. Underway at the Dow Airfield in Washington County for the past couple of years has been a job of considerable magnitude. The rate predetermined for the job for crane and shovel operators is $3.40 per hour. J. R. Cianchette Co., of Pittsfield, Maine, is the general contractor. Recently, adjoining the Dow Airfield, a contract for the construction of 2¾ miles of divided, limited-access highway under the Federal-aid highway program was awarded to the J. R. Cianchette Co., for approximately $2,750,000. The rate of wages for crane and shovel operators on this job, as predetermined by your Department, is $1.75 and $2.25 an hour, depending upon the size of the machine.

This means that the same man operating the same machine for the same contractor takes a cut in wages of as much as $1.65 an hour when the machine is moved from Dow Airfield to the road job. If the rate of $3.40 per hour represented a "bulwark of protection for the working man against substandard wages," then the United States Government, through its Department of Labor, has by a stroke of the pen condemned the man to a substandard wage and substandard living.

The article, in describing how rates are established, contains several quotes that I assume are taken from the Federal-Aid Highway Act. The article says, "'similar construction' is taken to mean highways or 'construction most similar to interstate highway construction' and is not regarded as having effected any substantial change in previously existing wage-determination procedure." It further states: "'Immediate locality' is considered a flexible term. Mr. Rothman has said the area is not necessarily a political subdivision." And again, "the rule of reason has been used in interpretation."

In view of the above, it is interesting to note how the Department of Labor was persuaded to establish the rates it has established in Washington County for highway construction. With the advent of the Federal-Aid Highway Act, nonunion contractors in the State of Maine set about to devise a way to break down the rate of wages the Department of Labor had previously recognized. It took some skilled maneuvering, but they were able to do it.

The Department of Labor had previously set up wages for three classifications of construction, marine construction, building construction, and heavy and highway construction. First, of course, it was necessary to divorce highway from heavy construction, since obviously your Department could hardly ignore rates it had already predetermined under heavy and highway construction. Thus, by establishing a fourth classification, highway construction, the way was open to stabilizing this segment of construction for the nonunion contractors.

But even then it was necessary to convince the Department of Labor that the rates it had recognized previously were not proper rates for the new classification. Now, quite obviously, if Maine was considered as a whole, and the yardstick used for determining rates for the Federal aid highway program was that paid on similar construction and construction most similar to interstate highway construction, then the rule of reason would prevail, and very probably the rates established by the Department of Labor would be the rates paid by union contractors who had done by far the great bulk of such work, and the hoped-for stabilizing influence would not come about. So by convincing the

Department of Labor that rates should be set up by counties, it was possible to segmentize the State and ignore the practicalities of major highway construction.

Let us get back to Washington County, where I started. I would like very much to know where and when in the immediate locality any construction most similar to interstate highway construction has taken place; that is, that compares to the contract recently awarded the J. R. Cianchette Co. Yet to determine the rates for this job, the Department of Labor accepted as valid those rates being paid by small contractors in the county. This type of contractor generally owns 1, 2, or 3 small pieces of excavating equipment, which not unusually, he and his family operate. I say it is grossly unfair to set a standard of wages by this type of contractor. There is about as much relationship between this small-type of contractor and a major highway contractor as there is between a border skirmish and a full-scale war.

But a mere handful of nonunion contractors have succeeded in establishing their much-desired stabilizing influence. The little contractor, who was used to establish the rates and the union contractor who was ignored, are both out of the picture; the first through the simple lack of earth-moving muscle and money, and the latter because he is committed to paying wages he has always paid in Maine, and recognizing a bulwark of protection for the workingman against substandard wages.

As the president of a union which represents more than 500 men in the State of Maine, I protest against this discrimination. I ask you to apply the "rule of reason." I ask the Department of Labor to check the rates paid on the construction of the Maine Turnpike. I ask for a flexible interpretation of "immediate locality," so that "construction most similar to interstate highway construction" will be taken in its true meaning and will thus not result in any substantial change in previously existing wage determination procedure.

Very truly yours,

JAMES R. J. MACDONALD,
President and Business Manager.

The "Little" Businessman

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I include the following editorial from Alan G. Nichols, publisher, Pittsburgh Sun-Telegraph, in answer to an open letter of inquiry from a businessman.

I agree with the editorial in all its concepts. The feeling of confidence and faith is only one of the ingredients we need to whip the enemy, or the recession, depression or whatever name hard and sordid times may be called.

With this display of courage and optimism I suggest a little realism in the form of substantive amendments to the social security law, lowering the age limits, increasing the payments and a greater coverage under unemployment compensation with longer pay periods. Coupled with this, I would push some of the already federally approved public-works programs, schools, roads, and public buildings, post offices, hospitals, and so forth.

Thus a good dose of courage backed with confidence in both ourselves and our institutions and away we will go together.

Congress can and will help. The newspapers can and will help; the people can and will help. There is no good sound reason for a depression, all that can cause one is narrow, selfish, partisan thinking. The time has passed for self-seekers. Let us do it as a team.

Public works, public press, and public spirit can keep the ball rolling in the right direction:

A "LITTLE" BUSINESSMAN WRITES THE EDITOR

Mr. ALAN G. NICHOLAS,
Publisher, the Pittsburgh Sun-Telegraph, Pittsburgh, Pa.

DEAR MR. NICHOLAS: I am a "little" businessman. I have been in business for 17 years, in the same Squirrel Hill location on Hobart Street near Wightman Street. For a year my wife and I, who work long and hard hours in our store, planned to move next door into a larger location and open a "superette" market, the first of its kind in Squirrel Hill. A few weeks ago, I finally took the first steps and started ordering new show cases and fixtures, etc. I put an ad in your paper for another clerk or two and have the people I want to hire. Since I have started this expansion plan, I have read in the papers and heard on radio and TV so much about a recession and unemployment. I am wondering, Mr. Nicholas, whether I am doing the right thing in going ahead with my plans? I'd like the advice of a man in your position, if I may impose upon you?

HARRY A. LIPTZ.

THE EDITOR ANSWERS

The letter you sent, Mr. Liptz, made me ponder long. While I feel honored and pleased that you should ask my advice, the answer to your question includes a grave responsibility. And yet, there is only one way I can answer your question.

Your position as a small-business man is very similar to those of us in business of larger scope, employing hundreds or thousands of people.

To ignore the fact that there has been a deflection in business in various fields or sections of the country would be like the ostrich hiding in the sand.

To say that the effect created by this deflection is an alarming one would not be the truth either. Fortunately, the deflections have been comparatively slight and spasmodic and there are many signs in the making which paint a much brighter picture. What the future holds, none of us know.

However, here are the truths and standards by which I will try to answer your question.

This great country of ours has faced far, far greater crises. We have never overcome these crises with fear and hesitation. Rather, our country has been built by fearless men—men who staked their lives, their reputations, their futures on faith in America and that it would grow and prosper.

The present situation calls for a renewal of such faith and confidence that this country will continue to grow and prosper.

Men in businesses of all kinds, regardless of their size, must carry on this richly endowed heritage. Specific action on the part of management and labor, Government and civic leadership can bring about the prosperity which is possible and rightly ours.

Such action calls for the dusting of shelved plans for the expansion of plants and factories; cooperation on the part of labor and Government; encouragement of building by the easing of financing; development and promotion of new products; encouragement of research and scientific discoveries.

These and many more developments will create the activity and employment necessary to put the country on the upward swing again.

Most of all, the feeling of pessimism must be erased.

In its place, there must permeate a feeling of confidence throughout the land. And this feeling will come much quicker when businesses everywhere look up. For if we are to go up in sales and employment and building and expansion, we have to think and work in that direction.

That goes for you, Mr. Liptz, and for all of us.

Go on with your new venture, and the best of luck to you. We know you will make a success of it.

We urge others—in large and small businesses everywhere to move forward with faith and with confidence.

And as for the Pittsburgh Sun-Telegraph which is going forward in its own field, we make this pledge:

The pages of this great newspaper will be devoted to encouraging all businesses in moving into this upward swing of expansion and fuller employment. Let Pittsburgh start it for the whole country for we know the people here have the faith and confidence necessary to carry on successfully.

ALAN G. NICHOLAS,
Publisher, Pittsburgh Sun-Telegraph.

The Regulatory Agencies

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. McGOVERN. Mr. Speaker, the attention of the entire Nation has been focused currently on the important regulatory agencies of the Federal Government. Such attention is in itself valuable insofar as it awakens the American people to the vital role which these agencies play in our governing process. The current investigation and publicity centered on the agencies will be of much greater valued, however, if permanent corrective measures are taken to make the regulatory agencies better able to do their work in the public interest.

Our able colleague from Arizona, Representative STEWART L. UDALL, has stated the basic problem of the agencies so clearly in his newsletter of March 6, that I have asked for permission to include his statement in the RECORD as follows:

REGULATORY AGENCIES: COURTS OR FORUMS OF "INFLUENCE"?

If the current investigation of the important Federal regulatory boards and commissions serves only to attract wide public attention to the vast power held by these agencies a worthwhile purpose will have been served.

And if it results in adoption of new procedures which preclude the use of influence by either high administration figures, Members of Congress, or the industries which are supposed to be regulated we might be well on the way toward correcting a situation in which abuses are practically inevitable.

Millions of dollars hang on many of the decisions of such regulatory bodies as the Federal Communications Commission (which has authority over licensing of television stations), the Civil Aeronautics Board (which decides matters affecting airlines) and the Federal Power Commission which, for example, will decide who—if anyone—will build Bridge Canyon Dam in northern Arizona.

These agencies, which have the power of life and death over the industries they regulate, exercise enormous powers. One historian has suggested that, in terms of decisions which count most in the day-to-day life of Americans, these exert more power than either Congress, the President, or the Supreme Court.

Yet, though they are quasi-judicial bodies, in many ways they are not run like courts. Whoever heard, for example, of the judge in an Arizona Superior Court being loaned money by one of the parties in a major civil suit being tried before him? Or, for that matter, of being wined and dined at the expense of a litigant in an undecided matter?

Pursuing it further, whoever heard of a legislator interceding with a judge on a case involving a vital public policy?

And yet, not only are the Federal agencies operated in such a way as to encourage these questionable activities, but constituents frequently call on Members of Congress to intervene for them simply because that is the way things are done under present laws and practices.

The Service to Phoenix case last year provides a good example. The question before the CAB was which airline or airlines would best provide the service needed by Phoenix—and the rest of the State. In keeping with the practice of the CAB I appeared, along with other members of the Arizona delegation, to urge that the best possible service be granted.

However, 13 Senators and half a dozen Representatives from other States—some from as far away as Minnesota and Nebraska—dropped their work and went before the CAB to plead, not the need for better service to Arizona, but for consideration to airlines predominant in their areas which sought the profitable Arizona business. If Phoenix today still lacks adequate service, this intervention may partly explain that fact.

While rules of the CAB permit such congressional appearances, as far as I am concerned these cases should be considered solely on the merits, and even Congressmen from the States affected should not participate in the hearings.

The right to an impartial hearing is deeply imbedded in the thinking of our people, and the decisions arrived at by unjudicial methods are suspect even when they are just.

Under our system of justice there are no friends at court, only advocates of law and fact in open court. And understandably those who hold court after hours, or in the market place, should not expect that the decisions they hand down from the bench will stand upright in the public eye.

I believe all of these regulatory agencies have the power to adopt rules and customs which will eliminate the influence factor when decisions are made. I once heard a wise Arizona judge put it this way: "If you want your court to have respect and dignity, you must always maintain a judicial demeanor and conduct your proceedings like a court."

It is my sincere belief that if these agencies adopted rules which completely stopped intervention in matters before them except for requests to expedite action or for status reports, thus creating a true judicial atmosphere, most Members of Congress would applaud to the echo.

Today our citizens have a right to expect that even quasi-judicial public bodies will adhere to the best judicial practices. Nothing less will win and keep public esteem.

Stop—Stop This Madness Before It Is Too Late—For God's Sake, Turn Back

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. PORTER. Mr. Speaker, the words of Albert Smith Bigelow, 51-year-old architect and painter from Cos Cob, Conn., have certainly occurred to many people with regard to the nuclear weapons race: "Stop. Stop this madness before it is too late. For God's sake turn back."

Mr. Bigelow was a lieutenant commander in the Navy during World War II, commanded three ships and saw considerable action in the Atlantic and South Pacific. He is now the skipper of the ketch the *Golden Rule* which is on its way to Eniwetok waters where the United States Government intends to make further tests of nuclear weapons in April.

Are Mr. Bigelow and his crew "crackpots"? Or are they seeing the future more plainly than the rest of us are willing to admit?

I have filed a bill for the cessation of the nuclear weapons tests. Perhaps the gesture being made by these men will help the world realize the great danger confronting us all.

Under unanimous consent, I include the following news story from Labor's Daily for Tuesday, February 18, 1958:

SHIP SETS SAIL FOR A-TEST AREA—MISSION OF PROTEST

SAN PEDRO, CALIF.—Somewhere between the California mainland and Hawaii a 30-foot ketch, the *Golden Rule*, is plying the Pacific on a mission with a message. The blue and white sailing vessel has as its destination the Eniwetok waters, where the United States Government intends to continue nuclear tests in April.

The purpose of the volunteer four-man crew is to protest the tests, and to arouse the attention of the world toward the grave potential dangers involved in nuclear testing.

Sponsoring the $30,000 voyage, including cost of the boat—only $10,000 has been raised so far, the remainder is a loan—is the Non-Violent Action Against Nuclear Weapons Committee, headquartered in Philadelphia. But hundreds of persons not affiliated with the committee in any formal manner have sent small contributions.

Skipper of the ketch is Albert Smith Bigelow, 51-year-old architect and painter from Cos Cob, Conn. During World War II, Bigelow was a lieutenant commander in the Navy, commanded 3 ships, and saw considerable action in the Atlantic and South Pacific. Later, he was housing commissioner of Massachusetts, and in 1952 was a Republican precinct captain. Last August, he and 10 others were arrested at Camp Mercury, Nev., AEC test site headquarters, for protesting the summer-long nuclear bomb tests.

Two Hiroshima maidens disfigured by the A-bomb blast, who came to this country for plastic surgery, spent 19 months at the Bigelow home.

Why is Bigelow undertaking the perilous trip? "Because it is the way I can say to my Government, to the British Government, and to the Kremlin: 'Stop.' Stop this madness before it is too late. For God's sake, turn back.'

"I am going because it is time to do something about peace, not just talk about peace. I am going because, like all men, in my heart I know that all nuclear explosions are monstrous, evil, unworthy of human beings.

"I am going," he continued, "because it is now the little children, and most of all, the as yet unborn who are the frontline troops. It is my duty to stand between them and the horrible danger.

"I am going in the hope of helping change the hearts and minds of men in government. If necessary, I am willing to give my life to help change a policy of fear, force and destruction to one of trust, kindness, and help.

"I am going because I have to—if I am to call myself a human being."

Second in command is William R. Huntington, 50-year-old architect from St. James, Long Island, N. Y. A World War II conscientious objector, he later served as commissioner in Europe for the American Friends Service Committee. Like Bigelow, he has had extensive experience sailing small craft off the east coast.

SEAWORTHY SHIP

The other 2 members of the crew, chosen from a volunteer list of more than 50, are George Willoughby and David Gale. Willoughby, 43, comes from New Jersey. He is secretary of the Central Committee of Conscientious Objectors and has four children. He and his wife, Lilian, were arrested at Camp Mercury last August and, like Bigelow and the eight others, given a suspended sentence of a year.

Gale, 25, a pacifist organizer from Carver, Minn., is unmarried. He is a Presbyterian, the other three are Friends (Quakers).

The ketch in which they are sailing is a smaller model of the famous *Sea Witch*, winner of the San Francisco-Honolulu race several years ago. Boatmen who have worked on or examined the *Golden Rule* place their stamp of approval upon it. It is seaworthy in every respect.

No precautions for safety in bomb-test waters have been taken. The crew has no idea what will happen to it. Most observers around Berth 44 in San Pedro, where the vessel was made seaready, felt that the Navy would take it under tow and pull it out of the bomb-test area.

The voyage has caught the attention of the European press, which was represented in San Pedro by photographers for several prominent agencies. By the time the ketch reaches its destination the eyes of the world may well be upon it.

Outlook for Recovery

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of an exclusive interview with Secretary of the Treasury, Robert B. Anderson, which ap-

peared in the March issue of Nation's Business. I feel sure that all members would be interested to read the remarks of Mr. Anderson and to learn of his estimates for our recovery from our present unsatisfactory economic situation.

The text of the interview follows:

OUTLOOK FOR RECOVERY—AN EXCLUSIVE INTERVIEW WITH THE SECRETARY OF THE TREASURY, ROBERT B. ANDERSON

Question. Mr. Secretary, do you consider it likely that the American economy will begin to bounce back around the middle of this year?

Answer. I have not tried to make any judgment as to a precise timing of the movement of the American economy, but rather have expressed a confidence, which I still maintain, that we are going through a period of readjustment or recession, however you want to describe it, of a character that will not be protracted.

Without attempting to pick a precise time in the year in which the economy may be expected to shift into a resurgent mood and begin a sustainable rate of expansion, I am confident it will occur within a reasonable period.

Question. There has been a great deal of talk about weak spots and danger signals in the economy. Do you see strong points and hopeful signs as well?

Answer. Well, in an economy of the size and magnitude of ours undoubtedly there will always be fluctuations. It seems to me that most importantly we ought to try to analyze our situation on the basis of long-term and short-term factors which weight importantly on the total economy.

Looking first at the short-term situation, I think you find that readjustments already have been made in a number of areas.

Question. What are some of these areas?

Answer. Inventory reductions have brought about a better balance in some industries. There already has been adjustment in outputs of a substantial number of industries. There has been adjustment in prices, which reflect some of the industry adjustments that have taken place. Personal income has held up very well. Total income and total retail sales in December were about 2 percent over a year ago. There has been a very prompt readjustment in the stock and bond yields and in the interest-rate relationships. The stock market has shown some elements of strength in recent months. There are indications of a revival of residential construction, which is turning up.

About $5.5 billion more in defense contracts will be let to private industry for the first 6 months of 1958 than in the last 6 months of 1957. There will be an increase in defense spending as well as increase in defense contracts. There will be speedups in other projects, such as highway construction, which will add significantly to the economy. As there has been some turnover or lessening of demand for credit in the areas of private construction, there has been increasing demand on the part of State and local governments. For example, the 30-day visible supply of municipal bonds in the wek ending January 31 was $549 million, compared with $260 million a year before.

The business plans for fixed investment in calendar year 1958 are higher than in any years, except for 1956 and 1957. The most important factor of all is the maintenance of a relatively high level of confidence in the basic strength of the economy of this country.

Question. You feel that this confidence is thoroughly justified?

Answer. Yes, I do. I think that boards of directors who make their decisions on the basis of a belief that the restrictive influences in the country will not be protracted, and we will be able to maintain a sustainable rate of growth, will be on the right side.

Question. What about long-term considerations?

Answer. Our population in this country is growing at the rate of about 3 million a year, and this is the equivalent of adding a State the size of Kentucky to our consumer population every 12 months. We have an increasing demand for new products and new materials. We have a very competent scientific and technological community in the business world, and they are constantly making new products and finding new ways to make things. Both because of the demands of our people and the factors of competition, these new technological advances indicate a growth and a rate of progress. We have a constant desire on the part of all of our people to improve their standard of living and to expand their opportunities. This is one of the intangible but very important forces in an economy such as ours.

We have, from 1946 through 1957, put more than $300 billion into capital investments—a total outlay equal to the United States military expenditures during World War II, between 1941 and 1945.

Question. Some economists suggest we had too rapid a rate of capital expansion and we now need a period for population growth to catch up. Do you feel this is true?

Answer. Without trying to make a judgment as to the rate at which capital investment ought to take place, I do think that the movements of our economy at present reflect in part the natural aftermath of such a large expenditure program.

I think that there will be continued capital expansion, perhaps not on the scale that has characterized the past 2 or 3 years, but rather a more sustainable rate of growth that is again consistent with the demands of both our domestic economy and export demands.

Question. How much Government spending can our economy stand for defense and other purposes?

Answer. This, of course, is one of the really basic problems of our country. We must, and I am sure we can, maintain a relatively high level of defense expenditures so as to insure an adequacy of protection for our country. I am quite certain that everyone would give this a top priority. On the other hand, it seems to me that we must regard our effort not as something which we must do for a year or so, but an effort which we are at least willing and competent to make over a long and unknowable period, if that is necessary.

In the past when we have been engaged in wars we have taken a large proportion of the gross national product, and after the conflicts were over have taken a time within which to recover. We could again take a sizable slice out of our gross national product for national protection, but if you get up into an exaggerated possibility of such great proportions as, say, a half or more, then you get to the point where most of us would work for the Government, where people are told what and how to do things, when price controls and wage controls would come into effect, and there you would have a degree of regimentation that is the very thing we seek to avoid in maintaining the freedom and the liberties which we cherish.

The precise point where you get more regimentation and less liberty can be difficult to judge.

It seems to me we need to determine a rate of expenditures for those things which are most essential, and to postpone, where necessary, things not as essential.

Question. Is that the philosophy behind the new Federal budget?

Answer. Certainly this thinking is always in our mind. We believe the budget is one which the country can maintain without the kind of regimentation which we are seeking to avoid.

Question. Do you feel that in this period of readjustment we will be able to produce the $74.4 billion in revenue estimated in the Federal budget for fiscal 1959?

Answer. We believe that it is a reasonable estimate of receipts during the period. The judgment is one which has to be made months in advance, and, of course, it is difficult to be entirely precise 17 or 18 months in advance.

The calculations which we have made are based upon a level rate of receipts from corporations, with some increase in receipts from individual income tax at current rates, but which takes into consideration not a rate of growth equal to that for the past 2 or 3 years, but something less than half that rate. Even giving weight to the current economic condition we believe that it will not be of a sufficiently protracted period to mitigate against the kind of estimates of revenue which we have made for that fiscal year.

All assumptions of receipts are hazardous. The very process of budget making requires a degree of preciseness which is difficult within itself. It would be much easier if we could make our assumptions on a range of revenue and a range of expenditures, but this would be like writing a budget in which you followed each calculation with the word "maybe." We finally come to the point in the budget process where even with the realization of the difficulties involved we nevertheless have to arrive at a judgment. The most that we can say is that our judgments, we believe, are reasonable.

Question. They are based upon the best evidence that you can get?

Answer. They are based upon the best evidence we can get in the Treasury, the best information which we can get from the staff experts of the Federal Reserve System, the council of economic advisers, and those other sources of information which are available to all business people.

Question. Can you explain just why the administration considered a $5 billion increase in the Federal debt limit of $275 billion necessary rather than some smaller increase?

Answer. The request for a $5 billion increase was based, first, upon the belief that the orderly management of our Government affairs would indicate that we should have balances on hand equivalent to at least 12 working days of normally anticipated expenditures. This requires about $3.5 billion of funds available. Our expenditures for all purposes are currently running at a rate of about $1.5 billion every 5 working days.

We then believe that there should be a margin for contingencies because in a Government the size of ours, with the problems that our Government has, there are certain things which we could not reasonably be expected to anticipate. For example, we might move more rapidly than anticipated in some of the scientific fields—for example, in missile development—and it might become important that the Department of Defense spend money in that area more rapidly than it now judges it will spend it. We believe under those circumstances we in the Treasury should have the ability to meet what acceleration if required. We believe, also, that in view of the fact that we are managing a debt of $275 billion we ought to have some flexibility in handling our debt management problems.

For example, when we go to the market, as we have recently done, with a large offering involving both intermediate and long-term bonds, we believe that there should be a reasonable period during which the market is allowed to absorb and to distribute by secondary operations this kind of a debt offer. If, after making such an offer, we should have a large attrition—that is, people who have held earlier securities, and who for business reasons would want to be paid—then we may find it necessary to go back to the market in a short time to ask for cash.

So that in effect we are competing with the offering that we have just put out on a longer term basis.

Therefore, in making our calculations under a tight debt ceiling we have to make an offering that minimizes attrition, or we have to take into consideration the fact that if the market should better itself between the time that we make the offering and the time that the securities are actually marketed so that the attrition is less than we expect, then by accident we may have some of the debt overlapping, and we would be beyond the debt ceiling.

Question. Do you anticipate returning to the present debt limit if a temporary increase is granted?

Answer. We have asked that the $5 billion increase be granted through fiscal 1959. At that time we would have to take a look at our fiscal position and at our debt-management problems. I believe that it is in the best interest of the country for the Congress from time to time to examine the way in which we are handling our operations in the Treasury in the management of the debt. This is the sort of examination that will occur when we review our debt-limit problems.

Question. What are your plans for lengthening the maturity of the debt?

Answer. I would not want to be too detailed with reference to debt-management plans, because during this year we are going to have to refinance about $50 billion of debt. This includes the amount that we recently went to the market for—$16.8 billion. In addition, we will have to refinance about $22 billion in short-term bills and arrange for redemption of about $3 billion in tax-anticipation bills.

I believe, however, that it ought to be, and it is our objective to get the best balance that we can in the debt under conditions as they exist and to minimize the number of times that we have to go into the market either for cash or for refinancing. We realize that when we do go into the market, we may create problems for people who are financing private businesses, either corporate or individual; we may create problems for States, municipalities, and political subdivisions and other institutions that are going to the same market for their financing. So the extent to which we can improve the balance in our debt structure and minimize our trips to the market, I think, will serve the best interest of the public.

Question. Is there any realistic basis at this time for businessmen to anticipate substantial tax cuts soon?

Answer: Fiscal policy, I believe, should always be judged in the context of the impact which it has on the total economy at any given period. One should not try to make dogmatic judgments on hypothetical situations. It seems to me that in periods of relatively high levels of production we should make every effort possible to pay our current expenditures with current revenues and not to add to an already burdensome debt.

On the other hand, I have expressed to the Congress the feeling that I can conceive of situations where the downward movements in an economy might be sufficiently deep and sufficiently protracted that some tax reduction should be considered in order to revitalize the economy. I do not believe that we are now at that point. I have confidence that the economy will reassert itself without that kind of action.

Question: Are you satisfied with the effect of the actions that have been taken to stimulate the economy?

Answer. If one examines the adjustment that has occurred in interest rates and in the yields between stocks and bonds since November 14, which was the date of the first reduction of the rediscount rate, I think he will find that it has been about as sharp a drop in interest rates as has occurred in recent times. This, I think, is indicative of a very rapid market adjustment to conditions.

There will always be some variation of opinions as to the kinds of things and the timing of things that ought to be done in an economic climate such as ours. There are even differences which exist in various geographical parts of our country, but by and large the most important things, it seems to me, are the basic confidence of our people and the demonstration of a willingness on the part of the agencies of the Government to take whatever actions they in their best judgment believe are needed to help maintain an economy expanding and growing at a sustainable rate.

I am sure that this Government would never sit idly by and watch either inflation or deflation run a ruinous course.

Question. How do you feel about the practice of Government lending money at a lower interest rate than Government must pay to borrow?

Answer. As a general proposition it seems to me that the rate at which the Government lends money ought to be at about what it costs the Government, because Government costs are borne by all of the taxpayers. I think, however, that one has to take into consideration whether there are other values that arise from the money which the Government spends or provides, which outweigh the disadvantage of providing money at lower than the normal cost.

Question. Can you tell us the present status of the activities of the joint Federal-State committee?

Answer. The committee is still functioning. Before any program really becomes final, both the Congress and various State legislatures will have to take action with reference to those functions which will be assumed by the States. This will take some time, because all of the legislatures do not meet each year, and each of the various governors will make his own decision about the program and the manner in which he wishes to present his program to his own legislature.

Question. Is the administration's interest in the objective of that committee still as strong as it was?

Answer. Yes, it continues strong because we believe in a vigorous Federal-State system. We have a high regard for the duality between the States and the Federal Government.

Question. What is the biggest obstacle to the achievement of the objective of the committee?

Answer. Perhaps the most difficult problem grows from the fact that certain of the Federal-State functions have grown up piecemeal over a long time. To take a specific example, the States are exceedingly interested in sharing to a more substantial degree in inheritance taxes. They feel that this is important not only from the standpoint of the revenues involved, but also because of the differences in laws relating to inheritance and property ownership between the various States. Yet the fact that we have had a system of Federal estate taxation for a long period of time makes it exceedingly difficult now so to readjust the Federal system that the combined Federal and State taxes will be fair and not too complicated.

Question. Do you feel there is an overdependence by States and communities upon Federal money?

Answer. It seems to me that in years past there has been a readiness on the part of States to be dependent more and more upon the Federal Government. It seems to me that one of the important functions of the present Federal-State Action Committee is not only to take a look at what has been done, with the idea of restoring some functions to the States where they could be more economically and better administered by local authorities, but also to consider new programs in which there is involved a new Federal-State relationship so as to avoid overdependence or overconcentration in the Federal Government.

Question. Do you feel that the communities and the States could undertake much of the work that has been done by the Federal Government?

Answer. I think that the States and local communities have the capability and the potentiality. It is a question of ability to realine the responsibilities of the Federal and State Governments. There is also the question of the redistribution of sources of revenue so as to enable the States to resume functions heretofore performed by the Federal Government. Most importantly, there must be willingness and a desire on the part of the people of the State and local governments to have the responsibility for these programs under a conviction that they would be better and perhaps more economically administered at local levels, rather than at the levels of the Federal Government.

Statement by R. W. Freeman, President of International House, New Orleans, on Reciprocal Trade Program

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by R. W. Freeman, president of International House, New Orleans, to the House Ways and Means Committee in connection with extension of the Reciprocal Trade program:

STATEMENT BY R. W. FREEMAN, PRESIDENT OF INTERNATIONAL HOUSE, NEW ORLEANS, TO THE HOUSE WAYS AND MEANS COMMITTEE IN CONNECTION WITH EXTENSION OF THE RECIPROCAL TRADE PROGRAM

International House at New Orleans is a nonprofit civic institution founded in 1949 to promote and facilitate world trade through the Port of New Orleans and other ports of the Gulf of Mexico by the liberalization of trade, bettering international economic relations and education of the peoples of our own and other countries to the benefits of healthy, two-way world trade.

International House is not an advocate of free trade in any sense of the word, but it does believe strongly in freer trade, in reduction of trade barriers and restrictions, in greater movement of the commerce of the world between our own and other countries, in elimination of quotas, currency restrictions and tariffs insofar as is possible and consistent with our own national good.

We have always strongly supported the Reciprocal Trade Agreements program which we have seen steadily increase the volume of United States foreign trade, provide millions of jobs for our citizens, cargo for our developing merchant marine, goods for our citizens, and in general operate to the benefit of all of our people.

We believe, furthermore, that this program and the trade increases it has brought about through liberalization has been of enormous benefit to the United States in world political matters because it has helped to convince other nations that we favor trade growth and not trade restrictions.

Some years ago Dwight D. Eisenhower, then a candidate for the Presidency, said in New Orleans that "if there is a city in the United States which has grasped the significance of world trade, that city is New Orleans where International House is a majestic and tangible symbol of your understanding. It has become known all over the country as a successful clearinghouse for healthy two-way international trade. To me it has even greater symbolism. It represents community action without Government money—community action arising out of private thinking and local planning."

Here it is necessary to emphasize that International House is a private institution, supported by about 2,500 dues-paying members in New Orleans, in Louisiana, and scattered throughout the United States and abroad. It is in nowise a Government-supported institution, its support comes solely from businessmen who believe that they should develop, encourage and promote international trade.

International House has always believed that private initiative, investment and work was the solution to holding the economic leadership of the United States in the world, and that our country could not possibly depend or wait upon Government leadership and aid for this solution, but should do the job by private means. Thus, we are energetically opposing the efforts of the protectionists to erect new or to strengthen old barriers to the advance of private enterprise in foreign trade.

We have, therefore, watched the gathering attacks upon the Reciprocal Trade Agreements Act with great alarm and misgiving, because we regard the attacks as unfair, unwarranted, unjustified and in many senses of the word an actual hoax upon the American people, many of whom are not well informed about the complexities and intricacies of foreign trade, or its great significance to our own economy.

We have seen with great concern that while there has been a sharp increase in our volume of trade, protectionist attacks have mounted upon our tariff policies; we have seen the protectionist attacks and sniping of our program cause suspicion, doubt and unrest among the friendly nations of the world who find it difficult to understand or adjust themselves to the vacillations of our trade policies.

We believe that stability and liberalization in our trade policies is essential to our position as world leaders, and that it is impossible to achieve either of these goals with constantly changing tariff schedules and political influences upon the basic laws.

Because of these beliefs and factors International House last September 10 adopted the following resolution requesting Congress for a 10-year extension of the reciprocal-trade program without emasculating amendments. Copies of this resolution were sent to every Member of Congress and were distributed widely throughout the United States at the grassroots level.

The resolution follows:

"RESOLUTION ADOPTED BY THE EXECUTIVE COMMITTEE OF INTERNATIONAL HOUSE ON TUESDAY, SEPTEMBER 10, 1957

"Whereas the reciprocal trade agreements program, inaugurated in 1934, has been successful in promoting international trade throughout the world, and resulted in progress and prosperity in our own and all friendly foreign nations; and

"Whereas working within the framework of the reciprocal trade agreements program, the United States has in the past quarter century greatly expanded the worldwide exchange of goods and increased its own markets abroad by reciprocally lowering tariff and trade barriers and liberalizing trade regulations; and

"Whereas world trade is a necessary factor for world peace; and

"Whereas it is recognized that nations and peoples buying from the United States must also sell to the United States and this necessarily makes for mutually beneficial two-way international trade; and

"Whereas the total United States volume of exports and imports surpassed $30 billion annually in 1956 and is a keystone to our own peace, prosperity, and the welfare of our citizens; and

"Whereas the reciprocal trade agreements program has been renewed 10 times since its original passage in 1934 but these renewals have been for short periods and gradually the law has been emasculated and weakened by restrictive provisions in recent years; and

"Whereas to assure continuance of this beneficial and productive program it is necessary to rally all citizens to join in an effort to preserve this law when it comes up for renewal next year in Congress; and

"Whereas New Orleans, a great port and trading center, recognizing the paramount importance to the Nation and the world of a continuance of the reciprocal-trade program, expresses serious concern with the move to turn the clock back to a tariff program that would restrict trade, and undermine our economic and political situation in world trade: Be it therefore

"*Resolved*, That International House of New Orleans, an organization dedicated to world peace, trade, and understanding, hereby requests Congress to authorize a 10-year renewal of the reciprocal trade agreements program beyond June 30, 1958, and endorses a nationwide program to educate and inform the people of the United States and particularly those in the Mississippi Valley of the grave threat to this highly successful program; and be it further

"*Resolved*, That all trade, commercial, civic, economic and cultural groups everywhere be invited to join in this crusade to save and extend the reciprocal trade agreements program, and thus preserve the keystone of our foreign trade policy which has had the support of both great political parties over two and a half decades, and which has made a material contribution to world peace and prosperity."

Naturally enough within a few weeks this action began to claim national attention, and within the next few months a large number of local, regional, and national organizations adopted similar or like resolutions, some asking for 5, 10, 11 years' extension and some seeking permanent trade legislation.

The effect of this crusade was to stir up an early interest in the trade-agreements program, which was aided materially when Vice President RICHARD M. NIXON announced that the Eisenhower administration would seek a minimum of a 5-year renewal, and later it was announced in Washington that this was the administration's goal.

International House is fully aware that during the historic tariff debates of the past quarter century every fact or opinion has been published and expressed, and that it is difficult, if not impossible, to bring new light to bear upon the economic phases of the tariff problem.

We do believe, however, that far too little attention has been paid to the political implications of the present controversy, and the devastating effect the death of the reciprocal trade agreements program would have upon our position in world affairs.

Furthermore, we believe that the clamoring of the protectionist adversaries of the reciprocal program has drowned out and destroyed the voices of reason which have by comparison been mild and unheard in the squabble. We do not believe that the American people, generally speaking, have a true concept of how many jobs depend upon foreign trade, and how few are affected or have been lost by badly needed imports which we have brought into our country.

These facts will, of course, be laid before you by experts, but there will be many widely different constructions placed upon them by your witnesses. We know that it is your duty to sift the truth from the untruths, and we believe that when you do the logic of trade liberalization and stabilization will be apparent.

We very much fear that the United States is about to deliver to our arch enemy Nikita Khrushchev his cheapest and easiest victory through the demise of the reciprocal trade program in Congress.

It would also be Khrushchev's greatest victory, won without firing a shot and at no cost or loss whatever to the Soviet Union.

We are sure that Nikita Khrushchev's recent remarks on trade did not escape any of you, but I want to repeat what he said, which was:

"We declare war on you—excuse me for using such an expression—in the peaceful field of trade. We declare war. We will win over the United States."

No warning from the free world could be as precise, as direct and as factual as this warning from the Soviet leader. Yet important segments of our business community here seem to have ignored it entirely. Let us be sure that Congress does not make this basic error.

The need for higher tariffs or continued high tariffs is the biggest hoax that has ever been perpetrated upon our Congress. Only a relatively small percent of our population derive any benefit whatever from high tariffs, while 99 percent or more of our people suffer and pay for such policies.

People generally do not know all the facts, they have not been aroused to the dangers, to the realities, and to the tragic costs of protectionism; most of all they do not realize the disastrous political effects of high or higher tariffs, of slamming the trade door shut.

People do not realize that exports are an extremely vital part of our economy and prosperity, and that exports are geared precisely to imports since others must sell to us in order to buy from us. Our foreign business friends must be able to earn the dollars they want to spend for our products, and they can do so only as we provide them fair and reasonable access to our markets.

The thing that we must bear in mind, of course, is that foreign trade is of vital importance to all of the United States and that undue solicitude for the protectionists is at the expense of our farmers, our labor, our industry, and our whole economy which depends in greater or less degree on exports. Our export producers, on the farm and in the factory, are hurt by a restrictive import policy because it induces trade restrictions by foreign countries and reduces their supply of dollars with which to buy our goods.

We tend to overlook another important factor and that is that there is American labor content in every dollar of our exports, whether of minerals, of agricultural products, or of manufactured items, while on the other hand a large percentage of our imports are of raw materials and other products which are not produced here, and which are not in competition actually with our own economy.

Great and important, however, as our foreign trade is to our own economy, this is of far more importance to other friendly nations of the world.

It is our earnest belief that 95 percent of the American people would be unreservedly and enthusiastically for a liberal and reciprocal foreign economic policy if they knew what it means to the future of the United States.

Every time we move to impede instead of to liberalize world trade we not only directly hurt ourselves, but we alienate more friends abroad. The Soviets, with their full and immediate control over trade policies, fill every vacuum we create, and win every battle we lose.

There are much more intelligent and far less dangerous ways of coping with the problem of lost jobs through imports, and adjusting hardship cases. The cost of this would be minor, and would be direct, and would be understood whereas the indirect cost of higher tariffs is major, very high, and very dangerous to our whole political position in today's explosive world.

International House strongly believes that the United States position in the world and as a leader for peace is determined as much by our ability to promote liberal and productive trade policies as it is by our ability to produce military pacts and nuclear weapons.

We are firmly convinced that world trade is important to every American and that a liberal trade policy and lowered tariffs help American economy. We also believe that it would promote many jobs for every job affected or lost, that it would stimulate business conditions, lower prices, and would prove that trade, international as well as national, is the backbone of all business and prosperity.

It is impossible to construct a Chinese Wall around this Nation in the 20th century, and it would be wrong even if possible. We think high tariffs are unrealistic and dangerous to the economy of the United States, the welfare of other nations, and the peace of the world.

In this era of geopolitics the leaders of International House are convinced that as a nation we can no longer live in the splendid isolation of the past, either economically, militarily, or politically. Our motives are judged by other nations of the world as much by what we do in economic matters as by what we do in military matters and diplomatic affairs.

International House believes that at a time when we are seeing history making changes in the field of international trade, science, and culture, with the Soviets challenging United States supremacy throughout the world in the cold and silent war, it would be a national tragedy to return again to the narrow view and to try again to erect friendship destroying trade barriers. We believe that our friendly neighbors must trade to exist and that we must assist them to trade and live.

International trade, travel, and transportation have linked the world so closely together that now it would not be possible to turn back the clock to the high tariff policies of the great American depression era.

We are today watching the development of the common market in Europe which bids fair to be the most important economic development there in a century; it creates overnight one big market where there has been numerous small markets, and puts much of Western Europe into an economic union that will enable them better to compete with the United States. These facts behoove forward instead of backward thinking on our part in our trade policies, and for this reason also we should renew the reciprocal trade program for a long period.

Therefore, we recommend that Congress, in recognition of its obvious responsibility to the majority of the people of the United States, renew the Reciprocal Trade Agreements Act for 10 years; that it avoid new emasculating amendments that have crept into the legislation in years past.

We hereby officially record our support of the Congress in extending this great piece of history-making legislation.

Address by Hon. Frances P. Bolton Before the "Salute to Women" Luncheon, Chicago, Ill., February 15, 1958

EXTENSION OF REMARKS
OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting herewith the outstanding and significant address delivered by my colleague, Mrs. FRANCES BOLTON of Ohio, before the crowded "Salute to Women" luncheon in Chicago, Ill., on February 15, 1958:

Madam Chairman, fellow Americans, to be here with you today at this wonderful luncheon is both a pleasure and a privilege. To be given such an opportunity to speak frankly with so many responsible women is opportunity indeed. Thank you for it.

Especially do I want to thank you, Mrs. Higgins, for your part in bringing me here.

You are indeed fortunate to have such an outstanding Republican woman in your midst. Mame Mason Higgins is known up and down the land not only for her work as dean of women and professor of education at Bethune-Cookwan College and instructor in Cincinnati and St. Louis public schools, but also as a family caseworker in the Chicago Public Welfare Department, as the executive director of the South Parkway Branch of the YWCA and as the Director of Negro affairs in the Chicago area under the National Youth Administration. Few women have given more of themselves to worthwhile, far-reaching good works than has Mrs. Higgins.

It is especially delightful to me to have been introduced by my colleague MARGUERITE STITT CHURCH who serves with me in the Congress on the Committee on Foreign Affairs. You are fortunate to have such a representative in Washington. We on the Hill are proud of her—we women especially. I do not need to tell you of her dignity when she goes down into the well of the House and addresses the Congress. Nor do I need to mention the fine quality of mind that organizes her thoughts and expresses them in clear, trenchant English. The sincerity of her remarks, whenever she speaks, is one of her strengths, as is her heartfulness.

Yes, this is another election year, friends, don't fail to send back to Washington this fine Member of Congress, one whose womanhood assures you, whether you are in her district or not, that something extra which means much to you and to the Congress itself.

When I sat down in my quiet room to consider the many matters we might discuss today I found myself in a quandary. There was so much that I as a woman wanted to talk over with you who are women. Bit by bit I ran my pencil through one subject after another. What I have left are a few matters that to me are basic—fundamental to our future as a Nation and as free people, important to us as women into whose hands God has given the children, and so the future of mankind.

It used to be that women were not supposed to trouble themselves about matters outside their homes. How long ago that seems. For now we must carry responsibilities that reach out across the world. One of the poignant areas of experience that was mine on my long trek in Africa in 1955 was the immediate bond that seemed to forge itself in country after country as I met the women. They want our women's help. They feel we will understand, as men never can, the special needs of the child, for better education, for health and medical care, and so forth, and so the needs of mothers.

As I relive these experiences I find myself wondering if we over here, we women, realize half clearly enough the responsibilities that are ours across the world. So, as I speak with you today I hope you will recognize the great current that flows under and around and through whatever I may say: that we, as women of responsibility, of opportunity and of understanding, must not only carry our share of the load here at home, but must raise our sights until our horizons encompass all the world. For to us the Infinite has given responsibility for His children, wherever and in whatever circumstances they may be.

As one looks around, isn't it amazing how much women really are doing? Think of the many civic groups which you who are here today, represent. Look at the first-hand knowledge of other lands that flows to us all as the international exchange projects bring foreigners to our shores and take our young people out across the seas.

Women are playing an ever greater part in all the international organizations of the U. N. The International Labor Organization—the Inter-American Commission. And our own women's organizations—among them the National Council of Negro Women, the National Council of Women of the United States and the International Council of Women of the World.

I have been greatly tempted to tell you what women are doing all over the world, how they are finding that basically there is a unity of desire and of purpose that will inevitably draw us all together. But I do want to talk with you about our own country's need of us—under God. And I want to emphasize a few matters that are more in your hands than in mine.

This is another election year—one of great portent and of far-reaching significance both here and abroad.

As you well know, I am a Republican—as was my husband before me. Until I was elected to succeed him, I had no need to examine my reasons, nor to define what the GOP stands for. In recent years, however, one has heard on all sides: "There is really no choice between the two parties, they want just about the same things." Then suddenly one fine day I was pulled up short, faced with some rather cold facts that painted a different picture altogether.

World War II necessary and legitimate emergency legislation and the Korean conflict gave Washington unbelievable control of our economy, threatening to change our traditional way of life unless rescinded. Granted the needs for emergency action were unprecedented, they were supposed to be temporary. However, it was not until President Eisenhower came to the White House in 1953 that wartimes controls were relaxed, taxes reduced, and steps taken to eliminate certain governmental functions which could best be handled by private enterprise.

Basically, the Republican philosophy of Government was best expressed by our first Republican President, Abraham Lincoln, when he said:

"The legitimate object of Government is to do for a community of people whatever they need to have done, but cannot do at all or cannot do so well for themselves in their separate and individual capacities. In all that the people can individually do as well for themselves, the Government ought not to interfere."

So, suddenly, I saw that there was a great difference between the two parties, rather than a similarity which was being so constantly pictured to the people. This dif-

ference was magnified a thousandfold when racial problems were brought out into the open.

Then Dwight D. Eisenhower accepted the nomination. Among other fundamental points of his political creed he made it unquestionably clear that he believed in the equal dignity of all our people, whatever their racial origin or background may be; in their equal right to freedom and opportunity and the benefits of our common citizenship.

During his first campaign he acknowledged the fact of discrimination and said: "This crusade is pledged to use every single item of leadership and influence it has to eliminate it. It intends to enforce the full constitution, not part of it."

In his inaugural address on January 20, 1953, he said further, "We reject any insinuation that one race or another, one people or another, is in any sense inferior or expendable."

He assured us all that he would see to it that wherever the Federal Government had jurisdiction, this principle would be activated and segregation would cease.

I need not remind you that it was but a matter of months before these principles were being put into effect.

With other Republicans, I have worked for and secured the passage of various bills which had to do with the rights of minorities; anti-poll-tax legislation, antilynch bills, and an FEPC measure, only to see these bills buried in the Democrat-controlled Senate.

I must say to you with utter frankness that I cannot understand how any American Negro, who knows the history of these bills, or who is informed about the empty words of the Democrats and their determined actions against all civil rights measures, can possibly vote for a Democrat. How can such a vote be justified.

Granted that during the depression years and the New Deal era, F. D. R. used the power of Government to give both food and jobs to the unemployed, yet none of the civil rights measures which President Eisenhower put into effect so promptly, but could have been instituted by the flick of a cigarette holder any time during the 20 years of Democrat rule. Yet Negroes have continued to vote for Democrats. I simply cannot understand it.

Now we Republicans on the Hill and on Pennsylvania Avenue have no wish or intention of taking from others the credit for every civil-rights advance of these last years. Neither Democrats nor Republicans can claim credit for the magnificient work done by Mrs. Mary Church Terrell and Rev. William Jernigan in the Thompson Restaurant case in Washington. Such courage and faith as theirs cannot be praised adequately. Nor can either political party claim credit for the results of the years of arduous work of the NAACP that won the long court fight which resulted in the school decision of May 17, 1954.

But, ladies, we Republicans do want full credit for measures taken to eliminate discrimination in our Capital City: Opening up the theaters, hotels, and other places of amusement, integrating the fire department, desegregation of the public schools.

We do want credit for the elimination of segregation in the Air Force, Army, Marines, and Navy, and in veterans' hospitals. We do want credit for ending segregation in all schools on military installations in the United States. We do want credit for the improved operation of the Committee on Government Employment Policy, resulting in the upgrading of thousands of Federal employees (300 Negroes were early made supervisors in the Post Office alone).

We do want credit for setting up a new Government Contract Committee, resulting in higher type jobs for Negroes in such industries as packing houses, public utilities, and the chemical industry.

When I first came to Congress, Chicago had a Republican Congressman whose name was Oscar DePriest—a fighter if there ever was one—and the first Negro to be elected to Congress since the days of the Reconstruction. While campaigning for Wendell Willkie he said:

"When a civil-rights bill is passed, a Republican President will do it. It will not be easy. When accomplished it will have to be done over strong opposition of Democrats, North, South, East, and West. They are a smart bunch who know how to make effective deals both above and below the table. I know because I served with them in Congress. You may laugh this off as politics but as long as Democrats control the White House we can forget civil rights. It just won't happen. The second phase of your emancipation, your quest for first-class citizenship, will come with the election of the next Republican President, whether it be Wendell Willkie or some other Republican later."

Mr. Willkie didn't make it, but President Eisenhower did and this is one of the first things he said:

"People are made in the image of God. They are divinely endowed with aspirations and talents. Their destiny reflects their divine origin. Therefore, the Republican Party must be inspired by a concern that comprehends every American; that sets up no walls of birth or creed or party; that ranks all men and women of decency and good will equal in their dignity."

Nineteen hundred and fifty-seven brought the determined all-out effort by President Eisenhower to give Negroes their first-class citizenship. In spite of heavy opposition we passed the civil-rights bill in the House. In the Senate the potent Eisenhower bill was weakened by including the trial-by-jury amendment. In the final test vote in the Senate, only 9 out of 49 Democrats voted against this amendment. How can Negroes everywhere fail to register that this was a 4½-to-1 ratio against Negro civil rights?

The day following this vote President Eisenhower said:

"The result cannot fail to be bitterly disappointing to those many millions of Americans who realized that without the minimum protection that was projected in section 4 of the bill as it passed the House of Representatives, many fellow Americans will continue, in effect, to be disenfranchised."

How can Negroes fail to have registered the battle which our Republican President and Vice President, the minority leaders of Senate and House and the rest of us fought and won?

After the legislation was passed in the Senate, it went to a House-Senate conference where the trial-by-jury amendment was partially eliminated. So today, a Federal judge, without a jury can fine a defendant up to $300 and give a jail sentence of 45 days without interference.

Oscar DePriest's prediction was all too accurate: "When a civil-rights bill is passed a Republican President will do it * * * when accomplished it will have to be done over strong opposition of Democrats, North, South, East, and West."

Praise be that there have been and are some Democrats who fight for universal civil rights; the fact remains, however, that in this last battle in the Senate, Republicans voted 34 to 5 against sending the civil-rights bill to its traditional burying ground in Senator EASTLAND'S judiciary committee. Eleven Democrats also opposed such action while 34 voted to bury it.

If you examine the record you will find that during the years of Roosevelt and Truman there were 33 test votes in the Senate and House on civil rights, antidiscrimination, antipoll tax, and antilynching measures. Eighty-one percent of the Republicans voted for these measures, as compared to only 41 percent of the Democrats.

What can we Republicans—men and women—do about all this? Why has this misunderstanding persisted down the years?

Politically, the trouble is that precinct captains and ward leaders are not reappraising the actual happenings, and getting the facts to the people. Only a few earnest men and women, if certain of their facts, can transform the thinking of whole areas.

Such has been the case in a Negro ward in my own city of Cleveland, where John Kellogg, a young energetic ward leader who is also on the city council, when to work some years ago.

That 18 ward votes Republican with an enthusiasm that is good to see. Oh, yes; it means work and lots of it. But John Kellogg has proved that informed, determined people are not going to vote for any candidate whose party has fought against their right to vote.

It is natural, I suppose, that because I am in active politics, which is the machinery by which we preserve our freedoms, my mind goes first to the responsibility of precinct workers, etc. But because I am a woman, deeply aware of the great responsibilities that are ours as women (and you have given me this opportunity to talk freely with you), I cannot refrain from saying that it isn't just politicians who have responsibility.

Every man and woman in a free land holds his freedom in his own hands. If he fails to do his part in upholding the Constitution and the laws of the land originally created to protect his freedom, he has no cause to complain should they fail him.

So many voters fail to vote in the primaries—the one time when they can select their party's candidates.

So tragically many don't even go to the polls on election day. Failure to vote gives the other side an extra vote. In many communities, your vote, or the lack of it, decides the outcome.

Now I am asking you as voters, as women who should be building for your children the kind of freedom under God that should be theirs, are you willing to accept the record of the 25 years of Democrat rule? Do you want to keep the control of Congress in the hands of the party that is going to use all its strength to refuse full citizenship to any group such as yours?

Or do you see how truly the vote you do have here in the north can build the party that has fought your battles for nearly a hundred years. If so you will take your responsibilities seriously and do everything in your power to see that the facts be known and constructive action be taken.

High on my list of matters I wanted to discuss with you was, of course, our children and our responsibility for them. Every mother knows in her heart that her children learn most from her in those early formative years. Each of us makes mistakes, alas! But when the chips are down we know that home should be a place where love is, where a child is welcomed, and where the first lessons of respect, integrity, honor, and love are part of the very atmosphere of that home. Today I have emphasized other matters.

Yet, I cannot refrain from leaving with you the thought that our responsibility for our homes, our children, and for their education is perhaps our greatest responsibility. They are the future and we know that as the twig is bent so does the tree grow. Because our homes are of paramount importance we must be concerned about the national economy which means the ability of our people to earn a living for themselves and their families.

We must be certain that the administration is facing up to the unpleasant fact that today there is more unemployment than is usual at this time of year. To assure you that the administration is not only deeply concerned about the situation but has a firm policy to foster recovery in a very sound way, the President stated this week that definite steps have been taken to stimulate home building, step up the national highway building program, increase activity under the urban renewal program, and increase the rate at which defense procurement contracts will be placed with private industry. He assured us further that if other measures are needed, they will be proposed—and in time!

Let me again quote from the President:

"I have confidence in the recovery of our economy * * * this year. * * *

"It is my conviction that the underlying forces of growth remain strong and undiminished. * * * The future will belong not to the fainthearted, but to those who believe in it and prepare for it.

"The firm policy of the Government is to foster this recovery in every sound way. I am making sure that we will go forward on every practical avenue of action. * * *

"If other measures are needed, I assure you they will be proposed—and in time. For example * * * expansion and modernization of public works and buildings, all of these useful public projects to be taken off the shelf when they could most appropriately be undertaken.

"In all these matters of Government policy, it is well to remember * * * it is necessary not only to avoid taking the wrong steps, but confidently to take the right ones. This we propose to do."

Again let me thank you for the privilege that has been mine to discuss with you some of these vital matters in which we women have not only a deep concern, but also the numbers and the capacity to make possible an ever-increasing freedom under law which is so necessary to the happiness of all of our people.

Not a woman here but knows that home is the center of constructive community and national living.

In closing I would ask the Infinite Father of all mankind to help us so to live that this great country of ours becomes more and more a land where freedom under God is in every breath we draw, and every thought and every deed. For only then can we hope to build a better world.

I should like to leave with you this quotation by Abraham Lincoln:

"We will speak for freedom and against slavery as long as the Constitution of our country guarantees free speech, until everywhere on this wide land the sun shall shine, the rain shall fall, and the wind shall blow on no man who goes forth to unrequited toil."

Daffodil Days in Oregon's Umpqua River Valley

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. PORTER. Mr. Speaker, Friday afternoon, February 28, a large package of daffodils grown in the Scottsburg-Green Acres area of the Umpqua River Valley arrived in my office. I regret that it was impossible to share this bit of beautiful Oregon with each of you. I do invite you to come by and see the vase of colorful daffodils in my outer office.

Saturday I sent the following telegram to Mr. and Mrs. Norman Workman, of Scottsburg. Mr. Workman is president of the Umpqua River Daffodil Growers Association:

Your beautiful daffodils brought Oregon spring to Washington. They were shared with other appreciative people. Thank you so much for your thoughtfulness. Best regards.

On behalf of the daffodil growers in my district, I should like to extend an open invitation for any Member to visit the area whenever he or she is in the West. More than 3 million blooms from the Umpqua are marketed to all parts of the United States and Canada and the golden fields of daffodils are a lovely sight when in bloom.

Rather than read the following articles, I have requested permission that they be included in the RECORD. One is an editorial from the Reedsport Port Umpqua Courier by Editor William Tugman. The other is an article which appeared in the same newspaper and which details the work put in on Daffodil Days. Both appeared in the February 27, 1958, edition of the newspaper:

DAFFODIL DAYS IN REEDSPORT

Merchants in Reedsport this weekend are holding "Daffodil Days" in recognition of the important flower and bulb growing industry in the Scottsburg-Green Acres areas of the Umpqua River valley. This a very praiseworthy "promotion" stunt. How many people in this community realize these facts:

In a 3-weeks period every spring, the daffodil growers of this area ship more than 3 million blooms to all parts of the United States.

Even at rock-bottom prices this "spurt" injects more than $30,000 of "new money" into the community.

Most of this money goes to the 60 to 100 people who find employment during the bloom season.

On the Pacific slope, the seasonal daffodil industry markets more than 50 million blooms.

New methods are prolonging seasons and extending markets.

Every year, in the season, hundreds of tourists from valley points come down the beautiful Umpqua to see and obtain blooms.

To our way of thinking, the real significance of the daffodil industry is that it points the way to a diversified and intensive agriculture in our narrow but fertile valley. The soils are rich and the farms are sheltered from the winds and blasts that create problems in other areas. We know that these valleys are ideal for many cannery crops which will come inevitably with better access to markets and to processing plants.

Highway 38—the only real watergrade route to the coast in Oregon—offers the ultimate answers to many of these problems of agricultural development. Let's ride out this coming weekend and see the golden fields of daffodils and get acquainted with our neighbors to the east.

MAKE YOUR WEEKEND TRIP A SUNDAY DRIVE UP THE UMPQUA TO SEE FIELDS IN GOLDEN BLOOM

Merchants of Reedsport this weekend—Friday, February 28 and Saturday, March 1—are holding Daffodil Days in honor of the bulb and blossom growers of the Umpqua valley between Scottsburg and Elkton whose industry makes an important addition to the area's economy.

Nearly all merchants are using daffodils for decorations and many will be giving them away to their customers on Friday and Saturday. The event is a gesture of good will toward the growers who have been hard hit by the Midwest blizzards which closed many markets after an unusually early season which promised a fine crop and good prices.

Norman Workman, president of the Umpqua River Daffodil Growers Association says the spring crop brings some $30,000 into the area each year in a 3-week season, even with minimum prices, and it provides jobs to more than 60 pickers.

Present members of the local association are Harry Burton, Alden Paull, E. L. and Anne Baker, W. C. Lowe, T. S. Andrews, Don Posekany, Norman Workman, Norman Jackson, Don Abrams, Andy Monson, Benny Knypstra. Growers not members of the association are Roy Lewis and Warren Billick.

Citizens of the Reedsport-Gardiner area are invited to ride up the Umpqua Sunday afternoon when the fields are expected to be at the peak of their beauty in golden bloom. Each year hundreds of sightseers are attracted from Eugene, Roseburg, and other points in the inner valleys.

"We've hit hard luck this year," said Mr. Workman, "but we have faith in the future of this and other agricultural specialties for these sheltered valleys. We have the soil, the climate; we need only better transportation and wider outlets to make the Umpqua area come into its own."

More than 3 million blooms from the Umpqua are marketed to all parts of the United States and Canada, mainly through four jobbers: Hugh Campbell, Portland; Pacific Fruit and Produce, Seattle; L. & L. Evergree, Puyallup, Wash.; G. R. Kirk, Tacoma.

On the Pacific slope more than 50 million blooms are ripened in similar sheltered valleys from California to Washington in late winter. Shipments are made by air and by refrigerated trucks to far distant cities to compete with hothouse production for weddings and spring events of all kinds.

Mr. Workman says growers of this area now have limited storage facilities where buds can be preserved for several weeks beyond the normal blooming periods.

William T. Roy, Assistant Parliamentarian of the House of Representatives

SPEECH
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. KING. Mr. Speaker, I rise to extend my sincerest best wishes and commendation to a valued public servant upon his retirement from an important office in the legislative branch of the Government. William T. Roy, the assistant parliamentarian of the House of Representatives is retiring from many years of highly efficient, able, and dedicated service to the legislative branch of the Government and to the people of the United States. Colonel Roy is one of those rare individuals who we encounter as we go through life. He has applied all of his energy to his work, and Members of this House will attest to the dedicated nature of his service and the pro-

fessional skill and competence which he has brought to bear on the important problems which have fallen within his sphere of responsibility. I have valued him over a period of many years as a close and trusted friend. He has always been ready to assist Members of this House and others with a multitude of problems arising out of the intricacies of legislative procedure. The positions of Parliamentarian and Assistant Parliamentarian are among the most important positions on Capital Hill. Decisions made by persons in these positions in rendering advice to the elected representatives of the people have an important and far-reaching impact upon the lives of all Americans.

I join with my colleagues in commending Colonel Roy for his dedicated public service and extending to him my very best wishes for a period of well deserved rest and relaxation.

Truman Garbage

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like permission to insert an editorial appearing in the Chicago Daily News, Tuesday, February 25, 1958. The Daily News of Chicago is known for its forthrightness, accuracy and fairness in disseminating the news.

As a Republican, I take issue with former President Truman's presentation of the ills of today and the causes and effects involved. We have his analysis on one hand to compare with the remarks of another past President, Herbert Hoover. For my part, I choose to believe in the future of America and to bear in mind that our country has gone through many passing trials. History records augur well for our future, since the past reflects that when we have a job to do, we do it, in spite of distrust and lack of faith on the part of some. The editorial follows:

TRUMAN GARBAGE

Nobody has ever contrived a really effective retort to an opponent who had just dumped a bucket of slop over him.

In a flurry of statements, Republican Senators called former President Truman's remarks at a campaign kickoff dinner cynical, irresponsible, bombastic, demagogic, insincere, wild, reckless, and false. All this proved was that Mr. Truman is the more effective mobmaster.

It is no more possible to debate reasonably the points in Mr. Truman's speech than it would be to discuss the teeth of a circular saw. It was designed to cut, and it did.

Even on civil rights, where a more sober-minded partisan might not have attributed a monopoly of virtue to the Democrats, considering Governor Faubus, and all, Mr. Truman attacked relentlessly. "Unless a President works at it day and night," he said, "* * * you can expect the demagogs to move in and make trouble."

Since it has been a Democrat-controlled Congress that was, and is, the chief obstacle to President Eisenhower's pleas for more foreign aid, one might have expected the former President to soften his blows on this theme. But no: "The present administration has acted like an overbearing banker with a glass eye."

Nobody gets madder than Mr. Truman at the cause-and-effect accusation implied in noting that the last three Democratic Presidents have each had a war. Yet he joyously points out that most of the business recessions in the last half century have occurred in Republican administrations.

Another former President, Herbert Hoover, was also making a Washington's Birthday address. His was an appeal for faith in the future of America, despite concern over a passing trial. In his conclusion, he revealed that his words were almost exactly those of a speech he had given 27 years ago.

We expect that Mr. Truman's message will get a more frequent workout.

Opinion Poll Results

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. CORBETT. Mr. Speaker, I have just completed another of my regular polls of public opinion in my congressional district on 10 vital issues. The tabulated percentage results are reported below without editorial comment. I hope my colleagues in the Congress find them interesting and informative.

I began taking these polls when I first came to Congress in 1939. They are in the form of a printed questionnaire, requiring simple yes-and-no answers to questions on vital issues of current interest. They are mailed to registered voters in my district, regardless of political affiliation.

My congressional district is probably as representative and contains as many varied interest groups as any in the Nation. It has a high concentration of labor, white-collar workers, small business, large industries, and some of the finest farmlands found anywhere. The district includes a thickly populated section of Pittsburgh, extends to the rural areas, and takes in many large and small residential towns in northern Allegheny County.

Total response to this latest questionnaire was particularly large and because of the manner in which it was conducted, the percentage results virtually constitute a referendum of the district.

The poll follows:

1. The President is asking for $1.3 billion at once for the missile program and an increase over last year of $4 billion for defense efforts. Should this amount be appropriated? Yes, 88 percent; no, 12 percent.

2. Do you agree with the President that foreign military aid is essential to our own defense? Yes, 83 percent; no, 17 percent.

3. Do you believe that economic penetration of neutral countries by the Communists must be matched or bettered by ourselves? Yes, 76 percent; no, 24 percent.

4. Would you vote for a Federal expenditure of $1 billion over the next 4 years to improve teaching skills and encourage scientific and technological training? Yes, 78 percent; no, 22 percent.

5. Are you satisfied to forgo a possible tax cut in order to keep the budget balanced? Yes, 87 percent; no, 13 percent.

6. Do you believe that the Federal Government should reduce its efforts in the fields of health, education, and welfare to save money? Yes, 24 percent; no, 76 percent.

7. Do you believe that the farm subsidy program should be sharply cut back? Yes, 80 percent; no, 20 percent.

8. Would you grant the President's request for power to negotiate reciprocal trade agreements over a 5-year period? Yes, 72 percent; no, 28 percent.

9. Do you believe the people of the free world are unduly alarmed by the evidence of Russian progress in the missile field? Yes, 51 percent; no, 49 percent.

10. Are you satisfied that President Eisenhower is doing a good job as our Chief Executive? Yes, 82 percent; no, 18 percent.

We Can't Hear the Echo Unless We Make a Sound

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. SHELLEY. Mr. Speaker, the established poets and masters of prose are often surpassed in the expression of an idea by those whose sincerity and belief in what they have to say acquires eloquence far beyond formal training or even natural bent as writers.

Such a man is Mark F. Bell, whose Christmas message to his family and friends has just recently come to my attention.

Mark F. Bell is an American workingman.

He makes his living as a waiter in a restaurant called Dominic & Johnny's in San Francisco.

Each year he manages to find the time to set down for his family and friends a report which manages to express, with an effectiveness which I feel is quite wonderful, the important feeling that comes with belonging to a family, as well as a formula for peace which all of us could profit by, not only in the reading, but in the emulation:

CHRISTMAS MESSAGE TO OUR SON AND DAUGHTERS AND THEIR FAMILIES

This year, as every year, I want to express my opinion in this plain but simple message.

Christmas is not only the most celebrated day of the year for the Christians but also for many other people. At this time, we see decorations everywhere which revives the holiday spirit in our hearts and brings back memories from our younger days.

At this time, more than any other time, we want to greet and to hear from all of our friends as this brings a warmer and closer friendship. We must be heard if we want to hear from others. It is just like being in the mountains. "We can't hear the echo unless we make a sound."

Parents do not only want to exchange greetings and presents with their loved ones, but also wish they could be near them on that great day, especially with those sons and daughters and their families who are far

away whom they don't see as often as they would like to. It is natural for parents to miss their children when they are away from home but some parents whose children are with them or near them don't fully understand that, but I am sure if and when their children go away from their home, they will not only miss them but also many times worry about them. That's why a letter, especially one with good news from sons and daughters who are away, is the best tonic for the parents' morale and their happiness.

Peace has tremendous meaning. Jesus recommended. Today more than ever, all the world is crying and praying for peace.

We need the peace not only in the world but also in our homes and in our hearts as none of us can be happy without peace because peace and happiness go together hand in hand.

So many people are doing their utmost to have peace but those impossible ones want peace at a prohibitive price which cannot be met, and by doing that they are holding back badly needed peace, not only from the others, but also from themselves. If we want genuine peace, we will not only have to pray for it but also practice these noble rules of life which help to bring peace to us. One of the main rules is to treat others as you would like others to treat you. This applies to all men and women as well as all the leaders of the world.

Now, dear children, grandchildren, and all the in-laws. Mother and I are glad to know that all of you have peace and happiness in your homes and we are going to say again, as always, that special prayer in the hope that the good God will keep you on the right path as he has done up to now. We send you our blessing and our love and also wish you a very merry Christmas and many more happy New Years.

Amen, and God bless all of you.

FATHER.

(Mark F. Bell.)

The Oregon Journal Finds an Encouraging Sign in Guatemala

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. PORTER. Mr. Speaker, under unanimous consent, I include the following perceptive editorial from the Oregon Journal for February 20, 1958, relating to the recent Guatemalan elections and stating very well the implications for the orderly and reasonable processes which lead to a peaceful result. This is another indication that the citizens of the United States are not only interested in Latin American countries, but concerned about their slow and painful progress along the road of social and economic betterment and, particularly, democracy and freedom:

ENCOURAGING SIGN IN GUATEMALA

The manner in which Guatemala has received its political leadership is an encouraging sign that this key Central American country has a strong core of citizens dedicated to the fundamentals of democracy. And there can be no real democracy unless the fundamentals are practiced.

After the assassination of President Castillo Armas, who overthrew the Communist-dominated government, there was a real test. Smart money would have bet that an ambitious politician supported by the strongest element in the military would have taken over. That has usually been the case in Central America.

But this did not happen, and full credit must be given to the Guatemalan military, which has a power that we have never known in this country. The Vice President took over. An election was held according to the constitution. Fraud was charged in that election, and the man elected resigned. A civilian again took over as a caretaker. Elections were held in January. They were inconclusive. According to the Guatemalan constitution a candidate to be elected President must get the majority of the votes.

Gen. Miguel Ydigoras received the highest vote but not the majority. Crux Salazar received the next highest. Under the law it is provided the choice must then be made by the Congress, which was heavily of the Salazar party. But Salazar withdrew, and the Congress elected Ydigoras.

This is orderly government. There were opportunities and incentive for ambitious men to take over during the circumstances. But Guatemala worked it out.

There has been some talk that Ydigoras is a dictatorial type. But he did not take over as a dictator. He was elected in a free election, and a hotly contested one. That is important, and a credit to the people of Guatemala.

The Nutritive Value of Eggs in the Human Diet

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. AUCHINCLOSS. Mr. Speaker, on February 26, 1958, the gentleman from California [Mr. SCUDDER], made a most informative speech entitled "The Nutritive Value of Eggs in the Human Diet"—page 2549, CONGRESSIONAL RECORD—in which he submitted some interesting statistics about the human consumption of eggs. He pointed out that the poultry industry in the United States is the third most important source of cash income on our farms, being exceeded only by the cattle and dairy industries. He also stated that poultry production today in a number of States surpasses all other farm commodities, citing as an example cotton in Georgia where at one time cotton was known as the king of the farm commodities. No wonder it is appropriate to designate March as "Egg Month," not only to draw attention to the importance this industry has achieved in our farm life, but also to aid in the promotion of egg consumption.

Although the poultry industry has grown mightily in size, the returns on the investment involved have suffered severely in the past few years and the poultry farmers have been learning the economic facts of life in a hard way. Fortunately, however, things have been better for them lately and they are doing what they can to prevent another depression similar to what they have experienced. I have been close to this picture because in New Jersey poultry farming is the largest industry in the State and a great part of it is located in the Third Congressional District which I have the honor to represent in the Congress.

The depression in poultry farming has resulted mainly from four causes: First, inexperience; second, overproduction; third, rigid crop controls; fourth, inadequate marketing; and I would like to make some observations on these causes and state briefly what is being done by the poultrymen themselves under the guidance of the State of New Jersey to build up and stabilize the industry.

First. Inexperience: Many people in our State went into the poultry industry without adequate knowledge of what it involved. They thought that by buying a few chickens and feeding them, the birds would produce eggs in abundance, since eggs are consumed by individuals of all ages, there would always be a demand for them, and therefore such an investment could not lose. They soon learned the falsity of such a dream. They learned of the problems connected with adequate and appropriate feed, and the ravages of disease; they learned of the difficulties of marketing and the curse of over-production; they learned of the severity of competition and the buying selectiveness of the consumer; they learned lots of things they had never dreamed of and were not prepared to meet. They wrung their hands, cried for help of one kind and another from the Government which was not forthcoming, and if it were it would have been temporary and inadequate. They went into debt, were unable to meet the mortgages on their farms, many failed in business and in a few instances I know of, died of broken hearts. It was altogether tragic.

Second. Overproduction: Many poultrymen reasoned that if they were making money with a flock of 2,000 birds, they would make twice as much with a flock of 4,000 birds, but they soon learned the fallacy of this reasoning. They failed to take into account the steady advance of science which increases the egg production of each individual fowl. They failed to recognize that with a greatly enlarged supply of eggs and poultry products, the demand therefor became more than saturated and the market became one in which the buyer controls the price. They failed to recognize the fact that by their own expansion they affected the whole industry and, as a result, everyone suffered.

Third. Rigid crop controls: This was perhaps the greatest underlying cause of the egg depression in the poultry industry. The grains that make up chicken feed are supported under the law by the United States Government at a more or less rigid price and when the overproduction of eggs caused a decrease in the market price, the high cost of egg manufacture—feed—made impossible a profit in the flooded market of the finished product—eggs. Some poultry farmers wanted the Government to place rigid support prices on eggs and poultry products, but the Government wisely refused to adopt such a policy and, more important, the great majority of the poultrymen desired none of it. They wanted

no interference in their business by Government and advocated instead that Government leave other phases of the farming industry alone and remove rigid controls from the feed grains. This policy of rigid grain controls caused much distress in the poultry industry and I do not believe proper consideration of this serious effect has been given the attention it deserves. The Government has no business to favor one part of an industry at the expense of another part and the poultrymen should enter their serious protest and demand that such a policy be changed.

Fourth. Inadequate marketing: This is a phase of the poultry business in which there is room for great improvement and I am proud to say that the State of New Jersey, under the leadership of the Honorable Philip Alampi, State secretary of agriculture, is doing something about it. Generally speaking, the poultry farmer has marketed his product in the past few years in a haphazard sort of way. He has sold his eggs direct to his own customers; he has joined up with others in cooperatives; or he has just sent his eggs to market and accepted the current price no matter how it was arrived at. The underlying weakness of these procedures lay in the fact that no real standards of quality were set and maintained for eggs as handled from the hen to the market place. The purchasing public under the marketing system had no assurance as to the quality of the product. Of course a cabal of poultrymen to control and maintain a price would be wrong and contrary to law, but there is no reason why poultrymen should not combine to adopt uniform high standards for their products and insist that the members of the combine live up to such standards. That has been overlooked in the past and I am delighted that the poultrymen of New Jersey are uniting under the leadership of the State government to guarantee a high standard for New Jersey eggs; I feel sure that will set an example for other States to follow. I would like to describe briefly what is being done in New Jersey along these lines.

A Poultry Products Promotion Council composed of growers, poultry-feed distributors, representatives of the State department of agriculture and the State college of agriculture has been organized under the authority of the State legislature, and its activities are financed by a State tax on poultry feeds of 1 cent per hundred pounds, paid by all poultrymen and collected by the feed distributors. The aim of this organization is to develop a long-range program for the advertising and merchandising of New Jersey poultry products, and, what is of the greatest importance, the program is coordinated with the quality control and grading activities of the division of markets of the State department of agriculture.

I quote from a letter I received recently from the Honorable Philip Alampi, the secretary of agriculture of the State of New Jersey, and to whom most of the credit of this entire plan is due:

The program is designed to expand market outlets and to strengthen the economic position of New Jersey's $130-million annual crop of quality poultry products by creating consumer preference through advertising and promotion. Domestically produced eggs and poultry meat will be identified and marketed under the department's official State seal of quality denoting conformity to grade and New Jersey source. The confidence-inspiring symbol will be used only on consumer packages meeting strict quality standards of the department of agriculture.

An egg-quality-improvement plan has been developed. Field representatives are presently working in conjunction with the department's inspection and regulatory personnel and with the State agricultural extension service, cooperative marketing agencies, receivers, and producers. Egg-quality surveys are being made and technical assistance given to improve on-farm marketing functions to produce better quality eggs. Improvement of quality-conservation practices in distribution channels will also be sought in cooperation with the regulatory staff of the department.

Interviews were conducted with 5,500 consumers in the New York City, New Jersey, and Philadelphia market areas to ascertain preferences, buying habits, consumption and use of fresh eggs and poultry meat. The findings will aid in guiding the farmers to produce in accordance with market preferences and will help the council and its advertising agency in designing their programs of advertising and publicity.

Surveys have been completed and summarized, analyzing the various ways in which New Jersey eggs, poultry, and turkeys are marketed. Information relative to distribution points, estimated volume of products to be merchandised under the official seal, and marketing outlets was made available to the council's advertising agency.

Preliminary steps have been taken toward developing a marketing program for the poultry meat growers through the combined efforts of the council and the newly created New Jersey Poultry Meat Growers Association, in cooperation with the Bureau of Poultry Service.

To further the efforts of the poultry council, the department obtained $25,000 from the Agricultural Marketing Service of the United States Department of Agriculture. Under a work agreement with the Federal agency this money is used to employ personnel to work with poultry producers, dealers, and distributors for improvement of quality and uniformity of products. Under Federal regulations, none of this grant may be used for advertising.

This surely is a comprehensive and ambitious program and judging from the enthusiastic reception it has received, its success seems assured. It will be worthless, however, if the poultrymen fail to live up to the standards that have been set, and I predict that if they do not cooperate, New Jersey poultry products will deservedly acquire such an unsavory reputation that their market will go into a slump from which they will take a long time to recover.

Permit me to speak of the preliminary work of this program which is now underway.

Advertising: The advertising campaign for New Jersey State seal of quality grade A fresh eggs was launched in the flush egg-production month of January. using key newspapers in New Jersey and New York City having a total circulation of over 1½ million readers, and, with radio advertising, the message is carried to over 2 million persons each week.

Trade publications for wholesalers and retailers carry advertising to over 18,000 interested egg receivers, distributors, brokers, and grocers.

Each of the advertisements appearing in consumer newspapers carry this exhortation next to a picture of the official seal:

When you buy eggs, look for this New Jersey State seal of quality on the carton. It means a dozen genuine New Jersey fresh eggs.

Merchandising services: All 19 newspapers which carried the New Jersey egg advertising schedule assisted in merchandising the campaign by contacting over 4,500 retail grocers in the egg-marketing areas of New Jersey and metropolitan New York City and Philadelphia.

Fifteen papers chose to send a letter and reprint of the first advertisement to the retail grocery outlets in their areas. Jumbo cards featuring a blowup of the New Jersey State seal of quality for genuine New Jersey fresh eggs were mailed by the other newspapers. Copy for these trade mailings was furnished by the advertising agency.

Additional merchandising to the grocery trade included personal calls on key retailers, feature notices in advertising bulletins sent to grocers, tie-in advertising solicitation, window and in-store point of sale displays.

A chain of 285 Associated Food Stores has distributed circulars carrying the first egg advertisement into the homes of 100,000 consumers.

Public relations: Because the poultry industry is the top ranking agricultural interest in New Jersey, news and food editors have given generous publicity to each development of the promotional campaign.

The Lenten season and the fact that March is Egg Month in New Jersey, as well as nationally, stimulate the use of releases on New Jersey eggs.

A continuous campaign of feature and news stories and pictures will be directed to the consumer, trade, and agricultural publications. Radio and TV broadcasters, home economists, and restaurateurs will be kept informed of important developments which they can implement.

Displays will be set up in public places, calling attention to this first for New Jersey egg promotion campaign.

In additon to these activities, the program is thoroughly and constantly promoted by radio broadcasts, describing the State seal of quality which identifies the high nutritive quality found in fresh eggs from the State of New Jersey.

It is indeed a great privilege for me to report on this constructive work being done by my State for its poultry industry. New Jersey poultrymen are helping themselves in the solution of their problems without running to Uncle Sam for assistance. They are acting the way American citizens should in working out their own salvation. I venture to state that others in our great country may well profit by their example and conduct their businesses and professions without the interference of Government in their affairs. Government controls, Government supports, Government dictation have no place in the ordinary business affairs of our people. America never

grew great and powerful, the envy of the world, under such a policy. Our American heritage of freedom with justice should be promoted and preserved if we as a nation are to maintain our standards and provide leadership to a bewildered world.

Another Peril: Creeping Economic Isolation

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. PORTER. Mr. Speaker, Oregon has many distinguished citizens, but among them there is no more distinguished economist than Prof. Raymond F. Mikesell, Miner professor of economics at the University of Oregon, and no more distinguished journalist than William M. Tugman, for many years at the editorial helm of the Eugene Register-Guard and now editor and publisher of the Port Umpqua Courier in Reedsport, Oreg.

Mr. Tugman, who has been a friend and mentor of mine for more than 22 years, comments on a recent talk by Dr. Mikesell in the following editorial which was published in the issue for Thursday, February 20, 1958. I commend his views to every one of my colleagues, particularly to those who may be wavering in their support of the mutual-security program and of the renewal of free trade legislation. The editorial is as follows:

ANOTHER PERIL: CREEPING ECONOMIC ISOLATION

One of the most interesting of the many talks which were made to the 39th annual Oregon press conference in Eugene last weekend was the warning of creeping economic isolation which was delivered by Prof. Raymond F. Mikesell, Miner professor of economics at the University of Oregon, and an economic adviser to Presidents of the United States, our State Department, and an active participant in economic missions in many parts of the world. This is a revised version of the trade, not aid, slogan which was so popular with politicians a few years ago, and so soon neglected and forgotten.

Quite as great as the dangers of space weapons are the dangers of losing the trade and the friendship of the world's great resource nations. Annihilation in space warfare might even be more merciful. Economic isolation could bring death by slow, agonizing strangulation. Dr. Mikesell reduces the problem to very simple terms:

"Like ourselves, other nations must sell what they can produce or make in order to live.

"When we shut them out of American markets by raising or restoring tariff barriers we drive them inevitably into the Communist orbit.

"When we shut out Swedish clothespins, German safety pins, Japanese textiles, Bolivian tin, competing products of many kinds, we are inviting long-range reprisals."

Within both political parties there are tremendous pressures to raise tariff walls around favored industries and to reduce all forms of American economic and military aid to our allies and to the so-called backward countries. As we withdraw from the field, the Russians move in. The time could come when we would find ourselves cut off from the great storehouses of Asia, Africa, and South America.

The professor makes all this quite clear to an audience of fairly well-educated and history-conscious editors, but he leaves unanswered (and in the laps of the editors) the $64,000 superquestion:

"How are you going to translate this into language which will appeal to the unemployed guy who is subsisting on rocking-chair money, or to the small-business man who sees his trade dwindling? How are you going to answer the argument that charity begins at home?"

Nobody in his right mind would want to return to the Smoot-Hawley high tariffs and the political and economic follies of the late twenties which had so much to do with bringing on the great depression and Hitler and World War II. The United States needs a policy which moves steadily in the direction of unrestricted free trade, but the question is how fast can we move without upsetting real or fancied American standards of high living?

The present session of Congress will put to a severe test the sincerity of many politicos who do lipservice to the broad ideals of world peace but take for cover under the first barrage of letters from home.

Actually the present recession, to use the honeyed word (and no community is harder hit than ours) may be traced in part to the shrinking of our overseas markets, for the very simple reason that if we do not buy what our friends have to sell, they cannot very well buy from us. Behind the so-called dollar shortage in most of our customer countries lies our increasing unwillingness to let them earn a few dollars from us.

Resolution

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledge of March 5, 1958:

RESOLUTION

This is the resolution offered by State Senator George W. McKown and adopted unanimously Monday by the Cherokee County Democratic Convention:

"Whereas employment in the United States is at a dangerous low and take-home pay for the employed is being continuously lowered, while the cost of living continues to increase; and

"Whereas farm prices have been systematically lowered since the inauguration of the Eisenhower administration; and

"Whereas small-business failures continue to increase; and

"Whereas the Republican foreign policy or lack of policy has dragged our international prestige to an all-time low; and

"Whereas the policy of the Eisenhower administration is directly responsible for these ever increasing deplorable conditions: Now, therefore, be it

"Resolved by the Cherokee County Democratic Convention, That we respectfully recommend to our ill-advised, ever-vacationing, golf-playing President that he devote at least a measure of energy to the correction of some of these irresponsible policies brought on by his administration that concern the Federal Government, and less energy to those things that are purely State functions; be it further

"Resolved, That Mr. Benson be replaced by someone who is sincere in his interest in the economic welfare of the American farmer and the American people.

"The many policies of the Eisenhower administration show clearly that the farmer, the workingman, or the small-business man have not been able to gain a sympathetic ear, therefore, in an effort to reach his advisors, let a copy of this resolution be given Radio Station WFGN, Spartanburg Herald, the AP, the IP, and the UP."

Food Stamp Plan for America's Needy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. ANFUSO. Mr. Speaker, I am today introducing a bill which provides for the distribution of surplus food commodities through the use of a food stamp plan.

Let me emphasize at the very outset that this program is intended to aid the needy and the undernourished in our country. The purpose of this bill is twofold: to help raise the levels of health and nourishment of needy persons, and the disposal of some of our huge food surpluses in a beneficial manner.

My bill would authorize the Secretary of Agriculture to put into operation by January 1, 1959, a food stamp system for the distribution of food to the needy from the surplus commodities acquired by the United States Government through its price-support or other programs. Such distribution is to take place through the States. For this purpose, food stamps or certificates shall be issued to eligible persons which would be redeemable for certain types and quantities of food as determined by the Secretary of Agriculture.

The total of such surplus food to be distributed under this program shall not exceed more than $1 billion worth of food annually, based on the cost to the Government for purchasing, storing and handling these commodities.

It should also be noted that the food distributed under the food stamp plan shall not supersede any welfare assistance to such needy people, but should be in addition to such aid given them by the respective States.

Enactment of this bill would serve many useful purposes at this time. Aside from the fact that it would be of great help to the needy in our own country, who are having a most difficult time to cope with the present high cost of living, it would be beneficial also in the following ways:

First. It would help cut down our tremendous inventory of surplus food commodities, reported to be valued at approximately $7 billion and costing hun-

dreds of millions of dollars annually for storage, handling, and spoilage.

Second. It would be of immeasurable help to our farmers by disposal of these surpluses and the increased income for their farm products.

Third. Bolstering the farm economy would also be a much-needed shot in the arm for the entire economy of the Nation at a time of recession and growing unemployment.

Fourth. The needy, the elderly persons, the people in charitable institutions and those who are dependent on welfare assistance would be given extra nourishment and the opportunity to improve their level of health.

Fifth. Disposal of large quantities of such surpluses would have the Government and the taxpayers considerable expenditures for the cost of storage.

Mr. Speaker, since this bill will undoubtedly be referred to the Committee on Agriculture and turned over to the Subcommittee on Consumers Study, of which I have the honor to be chairman, I shall arrange for my subcommittee to undertake early hearings on the bill and the proposals contained therein. I am planning to invite the governors of various States or their representatives to testify before our committee and to present their views and a picture of the situation in their State as regards the needy who would benefit under this plan.

It is my opinion that every State will benefit by the launching of a food stamp plan, particularly the economically distressed areas where unemployment has reached alarming proportions in recent months.

Mr. Speaker, in conclusion I wish to take this opportunity of expressing my gratitude to our colleagues, the Honorable MARTHA W. GRIFFITHS of Michigan and the Honorable LEONOR K. SULLIVAN of Missouri, for their contribution in helping to develop this method of food disposal. They, too, will be invited to share their views and opinions regarding the food stamp plan with our committee.

Lastly, I should like to express my gratitude also to the distinguished chairman of the House Agriculture Committee, the Honorable HAROLD D. COOLEY, who has recognized the wisdom of this legislation and has given me the "green light," so to speak, to proceed with it.

The American Merchant Marine

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mrs. SULLIVAN. Mr. Speaker, recently a deep water shipping leader—Mr. Harry X. Kelly, president of the Mississippi Shipping Co., Inc., of New Orleans—came inland to bring a most important shipping and world trade message to members of the Mississippi Valley Association who met in St. Louis, Mo., my home city.

There is a direct trade connection between St. Louis and New Orleans, as goods move down the Mississippi River and overland to that great gulf port and then are shipped to overseas' markets by Mr. Kelly's company and other steamship lines. Thereby, transportation joins to link the Mississippi Valley region to the world, through a coordinated domestic transportation system.

And this man who has spent a lifetime dealing in world commerce emphasizes the need for two-way trade between nations, which further speaks for an extension of the Trade Agreements Act.

I ask unanimous consent to have entered into the Appendix of the RECORD his remarks on the vital role our Merchant Marine plays in commerce and national defense.

The remarks follow:

THE AMERICAN MERCHANT MARINE—ADDRESS BY HARRY X. KELLY, PRESIDENT, MISSISSIPPI SHIPPING CO., INC. (DELTA LINE), AT MISSISSIPPI VALLEY ASSOCIATION, ST. LOUIS, MO., FEBRUARY 11, 1958

You will recall a book published a few years ago, the title "30 Seconds Over Tokyo." It described the heroic exploits of General Doolittle's bomber crews in the first American raid on the Japanese mainland. One of the crewmen had only two words to say, "bombs away." That was a difficult mission. I also have a difficult mission: to bring you up to date on the American merchant marine in 12 minutes.

There is one thing for which I must take time; that is to express the appreciation of our industry for the continuing support which this great organization gives to American shipping.

Your resolutions committee annually demonstrates an awareness of our problems and a firm resolve to aid in solving them. We know that your membership believes that a strong merchant fleet under our own flag—like the Mississippi River itself—is an essential element of the expanding economy of the midcontinent.

First, national defense. For a while, there were rumors floating around that the American merchant marine might be less necessary in the missile age than before. Such rumors have been proved without foundation. General Twining said recently—and I quote, "If the catastrophe of a general war should be forced upon us by the necessity of retaliation against surprise attack, the merchant marine, after the initial period of devastating nuclear exchange, would play a most vital role. Indeed, it might very well be the one source of strength of the free world which would pluck victory from chaos."

Then—to fix the present administration's attitude—Mr. Gordon Gray, head of the Office of Defense Mobilization, said recently, "The conclusion of the Defense Mobilization Board that an adequate merchant marine is essential for defense purposes and that there is a continuing need for a modern, adequate, and well-balanced United States merchant marine fleet has been affirmed as the policy of the administration."

These authoritative statements take care of the rumors and reaffirm the necessity for an American merchant fleet adequate to our defense needs. Ships under the American flag are especially necessary for national defense, for in emergencies, every government needs its own ships to carry goods and men to places vitally necessary for themselves. So many tons of cargo are necessary to support one fighting man at the front. In our lifetime, airlines will not have the capacity to supply this demand.

Second—international trade. Our total annual stake in foreign trade is about $32 billion. That means jobs for 4½ million people with $13½ billion annual earnings. Exports are almost 6 percent of the national output of goods and services—and imports supply about 10 percent of the raw materials we use. The maintenance of American shipping on our essential trade routes is a form of insurance protecting that investment in international trade.

The subject of our foreign trade policy is very much in the limelight today. Actually, our maritime policy has been founded on the principle of reciprocity. For example—our basic goal is to have a fleet adequate to carry a substantial portion of our commerce. Now, while the policies of the Federal Maritime Board and the establishment of essential trade routes have been a very important factor in the development of our huge international trade and the goal set by our Congress is 50 percent, the fact is that the percentage carried in ships of our own flag has been decreasing annually since 1945 and is now about 20 percent. American flag lines have opened up trade areas over the entire world; have instituted trade promotion departments; have placed thousands of shippers in communication with buyers abroad; have placed other thousands of American importers in communication with shippers from other countries. But once the trade is developed, vessels of other nations come in until now they are carrying nearly 80 percent.

It seems to me we have been more generous in allowing other shipping nations to carry our goods than they have been in permitting us to carry a reasonable portion of theirs.

It is possible to carry reciprocity too far; but, I think there is no doubt that in the economic struggle which is now taking place between the free nations and the Soviet Union, aggressive steps must be taken to encourage the development of two-way trade among the free nations. Obstacles to that development must be removed.

Third—the future. The United States Government supports the maritime industry through construction and operating subsidies. This year, the budget request is for $120 million for operating differentials, and $160 million for the ship-construction program. I am sure you are familiar with the justification for this support and the fact that the ship-construction subsidy is not paid to the shipowner—but rather to the shipyard. A ship, which can be built in Italy today for $5 million will cost more than $10 million in any American yard. Italy pays 48 cents an hour for shipyard labor; United States pays $2.40. Our yards are in competition with Japan which pays 32 cents per hour.

On American ships, we pay $19,000 in wages per month. On a German ship, the wages are $4,100 per month.

The Government bookkeeping system fails to reveal all of the offsets which, in effect, reduce the cost of maintaining a merchant marine. I refer to the taxes paid by the owner; Federal income taxes paid by personnel on board and on shore; taxes paid by ship repair yards and suppliers. Maritime Administrator Morse recently estimated that the net cost is about $29 million per annum.

I also point out that in addition to the other substantial contributions the shipping industry makes to the American economy, our ships are substantial customers. In 1 year, for example, we buy about $07 million worth of food in this country. As we move into our ship replacement program, most of it private investment, our economic contribution will be increased and communities throughout the land will be producing parts and machinery which will eventually be installed in our new ships. I think this will be a substantial contribution to production and employment. My company has already contracted to undertake a long-range

replacement program as has Lykes Bros. Steamship Co. Only last week, Lykes awarded a contract for the building of five freighters to the Ingalls yard in Pascagoula. I am glad to state that 9 out of 18 steamers whose keels will be laid in 1958, will operate from gulf ports.

The shipping business has contributed substantially to the growth of the gulf and through the gulf ports, to the development of the Mississippi Valley area. We believe that in the future, your need for shipping will increase and we can assure you of our efforts to promote the most regular, the safest and the fastest service, and with the cooperation of the shipping industry, our manufacturers, our exporters and our importers, the welfare of the entire Nation will increase.

The Soil-Bank Program

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter by the gentlewoman from Indiana [Mrs. HARDEN]:

WASHINGTON, D. C.—Any Indiana farmer who is denied participation in the soil bank this year should place the blame right where it belongs—on the Democrat-controlled Congress, not Mr. Eisenhower or Mr. Benson.

Last year, Secretary of Agriculture Benson asked Congress for $750 million with which to carry out the 1958 soil-bank program. The House Appropriations Committee reduced it to $500 million. The committee is, as are all committees in the Congress, controlled by the Democrat Party. So there is no question as to where the blame lies.

When the bill reached the House floor for action, a Democrat Congressman from the South proposed that the entire appropriation for the soil bank be cut out. By a party-line vote of 192 to 187, this was done. The soil-bank program was killed. Even the insufficient appropriation approved by the Appropriations Committee was wiped out. Needless to say, I opposed this action and voted to keep the soil bank in operation. So did most Republicans.

Fortunately, the Senate restored the $500 million. Remember, though, that this was just two-thirds of what the Secretary of Agriculture had requested in soil-bank funds.

It turned out that Mr. Benson had not exaggerated the need. Indiana farmers, for example, oversubscribed our $15 million soil-bank quota by 197 percent. Nationally, the interest was equally as great and by late January the funds were exhausted.

Mr. Benson promptly asked Congress for additional funds. The House Appropriations Committee voted to approve another $175 million and Republican House Members were successful in getting the figure increased on the floor to $250 million in voting last week. It is hoped the Senate will follow suit, and that the funds will be made available.

Congressman CHARLES HALLECK, of Indiana, had this to say during the House debate:

HALLECK told the Democrats that concerning the soil-bank acreage reserve, "the administration asked for $750 million to carry on this program * * * and apparently in great glee, you sabotaged the program, even as you sabotaged the program we wanted for the corn farmers of the Middle West."

He added that "as far as I am concerned, you are not going to get away with it. You cannot blame the administration, you cannot blame Benson, you cannot blame me for the very failings in which you have indulged on your side as you have run the Congress of the United States. * * * You are the people who joined up against most of us on the Republican side to cut out the money, thereby bringing this confusion throughout all of the farm areas today."

HALLECK continued, "I have been trying to find out when you are going to come up with a farm program. You are awfully free and long on criticism, but I have not seen you come up with anything. You will not take what the administration offers. * * * The crop season will soon be here, so apparently after you have had complete control of the Government so far as legislation is concerned, you yet are unwilling to do anything.

"We can have no farm program except as the Congress votes it and appropriates the money for it * * * so I think the time has come when the shoe ought to be put on the right foot, and that is on the foot of the Democrat Congress that has failed to meet its responsibility."

I subscribe to Mr. HALLECK's statement 100 percent.

United States Advisory Commission on Information

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HAYS of Arkansas. Mr. Speaker, the United States Advisory Commission on Information has prepared a report making some very interesting recommendations about the operations of the United States Information Agency. Since our information program abroad is so crucial to the success of our efforts to keep the free world strong and the captive world informed of the truth, I think every citizen of the United States should take a real interest in the suggestions made by the Advisory Commission. Under leave to extend my remarks, I include a summation of the recommendations made, as follows:

Ten years of experience in counseling the United States foreign information program has led the United States Advisory Commission on Information to highlight in its 13th report to Congress the urgent need for long-range planning in foreign information work. "This is essential," affirms the Commission, "if we are to wrest the initiative from the well planned, long-range, lavishly financed Communist propaganda effort."

The Commission said that recent Communist propaganda successes following the launching of their earth satellites coupled with the call for ideological competition that was enunciated by Khrushchev in 1957, represented a double-barrelled challenge and threat to the free world.

The report points out that the Soviet propaganda challenge which has existed for 40 years, has been intensified in the past 15 years and reached a peak with the launching of sputnik and other Soviet advances. But, the report emphasizes, matching this challenge are "some very real opportunities for United States information activity."

It believes that there is a chance to turn sputnik to the free world's advantage. The Soviet sputniks and the challenge they represent can serve to reunite and rearm the free world, just as the Soviet attack on Korea helped to this end.

The report also saw in Khrushchev's challenge of "let us compete" a slight lifting of the Iron Curtain and a chance for increased communications between the Soviets and the free world.

Another opportunity is seen in the increased demand for news from and about the United States. The Commission pointed out in its report that the Soviet's scientific advances have been news around the world and have whetted the appetite of the world for more news about what this country is doing and for more information about the United States and its people. This demand, it believes, can be met only partly by private news services and offers an opportunity for the USIA to help clear up misunderstanding and ignorance of the United States. Reports from the field indicate an aroused receptivity for books, pamphlets, exhibits, and motion pictures and has disclosed a greater curiosity about the scientific and economic strength of the United States than in the past.

A further opportunity mentioned in this report is the need for information activity in Africa, much of which it says remains a wide-open field. It believes there is today a real opportunity, especially in the central areas, to reach the people with long-range information programs that will be of real help to the people of that continent.

Cautioning that it would be a costly error to assume that the Communist threat is only a scientific one, the Commission's report states that "science to dominate the world * * * and ideology to win the minds of men are both essential elements in the Soviet plan of conquest * * * both are the products of carefully developed long-range plans. The Soviet activities in both fields have been persistent, continuous, aimed at specific long-range targets."

To successfully meet the Soviet Communist long-range ideological propaganda challenge, the Commission calls upon the United States Government to close further the 30-year competitive gap between the level of Communist propaganda and that of the United States foreign information effort.

Based on the lessons of the past 10 years, the Commission recommends 8 principles which the United States information program should adopt:

1. The foreign information program and organization must be nonpartisan in the hope that this will encourage continuity in leadership and more efficient planning and operations.

2. Relations with Congress must be closer and continuous, including frequent consultations and discussions.

3. The international information organization should continue to be an independent agency. After observing the operations of the United States foreign information program, both in the Department of State and as an independent agency, the Commission concludes that an information program operates more effectively when it is independent.

4. A permanent career system is urgently needed in order to attract and retain competent personnel.

5. These personnel must be supplied with adequate representation funds which have been denied to them year after year.

6. The program should continually clarify its objectives.

7. It should make available its specialized knowledge at the policymaking levels of governmnet.

8. Finally, the USIA should assist the United States Government in taking the leadership in worldwide information programs.

The Commission's 13th report to Congress also examines the present strengths and weaknesses of USIA and concludes by making specific suggestions for prompt action in order that the Agency may be equipped to meet the long-range challenge of Communist propaganda and ideology. These include:

(a) An appraisal of the Agency's major themes and programs. The Commission recommends the vigorous programing of people's capitalism, family of man, free elections, atoms for peace, and a projection of United States cultural attainments. It urges the Agency to grant the teaching of English a high priority.

The Commission also calls the Agency's attention to two possible new themes. One would be based on the free world's use of science to improve health, welfare, and living standards of all people.

The second, the Commission points out, would stem from the fact that "the Soviets have borrowed heavily from the free world's ides of competition, rewards for excellence, and spirit of free inquiry in developing their physical sciences. They could now be challenged publicly as to why they have not carried the same free world ideas into the social sciences, * * * human relations, economics, government * * * where they would be of benefit to the Soviet peoples."

(b) Step up personnel improvement by obtaining a career service, giving foreign language training high priority, improve and speed up the reassignment of personnel returning from the field, and give greater weight to the role of the cultural-affairs officers in the Agency's total program.

(c) Plan for increased East–West exchanges and cooperate with other Government agencies to promote and develop a program of tourism to the United States.

(d) Improve cooperation and continue to avoid competition with private enterprise.

This 13th report to Congress marks the 10th year of the Commission's existence. Three of the original members of the Commission, Chairman Mark A. May, director, Institute of Human Relations, Yale University; Mr. Erwin D. Canham, editor, Christian Science Monitor; and Mr. Philip D. Reed, chairman of the board, General Electric Co., have served continuously during the past decade. Mr. Sigurd S. Larmon, president, Young & Rubicam, has served on the Commission since January 1954, and Mr. Lewis W. Douglas since January 1956. Because of a recent illness, Mr. Douglas was unable to participate in the preparation of this report and for this reason has not signed it. He has, however, expressed agreement with most of the major points made by the Commission.

Democracy in Costa Rica

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial:

DEMOCRACY IN COSTA RICA

It is always heartening to see the democratic process flower in the governments of our Latin American neighbors. The recent elections in Costa Rica were models of free and honest voting, such as we have come to expect of that enlightened country.

A conservative lawyer, Mario Echandi, defeated by a narrow margin the incumbent president, Jose Figueres. Figueres had been president since 1953, and had been instrumental, both before and since his presidency, in putting into effect social-welfare measures and advanced industrial codes. Under attack by extreme conservatives in his own country, he was bitterly opposed by Dictator Somoza in neighboring Nicaragua. Somoza provoked a border fight which was bitterly waged. Figueres emerged from this struggle with the admiration of even those fellow countrymen who had felt that he was too far left of center.

To preserve the democratic process that he saw so badly abused in other Latin countries, Figueres maintained an electoral system where registration of voters, secret balloting, and counting of votes were handled by genuine political neutrals. It was this system which produced the people's quiet rejection of Figueres the other day, and his supplanting by Echandi. The latter had campaigned on a platform of less Government interference in business, and the voters were ready to accept him.

There are more people of white than of Indian extraction in Costa Rica, and in economic life fewer extremes of poverty.

Doing Business in Puerto Rico

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 13, 1958

Mr. ASPINALL. Mr. Speaker, the Commonwealth of Puerto Rico, and may I say, too, the Congress of the United States, is very fortunate indeed to have the Honorable A. FERNÓS-ISERN as Resident Commissioner from Puerto Rico. He has spent almost 12 years discharging the obligations of this important office, and of course with each succeeding year his services become more valuable to all of us.

Dr. FERNÓS is possessed with unlimited knowledge about his people and with his recognized ability and industry, together with the confidence which his people place in him, he has been able to render to them outstanding service.

Just recently there was held in New York City a briefing conference on the subject of doing business in Puerto Rico. The Resident Commissioner was honored to give the address of welcome to those attending this conference. His address is a fine, up-to-date statement of the history of this part of our Nation and the important part that it and its people are playing in our national life today. I take great pleasure, Mr. Speaker, in placing Dr. FERNÓS' address in the Appendix of the RECORD so that all of us may read it and have profit therefrom.

ADDRESS BY HON. A. FERNÓS-ISERN, RESIDENT COMMISSIONER OF THE COMMONWEALTH OF PUERTO RICO IN WASHINGTON, D. C., AT THE DOING BUSINESS IN PUERTO RICO CONFERENCES HELD ON FEBRUARY 6 AND 7 AT THE HOTEL COMMODORE IN NEW YORK CITY

Gentlemen, allow me to thank you for having accepted the invitation of the Bureau of National Affairs Inc., and the Puerto Rico Economic Development Administration, to attend this conference. I thank you in the name of the people of Puerto Rico, whom I represent in the Federal Government. As I am sure you know, the Resident Commissioner of Puerto Rico is the elected representative of the people and serves for a term of 4 years. He is the spokesman for the people of Puerto Rico in Federal matters. The position exists since 1900 and was created by the first organic act which organized civil government in Puerto Rico under American sovereignty. The fact that you are here, and that you are giving so much of your precious time to become acquainted with the Commonwealth of Puerto Rico and its opportunities, attests to your interests in the islands and its people. (The Commonwealth of Puerto Rico comprises the island of Puerto Rico and a number of small adjacent islands, two of which are inhabited and organized as municipalities within the Commonwealth.)

I believe I owe you a short résumé of the background of the islands comprised within the Commonwealth of Puerto Rico and of its people. As you may remember, the first area of the New World which came in contact with Western civilization was the Caribbean. The first settlement in the New World, and for that matter the first capital of the New World, was established before the end of the 15th century in the island then known as Hispaniola and now occupied jointly by the Dominican Republic and the Republic of Haiti. From what is now the Dominican Republic discovery and conquest branched out. Puerto Rico was the second island to be conquered and settled; therefore, its capital city, San Juan de Puerto Rico, is the second oldest city in the New World. It was founded by the first settler of Puerto Rico, Juan Ponce de Leon, in 1508. Cuba, Mexico, Costa Firme, Peru, followed. Exactly 99 years after San Juan was founded the English king awakened to the fact that there was a New World and there was plenty of room in it, not only for Spaniards, but also for Englishmen. Jamestown was founded.

Therefore, by the time Jamestown was founded, western civilization was 99 years old in Puerto Rico. During the succeeding centuries, up to the end of the 19th century, a continuous stream of settlers moved over from Spain to the New World, and consequently, into Puerto Rico. And in those four centuries Puerto Rico grew into a people a million strong, with no less than 66 cities and towns, or municipalities, and with no more free land for settlement. Until the middle of the 19th century, when various separate kingdoms merged to give rise to the unified Spanish State, Puerto Rico was a part of the Kingdom of Castile, one of the component parts of Spain, and lived under the Laws of Indies, which means the laws of Castile in a modified form, in order to adjust to New World conditions. After Spain became a united kingdom with a constitution and a common code of laws, Puerto Rico was declared to be a component part of that Kingdom. Since 1868 Puerto Rico was duly represented in the Spanish Cortes, the national parliament.

The ethnic composition of the people of Puerto Rico is, therefore, fundamentally Spanish. The Indians very early disappeared as a race. There were about 16,000 Indians at the time of the discovery and conquest and they were soon absorbed both by the white race and by the colored race which was brought into the island from the early days of settlement. Slavery existed in Puerto Rico until 1873 when the 33,000 slaves were declared free citizens. Their masters were paid the proper indemnity.

To say that Puerto Rico was a part of the Kingdom of Spain is to express a political fact, but the political fact did not quite conform with social realities. Thousands of miles of water between the island and the peninsula made for such differences of interest and outlook, that even with a common origin, a common culture, and a common language, there were profound differences which subjected the existing political rela-

tionship to strains and tensions which found expression in the claim for self-government by the island people.

This came to fruition in the year 1897 when the Spanish crown granted a self-governing constitution to the people of Puerto Rico, with the participation of Puerto Rico in the decisions which concerned their external affairs as well as representation in the national parliament. National matters were still in charge of the central government. What the outcome of this arrangement might have been, had it lasted, is anybody's guess. Mine is that separation from Spain was inevitable and that the Spanish-American War, as a result of which Puerto Rico was separated from Spain and its sovereignty transferred to the United States, must be interpreted as a short-cut in history. By virtue of this separation Puerto Rico ceased to be a part of a European kingdom and became, in the political sense, what it had always been and is in the geographic and social sense, a people of the New World.

The determination of the political status of the Puerto Rican people after separation was not made by the Treaty of Cession. The Treaty of Cession, the Treaty of Paris of 1899, left the determination of the political status of the Puerto Rican people to the Congress of the United States. Following the termination of the Spanish regime, Puerto Rico was placed under a military government for two years. In 1900 the Congress enacted the First Organic Act for Puerto Rico and civil government was restored. The Organic Act of 1900 provided for the people of Puerto Rico raising their own taxes and paying for their own internal government, while the Federal Government would have direct charge of external matters and what we all know as federal functions and services. It provided for the extension of the United States tariff to Puerto Rico, as imposed to foreign imports, and for the accession of Puerto Rico to the common market of the United States. The basic relationship still exists at present, except for the limitation on the amount of refined sugar Puerto Rico may ship to the mainland.

The Organic Act of 1900 also provided for American currency to be the currency of Puerto Rico, and for the extension to Puerto Rico of the United States postal system. No federal taxes would be collected in Puerto Rico. (This situation still exists except for the limited application of the Federal income-tax law. Residents of Puerto Rico are now subject to the Federal income-tax law on income derived form sources outside Puerto Rico. This includes Federal salaries earned in the island.)

Practically the whole tax field was left to the island's government and, since 1917, its income from revenues collected includes that tax on goods produced or manufactured in Puerto Rico and transported to the United States market. The tax is equal in amount to that imposed in the United States on United States domestic products. Puerto Rico was to be represented in the Federal Government by a Resident Commissioner who was also granted all the privileges of the House of Representatives, except a vote. The Government of Puerto Rico was organized with a Governor appointed by the President of the United States, a bicarmeral legislative assembly, and a supreme court. The upper house, of the legislative assembly, the executive council, was composed of eleven members appointed by the President. The house of delegates was elected by the people. Out of the 11 members of the executive council, 6 were at the same time respectively the heads of the six departments of the executive branch of Government.

Puerto Rico lived under the Organic Act of 1900, known as the Foraker Act, for 17 years. In 1917 Congress enacted a new organic act known as the Jones Act. The executive council was replaced by an elected senate. Four of the heads of the six executive departments were to be appointed by the Governor by and with the advice of the Senate of Puerto Rico. The Governor, the auditor, and the two remaining heads of departments, namely the attorney general and the commissioner of education, were still appointed by the President. The justices of the Supreme Court of Puerto Rico were appointed by the President, while the judges for the inferior courts were appointed by the Governor with the advice and consent of the Senate of Puerto Rico. Appeals from the Supreme Court of Puerto Rico were to be made to the First Federal Circuit Court of Appeals at Boston and thence to the Supreme Court of the United States. A Federal district court, which had been previously created for the District of Puerto Rico, was continued.

The Jones Act, the Organic Act of 1917, was not substantially amended for 30 years. In 1947 it was amended to provide for an elective governor and for the appointment by the Governor of all the heads of departments. The auditor and the supreme court continued to be appointed by the President of the United States.

A fundamental change in the government of Puerto Rico took place in 1950. Public Law 600, of the 81st Congress, was signed by the President on July 3, 1950. I had the honor of having introduced the bill in the House, while it was introduced in the Senate by Senators O'MAHONEY and BUTLER of Nebraska. The act, which was adopted in the nature of a compact and was to become effective if accepted in a referendum by the people of Puerto Rico, was in fact an enabling act to allow the people of Puerto Rico to organize their own government under a constitution of their own adoption, within the framework of relationships as Public Law 600 offered the people of Puerto Rico. They approved, 4 to 1, the terms of compact. Accordingly, they elected delegates to a constitutional convention to frame a constitution for the Commonwealth of Puerto Rico. I had the honor of presiding over that convention. The constitution framed by the constitutional convention was submitted to the people of Puerto Rico for approval or rejection, and they approved it by popular vote on March 3, 1952. Under act 447 of July 3, 1952, 82d Congress, the Congress of the United States declared the constitution adopted by the people of Puerto Rico to be in conformity with the compact, and approved it, subject to some conditions subsequently approved by the people of Puerto Rico. Thereupon the Commonwealth was inaugurated on July 25, 1952, on the 54th anniversary of the landing of American troops in Puerto Rico under General Miles on July 25, 1898.

In accordance with the compact, the Constitution of Puerto Rico creates the Commonwealth of Puerto Rico. The constitution contains a bill of rights and provides for a republican form of government, with three branches of government, namely, the executive, the legislative, and the judicial. The Governor is elected by the people every 4 years. The Governor appoints the council of secretaries, with the advice and consent of the senate. There is a unified judicial system and a legislative assembly consisting of a senate and a house of representatives elected by popular vote every 4 years together with the Governor and the Resident Commissioner. The bill of rights is patterned after the Bill of Rights in the United States Constitution. A unique feature of the Constitution of Puerto Rico is that it provides for representation of the minority parties, roughly proportionate to their voting strength, regardless of the number of districts they may have carried.

Under the compact the United States Government operates in Puerto Rico within a sphere of authority comparable to that within which it operates in the United States, except the exercise of the taxing power. The Government of the Commonwealth operates in Puerto Rico within a comparable sphere of authority as a State government, although the field in which it exercises its taxing power is broader than in a State. The other main difference between the Commonwealth of Puerto Rico and a member State of the Union is to be found in the fact that Puerto Rico has no participation in the election of the President of the United States, has no representation in the Senate of the United States and is represented in the House by a voteless Resident Commissioner. Federal laws apply in Puerto Rico, with a few exceptions, with the same force and effect as in the United States. Appeals of decisions of the Supreme Court of Puerto Rico are still made to the first circuit court. A United States district court continues to function in Puerto Rico.

Since 1917, under the Jones Act, the citizens of Puerto Rico were declared to be citizens of the United States. Common citizenship has been now for 41 years the fundamental bond of Union between the people of Puerto Rico and the people of the United States and, although those living in 1917 became citizens under collective naturalization, the fact is that more than half of the present population of Puerto Rico, the younger generations, are United States citizens by birth.

Within this framework of political and economic relationship to the United States, Puerto Rico is at present rapidly developing as a free community, permanently associated to the United States. While maintaining its historical and cultural heritage, it has assimilated and incorporated into its life the ideals, the outlook, the ways of American life. Puerto Rico is rapidly becoming bilingual. It is a hubbub of industrial activity. It is inevitably destined to become the outpost of American industry and commerce in the Caribbean, the frontier of American business, vis-a-vis the chain of countries that border the Caribbean Sea; countries that are now undergoing an upsurge of commercial activity and for whom I venture to predict Puerto Rico shall become the workshop. Millions of prospective consumers of the product of American enterprise, ingenuity and know-how live on the Caribbean basin and beyond, into the vastness of the Spanish-American Main.

With the weapon of a common language, both with the people of the United States and the people of the Caribbean, and with the stability derived from our American institutions, I venture to say that Puerto Rico will become the industrial leader of that area; again I say, the outpost and spearhead of American business and the American business and the American spirit in that part of the world.

Nixon's Cordiality Demonstration

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Hollywood Valley Times of Thursday, February 20, 1958:

NIXON'S CORDIALITY DEMONSTRATION

(By George Todt)

"They love him most for the enemies he has made."—Gen. E. S. Bragg—nominating speech for Grover Cleveland, 1884.

Regardless of the opinions of Republican Harold Stassen or Democrat Harry Truman about him in the past, I consider RICHARD NIXON one of the most admirable and amazing personalities in modern American political history.

Few men before him have shown so much progress and improvement over the years of his still-young political life as has Mr. NIXON. And he is on the upgrade, too.

A very fine columnist, whose work I read and admire, recently pointed out that DICK NIXON had always been the same, great guy he is today—but people are just finding it out for themselves as they get to know him better. With this outlook I must respectfully, but firmly, disagree. Here's why.

Although the Vice President was an exemplary young fellow when he first entered into politics a decade ago, not far removed from a tour of duty in the United States Navy as a lieutenant commander, he would probably be the first one to admit that he was green as grass at the time he made the fateful plunge. It ultimately took him from the position of Mr. Doakes to the second-highest slot in the administration of the most powerful Nation on the face of the globe today. All in the incredibly short span of 10 years. Isn't this amazing?

Now it isn't this tremendous success in politics which has filled me with admiration for DICK NIXON—I have been acquainted with quite a few other successful men and women in my time and this doesn't send me any more—but rather the way the young man from Whittier, Calif., has handled the success which has come his way.

In the first place, it hasn't gone to his head. As a matter of fact, he is about as down-to-earth and modest as any political personality of his magnitude could possibly be. As I have watched him become more polished with the passing of the years, I have also noted something else which is occurring simultaneously in his development—the common touch. Let me tell you something I saw him do recently which illustrates my point.

Last Monday evening, Dick and Pat Nixon received more than 4,000 GOP party precinct workers and their friends at the Hollywood Palladium from 6:30 until 10:30—and they shook hands and talked with every single one of the huge throng which jammed the hall. You can imagine how tired they both must have been when the last well-wisher had gone through the line. Frankly, the Nixons were pooped out. So what did they do next?

Well, there were just a small group of us left in the Palladium—some few scores of people on the way out when we all stopped to see what Pat and Dick Nixon were doing. It was so warm and human, the little gesture they made together, that I want all my readers to know about it. All the service personnel and volunteers who served the coffee and punch throughout the evening—another tiresome but important job—were lined up in double rows. And the Nixons went down the lines speaking to every one and thanking them for helping to make their reception the tremendous success that it was.

After people had been coming up to Dick and Pat all night to shake hands with them, this down-to-earth young American couple were thoughtful enough to reverse their roles upon leaving, tired as they were, and simply wouldn't leave until they had the opportunity to thank each and every one of the uniformed service personnel and the volunteers who served the crowd. I will leave it to you to imagine how proud and pleased they all were.

Actually, this warm and human action of DICK NIXON and his Pat are only illustrative of the spontaneous affection for others which constantly emanates from them both. They are humanitarian in the best sense of the term, because it comes from the heart. It is quite obvious to an observer that they truly like people and wish to be of service to them where and when they can. People like them because they like people.

The fundamental reason why I admire the Vice President so much may be summed up in these two words: eternal progression. I don't know of any figure in modern United States political history who keeps on improving himself so assiduously with every passing day—whose ability continues to expand so remarkably as he applies himself more and more to his job.

I have a hunch that DICK NIXON will keep on improving himself constantly as long as he is in public life. And this I like. Don't you? What is a more necessary ingredient to real progress than a consistent rate of improvement? And what is more hopeful in these trying times than the right kind of progress demonstrated by our leaders?

Interests of Family Farmer, Factory Worker, and Consumer Are All the Same Interests When Fighting Depression

---

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mrs. KNUTSON. Mr. Speaker, under permission to extend my remarks, I insert letters from two different segments of our economy, the farmer and the factory worker, both of whom recognize our common problems and common interests in licking this farm depression that affects the national economy:

UNITED AUTOMOBILE, AIRCRAFT, AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA,

Minneapolis, Minn., February 27, 1958.

Hon. COYA KNUTSON,
Ninth Minnesota District,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN KNUTSON: Recently you received a copy of a resolution passed by the Minneapolis City Council concerning unemployment problems as related to the farm problem.

For your information I am enclosing a copy of a resolution adopted at a conference on unemployment problems held on January 15 in Minneapolis.

You will note that the Minneapolis City Council's action was initiated by our unemployment resolution.

Our local union representing workers in a hard hit farm equipment industry cannot urge you too strongly to initiate and actively support measures designed to relieve the economic situation now, not some time in the vague future.

Respectfully yours,

GEORGE W. MACDONALD,
Business Representative, Local 1146.

Resolution on reduced farm income and its effect on full employment

Whereas the American people, through Congress, passed the Employment Act of 1946 with instructions to any and every administration to use all its powers to maintain maximum production, maximum purchasing power, and maximum employment; and

Whereas numerous national policies, including farm policies have been put into effect that are not designed to achieve those stated principles but are actually designed to accomplish the opposite results; and

Whereas it is common knowledge that full employment has not been maintained and that presently in Minneapolis, as in the Nation as a whole, less than maximum production has resulted in much less than maximum employment and maximum purchasing power; and

Whereas there are over 18,000 admitted unemployed in Minneapolis and some 4 million in the Nation with the prediction that these figures will be greatly increased; and

Whereas a great portion of the responsibility for this growing number of unemployed workers can be directly traced to farm policies that have resulted in reduced farm income and eventual elimination of the family-type farmer; and

Whereas such reductions in farm income and family-type farmers serve to reduce, not only the purchasing power of the family farmer who is an important customer for products produced by the city workers, but of the unemployed city worker who in turn cannot buy the farmers' products; and

Whereas Minneapolis, which is located in the heart of an agricultural area and whose well-being through income derived from agricultural products is greatly dependent upon sufficient farm income to buy the products which we, the citizens of Minneapolis, produce; and

Whereas the great depression taught us the lesson that farm depression drags down the living standards of all of us and that American democracy thrives on the independence and self-reliance of its family farmers and organized workers; and

Whereas if present farm policies continue, including the most recent announced reductions in dairy product support prices, driving out small family farmers, and turning the farm economy over to corporation farms while more and more of the business economy is falling into the hands of the huge monopoly corporations, our democratic way of life will have received a serious blow: Now, therefore, be it

Resolved, That this conference on growing problems of unemployment sponsored by the Hennepin County CIO council, meeting in Minneapolis at 501½ East Hennepin Avenue on Wednesday, January 15, 1958, goes on record calling upon the city council of Minneapolis to pass a resolution memorializing the national administration and Congress to adopt a farm policy that will embody the following:

1. A farm price-support program that will maintain at least 90-percent parity on all crops and dairy products, up to a reasonable level of farm family income.

2. Such support program should include production payments, a bona fide soil-bank program, as well as loans and other devices.

3. Encourage farm prosperity by expanding food consumption at home and abroad under terms and conditions that will neither penalize our own farmers for producing abundance nor antagonize farmers in other countries by dumping so-called surplus foods as a part of capital grants and loans in international economic development, but so as to supplement inadequate diets as proposed by the United Nations Food and Agriculture Organization.

4. Develop school-lunch programs that will reach every child and for food stamps or allotment programs that will supplement inadequate diets of persons with low incomes without being used as an excuse for reducing or holding down wages, pensions, or public assistance payments in cash.

5. Allow real family farmers a greater measure of democratic participation in developing of farm programs through their own organizations; and be it finally

Resolved, That the Minneapolis City Council go on record calling either for the resignation or removal of the present Secretary of

Agriculture who has proven that he is either incapable or unwilling to administer such farm policy programs that will encourage maximum production, maximum purchasing power, and maximum employment.

BONNIE VIEW FARM,
Java Village, N. Y., March 1, 1958.

Hon. COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR MADAM: I take this opportunity to express, in part at least, the real appreciation I have for the noble fight you are waging for the American family farmer.

We hear much oratory and concern expressed about the American way of life and the fear that Russia will in some mysterious manner deprive us of this privilege. How stupid. If we would only pause for a brief moment, in this rat race to the moon, and do a little basic research on our American heritage we might discover a very definite pattern and be able to identify and evaluate some of the ingredients which have made us great, as well as some of the negative factors.

Not the least of these assets is the contribution to our economy and our culture of family farming. Through the years it has stood as the symbol of the frontier, of solid thrifty citizenry, and good wholesome American living, as it should be. It comes much closer to an expression of American democracy and independent thought and action than is to be found in more metropolitan groups. The good rural communities made up of independent farm families living under prosperous conditions constitute the greatest defense we have against communism. While they are today in a minority they still contribute a staggering amount to productivity and consumption of American trade. Without them the American way of life would be a mockery.

Today our problem is one of survival. The efforts of Benson to liquidate the American family farmer is as ruthless and reprehensible as anything ever practiced in Russia. Today we are operating without choice in one of the following ways. Through a subsidy of a part-time job, inheritance, depreciation or debt. Any way it's a losing game. The current depression is aggravating a bad situation, and the outlook is more of the same.

It is certain we cannot expect anything good from the quail shooters, nor the diplomats who fly around like a misguided missile, with a bo-bo in one hand and a blank check (ours) in the other. Many of our statesmen and leaders (so called) appear in a lunar daze, with what Elbert Hubbard once diagnosed as "chronic constipation of the intellect and acute diarrhea of the vocal chords." No help here. It seems to me that our only road to survival is to make ourselves heard, above the whistle of the missile, the moans and groans of the sacred cows, and the bellowing of Benson, and call for a showdown.

I therefore humbly suggest the following as grass sentiment from a real family farmer.

FARM PROBLEM

A definition of terms and a bill of particulars. Define family farmers as those who farm for a living and are bona fide operators. Also define and catalog tax-dodging farmers, hobby farmers, corporate farming, and what else have you.

Show plainly who has contributed and how much to the so-called surplus, and how they have absorbed farm subsidies.

Demand that the President (whoever he is) declare a moratorium on all family farm debt, including taxes, in excess of $100, until the farm dollar is a dollar in the market place.

Enact legislation to curb and control corporate farming, penalize or discourage tax dodging and hobby farming.

Use supports and controls if necessary until a practical farm program is devised. Favor direct payments over Government purchase of processed goods. Turn the spotlight on more efficient distribution of farm products and encourage true cooperatives into this field.

Consider the advantage of land use rather than soil bank.

Use present surpluses to help needy people wherever they are.

Work for the appointment of a commission on country life.

I trust that this will be received as intended, an honest expression of opinion from one sincere American to another.

Gratefully yours,

H. G. ABBOTT.

Tax Evasion

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. VANIK. Mr. Speaker, the sale and purchase of corporations for the advantage of profitable tax-evasion gimmicks is developing into a profitable new business on the American scene. This new business is costing the United States Treasury untold millions in income-tax losses. The gimmick is very simple, a company with a lusty income record acquires or is acquired by a corporation with a tax-loss carryforward. The corporation with taxable income offsets this income with the tax loss carryforward and the Federal Treasury loses millions of dollars in income taxes otherwise due and payable. The use of this gimmick is big business, and its use shifts an increasing burden on the rest of the tax-paying public.

In order to take advantage of this gimmick and develop a tax-loss carryforward some businesses have shut down operations and displaced thousands of workers throughout the Nation. This was never the legislative intent of the internal-revenue laws which make possible the privilege of loss carryforward. This privilege should be available only to a corporation continuing in business, and it should not be assignable to another corporation or business for tax-avoidance purposes. It is my hope that the other body will correct this tax-saving gimmick as it currently considers the technical revisions to the Internal Revenue Act.

As a specific example of the operation of this tax-avoiding gimmick, I want to call attention to the following article entitled "Servel Says It Seeks To Acquire Firm With History of Earnings," which appeared in the Wall Street Journal of March 3, 1958:

SERVEL SAYS IT SEEKS TO ACQUIRE FIRM WITH HISTORY OF EARNINGS

DOVER, DEL.—Servel, Inc., which disposed of most of its manufacturing business during 1957 for about $14 million, has a $18 million tax loss carry-forward and is looking for ways to spend its money, an official said at the annual meeting here.

Duncan C. Menzies, president, said, "We want an established business with a history of earnings * * * a bread-and-butter business, not one with a lot of glamor and no record of earnings."

It's hard to tell, Mr. Menzies said, but it is possible that such a firm will be purchased within the next 6 months.

Servel last year sold its air conditioning business and some buildings from its defense division to Arkansas Louisiana Gas Co. for about $3,675,000. Other property, including the firm's general offices and home appliances division, with more than 1 million square feet of space, was sold early in January to Whirlpool Corp.

William Caldwell, counsel for Servel, said the firm has enough cash to redeem the preferred stock at $107.50 a share, and still pay off a short-term loan of $3,760,000. But, said Mr. Caldwell, "I think the common stockholders would cry bloody murder." He said that the sale of the firm's assets last year was authorized on the condition that the firm look for new businesses.

"I could not encourage directors to pay dividends except out of earnings," Mr. Menzies commented. He said he thinks the management has a duty to resume dividend payments as soon as new businesses are purchased and earnings begin coming in.

Convictions That Guide Benson

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Valley Times, Hollywood, Calif., of Monday, February 3, 1958:

CONVICTIONS THAT GUIDE BENSON
(By George Todt)

"Whatever makes men good Christians, makes them good citizens."—Daniel Webster.

President Eisenhower, at his first Cabinet meeting, asked 1 of the 12 Apostles of the Church of Jesus Christ of Latter Day Saints to offer a prayer. He did, and since then every Cabinet meeting has opened with a prayer, either vocal or silently.

The Mormon Apostle commenced this commendable cycle was the Secretary of Agriculture, Ezra Taft Benson. All of his staff meetings are opened with a vocal prayer, as are also the National Agricultural Advisory Commission meetings. As a matter of fact, all members of the staff of varying religious denominations take their turn in offering prayer.

What kind of a man is Secretary Benson anyway? Shall we look beneath the surface, and see for ourselves the character and philosophy which motivates this great but much-maligned public servant? Is his the kind of Americanism we can buy for ourselves?

For answer to this question, let's take a few personal glimpses of the man:

He is a kindly and compassionate person who neither smokes nor drinks, nor do any members of his family; while he conscientiously adheres to his own standards, he is careful not to impose them on others holding different views.

His family life is an exemplary and inspiring one. His devoted wife, the former Flora Ammussen, was a beautiful girl from a wealthy home who fell in love with a young farmer of modest means in the early twenties back in Cache Valley, Utah and Idaho. She waited for him to graduate with honors from Brigham Young University, going on a 2-year mission for the Mormon Church to eat up some of her waiting time

in the meanwhile, and then married her childhood sweetheart without further ado. The Bensons have 6 talented children ranging from 14 to 30, all active in church and civic affairs today.

The deep religious faith and humility of Ezra Taft Benson—and the faith and loyalty of his lovely wife and family which comprise 2 sons and 4 daughters—give him a serenity, a confidence, a sense of security which is not likely to be shaken by the Washington tumult now or in the future.

Now what about Mr. Benson's inner philosophical convictions—what motivates him in the performance of his important duties? How can we judge the effect until we know what caused it in the first place? Shall we hear from the Secretary directly about this?

"I love this Nation. It is my firm belief that the God of heaven raised up the Founding Fathers and inspired them to establish the Constitution of this land. This was engrained in me as a youngster by my father and mother and by my church. It is part of my religious faith.

"To me, this is not just another nation. It is a great and glorious society with a divine mission to perform for liberty-loving people everywhere.

"We here in this privileged land hold in our hands the best hope of mankind—and it will be our shame and disgrace before God and man if we allow that hope to wither and die.

"The supreme test of any Government policy, agricultural or other, should be: 'How will it affect the character, morale and well-being of our people?'

"We need—the world needs—a strong America in the critical years ahead.

"Freedom is a God-given eternal principle vouchsafed to us under the Constitution. It must be continually guarded as something as precious as life itself.

"It is doubtful if any man can be politically free who depends upon the state for sustenance.

"A completely planned and subsidized economy weakens initiative, discourages industry, destorys character and demoralizes the people."

This, then, may provide us with a quick insight into the philosophical and moral thinking by our hard-pressed Secretary of Agriculture today. We can readily observe that he is much more interested in American principles than running a popularity contest for the sake of expediency. We could do well, in this instance, to recall the immortal words of the great southern statesman, Henry Clay, who said in an address some 108 years ago.

"I would rather be right than President."

Former President Hoover Turns Clock Back to 1931

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mrs. KNUTSON. Mr. Speaker, under permission heretofore granted, I make the following observations: On Washington's Birthday, 1958, the American people were treated to a bit of magic. The magician was former President Herbert Hoover. The place was Valley Forge, Pa. When Mr. Hoover concluded his speech, he revealed a "surprise." He said:

The address I have just made to you is, with slight elimination of less pertinent paragraphs, the identical address which I delivered on this spot * * * 27 years ago in the depths of that period of anxiety and discouragement. But we rallied to a period of greatness as we will again today.

Mr. Hoover had a purpose in selecting an old speech delivered on May 31, 1931, for delivery on February 22, 1958. From his own words, Mr. Hoover admits that 1931 was a period of depression, "of anxiety and discouragement." He indicates 1958 represents a very similar time of history. He indicates that his words will rally us from our depression to another "period of greatness."

It seems to me that it was not the Republican Party's "words without deeds" that brought us out of the depression Mr. Hoover speaks of a quarter of a century ago. It seems to me that the only prosperity that was "around the corner" back then was the prosperity that Franklin D. Roosevelt and the American people—with the greatest teamwork this country ever saw—constructed with hard work, courage, and imagination.

Mr. Hoover does sense that an economic depression today is a reality not merely the hallucination of prophets of gloom. Let us not be afraid of words. Words cannot hurt us. But inaction can spell disaster.

Mr. Hoover said that the difference between the two speeches was the elimination of "less pertinent paragraphs." I asked the Legislative Reference Service of the Library of Congress to obtain for me a copy of his 1931 address and was immediately struck by one, so-called slight elimination. In 1931, but not in 1958, Mr. Hoover said:

No one who reviews the past and realizes the vast strength of our people can doubt that this, like a score of similar experiences in our history, is a passing trial. From it will come a greater knowledge of the weakness of our system, and from this knowledge must come the courage and wisdom to improve and strengthen us for the future.

In 1958, Mr. Hoover reworded the paragraph to read:

But no one who reviews the past and realizes the vast strength of our people can doubt that this, like a score of similar experiences in our history, is a passing trial. From this knowledge must come the courage and wisdom to improve and strengthen us for the future.

Mr. Hoover's elimination of the phrase "a greater knowledge of the weakness of our system" is a confession of the number one shortcoming of Republican leadership: a failure to learn from the past. The weakness of the GOP system which we discovered after the Hoover depression was the "trickle-down system of big-business favoritism." The Republican Party is a great believer in "rugged individualism." Yet we rarely hear of the GOP calling for rugged individualism from "big business."

I wonder whether it is not "profits that zoom" instead of "prophets of gloom" which have brought into being this 1958-style Hoover "recession." I wonder whether the American farmers, small-business men, the factory workers, the schoolchildren do not deserve more than words. Mr. Eisenhower said on Monday, "Now is the time for courage and commonsense." He should have added: "Now is the time for action."

Brooklyn: A Frontier

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. MULTER. Mr. Speaker, though frequently the butt of jocular remarks, Brooklyn is, I believe, one of the most culturally advanced and forward-looking communities in the Nation.

Dr. Otto Klitgord, president of the Community College, and one of Brooklyn's most distinguished citizens, demonstrates in the following address why Brooklyn today is a pioneering community. The address was delivered at the annual meeting of the Downtown Brooklyn Association on January 27, 1958:

BROOKLYN: A FRONTIER

(Remarks by Dr. Otto Klitgord at the annual meeting of the Downtown Brooklyn Association, January 27, 1958, at the Towers Hotel, Brooklyn, N. Y.)

Recently, two men, 1 a professor of science, visited a local amusement park. Both were intrigued by a new target range where the object was to shoot down pingpong balls suspended on a jet air stream. The first man proceeded to take careful aim and fired 20 rounds without hitting a single ball. The scientist picked up his rifle, took careful aim, fired 1 shot, and immediately all 10 pingpong balls fell. An observer remarked "What a perfect shot. You are a superior marksman." The scientist replied, "It is not a matter of marksmanship—it is simply a matter of knowing what to do—I shot a hole in the pump."

Four weeks ago I was approached by your committee and asked to speak at this meeting and be prepared to say something that would reveal Brooklyn and the Downtown Association as they will be 10 years from now. This I cannot do. I am not a visionary, and I find crystal-ball gazing very unreliable. However, I can examine the facts as they exist, and from the facts make some determinations as to what we should do, and probably will do, in order to give us the Brooklyn 10 years hence as we would like it.

In gathering the facts and information necessary to make practical recommendations, I enlisted the aid of several of my colleagues. To test the practicability of the ideas brought forth, I have further been guided by the solid and constructive thinking of several of your members.

Project No. 1 for our team of scholars was to search the record to find facts concerning the future of Brooklyn. In searching for predictions of failure concerning Brooklyn as a city and as a borough, our researchers concerned themselves with events at the turn of the century, preceding and following World War I; the recession of the early twenties; the great depression; the period just before and after World War II, and, finally, our era of greatest prosperity, the fifties to date. The search was futile and we came away with empty hands. With the exception of occasional political speeches predicting horrible things that would happen to Brooklyn if the opponents were elected, we found a recurrent pattern of confidence in Brooklyn reflected in predictions of improvement in our economic, social, educa-

tional, and political life. Almost without exception, these predictions of growth and related prosperity have come to pass. From the facts at hand, and using as one of our resources the trends of the past, it is safe to predict, 10 years hence, a Brooklyn just as strong economically, socially, culturally, and politically, as we are willing to make it.

Downtown Brooklyn will be exactly as strong as the 2,800,000 Brooklynites which the downtown area will serve. The many individual businesses and organizations that make up this wonderful center must continually seek one another out to plan together, work together, and stick together—so as to better serve the entire borough and thus contribute to its strength.

HOUSING

No one will dispute the fact that Brooklyn needs new housing and lots of it. There are areas that are badly blighted and should be redeveloped. We have a fair share of overcrowding and some slums are in evidence. Through proper redevelopment the ilhoused can rise and live in surroundings that will dignify man. Ways must be found to spur the building construction that is essential to Brooklyn's future. It is time that everyone take a fresh new look and make a new attempt at finding better ways of establishing the good housing that Brooklyn needs.

The need is there and when the solution of meeting this need can be found, the resultant effect on jobs, business, industry, and family income should be phenomenal and should have a salutory effect on all the people of Brooklyn.

TRANSPORTATION

Transportation is now, and will for years to come, be a continuous plaguing headache, strangling the free movement of people and goods. Fantastic transportation costs, pressuring the economy, make us all cry out for some form of traffic relief. The need within the city for highways, throughways, parkways, bridges, tunnels, parking space, is endless and fantastic. Every step taken toward the solution of the traffic problem takes valuable real estate off the tax rolls, diminishes the space in which our people can live, work, and play, and otherwise plagues our existence at every turn.

Modern science, engineering, metallurgy, and design, can take us far beyond the present-day subway, bus, and arterial parkway forms of transportation.

I would like to see the city sponsor and actively support an experiment that could well, at one fell swoop, prove to be the master solution of the problem.

There is within our grasp a way of whisking through traffic from the Jersey shores, across Brooklyn, and into Nassau County without bothering anyone. Why is it concluded that only a bridge or a tunnel can link Staten Island with Brooklyn?

Developmental engineers and scientists, we find, have for years been working on a system of transportation which could carry passengers and goods ranging from a baby carriage to a 60-ton double trailer, in lightweight capsules moving almost noiselessly at high speeds from one point to another.

We should build for purposes of study and experimentation, and design for the future a monorail system of transportation. During the past few months, I have collected from every corner of the earth, books, manuscripts, designs and plans, which show clearly the tremendous possibilities of this form of transportation. I believe that an actual experiment would clearly show the desirability of moving persons and goods quietly, rapidly, and economically, across the city in a quiet, dignified, speedy monorail system which would be so designed that it would enhance the appearance of the city.

I have no reference whatsoever to an elevated. The modern monorail for New York would have no more similarity to the old elevated than our modern missiles have to Benjamin Franklin's kite.

If the city is to make further progress, better and less costly transportation will have to be found. I believe that this experiment should be launched. It could well be our undoing not to try.

The possibilities are so great that for purposes of the experiment and to work out engineering problems and designs, private industry might well contribute equipment, materials, and technical assistance. The Downtown Brooklyn Association and the chamber of commerce could well join hands in soliciting the aid of industry.

INDUSTRIAL PARKS

I am cognizant of the many reports that have appeared in the daily press about the mothballing of our giants of the sea and note the drastic curtailment in war shipbuilding activities. Concern has been expressed by many about the future of the New York Naval Shipyard, the scene of employment of tens of thousands of Brooklynites. Missiles, projectiles, atomic warheads, nuclear-powered submarines, are, of necessity, going to force a drastic change in the industrial activities carried on there. Few of us can see the yard as a missiles factory, or a place for the assembly of superpowered missile-bearing explosives.

Our defenses of the future will have little need for the products of the Navy yard as it exists today. Unless the yard can be used in a realistic way for future defense purposes by building or servicing units that require its vast area, prize water frontage, and huge industrial buildings and equipment, plans should be made for its use as a modern industrial park used for the manufacture by private industry of the tools of peace, defense, and the products needed to increase our standards of living.

It is ironical to think of one of Brooklyn's No. 1 industries, the Mergenthaler Linotype Co., moving away from its home, when space that is needed is just across the street. The Navy yard, a pillar of our naval defense strength in the past, can now become a pillar of economic strength to help support our program of peace and contribute to defense by the manufacture of items needed for our general security.

When it is clearly shown that the Navy yard could be better used for industrial purposes, then it would be advisable that an authority be established to develop and expand it for industrial purposes.

I am confident that the space and facilities in the yard could be enlarged and improved to provide permanent employment for the yard's current work force, and in addition, create new jobs for many thousands more.

Other industrial parks can and should be developed in Brooklyn. There are probably over 1,000 acres that could be used for this purpose. I understand that the city is seeking legislation that would permit it to assemble odd parcels in undeveloped and blighted areas for industrial park purposes. This is certainly the right thing to do. Let's all spur the city on to greater activity. Give it our full support. After the sites are available, then will come the task of relocating present factories and helping new ones to move in.

More industry, more efficient plants, more jobs, and a resultant higher standard of living, will contribute materially to a prosperous brooklyn 10 years hence.

BROOKLYN AND THE PORT OF NEW YORK

Brooklyn's waterfront comprises the greatest and most important part of the Port of New York. This great port, the very heart of our business and industry, is the principal reason the city came into being and emerged as the greatest city in the world.

Since so much of Brooklyn is devoted to the port and dependent on it, our future is closely interwoven with the destiny of the port. We are all aware of the great work and the many plans that are underway by the port authority, and the city of New York. It is imperative, however, that deeds follow words and plans.

By our own admission, the many piers, wharves, and modern cargo-handling facilities needed for the efficient, rapid, economic handling of goods are sadly wanting. We must also realize that to have a modern port we need, not only modern facilities, but well-trained workmen and technicians to expedite the work of the port.

To the north of us, almost completed, is one of man's greatest modern developments—the St. Lawrence seaway. Like it or not, we must face the fact that this huge new system of waterways is going to divert a tremendous tonnage from this port, as well as from other ports along the east coast. Because we are at present the busiest port, we may suffer the greatest tonnage loss. To say that this seaway will hurt us economically, or result in the loss of jobs and shipping, and perhaps stimulate the exodus of industries to other places, could place me in the position of being labeled a "prophet of doom." At this I rebel and am thus compelled with every ounce of my energy to help turn a potential loss into a worthwhile asset.

As it stands, we have our old Port of New York, for better or worse, while near us to the north there is being created an entire new, modern, competitive system of ports and waterways. About this development we can do nothing, but we can be in a position to strengthen our port, attract more business to it and bring more business into New York directly from the Great Lakes and Canada. Instead of being separate from the St. Lawrence seaway, we should become a part of it. I believe that this could be done at a cost no greater than that of the Brooklyn Civic Center.

Let us take a careful look at the map and proceed in a freighter by inland waterway in a northerly direction. Without difficulty, we proceed to Albany via the Hudson River. With a little dredging, we can proceed up the Hudson to Fort Edward near Glens Falls. Continuing north, there is an old but usable canal at Whitehall which, with dredging, would permit the passage of our ship into Lake Champlain. In this lake, we have a system of small inland ports on both the New York and the Vermont sides of the lake. Our vessel will pass with no difficulty through Lake Champlain into the Richelieu River near the Canadian border, and thence into the St. Lawrence River. Dredging and other improvements would also be required in the Richelieu River.

Surely, this would require some doing. Funds would have to be provided, engineering work started, and some kind of a treaty with Canada negotiated. But just think of what this would do for the Port of New York, the State of New York, the State of Vermont, parts of Canada, and all of the minor ports throughout the Great Lakes region that could benefit from the facilities available here.

Our port handles foreign commerce valued at nearly $10 billion per year; 490,000 persons earn $2,100,000,000 each year from jobs that would not exist if it were not for the port. The opening of an inland waterway directly from New York to the St. Lawrence might cost as high as $150,000,000. It would be well worth that expenditure to strengthen our great port and support people and industries dependent upon it. I presume that the Federal Government and the States of New York, New Jersey, and Vermon would aid in financing the necessary work to improve and strengthen the economy of this region.

On August 1, 1957, there was introduced in the House of Representatives and the

United States Senate, a joint resolution authorizing the Secretary of the Army to make a survey of a water route from New York into Lake Champlain and to connect with the St. Lawrence River. We, in Brooklyn and the Metropolitan New York area, should spur this survey on to completion so that the St. Lawrence seaway may actually become a great asset to the port of New York, and also contribute still further to the national defense and security of the United States.

EDUCATION

Throughout the world, people have been so busy laughing at corny jokes about Brooklyn that few have taken the trouble to find out about Brooklyn's important place in world affairs as a center of learning, culture, and research in the arts and sciences.

Few people realize that each day over 50,000 men and women attend our institutions of higher learning: Brooklyn College; Brooklyn Law School; Cathedral College of the Immaculate Conception; Packer Collegiate Institute; Long Island University; State University's Downstate Medical College; Pratt Institute, in the midst of its new development; Brooklyn Polytechnic Institute, the second largest engineering college in the country and one of the first in research; St. Francis College; St. Johns University; St. Joseph's College for Women; New York Institute of Technology; Institute of Design and Construction. Add to these the New York City Community College of Applied Arts and Sciences, and you have an extraordinary concentration of facilities for higher education, exceeding that found in many States and foreign countries.

In Brooklyn, our youth has educational opportunities in all of the professions, from architecture through zoology, and in all of the technologies from automation through X-ray.

The needs of business, commerce, labor, and education are all serviced by our great colleges and universities. Add to them, one of the world's best museums; a top-flight public library system; the Academy of Music; the Aquarium, and Marine Park; historical sites—and we find educational and cultural facilities equal to the resources found in any community in the entire world.

Our public school system has been criticized as being wanting in science, mathematics, and related subjects. Yet, at the same time, we are praised from far and near for having right here in Brooklyn one of the best science high schools to be found anywhere. I refer to the Brooklyn Technical High School with nearly 5,600 science-minded students and a top-notch faculty.

We have in our schools and colleges brainpower and knowledge that, properly applied, can think through and find a good solution to most of the problems with which we are faced today. However, it is up to organizations such as the Downtown Brooklyn Association to make the advances to our academic people which will produce a satisfactory wedding of town and gown. Working together—business, the community, and education—can produce wonders.

We hope that through our cultural leadership in the arts and sciences, and by our participation in college and university programs, we can make the people of the world laugh with Brooklyn as the problems of the present yield to the achievement of the future.

The Chamber of Commerce of the United States, aided by the Brooklyn Chamber, have conducted a great study and have labeled it "Education: An Investment in People." The report points out that there is a direct relationship between education, earning power, and the standard of living. The report shows that as a result of more education, there is greater productivity, greater political activity, and a higher standard of living. The report eloquently says:

"An active interest in providing ever better educational opportunity in a community is the essence of good citizenship; good government; and good business."

Our programs of higher education must be strengthened, enlarged, and improved, if higher education for the people of Brooklyn is to remain equal to, or superior to that found elsewhere. Part of your investment has to be in education; every one of our local private colleges is in need of funds to establish scholarships, to expand their buildings, and raise faculty salaries.

At this time we are all aware of the great advances that the Soviets have made in science, but few realize the tremendous research program being carried on right here in Brooklyn by Brooklyn Polytechnic Institute. Research in space problems, electronics, chemistry, communications, nuclear physics, may shortly bring forth the answers to many of our science problems. Few realize that this college, like all other colleges, is struggling against great financial odds in trying to expand their offering, equip the reconverted buildings on Jay Street, keep pace with the increasing interest in education.

Every one of us will benefit directly and indirectly from the work of our great colleges. Before this week is out, I would encourage each one of you to think seriously about making a contribution to any of our local colleges. First find out for yourselves just what the needs are; then write a check; a substantial one.

I want to remind you that public colleges have financil problems that are just as pressing as those faced by private colleges. The publicly supported colleges, like Brooklyn College, with an enrollment of about 19,000, and our New York City Community College with an enrollment of 6,100, constantly need your dedicated support, and the assurance that you will be active in helping the city succeed in giving our schools the wherewithal to accommodate increased enrollment, raising faculty salaries and providing adequate buildings.

For example, the board of trustees of the New York City Community College was greatly aided in its efforts to acquire a site and additional buildings in which to accommodate more students when Mr. Andrew S. Roscoe, speaking for the Downtown Brooklyn Association, and representatives of the Brooklyn Chamber of Commerce, appeared before the board of estimate. They pointed out that an expanded community college was necessary to provide technicians needed in our modern industry. In this connection, it might be pointed out that although the amounts appear in the city budget, steps have yet to be taken to acquire the site and assign an architect to design the additional buildings. Perhaps the association can be of help again and thus help provide the education that our young people require and the technicians needed to operate our industries.

AN ARENA

The increase in leisure time, resulting in general from the progressive decrease in work time is creating vast local markets for all leisure-time pursuits. As a result, there is a greater demand for adult education facilities. Libraries are being pressed to provide more books and library services; our museums and art centers are finding their facilities taxed to the limit, and plans will be advanced for their expansion.

Public amusement is bound to come in for a vast increase, so let us take a moment to examine this one carefully. As much as we loved the Dodgers, it must be admitted that interest in them had waned to the point that only a relatively few found it worth their while to attend any but the most important games. I have a distinct feeling that this had nothing to do with Ebbets Field or its location. If people are really interested and want to see or participate, they will find the means of getting there.

At the very time the crowds were dwindling in the ball parks, thousands and thousands of sports-minded people were jam-packing Roosevelt Raceway and other outlying tracks and sports centers; difficult transportation was no obstacle.

I am sure we can agree that a large scale commercially operated sports area or arena would pay—a center where people by the thousands could participate in their favorite sports, or witness the best exhibitions by professionals.

I am not at all sure we need another ball club; I am sorry we lost the one we had, but to get another would just be inviting a repeat performance of the California story.

Space suitable for a sports arena in Brooklyn is at a premium, because we also need acreage for industrial parks and modern housing. Much as we would like an arena near the Atlantic Avenue railroad station, the problem involved are immense and no solution is in evidence. There is some opinion that the downtown section would be best enhanced if the station area were redeveloped for income-producing private housing.

In seeking other possible locations for the needed sports arena, another possibility comes into view. The day is here when large land areas in the midst of a teeming metropolis are no longer essential or practical for big military installations.

Is not the day foreseable when the large area of Fort Hamilton could contribute to the economic, cultural, and leisure time pursuits of the people of Brooklyn. It should be a good location for an arena and would not take property off the tax rolls. In fact, it would result in some being added, because it would be utilized for sports activities that are commercial in nature. If it can be clearly shown that an arena should be located elsewhere, then the fort could become available for housing.

OUR GREATEST ASSET

Outside of the natural advantage given to us by the port of New York, our greatest single asset is the people of Brooklyn—2,800,000 strong—more than you will find in most cities or States.

The people of Brooklyn generally are of the working class; many have come here from all over the world and have chosen Brooklyn as the frontier on which they will establish their homes and families; improve their lot; work their way from the lower income to the middle and upper income class; educate their children, and contribute, to the best of their ability, to the religious and civic life of our borough.

The facts and figures released by the city planning commission, the board of education, and the bureau of the census, as reported in our local newspapers, point again to an influx in the ever-changing make-up of our Brooklyn population. We now have in our midst large numbers of Puerto Ricans and Negroes, all of whom are here for exactly the same reason that we formerly received waves of Dutch, English, German, Irish, Italian, Poles, Swedes, Russians, and others from the four corners of the earth. Our newcomers have ambitions and hopes that the opportunities that exist here will enable them to become more self-sufficient and economically secure, and will enable them to provide education for their children; have good homes; enjoy modern health standards, and the other things that come with the good living that is possible throughout all America.

In the main, our new people want to do the right thing; they seek honest employment and welcome guidance; are willing to be educated in order that they reach their goals and objectives. Few come here for a "hand-out" or relief; they are just as ashamed to accept public alms as you or I would be.

The Negro and the Puerto Rican will contribute to the greatest economy that Brooklyn has ever known, if we will be careful and diligent in our planning and activity so that this may come about.

In the past, industries by the hundreds left New England, New York State, and even Brooklyn; they have established new plants in the west, south, Puerto Rico, and elsewhere. Many were attracted by offers of tax-free operation; free plant sites; loans without strings attached; low-cost labor; freedom from unions, and similar inducements. Industries that went south found the Negro to be a top-notch industrial worker, equal in most respects to anyone available in the north. Of the 500 plants that have been established in Puerto Rico, all, without exception, acclaim the Puerto Ricans as an asset to industrial production.

However, there are many factors in these distant places not entirely to the liking of the industries which moved away from here hoping to improve their lot. They soon found that existence in some of those tax-free towns was almost intolerable because, after all, what kind of a school system, water supply, fire department, police department, public health program, and sewage system, can be furnished by a tax-free economy? In fact, we can sum it up by saying that those tax-free offers have about as much substance as Los Angeles' gift to the Dodgers.

On this point, I think it about time that this association, the Brooklyn Chamber of Commerce, and similar organizations, label the tax-free giveaway programs as the baloney—blarney—that they really are. Our erstwhile industries having moved away, soon found that their modern plants using automation, new inventions, scientific materials, required a high degree of education—technical education in particular—to produce the technicians needed to sustain high operational efficiency. Technicians could not, or cannot, be educated in the tax-free communities, so industry was forced to import technicians, or, at great cost, to train the workers themselves.

Now, we are about to experience a change. New industries, profiting by the example of those that have moved away, will prefer to become established here where our public schools, colleges, and universities, offer the education that the workers need; education that has produced a continuous supply of competent technicians, engineers, and scientists.

Our greatest resources are people, educated to earn a good living, and to live the good life. They are here; it is up to you to stimulate the expansion of industry and the growth of new enterprises so that in sharing the frontier that is Brooklyn, all may prosper.

SUMMARY

A country village decided to have a festival at which there would be food, dancing, games, and free wine from a huge cask would keep the spirits high. To fill the cask, each villager was to pour in a jug of his own wine made from local grapes. One villager thought "my supply is low and it is too late to make more—and anyway, one jug of water in that huge cask will never be noticed." During the festival the cask was tapped when all were tired and thirsty. As the spigot was turned, out flowed a steady stream of clear water.

So that our cask will be filled with the right ingredients for the constant celebration that accompanies prosperity, each one of you should adopt the following program of action:

Keep your association strong and a force in the affairs of the city and Brooklyn.

Bring government and private enterprise together in a new attempt at establishing the good and abundant housing that Brooklyn needs.

Try the monorail.

Make good and full use of the navy yard.

Join the St. Lawrence seaway.

Help our colleges and schools.

Build an arena.

Make Brooklyn a prosperous home for all our people—all 2,800,000 of them.

The story of the two men engaged in a game of golf is appropriate at this time. Neither one being very good at the game, they were soon in a trap. One took a good swing, missed the ball, but plowed into an anthill scattering sand and ants all over the place. The second swing was worse; again he missed the ball, plowing up more ants and sand and scattering them all over his friend. As he raised his club for the third stroke, an ant was heard to shout: "If we are going to survive, we had all better get on the ball."

Presidential Indifference

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the March 3 Charleston, W. Va., Gazette. I recommend it to the attention of my colleagues.

The editorial follows:

IKE INDIFFERENT, CONFUSED IN TIME OF NATION'S NEED

There was upon a time a French king who during his lifetime lived it up good and hard, spending the public funds, pinching the rosy cheeks of his bosomy attendants, taking scant notice of affairs of state and heeding advice to let them eat cake. In a more philosophical vein near the end of his roisterous career he coined a famous phrase: "apres moi le deluge"—after me the deluge—and he was right, for his successor and family suffered a bloody end at the base of the guillotine.

To date President Eisenhower hasn't coined any famous phrases, but some of his recent actions are reminiscent of the callous behavior of an irresponsible and unthinking monarch.

While the rest of the Nation worries daily with a spreading recession in the form of increasing unemployment and a continuing inflation—two phenomena never before seen at the same time in our economy—the leader of the team plunks himself in Georgia at the estate of one of his former baronial team members and in effect cleanses his hands of the whole mess.

Ten days and some 20 grouse kills later he heads back to Washington in the official Presidential plane after first detouring 1,500 miles to deposit the First Lady and two of her social confidantes at a "make milady's face beautiful" resort near Tucson, Ariz., said resort absorbing the costs for the treatment and the taxpayers providing the transportation.

Is this the sort of dedication to government, to the American people, and to the problems of our Nation that Candidate Eisenhower spoke of so glowingly in his campaign bids for office?

Certainly, we do not want to be in the position of begrudging any President, even an indifferent one, the rights and perquisites to which his office entitles him. But these same rights and perquisites also demand obligations and responsibilities. The obligations and responsibilities of a President in times of duress are to lead and to set an example for his people.

For the last year or so President Eisenhower has led us nowhere, and of late his sole idea of setting an example seems to be to get away from it all either on the golf course or in a grousing shoot with others who can afford to get away from it all.

As his days in office dwindle, it is sad but true to note that President Eisenhower is confirming the critics of yesteryear. Incapable of decisive command, he is captive of a group of incomparable mediocrities so divided in their opinions of what should or should not be done that in fact nothing will be done.

As a general Eisenhower under orders performed well. As a President without orders he's a lost ball amid the rocks and weeds of doubt and indecision.

Twenty-fifth Anniversary of the Inauguration of Franklin Delano Roosevelt

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. EBERHARTER. Mr. Speaker, today marks the anniversary of the day in 1789 when the first Congress convened under the Constitution. It marked a time of crisis and of challenge—a crisis which was met and a challenge which was surmounted. Today also marks the anniversary of the inauguration in 1861 of Abraham Lincoln, at a time when our Nation also faced one of the gravest crises in its history.

These dates perhaps sound like ancient history. We know of those crises from having read about them. It is hard to reconstruct in our minds the atmosphere of that day in 1789 or of Lincoln's inauguration.

But millions upon millions of Americans remember at first hand another great occasion, another historic occasion, which happened on March 4—the first inauguration of Franklin D. Roosevelt as President of the United States.

We can remember the atmosphere of the day. We can remember the mixture of fear and of hopefulness as Roosevelt took the oath of office. And we can look back over these 25 years, remembering step by step the actions taken by Franklin Roosevelt to rescue America from one of the lowest points in our Nation's history.

The night skies over Pittsburgh had been dark—not for a few days but for months. Hunger stalked all of our cities. Despair was in the eyes of men in every walk of life. Our country, some feared, was a dying society. Would we turn to communism or to fascism?

Of course we did neither. The challenge of the depression was met in such fashion that today our economists tell us we can never again have that kind of depression in the United States.

Today our national administration would do well to join with us in recalling the first inauguration of Franklin D. Roosevelt 25 years ago. We are not in a depression. But we are deeply mired in economic troubles.

In Pittsburgh and in all of our major cities, in the rural areas and everywhere in this country, jobless men walk the streets looking for work. There is no excuse—no legitimate economic excuse—for this distress. True it is not of the magnitude of the great depression. But for every man out of work who has no immediate prospect of returning to work, this recession is, in effect, a personal depression.

Franklin D. Roosevelt led us brilliantly into the paths of economic reform which we are now told makes a future depression unlikely, if not impossible. He did it not by sitting and waiting for next month's economic statistics to be compiled to tell us how serious the situation was. He did it by moving vigorously against those factors which clearly existed leading to unemployment and distress.

The current occupant of the White House, if he were to look out upon the land and if he were to see and to recognize the conditions now existing, would also find in them sufficient reason to move now—promptly, vigorously, effectively—to restore our economy and to end joblessness in this country.

He could learn much from the history of the Roosevelt years. The lessons are there. They involve primarily a willingness to use the machinery of government to serve all the people in a time of crisis and challenge.

How To Give Aid

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HAYS of Arkansas. Mr. Speaker, we are now giving close attention to the mutual-assistance program of the United States Government and examining the President's request for funds to continue operations for the next fiscal year. While we concentrate on the public aspects of economic aid, we should not forget there is also a role for private philanthropy in this area. The New York Times of Thursday, January 30, 1958, had a thought-provoking editorial on how to make the most of local effort. Under leave to extend my remarks, I present that editorial as follows:

HOW TO GIVE AID

A simple story from a village in South Korea can teach us some things about how aid to nations in need can be effectively given.

Five years ago a fieldworker for the United Nations turned over to a village of 800 some $37.50 that had been taken in as payment for grain that the villagers did not want to accept as charity. This money, in turn, was invested in improvement of irrigation of the local ricefields so as to increase yield. The money investment was small, but the investment of the villagers in time and labor was large. In the end it paid off. The rice yield in the village was raised from about $6,000 to $36,000, a return of 800 to 1 on the original money investment.

Now the Save the Children Federation is adopting this technique, both to give further assistance in this area and to afford pilot projects for both the Korean and the United States Governments. In every case local effort is the key to the grants that are made. And in each case a percentage is earmarked for specific help to the children.

What is significant here is that the investment of money is trifling. But there is an investment of some other things. There is an understanding of the people who are to be helped. There is an ability to enlist their support and cooperation. There is an appeal to loyalty and initiative. And there is the continuing factor of warm human interest.

Not many investments pay off at 800 to 1. Perhaps if the spiritual investment kept pace with the economic the rate of return would go up.

This case seems to demonstrate that fact.

Theodore Roosevelt Centennial

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. BOSCH. Mr. Speaker, I am honored to join with my colleagues in paying tribute to Theodore Roosevelt who was inauguarted President of the United States 53 years ago today. We are all proud of Teddy Roosevelt's record which stands as a monument to leadership. I wish to include a recent column by George E. Sokolsky entitled "Theodore Roosevelt Centennial."

The article follows:

THEODORE ROOSEVELT CENTENNIAL
(By George E. Sokolsky)

Not enough is being made of the fact that next October the 100th anniversary of the birth of Theodore Roosevelt will be celebrated. The particular era in which we live historically starts with Theodore Roosevelt and while a younger generation may feel closer to another Roosevelt, it was Teddy who stirred the Nation with his overpowering personality, his physical dynamism, his intellectual forensics, and his intense nationalism.

Theodore Roosevelt was a nationalist, one who believed in America first and practiced it all the time. He was President when this country was still in its upbuilding stage and he was unapologetic in his assertions of its strength. He talked like a warrior but kept the peace. He moved through his Presidency with pride, dignity, and courage, and accepted no second place for his country.

Like all Roosevelts, both the Oyster Bay and the Hudson River varieties, Theodore came of a middle class, old Dutch family, of not too great means but enormous respectability. His father had been a bond broker and collector of the Port of New York; his mother was the daughter of Maj. James S. Bullock, a Confederate officer in the Civil War. Teddy went to Harvard from which he was graduated and immediately entered Republican politics on the grassroots level. He was elected to the Assembly but his health was poor and he went West to the little Missouri to be a cowboy on a ranch, thus establishing his love for the great outdoors.

His major interest, however, continued to be politics. He ran for mayor of New York City but was defeated (1886). He was appointed to the Civil Service Commission where he served 6 years, thus getting a valuable experience which served him later when he became President.

What brought him into direct line for high office was his very dramatic career as president of the New York City police board.

The top Republican politicians in New York wanted to get Roosevelt out of their hair. They had the President appoint him Assistant Secretary of the Navy. He directed naval operations during the Spanish-American War for a while but finally organized the Rough Riders, and served as its lieutenant Colonel.

At any rate, it was the colorful Roosevelt of the Rough Riders who was elected Governor of New York to the chagrin of the boss, Tom Platt. Platt immediately set about getting rid of him by having him nominated to the vice presidency in 1900. Mark Hanna did not want Roosevelt but Teddy had by now become the most popular figure in the Republican Party. The politicians thought they were rid of him forever, as vice presidents do not usually have much of a role in American life.

However, President William McKinley was assassinated and Theodore Roosevelt became President on September 14, 1901. His administration was a lively, exciting one. Roosevelt read everything, knew everything, knew everybody. He made the White House a center of American culture. He freed the Republican Party from the bossism which held it tightly in the control of monopolistic businesses. He stimulated a public interest in government. He sent his son, Quentin, to public school in Washington and shocked the fancy people of Washington. He entertained Booker T. Washington, a Negro educator, in the White House. He is the author of the Panama Canal.

Teddy Roosevelt—nobody called him Theodore—was President until 1909 when his friend, William Howard Taft, succeeded him. Roosevelt went hunting in Africa, returned to edit The Outlook and, quarreling with Taft over basic principles, he organized the Progressive Party, better known as the Bull Moose and ran against Taft in 1912, thus paving the way for Woodrow Wilson to be elected President of the United States.

His career was so full of action, of effervescent living that it is not always remembered that Theodore Roosevelt was one of the most constructive President in American history.

Low Tariffs Hurt the Potteries

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. HAYS of Ohio. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Salem News of Saturday, March 1, 1958:

LOW TARIFFS HURT THE POTTERIES

Labor and management of Salem and other district potteries expect to be well represented in Washington next Friday to argue against an administration proposal for a 5-year extension of the Reciprocal Trade Agreement Act, along with a liberalization that would permit further tariff reductions of up to 25 percent.

Previously concerned over mounting imports which, because of low tariffs, permit the foreign-made ware to be sold cheaper

than domestic products, the pottery people now are alarmed, and rightly so.

Already foreign competition has forced some potteries to close. The Salem China Co. has fared better than most of the dinnerware plants but only by the dint of hard work and an almost nonexistent profit. A further lowering of United States tariffs would jeopardize the livelihood of some 400 people here.

The Limoges China Co. at Sebring is going up for a sheriff's sale shortly. The Spalding China, an art plant, is liquidating. At Minerva the Cronin China Co. had to be liquidated. The W. S. George Pottery of East Palestine is gasping for its breath. Foreign competition closed two once-promising potteries in Carrollton.

All these are within the immediate district. Employment is off in the potteries at East Liverpool. At Paden City, down the Ohio River apiece, the Paden City Pottery threw in the towel last fall as did the Carr China Co. at Grafton.

There are others, including California's second largest pottery, the Vernon Kilns, which has started liquidation.

The pottery industry isn't the only group that is being hurt by foreign competition. Even the auto manufacturers are wrestling with the growing foreign-car imports.

Congress, the Tariff Commission and the President need to take a new appraisal of the basic tariff structure and overhaul our foreign-trade regulations.

Uncle Sam has a big heart but he cannot afford to let down the folks at home and expect to spread his bounty abroad.

The Sweatshop Is Still With Us

EXTENSION OF REMARKS
OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. SHELLEY. Mr. Speaker, I offer the following account of the experiences of a lady who has had the courage to find out for herself, through actual experience, that despite the advances of the unions of this country, the sweatshop still exists.

I regret that I must report that this condition does indeed exist today in my San Francisco Bay region, but I know that it is not limited to this area.

Mrs. Sonia Baltrum is a skilled professional in the textile industry. She could well have been content to make a living in the quiet pursuit of her craft, but her thoughts extend beyond the mere day-to-day quest for a weekly paycheck. Her interests are with the people who manipulate the sewing machines, cutting equipment, and other machinery associated with the textile industry.

The sweatshop is by its very name despicable. It exploits not only the skills but the integrity of its employees. It accepts and directs the talents of its inmates, then adds to the insult by offering substandard wages.

It operates, as Mrs. Baltrum relates, in private homes and even garages which from the outside give no indication of the industry being carried on within.

I offer the following remarks which should make it clear that despite the many advantages already promulgated by the unions, additional legislation which would insist on a decent living wage is still needed:

STATEMENT OF BAY AREA JOINT BOARD OF TEXTILE WORKERS UNION OF AMERICA, AFL-CIO, TO SUBCOMMITTEE OF HOUSE COMMITTEE ON EDUCATION AND LABOR, IN HEARING OF EXTENSION OF COVERAGE OF FAIR LABOR STANDARDS ACT, SAN FRANCISCO, CALIF., NOVEMBER 7, 1957

My name is Sonia Baltrun. I am the business manager of the San Francisco Bay Area Joint Board of the Textile Workers Union of America, AFL-CIO, and I have been an official of this union for about 20 years.

The bay area joint board represents about 1,200 textile workers, mostly women, in 23 plants. The major products of those plants are bags, yarns, rope, padding, carpeting, curtains, and drapes.

My first purpose in testifying here today is to endorse the comprehensive and thorough testimony presented this spring in Washington by President Meany and his staff and the subsequent presentation made by industrial union department President Walter Reuther and the officials and staff of my own union. The coverage of the FLSA should be broadly extended, particularly in agriculture and retailing, which are of primary importance in the State of California.

My second purpose is to bring before you some of the local conditions in the textile industry, which make it imperative that the FLSA be extended and raised to $1.25 as soon as possible.

Our primary problems here in northern California are substandard nonunion sweatshops that are growing and spreading, resulting in substantial unemployment among the workers in our union.

Most of these sweatshops pay $1 an hour for experienced operators. Under our contracts the minimum is $1.40 to $1.60 an hour, plus fringe benefits such as vacations, holidays and health and welfare benefits which cost at least 12 cents more per hour.

It is obvious that employers under contract with the union find it difficult or, in more cases, impossible to compete.

Let us give more examples of what is going on in this locality and in northern California. I will withhold names and addresses, but I will be glad to supply the subcommittee with specific details if you desire them.

Right here in residential areas of San Francisco, I know of small knitting mills that pay $1 an hour and less to workers—$1 an hour for experienced operators. The outside of the knitting mill is just like another residence. You would not know there was a factory inside, or in the garage in the back.

I myself worked for 3 days recently in a factory located over a produce market knitting baby garments in Oakland. I received $1 an hour as experienced operator on knit baby garments. Inexperienced workers were paid 85 cents an hour.

We have the entire bay industry organized, that is textile plants. But we are now suffering large scale, chronic unemployment because bag plants, yarn mills, carpeting plants have sprung up in the Salinas, Fresno, Hanford and other towns in the San Joaquin Valley. Our minimum here is $1.40 an hour plus fringe benefits. The prevailing wage for experienced operators in the out-of-town sweatshops is $1 an hour.

In Armona, Calif., one of the plants which pays a minimum of $1 an hour competes directly with one of our Oakland yarn plants which pays $1.40 minimum and all the fringe benefits besides.

I personally know of at least eight textile plants in the valley and a shirt plant in Salinas area which pays a maximum of $1 an hour.

I would like to submit for the record this chart of series of articles which appeared in the San Francisco Chronicle on October 3, 4, and 11, 1957. The first is headlined "Illegal Garment Factories Thrive in Chinatown."

The pictures of the overcrowded, poorly ventilated, and unsanitary factories, with children playing on the floor, speak for themselves. The articles indicate there are about 120 such shops employing more than 2,000 women. The article quotes the president of the Pacific Coast Garment Association, Fred Prater, as saying:

"If you kill the Chinese contractors, you kill a major portion of the garment industry in San Francisco.

"One of the biggest dress manufacturers in the United States has 15 or 20 little factories working for him.

"Our downtown manufacturers do their own cutting, but the Chinese shops do the making and trimming for them."

These articles are concerned that these factories are illegal because they are in the areas zoned for commercial and not industrial use.

We are concerned because they have been paying 75 cents an hour and will be paying only $1 an hour when the State minimum wage goes up to $1 effective November 15, 1957. We are concerned because of the hours of work they are putting in. We are concerned because of health hazards to these women employed there. We are concerned because it means pulling down labor conditions for organized workers and because organized plants are suffering unemployment, while these sweatshops are making a nice profit on this exploitation. We are concerned because the FLSA cannot catch up with them.

While most of these Chinatown sweatshops are in the garment industry, some are in textiles as well. How many we do not know.

I have also prepared another chart which I would like to submit for the record. The chart sums up the major facts which are important in the Bay area from the standpoint of judging the need for $1.25 FLSA minimum wage.

The need for such a minimum is down in the two piles of coins on the left.

The first pile is $2.79, the hourly rate needed by a steadily employed wage earner in the San Francisco Bay area, to support herself, spouse, and two children, according to the standards of the Heller committee of the University of California. The figures are based on September 1956 data, adjusted upward to September 1957, by change in the San Francisco consumers index.

Most of the workers in our industry are women. Many of them are single women who have to support themselves. The second pile of coins is $1.54, which we estimate is the Heller budget for single women, working steadily, in San Francisco area, as of September 1957 prices. This is estimated since the last actual study of budgets for single working women was made by the Heller committee in September 1949.

Thus the need is somewhere above the $1.50 an hour at present prices in this area.

Our union minimums are from $1.40 to $1.60 an hour as shown in the third pile of coins. If fringes are included, it comes to about 12 cents an hour above this. This is somewhat above the national minimum average for textile and is substantially above the level in the Southern States. On the other hand, the general wage levels are higher in the bay area than in the United States as a whole.

The proposed FLSA minimums shown in the next pile of coins is $1.25. This will not directly affect any of our organized plants—but will affect the substandard sweatshops and in turn help our situation.

The last pile of coins is $1 an hour which is both California State minimum effective November 15, 1957, as well as the prevailing wage for experienced, but not solely such, for many are at 75 cents per hour, for ex-

perienced operators in the substandard shops.

The work in our industry will be done wherever the lowest wages are paid. If left to natural forces, this will become an industry of small runaway sweatshops. The purpose of the Fair Labor Standards Act was to stabilize industry at decent levels. Such a decent level today is not less than $1.25 an hour. (This should be extended to all categories of workers, thus catching up with all the sweatshops.)

Red Powerplant Superiority

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LESINSKI. Mr. Speaker, the Russians put the first satellite into space, are reported to have produced superior missiles and rockets, and are supposed to be making tremendous strides in technology, science, and industrial production.

The following article by Peter Edson, which appeared in the Washington Daily News on February 24, 1958, tells of the latest Soviet achievements in the field of hydroelectric power production, another area in which the United States is falling behind because of the machinations of the present administration which favor big business.

Mr. Edson's article is as follows:

RED POWERPLANT SUPERIORITY
(By Peter Edson)

Soviet Russia's hydroelectric power production now approaches and will soon surpass that of the United States.

Individual powerplants in Russia and Siberia are far bigger than the largest installations in America.

Grand Coulee Dam on the Columbia, largest United States installation, has a capacity of 1.9 million kilowatts.

The new United States-Canadian Niagara powerplant on the St. Lawrence will have a total capacity of 2.2 million kilowatts.

But the U. S. S. R. has 10 plants ranging from 2.0 to 6.0 million kilowatts. One is almost complete, 3 more are under construction, 6 more are in advanced planning stage.

The 6.0 million kilowatts of the Yenesei River plant will be larger than the 5.25 million kilowatts capacity of all powerplants at all dams built by the United States Army Corps of Engineers in its history.

Five Siberian plants will have a combined capacity 50 percent greater than all United States dams built by the Army, Bureau of Reclamation, and Tennessee River Valley Authority put together.

This amazing picture of Russian power development comes from no less an authority than Maj. Gen. E. C. Itschner, Chief of United States Army Corps of Engineers. It is based on Russian reports put together by Army intelligence. It is fully supported by Senator ALLEN J. ELLENDER, Democrat, of Louisiana, who visited Russia last year and was allowed to make movies of many installations.

Testimony by Senator ELLENDER and General Itschner before Senate Interior and Public Works Committees has given officials here in Washington a rude awakening on what was going on in Communist boss Khrushchev's declared war to pass the United States in peaceful production.

Only two new United States multiple-purpose water resources projects have been authorized during the Eisenhower administration. One is Bureau of Reclamation's Colorado River development. The other is the St. Lawrence seaway being built with Canada.

Since building materials are scarce, particularly concrete, the Russians go in for earth and rock-filled dams.

Most Russian rivers flow through flat country, so they have few canyon or high dams. But they have four notable dams from 7 to 12 miles long. Fort Pack, longest in United States, is 4 miles. Only one Russian dam failure has been reported.

Total Russian hydroelectric power capacity is put at 25.9 million kilowatts, but this does not include 44 powerplants whose size is unknown. Total United States hydroelectric capacity is 27.6 million kilowatts. This is about 16 percent of all United States electric power. Russian coal is so inferior that more emphasis is put on hydroelectric power development than in this country.

Russia is dispersing its powerplants, developing whole new economic areas, says General Itschner. This breaks up big industrial concentrations like those in the United States northeast and so reduces and scatters strategic bombing targets.

Mr. Speaker, in the face of that reported progress, does the administration still plan to continue its policy of private power development? Will they continue to advocate that the Idaho Power Co., for example, be authorized to construct three low dams in Hells Canyon which would provide a power output in prime kilowatts of 505,000, or will they see the wisdom of public power development with one high dam which would provide a power output of at least 1,122,000 kilowatts?

I think it is time for the leaders in the administration to wake up, take a good look at facts, and act for the welfare of our Nation instead of catering to special interests and allowing our country to degenerate to the status of a second-rate power.

Can Congress Meet the Challenge of Gold?

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. BERRY. Mr. Speaker, I have asked consent to insert in the RECORD the address of the Honorable Lewis L. Huelsdonk, chairman of the gold and silver committee of the Western Governors Mining Advisory Council, which was delivered at the national western mining conference in Denver, Colo., February 7, 1958. It is entitled "Can Congress Meet the Challenge of Gold?" It is one of the best things I have seen in connection with the gold and monetary problem. I hope all Members will read it studiously:

I was very happy when I was again invited to appear before this group of down-to-earth mining men. This is particularly true because the Colorado Mining Association has built the national western mining conference into one of the most noteworthy conventions of this type in all of the world. Great credit must be given to the men responsible—for without their courage and foresight, the voice of western mining would, indeed, be difficult to hear.

Last year I was here pleading for a congressional investigation into the gold problem. I was deeply concerned, not only because I was serving as cochairman of the gold committee of the Western Governors Mining Advisory Council and as a member of the California State Mining Board where over, 1,700 gold mines had been forced out of existence, but also, because I had just returned from a very extensive gold survey tour through Europe and North Africa where I had conferred with many of the central bankers and world experts on the question. I felt sure that Congress should and would want to find out something about the strange role that gold was playing in a confused inflation-bent economy.

I was pleading not alone for the salvation of a great American industry whose product contributes immensely to economic stability throughout the civilized world, but also for the survival of a way of life which had raised this country, in a relatively short period of time, to a level of greatness.

With very little exception this plea fell upon the deaf ears of what might be termed an afternoon Congress. However, since that time the world has been shaken with some terrifying events and the very roots of complacency have been jarred. There is a wild horse loose—mainly because this afternoon Congress had failed to watch the keeper of the barn door. Up until last Friday at 10:40 p. m., Cape Canaveral time, this mad mustang was free to do its own bidding because we simply did not have a roundup horse or a buckaroo to send in pursuit. At that time, we finally succeeded in mounting a small boy for this man-sized job. Our hero is now on the way, with his lasso rope, and he will no doubt soon be fortified with other American riders—but even so—it will be a long, hard chase for American ingenuity to recapture this galloping nightmare which has been kicking down our defense fences in every land on the globe. It will be equally hard to place a share of the blame upon the shoulders of those men, who, for the sake of convenience, had sidetracked responsibilities to a den of experts—for neglected obligations have unfashionable ways of reappearing when the big finger of the kettle points to the pot and the pot calls the kettle black. Such coverup talk is for the ease of guilt. It is always political, confused, too late, and of little consequence. Its accomplishments are nothing but a waste of time. The job on hand is not to first accuse, to forfend accusation, but to safeguard the future with as much energy and as few mistakes as possible.

Today, with sputniks and the Explorer vying for glory in the skies, there appears to be a battle developing for the possession of the moon and control of outer space. This may sound like comic-book nonsense now, but there is no doubt in the scheme of things to come, that whoever controls these areas will be in a strategic position to conquer the entire world. In a short time ahead this may become another first for someone—for no man or nation has ever accomplished this objective, although the aspiration has been ever present throughout history. I need not remind you that this aspiration is dangerously present today and from all indications we are far behind in a race to ward off its threat—in spite of our successful January 31 launching.

We are behind because Congress preferred to do little other than listen to the experts who had told them that we were far ahead. The colossal scientific achievements of Russia have proven that these experts are not infallible as our Congressmen had supposed, but, on the contrary, that they are quite capable of making mistakes—and that on

many occasions their ouija boards were wrong.

We are now told that our trouble lies in not glorifying the American scientist—that we have made heroes of our ballplayers and athletes and therefore have failed in developing our scientists. To this we need only a quick glance at the 1956 Olympic records to come up with another version. We were told by the experts that we would win, but experts were wrong again. We were second to Russia in the final count by 5 gold medals and 129 points. This must prove that athletic accomplishment can be contemporaneous with scientific achievement.

I am merely pointing out these facts to illustrate that experts exist for every pebble on the beach and that their judgment and predictions are not always right. In all of the categories—the experts on economic problems are the most numerous and the most confused. They cannot agree among themselves or with anybody else. They have become frustrated because—from the beginning of time—they have been trying to create money from nothing and have it maintain value. Today these experts are buried in such a maze of complications that they are unable to recognize the simple facts that the wherewithal from nothing is equal to nothing and that the net product from the dilution of milk by water is water. Many of these experts are the creatures of Congress and, as such, they are also keepers of the barn door. We know that they have made mistakes—even some seemingly self-seeking ones. We have had depressions, recessions, and creeping inflation—all under their guidance, advice, and assurance that these things could not happen. In all of their wisdom and with the full backing of the Government, they have been unable to check the steady, consistent depreciation of the dollar. In the long run economies lean on the strength and stability of currencies and military power crumbles by their failures. Therefore, it is incumbent upon Congress to keep constantly alert to make certain that no more horses escape; lest we wake up some morning to find that we have also been challenged by the wisdom of Russia on economic and monetary horizons.

We have recently heard much about the unidentified dangers that are hovering about us, but we have heard little about the identified dangers that are boring within.

Congress yielded its power to coin and set the value of money some 45 years ago, and today we are losing the tangible backing of our currency because the experts—who usurped this power and have since been given command with a rod of iron—prefer the noncompetitive creation of fiat money.

In the hearings last August before the United States Senate Committee on Finance (pp. 1444 to 1447 of their report) there was evidence documented by Senator MALONE'S testimony that the legal 25-percent gold-reserve requirement on $26.5 billion in circulating Federal Reserve notes and on $20 billion of Federal Reserve deposits would amount to $11.76 billion. His testimony also brought out the fact that of the $22 billion of gold that we hold, $16,273,000,000 is mortgaged for payment against foreign-held American dollars, and that this leaves a net gold reserve for the United States of only $5¾ billion, and—need I remind you?—that this is supposed to fill the shoes of our legal reserve requirement of $11.76 billion. Russia is currently carrying an unmortgaged gold-reserve requirement of $7.3 billion. It must also be remembered that our dollars are issued on a 25-percent gold basis, then credit expanded to about 6 times into money supply, and that direct foreign conversion costs us 100 percent in gold, or a net loss of about 130 percent in gold for each dollar that comes home by this route. These are identified dangers that could, with a little effort, be measured by Congress in terms of our Nation's vanishing liquidity.

We also find that during the first half of 1957 that over $600 million[1] worth of gold was purchased by the United States from the International Monetary Fund. An analysis of this transaction indicates that it was not only for the purpose of building up United States dollar balances for the fund's use in its lending activities, but also for the additional purpose of digging out an extra home supply of Federal Reserve notes from an empty barrel. Simply described, the maneuver is an inflationary guided missle wilder than a Russian dream. Six hundred million Federal Reserve dollars, backed with gold by only 25 percent—or $150 million worth—will purchase $600 million worth of gold—which can then be used on our 25 percent legal gold reserve basis—to issue $2.4 billion worth of Federal Reserve notes. Thus, there is created a net gain of 1 billion, 800 million in Federal Reserve dollars from nothing except manipulation. From these same balloon dollars the money supply can be expanded by at least 6.6 times through our present debt-management and bank credit policies. So, the possession of only $150 million worth of gold can swing the door open to the use of over $11 billion in easy money supply. This is an inflationary ratio of over 75 to 1 and perhaps the fondest dream of our monetary acrobats. It is a vicious way to allow money to be created. It is a puppet performance which invites the laws of economics to catch up by the boomerang method. It is an identified danger that demands a double check on the keepers of the barn door.

Last year I read paragraph (a) of section I of article IV of the final act of the Bretton Woods Agreement in order to forestall any misunderstandings in regard to the attachment of currencies to gold. It is short; so I would like to read it again; this time, however, for the more definite purpose of spelling it out as the main cause for our present embarrassment of having more foreign held dollars demand against our gold reserve than we can legally accommodate.

"(a) The par value of the currency of each member shall be expressed in terms of gold as a common denominator or in terms of the United States dollar of the weight and fineness in effect on July 1, 1944."

No one needs to be an expert to understand that this international agreement categorically ties all of the major currencies of the world to gold with the exception of the Russian ruble. And Russia, though not currently a party to this agreement, maintains a base of 222.168 milligrams of fine gold per ruble and holds a 25 percent gold reserve requirement against her issue of currency. This places gold as the base to all of the most important currencies, and in addition the Bretton Woods Agreement provides for the United States dollar to act as an internationally usable money by placing an obligation upon her for the redemption of all of her foreign-held dollars in gold at $35 per fine ounce.

Now—in facing these facts—it must be conceded, even by our Congressmen and monetary experts, that our dollar is not only based upon gold, but that it is now being used as a medium to set the price of gold. Therefore, the American dollar and gold, though distinctive from each other in this country by undiminishing fiat ratios, is without a difference in international monetary consideration. This is the only reason that our dollar maintains its prestige as an internationally usable money. No matter how much we inflate our dollar at home—and although we cannot own gold as American citizens, the foreigner can always receive 100 percent in gold for an American dollar upon demand. This is true of individual foreign-held dollars as well as foreign central bank holdings, because the foreigners have ways and means of transferring their individual dollar balances into national dollar balances. This fact was also brought out by Senator Malone and documented in the testimony before the United States Senate Committee on Finance, August 1957, page 1444. Through this dollar standard arrangement we have been placed in a dangerous position. We are being forced, at our expense, to furnish the rest of the world with a gold standard which automatically revalues itself upward in direct proportion to the depreciation of our dollar. In other words, our depreciated dollar of today is worth about one-half of its 1948 value, yet when it is held by the foreigner it will purchase for him as much gold from the United States Treasury as it did in 1948—and there is nothing being done about it.

This is a frightening predicament into which we have allowed ourselves to be led. Our inflated dollars have been piled into such huge heaps that they are spilling over into the laps of our foreign friends for the inevitable use as a straight flush against our ace in the hole at Fort Knox.

However, it has been said that these foreign-held dollars are not necessarily demand against United States gold because they are also free for the purchase of American goods. And this is true, except that in the terms of these inflated dollars, the price of American goods is considerably higher than the price of foreign goods—and certainly very much higher than the bargain price of gold which has not been allowed, under law, to change for 24 years.

So, consequently, in a search for bargains, the foreigner will not use his internationally usable dollar at the American counter when foreign goods are available at cut rates—nor, if, when he needs no goods, he can exchange his pile of precarious paper for the undisputed security of solid gold.

In the meantime, either by the occurrence of rising foreign prices through the force of inflationary pressures abroad or by the constant buildup of foreign-held short-term dollars beyond the critical point of convertibility, gold, at its 1934 price, will definitely become an exclusive bargain. This will cause an epidemic of gold fever, and provide the stimulus for a foreign stampede in a race for the touch of King Fort Knox before his power to turn paper into gold runs out.

By then, another ignored identified danger will be recognized, but the time will be late. Another horse will be loose—a fast one, of a different color and more difficult to corner.

This horse's head is jammed through a paper barn door now, and if the keepers are not awakened in time to secure its halter to the hitching post of gold, we are doomed to the greatest dollar crisis the world has ever known. Because, if we should stop such a raid on our gold by refusing to honor the redemption of our foreign-held dollars, our dollar would no longer be an internationally usable money by virtue of no longer being able to command gold; and the net result would be its loss of foreign prestige and world influence. On the other hand, if we did not stop such a raid (with foreign-held dollar-demand in excess of our gold supply) our gold would be wiped out and leave our dollars without backing. And hence, in this manner, our dollar would also fail in a bid for prestige and world influence. It is a dilemma. But why are we being caught in the middle of such a squeeze play without our citizens having at least an equal chance to purchase their own gold with their own dollars? And why should foreigners be privileged to claim 100 percent in gold for their return of our dollars which are only 25 percent backed with the metal and then expanded by over 6 times through money supply methods? These are the kinds of questions that puzzle a sane man; but, I

[1] International Financial News Survey vol, X No. 15.

am sure that they do not puzzle the monetary marksmen from Moscow—who are, without a doubt, aiming their ruble guns at dollar prestige as a contribution toward ultimate victory in the cold war. This is an identified danger with difficult realization, but, nevertheless, one not to belittle.

Of all these identified dangers that lurk in the background for an opportunity to strike, the shortage of gold, with its warning rattles muffled under monetary policy, lies coiled with deadly fangs as the least apparent.

This gold shortage is dangerous because gold is the foundation that holds up our money tree—and our money tree, now top-heavy with monetized public debt, stands upright with unapparent weakness, only because the foreigners have not yet chosen to pull the mortgaged gold props from under its overloaded branches.

The premise of a gold shortage has been challenged through some strange facets of modern economic philosophy. To this we need only to remind these challengers that estimated at $35 per ounce, the total world production of gold in the last 2,000 years of recorded history has been less than $62 billion. Such a challenge is fantastic, in view of the fact that our Nation, with only 6 percent of the world's population and claiming nearly 60 percent of its official gold stock, has been forced from the proper money of gold to a national monetized debt that has grown in just the last 25 years to well over $200 billion more than the total value of all of the gold that the world has been able to yield in the last 2,000 years.

There should now be very little doubt as to the short supply of gold and in terms of economic law—be it modern or otherwise—short supply lends wings to value with telling effect. Therefore, it is reasonable that the value of gold cannot be held indefinitely in a price jail when its supply is neither keeping pace with the increase in population nor with the economic expansion.

This poses the serious question as to why our monetary wardens should confine gold in the solitary confinement cell of a price prison when its release could determine the full degree of its value in monetary honesty.

We can stop wondering about this question. Gold is behind price bars because political courage has continually failed in matching the powerful challenge of easy money methods. Anslem Rothschild once said, "Give me the power to issue a nation's money; then I do not care who makes the laws." This is what we face today. Congress gave this coercive power to the Federal Reserve bank—and as (elected) lawmakers, they have never been able to muster enough courage to legislate against its evils. To the contrary—they have always conceded to the fiat demands of money for the mere asking. Our monetary managers know that such tactics create inflation and that the discipline of gold is the prime safeguard. But, the production of gold is direct competition to Federal Reserve bank credit. It increases the member bank reserves and deposits without resort to Federal Reserve bank discount. It increases the supply of proper money without bending its knees to Federal Reserve consent. In fact, it is the only big bump left along the Federal Reserve road of tender mercies. For this reason, we have a monetary policy dedicated to the destruction of gold production as a means of eliminating this competition. Thus, for the convenience of easy bank profits, the stabilizing effect of gold has been smothered under a wet blanket of watered money. This does not mean to say that the Federal Reserve System is all wrong—or that private bankers should not direct the central banking of this country—it does say, however, that political courage does not exist with sufficient strength to legislate against the unrestrained credit-money forces that are building the private Federal Reserve bank without competition into a power greater than that of our Nation.

The gold mining industry of the United States has been the first to be sacrificed upon this altar of political cowardice, but it will probably not be the last—because Congress, still yawning from its recently disturbed sleep, will only throw stones at the disturbers. This does not mean to say that individual legislators are sleepy or political cowards. There are many Senator Malones in Washington who are being heard now and there are many others, buried deep in red tape problems, who are alert, intelligent and quite capable of coming to the rescue when the shoe begins to pinch the feet of their constituents. This is the American way and the way we will probably take. However, when the danger is identified before the pinch begins to hurt, the proverbial pound of cure can be saved by an ounce of congressional prevention. And that is a part of their job.

I was told in Europe, a year ago last fall, by over a dozen different banking authorities that a return to the gold standard was the only honest basis for international exchange, but that then was not the time—because gold would have to be revalued with inflationary effect. I was told by one expert, who was a monetary policy adviser to the Italian government, that confidence in the money managers of the world would soon push gold entirely from the monetary picture. He backed up his statement with figures to prove that gold, because of its short supply, was then only a token in monetary considerations, and therefore that confidence was, in fact, at that time the only means of money. In discussing this theory later, I began to feel that perhaps he was right—except that his timing was off by at least a million years. Because—first—it would be necessary for the peoples of the entire world to gain such complete confidence, trust and honesty among themselves and between each other, that cessation of all police action would follow as a natural consequence.

Even if all of our geese were swans, the world of today could not comprehend such a dream, nor is international trust a sign of the times—even between the most friendly nations. So when the modern money managers begin to prescribe themselves as the only source of money, we had better begin to wonder why. Or when a consensus of opinion of international bankers places gold as the only honest basis for international exchange—and with no genuine moves being made in that direction, we had better begin to wonder why again. We are being told that this honest move will take place as soon as things become stabilized—but we are not being told that it takes the move to do the stabilizing. So we go recklessly on, with the cart ahead of the horse, hoping that we can stay on the grade until a wider place is found to swap ends.

The restoration of monetary order through the convertibility of currencies, with unquestionable exchange rates, is the only key that will unlock the door to world stability. This key cannot be made of promissory notes, because scraps of paper have always been burned by the ambitions of man. On the other hand, gold will always stand firm because of its indestructibility and tangible bond between nations; it is by all reason, therefore, the most desirable substance for the keymaker's die. However, there is not enough gold in existence to make a key of sufficient size to fit the present lock. So if the door to stability is going to be opened, either gold must be revalued to the necessary price level for parity requirements, or the lock must be shrunken by a devastating depressionary effort. From the American viewpoint the profits from gold revaluation could be sterilized for the purpose of establishing a stabilization fund. This fund could be used, under the jurisdiction of the United States Treasurer, for the purpose of adapting flexibility to the supply of proper money until such time that gold production and related problems could be adjusted. Such a fund could also act as a backlog for the redemption of our foreign-held short-term dollars.

Insuring our security with gold, revalued to a new standard along such lines would not be inflationary because the increased difference in reserve gold, being frozen, would not reflect in money supply; unless called upon as needed for that purpose. Instead, it would relieve our obligation of furnishing a "dollar standard" for the rest of the world; it would place gold production in limited competition with reserve bank rediscount profits, which would be a healthy step; it would increase the production of proper money (ie-gold) as insurance against runaway "credit money" ratios; it would allow the supply of gold to keep pace with the growing economic and population needs; it would restore the rights of the individual as free men to own and store gold as wealth; it would stop the sale of monetary gold for industrial uses; it would develop a free market that would eventually establish the true value of gold; it would rebuild ghost towns and mend heartbreaks; it would reestablish badly needed community payrolls; but above all it would till the soil for international peace and plant confidence, honesty and trust between all nations and their peoples.

In order to accomplish these things and avoid monetary insaneness, it must be recognized that new money must be born in proportion to the increase in population, if unbearable debts are not to be forced upon the laps of our children. Because for each child born above the death rate, either additional money or monetized debt is needed for cradle to grave care. Now, since the increase-ratio of the world's population has overshadowed the increase-ratio of the world's gold production by approximately 20 to 1 in the last 15 years, Congress should be aware of the fact that we need more gold production—not less—and that our monetary policy is now being used only as a tool for the willful devaluation of our dollar. This expands money supply with improper debts and seriously confuses inflation with prosperity.

Advancing the price of gold to a realistic level in conformity with the present inflated production costs is the only way to effectively increase the supply of gold—and Congress is the only commission in the world with the power to do this job! So let's hope—with all of our might—that Congress does not fail to recognize the dangers—because, if they do not—it does not mean that the dangers will cease to exist.

The House Committee Report on Reds

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica Evening Outlook of Tuesday, February 18, 1958:

THE HOUSE COMMITTEE REPORT ON REDS

The House Committee on Un-American Activities has just released its annual report for 1957. The report contains some sobering

facts. Once given to posing openly as a genuine political party, the Communist Party is now a deeply secret underground apparatus for subversive infiltration and propaganda.

The committee states that the Commies have penetrated key Government agencies and have obtained scientific information which has helped Russia to develop its nuclear weapons and outer space devices; and that they are continuing to do this, as well as stepping up their recruitment of new converts to the cause. It seems that the party is making up in dedicated strategy and action for its apparent loss of funds and card-carrying members.

The release of this report should do much to stop the relaxing of our vigilance. There has of late been far too much evidence of indifference by our citizens, much of it induced by a false feeling that the danger of internal subversion is now slight, if indeed not over. Congress and its hard-working committee have not contributed to this relaxing. But the United States Supreme Court has done just that.

Its recent interpretation of the Smith Act in the appeal of the California Communist leaders did two things that discourage efforts to combat the Reds. It tied the hands of the FBI and the United States attorneys throughout the land. And it gave a tremendous boost to the morale of the party leaders, which helps to account for the renewed vigor of the party that the House committee now deplores.

As pointed out by bar members and responsible men in Government service, the decision was weak as a matter of constitutional law, for it reversed the original decision that approved the Smith Act. So flimsy were the distinctions that the judges gave for reaching a different conclusion in 1957, 6 years later, that most thinking people felt the judges just didn't like the Smith Act, didn't like the idea of Congress curbing political free speech except in times of obvious violent overthrow.

This judicial discouragement has resulted in United States attorneys throwing up their hands and refusing to prosecute further a hopeless cause. Now the House committee sounds a call to action. Now Congress should repass the Smith Act in words unmistakably conforming to the Supreme Court's views.

Let them write in the statute that advocating forcible overthrow means advocating actual violent action as soon as the time seems right, and that this constitutes an immediate threat and not just as abstract philosophical discussion. Then the Supreme Court would have a hard time discharging convicted Communists. Then Federal prosecutors could bring defendants into court with renewed vigor. Convictions and jail sentences would follow, as they did before the Court turned soft. And that would be good.

A Highly Intelligent Letter From a GI

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter I have recently received from a GI stationed overseas on the subject of Army morale. I am withholding the signature:

SIR: I read an article which you wrote for a magazine a few months ago on the draft. In the most recent issue of Newsweek magazine, there is a similar piece, the difference being, that Newsweek goes into detail on the problem of low morale in the Armed Forces.

It is about time that the current attitude of the American fighting man be noticed by someone other than his superior officers, who seem to be too busy with inspections and "scratching each other's back" with favorable efficiency reports.

I am a member of the United States Army, stationed in France, and if you are familiar with the details of the Newsweek article, then you may apply them to my situation and my unit.

Morale is not merely low. It is nonexistent. It's grounded. This can be traced to the refusal of the military to adjust to the 20th century—and its refusal to admit that the enlisted man is primarily a man, not a serf.

The reference to "spit and polish" is well put. Excessive GI-ing (cleaning, scrubbing, etc.) is standard in my outfit. We have been on a sand-the-floor binge since December. Along with this stress upon "standing tall," have followed restrictions and frequent work details after the regular duty hours.

This emphasis upon work details has reached the point where it takes 10 minutes a day to screen the bulletin board, glancing at the numerous rosters to see if one's name has been tapped for some grubby toil.

Naturally, the men resent this constant spit and polish push. The Army, naturally, increases the harassing necessary (it feels) to get work done.

And so it goes—day after day after day after day.

In the light of the (complaining) I've done, it will sound strange to say that I like my Army job.

I do. I don't like the forced role of a domestic. But my work during duty hours is directly applicable to my plans for civilian life.

Unfortunately, the majority of draftees and many enlistees, are not so blessed. They are square pegs in round holes, thus increasing their discontentment.

Low morale, in my opinion, is related to these questions: Must conscription equal servitude? Should a military tour of duty be the same as the working day of a scrubwoman? Should a soldier be a janitor?

There is your low morale. This is why a GI feels more like a member of the department of sanitation than a member of the Department of the Army. Treat a man as if he were a child, and he'll either be a rebel or a child, neither of which is an asset to a military machine.

Perennial GI parties aren't the only factors killing morale.

Such examples of cinemascopic ignorance as training (utterly useless) are others.

The week's training for me consists of the following: A whole day in the post theater, listening to lectures on military justice. The following morning (4 hours) I shall spend listening to similar speeches given by sergeants who leave much to be desired as speakers, and especially as thinkers. On Saturday, the following day, I shall have 4 hours of training which will be devoted to inspections, marching, etc. What amounts to 2 full days (working days) is being taken up with activities which in no way increase interest in the service, nor do they contribute to the job production.

I have less than 9 months remaining on my overseas tour, which I intend to finish with honorable service and as good a job as I can.

But I'll be darned if I call it a privilege to watch myself, and others like me, turned from a man into a low-paid maid. While officers' clubs flourish, enlisted men sleep in substandard billets (mine was condemned by the Air Force as being unfit to live in). While officers scan documents for personal r. i. f. notices, enlisted men read work rosters, wondering how many hours of menial tasks will be put in this week.

What incentive an American fighting man may have is thus smothered. He doesn't give a darn. And that is low morale. The Army doesn't care, why should I, he says.

If a dedicated, highly professional soldier as Lieutenant General Gavin had to quit—what other state can morale be in but low?

I want to do my best. But I want to do it as a man. If military service is necessary, at least let me do it on my feet, not on my hands and knees.

Respectfully,

———, ———.

Soviet Bloc Raises Its Bid for Latin American Trade

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the New York Times of March 2, 1958:

SOVIET BLOC RAISES ITS BID FOR LATIN AMERICAN TRADE

(By Herbert L. Matthews)

The threat of the Soviet bloc's economic penetration of Latin American is like the little black cloud on the horizon. The barometer is falling, the wind is blowing toward us, the storm is going to hit.

President Eisenhower, in his state of the Union message on January 9, issued the warning that we should not be misled into thinking that Russia would only use military aggression to achieve her aim of world conquest. Testifying before the House Ways and Means Committee on the Reciprocal Trade Agreements Act last Monday, Secretary of State Dulles said that the Soviet aid-and-trade offensive was a greater danger to the United States than open armed attack. On January 3 the State Department had issued a summary of The Soviet Bloc Economic Offensive in Less-Developed Areas.

All this means that we are forewarned. The Soviet bloc offensive (one must think in terms of the whole bloc, because about half the activity comes from the European satellites) is as yet largely confined to Asia and the Middle East. The program in Africa is just getting under way. That in Latin America is more advanced, but is also obviously only beginning.

TOTAL NOT YET LARGE

The actual figures are deceptive. In fact, Soviet-bloc trade with Latin America in 1957 totaled only about $210 million, compared to $244 million in 1956 and a record $335 million in 1955. Of this trade, 90 percent was carried on with Argentina, Brazil, and Uruguay. Cuban sugar sales amounted for most of the remainder. Offers of credit have so far been confined largely to Argentina, Brazil, and Uruguay. To take an overall figure, United States grants and credits given in foreign aid have amounted to more than $60 billion. Soviet-bloc aid has not quite reached the $2-billion mark.

On the basis of these figures an unwary observer might well ask: What is all the fuss about? The answer is easy and disturbing. It lies in the intentions and capabilities of the Soviet bloc in 1958 and its potentialities in the coming years.

Until 1953 the Soviet Union relied on political activities in countries and regions beyond the boundaries of the solid bloc of Communist nations. There were the Communist parties everywhere, through which Moscow worked, and no less than 13 major international front organizations each with dozens of subsidiary organizations all over the world. They cover such subjects as youth, labor, international trade, women and journalism. They emphasize national liberation and, particularly in Latin America, economic independence.

Nominally the Communist party is legal in only five Latin American republics—Argentina, Bolivia, Ecuador, Mexico, and Uruguay. However, there are a number of countries where the technical illegality is not enforced. Communism, for instance, has been against the law in Brazil since 1947, yet our State Department estimates Brazilian membership in the Communist Party today at 50,000. Argentina now has the largest party, with about 80,000. For this the country has the former dictator, Gen. Juan Perón, to thank, since he created a climate for them and surreptitiously encouraged important elements among them.

However, taking the picture as a whole, political communism is not a threat anywhere in Latin America. What might be called economic communism is another matter, and with totalitarian states economics and politics are inseparable.

SOVIET CREDIT AVAILABLE

The Soviet Union plus its satellites have now reached a point where they are in a position to grant credits, buy raw materials and export manufactured goods. The greater part of the trade now going on with Latin America is, in fact, the purchase of raw materials and the shipment of machinery. This is a genuine, economic base for trade and is the one which dominates United States trade with Latin America. The Russians are moving in at a time of inflation and falling commodity prices in which primary producers are finding it increasingly difficult to sell their commodities in normal cash markets.

Hence, when the Russian or other Communist-bloc trade missions come along with tempting offers, the Latin Americans must be expected to sell. Official trade missions are going from Argentina and Brazil to the Soviet bloc. The Soviet bloc is beginning to take part in Latin American trade fairs, like the Czech exhibition at the Jalisco Fair in Mexico in February and the Golden Anniversary Fair in Buenos Aires now underway. Technical assistance, a field we have almost monopolized since the war, is now being offered from the Soviet bloc. As is well known, the Russians are currently graduating more engineers and scientists than the United States, and they will be increasingly available.

The handicaps that we, as a free enterprise, capitalistic trader, face in competition with a Socialist trader are giving American leaders cause for worry. The Soviet bloc aid is always in the form of easy credits, generally 2.5 percent stretching over 12 years, which is much better than the Export-Import Bank, World Bank, or American private investors can offer. The Soviets, for instance, can lose in a deal with Argentina and pick up the loss in a deal with Peru. Or they can deliberately make an unprofitable economic deal for political gains. They do not need to pay any regard to ordinary commercial considerations. We do. They do not need any economic justification for their transactions. We cannot do business that way, except for our occasional grants-in-aid to a country like Bolivia to prevent absolute hunger.

The Russians can make their own people do without certain commodities or capital goods and export them. We cannot do that. For us trade naturally has important political corollaries but the main thing is the commercial transaction. Nikita Khrushchev has said quite frankly that the U. S. S. R. values trade more for political than economic reasons.

KHRUSHCHEV'S INTERVIEW

He gave an interview to Brazilian newspapermen in Moscow in November 1957, for instance, in which he, on the one hand, expressed the desire to resume diplomatic relations between Moscow and Rio de Janeiro and on the other hand held out the lure of big trade offers and technical assistance. Following that interview, Soviet credit offers of up to $750 million were reported and there was talk of large purchases of Brazilian coffee in exchange for industrial equipment. There were also rumors of Polish credit offers of $250 million to be invested in the steel- and iron-mining industries.

In both Brazil and Argentina the Soviet bloc is taking advantage of the "oil nationalism." Both these countries make heavy and very costly purchases abroad of oil; both are potentially big producers of oil but they want to develop their own industries. They will not let American or British firms in to develop the resources as has been done in Venezuela.

TEMPTING OFFERS

So the Russian bloc steps in with offers of material and equipment on very easy terms of payment and of technical assistance. Such offers are tempting. Meanwhile, Communist agents seek to discredit American business everywhere in Latin America, to disparage American products, to criticize American financial measures and to stir up labor troubles.

They are beginning to get results and they must be expected to get more and more results as time passes. As the State Department document said last January, most signs point to a continued increase in the trade of the less developed countries with the Soviet bloc. Latin America is definitely a less developed and in most cases an underdeveloped area.

The Soviet challenge is clear. How to meet it is a controversial problem. Some Americans feel the answer lies in greater Government assistance and this is what the Latin countries would prefer. Most American exporters would prefer to see Washington help the free-enterprise system. In any event, the challenge has to be met to avoid political dangers which would be far greater than any possible economic losses.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the fifth in a series of articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY—PART V: NAVIGATION THE GOAL

(By KENNETH A. ROBERTS, Member of Congress)

New dam construction will not appease those who dream of a new Coosa-Alabama River.

The potential of the basin will, in their estimation, remain unfulfilled until the riverway is navigable from the hills of Rome, Ga., to Mobile Harbor.

That is why Congressmen, civic and business leaders are watching closely a Corps of Engineers study of shipping—both available and possible—on the river.

Half of the study is complete. It shows navigation feasible from Montgomery southward.

The remainder of the report, it is expected, will show a similar feasibility for the Coosa River so provisions for locks can be made simultaneously with the building of the Alabama Power Co. dams.

The situation on the Alabama River appears more firm than that of its sister, the Coosa. The Federal Government now is planning for a $110 million project which would provide a navigation channel 9 feet deep from the mouth of the Alabama to Montgomery by means of low-lift lock and dam at Claiborne, two higher dams with locks and power installations at Millers Ferry and Jones Bluff, and supplemental channel work on the river below Claiborne.

But this project, too, has been the victim of the kinds of delays and setbacks which have plagued the upper stretches of the waterway.

General planning only has been done on the individual structures and when Alabama Congressmen joined basin officials in trying to get $150,000 for the Millers Ferry Dam during the past session of Congress, they were unsuccessful. The effort will be renewed during the present session.

What are the chances that the Government will be convinced the river should be navigable from one end to the other? Alabamians think they are good.

In the first part of their survey, Army engineers estimated about 2 million tons of freight a year will pass through the Montgomery to the gulf section, making development worthwhile from an economic standpoint.

Officials estimate that freight tonnage possible from Rome to Montgomery would perhaps double that of the lower waterway. Heavy industry at Rome, Gadsden, Anniston, Talladega, Sylacauga, and Childersburg would account for the heavy tonnage.

If the benefit-cost ratio is favorable, the way would be cleared for the Government to add locks to the power dams. The full potential of the riverway could be nearer utilization. Next: Basis for hopes.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the sixth in a series of articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY—PART VI: BASIS FOR HOPES

(By KENNETH A. ROBERTS, Member of Congress)

The assets of the Coosa-Alabama River give credence to the great expectations which have spanned the years with unwavering vigor.

The persistence of predictions involving the river makes the most objective observer believe that there must be some truth in these speculations.

More than 70 years ago, Rev. B. F. Riley voiced one of the prophesies. This historian said the waterway from Rome, Ga., to Mobile

will be opened to "spread all around * * * industry, prosperity and wealth."

Last fall, Robert F. Henry, president of Coosa-Alabama River Improvement Association, updated the situation. He said:

"The way is now open for the Federal Government, in partnership with private industry, to finish the job along the Coosa-Alabama system. If the Government will put locks on the power company dams on the Coosa and will build three proposed dams on the Alabama, the entire system will be open for navigation. It will make this valley blossom like a rose."

In the face of this optimism, let us examine the assets of the waterway.

Considered one of the 10 great river systems in the country, the Coosa-Alabama covers an area of 23,000 square miles. It flows from its headwaters—the Etowah and Oostanaula Rivers at Rome, 3,000 feet above sea level—down the Blue Ridge Mountains southwesterly across the Piedmont plateau, picking up the Tallapoosa River to form the Alabama River, then down to the lowlands of the gulf coastal plain to join the Tombigbee River in forming Mobile River just north of Mobile Bay.

The course runs through a basin blessed with mild, equable climate. There is abundant, well-distributed rainfall; large areas of fertile soil; flourishing timberland; rich and varied mineral resources; and a diversity of industry.

Minerals include bauxite, Selma chalk, clays, coal, iron ores, Fuller's earth, gold, graphite, granite, marble, slate, mica, ochre, lime, manganese, gravel, sand, silica, asbestos—the list goes on and on. Some are mined; others lie waiting.

At its Rome origins, the waterway is in a country of textiles, paper and metal products. Passing the Weiss Dam site at Centre, Ala., the Coosa enters Gadsden, home of heavy industry. Among its products are steel, rubber, textiles, pipe and metal goods.

At the tri-county junction of Etowah, Calhoun and St. Clair, the river enters Alabama's Fourth Congressional District. In its course to the gulf, the waterway will touch 7 of the district's 8 counties. Next: Tracing the river.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the seventh in a series of articles which I have prepared on the great Coosa-Alabama River system in Alabama:

THE COOSA-ALABAMA RIVER STORY—PART VII: TRACING THE RIVER

(By KENNETH A. ROBERTS, Member of Congress)

In its wandering course to the gulf, the Coosa-Alabama waterway unfolds a representative look at Alabama—particularly the Fourth Congressional District—and hints at the growth navigation would bring to this basin.

Leaving the industrial centers at Rome, Ga., and Gadsden, the river passes along Calhoun County, another site of industrial dominance over agriculture.

Anniston, east of the river by a few miles, is center of the industry—textiles, pipe, metal products, chemicals, and electronic tubes are important—and is the largest city in the Fourth District, but third to Montgomery and Gadsden in size of cities passed by the river. Here are two large military installations, Fort McClellan and Anniston Ordnance Depot.

To the west lies St. Clair County. Less industrialized than her neighbor, St. Clair has textiles, manufacturers of brick, cast iron pipe and cement. This stretch of the Coosa is rich in soils—the red limestone soils are among Alabama's best—and forests abound.

Now forming part of the Talladega-St. Clair Counties boundary, the river goes deeper into timber country, bordering the great Talladega National Forest. Talladega County is one of Alabama's most industrialized. Industry varies from textiles at Talladega, to newsprint at Childersburg, to marble mining at Sylacauga. The large Alabama Ordnance Works powder plant is at Childersburg.

Clay, east of Talladega, is the only Fourth District county not touched by the river, but the waterway could tremendously affect this county. Clay is the "graphite center" of the United States, and there is lumbering and the mining of mica.

The Coosa widens as it enters Coosa County, after passing Wilsonville in Shelby, site of a huge new powerplant. Lay and Mitchell Dams span the river between Coosa and Chilton Counties. Only slightly industrialized, Coosa has an abundance of timber and minerals—including tin—and is ripe for river development.

Entering Elmore County, the river flows into Lake Jordan. Elmore has moderate industry—lumbering and textiles are here—and minerals, including gravel, quartz, and limestone. The river bends westward after passing Wetumpka and combines with the Tallapoosa River to form the Alabama River.

The river dips down to Montgomery, site of greatest industry, before flowing west to form the southern border of Autauga County. Prattville, to the north, claims a majority of the industry—meat processing, textiles, lumbering—in the high-agricultural county.

Dallas is the last of Fourth District counties in the river's course. Tenth largest in the State, Dallas county contains Selma, the District's second biggest city. The land is rich in agricultural products. Lumber and wood products are among the 100 industries in the county. Here too is Craig Air Force Base.

Near Millers Ferry, the river leaves the Fourth District. Ahead lie Wilcox, Monroe, Clark, Baldwin, and Mobile Counties—and Mobile Bay. Next: Time for Culmination.

Coosa-Alabama River Story

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include for the RECORD the final installment in a series of articles which I have prepared on the great Coosa-Alabama River system. As will be obvious from reading this and the other articles, I am very much interested in complete development of this waterway and I believe it behooves the Members of Congress to assay the tremendous potential that could be unleashed to benefit the entire Nation, if this development were brought about.

Following is the last in my series:

THE COOSA-ALABAMA RIVER STORY—PART VIII: TIME FOR CULMINATION

(By KENNETH A. ROBERTS, Member of Congress)

Here, in the Coosa-Alabama Valley, we have everything necessary for the building of a second Ruhr Valley. Now is the time to culminate the dreams we have had for this area.

We have approximately one-third of the people of Alabama in our valley and this includes an adequate labor supply for new industries.

We have more mineral resources than any other section of Alabama, including many vital to the defense of our Nation, and heavy timber forests.

We have power enough for the long range development of the industrial empire in the Coosa Valley. When the Coosa dams are complete, some 360,000 kilowatts will be added and the Wilsonville steam plant will supply another million kilowatts to the capacity of the Alabama and Georgia Power Cos.

In short, we have all that it takes to make our area take on new life, all except the actual doing of it. Though the efforts to secure our dream have bridged a century, these efforts often have been insufficient, even complacent. And, as the Bible states, "hope deferred maketh the heart sick."

Believing that first things come first, we must insist that other river developments which are of less consequence to the benefit of Alabama and the Nation now take a back seat while full support is thrown behind the Coosa-Alabama.

Consider what full development of the Coosa-Alabama would bring: additional power for industrial development, full employment for the valley's people, freedom from disastrous floods, development of valuable mineral resources, adequate facilities for recreation for the young and the old, and the development of an industrial fairyland which would strengthen our national defense and security.

Industries are leaving the other parts of the country every day and finding new locations in the South. They prefer sites along waterways.

If Alabama is to move with the South, she must utilize her greatest undeveloped asset. The bounty of the Coosa-Alabama River system must be recognized.

We must not rest until our dream—closer to reality now than at any other previous time—is realized.

Support for H. R. 8002

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. CURTIS of Missouri. Mr. Speaker, in view of the debate on the floor with respect to H. R. 8002, I feel it appropriate to place in the RECORD, for the thoughtful consideration of my colleagues the following editorials, the first of which appeared in the March 3, 1958, edition of the St. Louis Globe Democrat and the second appeared in the March 3, 1958, edition of the St. Louis Post Dispatch:

[From the St. Louis Globe-Democrat of March 3, 1958]

SHOWDOWN ON MOSSBACK UNITED STATES BUDGETING

At long last the House of Congress will get a chance this week to debate and vote on one of the most vital Hoover Commission reforms—H. R. 8002, which would junk horse-and-buggy Federal financing methods for recognized modern procedure.

This is among the most important issues before this Congress, if not the least understood. It is especially significant now in a period of rising Washington costs. It can save taxpayers millions, perhaps billions of dollars.

The measure, twice passed unanimously in the Senate, has been clogged by obstructionist tactics in the House. Standpat battlers for a status quo have used every device to block its consideration from the floor. Now it will be forced to open consideration, but opponents have dug in for a last-ditch fight.

The legislation would require annual accrued expenditure budgeting by the Government. In plain language, that means it would give back to Congress its right to check and control long-term approapriations on a year-to-year basis. It would return to Congress power over the Federal purse strings, as the Constitution clearly intended that Congress have.

The legislation has been shorn of this authority, in large measure, by the system of appropriating lump sums for programs that run years. When Congress once votes money for such projects, it has no further control over the funds no matter how long the spending takes.

The result has been to pile heavy money backlogs in the pipelines of Federal departments or agencies. Last summer, authoritative estimate was that $70 billion of such carryover funds existed. Under present methods, Congress is powerless to do anything about this money. Obviously pile-up of tax billions in this manner encourages inefficiency and waste. It sabotages effective budgeting.

Congress should have annual review of all such moneys. It would obtain such power under H. R. 8002. Congress should have full authority to curtail, change, or end such spending from year to year. Government should be allowed to pay in a fiscal year only for goods and services obtained in that year. Under the proposed law, such powers would be afforded.

A classic example quoted to show need for this budgeting reform was the $12,500,000,000 appropriated during the Korean war for tanks, guns, and other military hardware. A month after the fiscal year began, the conflict in Korea ended. But expenditures of the billions allotted to supplies for this war did not. Four years later the Army was still spending the funds, free from congressional review or bar.

No business head, or housewife for that matter, would dream of managing money that way. It would be preposterous that Government continue such sloppy fiscal habits, especially when Washington is digging so hard for missile and space needs.

President Eisenhower, the Secretary of the Treasury, the Budget Director, the Comptroller General, accounting and other finance experts of the Nation support this bill.

The showdown finally impends. Aggravated, stubborn, and frustrating delays must be dissipated. This measure should be passed by the House and established a law of the Nation. It is irrefutably in the national interest.

[From the St. Louis Post-Dispatch of March 3, 1958]

ROADBLOCK IN THE HOUSE

A much-needed Federal budget reform is scheduled for debate and vote in the House of Representatives Wednesday. We hope that this time the House, which has twice frustrated unanimous Senate votes on the measure, will act with more responsibility. The reform—annual accrued expenditure budgeting—has been recommended by the second Hoover Commission, by President Eisenhower, and by leading accounting and budgeting experts.

What it would do would be to give Congress continuing control over appropriations for long-term programs. As it is, funds are appropriated in a lump sum for a long-range program and Congress thereafter has little or nothing to say about it. The President also has little control over the spending once authority to incur obligations has been apportioned by the Budget Bureau.

At present some $70 billion out of control by Congress or the President is thus wandering around the executive departments. Portions of it may be deobligated and spent for purposes other than those for which it was appropriated.

Under the proposed new method, Congress would appropriate for long-range projects only 1 year at a time, and review the projects annually. Eventually the multi-billion-dollar carryover could be reduced by the simple process of not adding to it. Near chaos in one large area of budgeting would be replaced by at least semiorder. We should think the basic good business of it would commend itself as easily to the House as to the Senate.

Measures Proposed To Meet Present Economic Crisis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. MULTER. Mr. Speaker, I have today introduced a bill to provide for an emergency public works program. Immediate action is necessary to correct the recessionary condition of our economy which daily grows worse. Signs of serious trouble are present in all sectors of the economy—employment is increasing by leaps and bounds; farm conditions are worsening; credit is restricted and interest rates are high; production in the basic industries has been drastically curtailed; the rate of business failure has soared to unprecedented heights; businessman, worker, and consumer are uneasy about the future. In the light of all this, the administration is dragging its feet and imploring us all to smile, close our eyes and with blind faith wait, wait, wait.

If the Eisenhower administration refuses to accept its responsibilities, I suggest that the legislative branch step in and take immediate corrective action.

Fortunately, our country has the know-how, the resources, and the backlog of needed public works and projects on which only action is needed to prevent a depression.

I recommend the following programs to be carried out at the earliest possible date:

First. The massive Federal highway program should be accelerated. We have had advance planning on this program so could move very quickly.

Second. The tight-money policy must be totally abandoned and action taken to correct its serious consequences which are still very much in evidence.

Third. A liberalization of credit is necessary in order to stimulate the home building industry and to augment consumers purchasing power. My GI home loan bill, H. R. 10764, is designed to accomplish this purpose.

Fourth. Aid to small business is required in order to reverse the trend toward concentration and allow expansion of qualified companies. Accordingly, I have introduced H. R. 9959 to provide necessary tax relief and H. R. 10980, the Small Business Investment Corporation bill which would meet the small business need for equity capital.

Fifth. The personal exemption for income tax should be increased from $600 to $800. My bill, H. R. 809, would accomplish this.

Sixth. Urban redevelopment can and should be accelerated.

Seventh. Farm conditions must be improved.

Eighth. I am introducing a public works bill to check the growth of unemployment by providing for Federal assistance to States and local governments for the construction of needed public works and improvements. School construction is an important need which could be met by such a program.

It is in the nature of the case that these programs will have no effect for several months. That is why immediate action is required. If we wait too long as we once did, recovery will take years, needless human suffering will occur and American strength will be dissipated.

In these words I am not prophesying gloom or doom. Rather, the opposite is true. I am prophesying continued economic strength if we face our difficulties with courage, vigor, and wise, forward looking policies.

New Look and Old in Communist Policy

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Los Angeles Times:

[From the Los Angeles Times of January 15, 1958]

RUSSIA AND SATELLITES—NEW LOOK AND OLD IN COMMUNIST POLICY

(By Robert G. Neumann)

I

The death of Josef Stalin on March 3, 1953, brought about considerable changes, both in the Soviet Union and in Moscow's relationship to the satellite countries.

The new rulers, especially Georgi Malenkov, did not have Stalin's tremendous authority and hence considered it desirable to strengthen their position by a moderate liberalization of the dictatorship of the Soviet Union.

While this did not go too far, a certain relaxation of the atmosphere was nevertheless unmistakable and added to the stability of the new course. But it became equally clear that while the new look may have strengthened the hands of the new leaders in Moscow, it weakened Moscow's control over the satellite empire.

The riots and revolts in East Berlin and East Germany on June 17, 1953, the first such uprisings within the Communist orbit, provided telling evidence that all was far from well in those countries, and that a sullen and rebellious population was merely waiting for a sign of weakness or confusion in Moscow in order to cause serious difficulties and even disintegration.

The events in East Germany probably contributed to the downfall of Malenkov and to the rise of Nikita Khrushchev. But there was no appreciable change in the policy which culminated in the latter's pilgrimage with Bulganin to Tito and in Khrushchev's amazing speech of revelation and condemnation against Stalin.

The new look in Russian policy gave rise to considerable optimism abroad, especially in Europe, where people hoped that there would also be a new look in Russian foreign policy. Although the American Government entertained doubts about the profoundity of Russia's changes, it did give in to great pressure at home and abroad and agreed to the summit conference in the summer of 1955.

This meeting of President Eisenhower, Prime Minister Eden, and Premier Faure with Bulganin and Khrushchev created a short period of ostensible goodwill. But it produced no tangible results. None of the problems which caused tension came one iota closer to a solution. And the second Geneva conference of Foreign Ministers in November 1955, which was to implement the decisions of the summit conference, ended in complete deadlock.

However, the forces set in motion by the period of relaxation within the Communist empire were not so quickly laid to rest. On June 28, 1956, the workers of Poznan, Poland, began to riot, an event which culminated in the removal of Poland's Stalinist leaders. Wladislaw Gomulka, an old-line Communist who had been purged by Stalin, returned to power. At the same time Hungary's Stalinist dictator, Matyas Rakosi, was also replaced by a nationalist Communist, Imre Nagy.

The Polish uprising was essentially a Communist affair, well organized and led by Communists who were by no means prowestern. Gomulka had been the architect of the Communist victory over the western-oriented Stanislaw Mikolajczyk in 1947 which gave the Communists complete domination of Poland.

In Hungary the leadership of the revolutionary forces quickly passed into the hands of determined anti-Communists. While Imre Nagy appeared as the nominal leader, well-known anti-Communists like Bela Kovacs, Anna Kethly, Cardinal Mindszenty rose behind Nagy.

The difference between those two rebellions decided, after a short period of indecision, the policy of Moscow. Evidently the Gomulka regime in Palond constituted the maximum concession which the Soviet leadership was willing to give. An outright anti-Communist regime, however, was intolerable to Moscow, and the Hungarian revolution was drowned by Russia in a sea of blood.

The crushing of the Hungarian revolution revealed once again the extraordinary solidity and exemplary discipline of world communism. There were a number of spectacular defections and important losses among fellow travelers, but when the smoke of controversy cleared away, the Communist parties emerged as strong as ever.

The Hungarian tragedy was compounded by the fact that it coincided with the bitter division within the western camp over the British-French-Israeli military intervention in Egypt. It must remain a moot question whether the West, and especially America, would have reacted more forcefully had the Suez crisis not intervened. Although America expressed its sympathy, and open intervention was not forthcoming for fear of creating a third world war.

Nevertheless, there has been no return to the monolithic uniformity of the Stalinists. In Poland, Gomulka's brand of national communism has resulted in a relatively freer atmosphere than Poland has known since 1947. Poland and its leadership are still Communist, there is no political freedom, and the freedom of speech and press is certainly very small indeed. But the interrupted contacts between Poland and the West have been resumed in large measure; even non-Communist Poles are permitted to travel abroad.

Western publications are widely read and distributed, and western institutions are treated with a measure of relative objectivity and even occasional praise. However, it is obvious that Gomulka is walking a tightrope between suppression and liberalization. It is this situation which has prompted the American Government to give some cautious aid to the Polish regime in the hope that its continued existence might have a corrosive effect within the Soviet orbit.

For similar reasons and with some good results, the regime of another undoubted Communist, Marshal Tito of Yugoslavia, was also supported.

With the elimination of Malenkov, Molotov, Kaganovich, and Zhukov, the consolidation of the Soviet leadership was completed. This was accomplished by the Moscow declaration of November 22, 1957, which for all practical purposes attempted to reestablish the Communist International with all its world revolutionary tendencies. This event constitutes a virtual declaration of war to the West and we would do very well to ponder its significance.

[From the Los Angeles Times of January 16, 1958]

BACK IN BUSINESS—MOSCOW DECLARATION REVIVES COMINTERN

(By Robert G. Neumann)

II

The first Communist International, often referred to as the Comintern, was founded in Moscow in March 1919. Its declared purpose was world revolution which at that time seemed to the Russian Bolsheviks the only way of guaranteeing the continuation of their own regime.

The Russian Communist Party maintained absolute leadership from the very beginning. In his famous "21 conditions" Lenin imposed upon every party entering the International the absolute duty to subordinate itself to Moscow. He also demanded periodic purges in the ranks of those parties in order to secure discipline.

In making these demands Lenin was influenced by his analysis of the reasons for the collapse of the Bolshevik regime in Hungary in 1919, which he blamed on the alliance between Communists and Socialists. This analysis also established the Communist habit of always blaming subordinate organs for any failure; the infallibility of Moscow became thus an article of the Communist faith.

Under Stalin the Comintern became purely and simply a tool of Soviet foreign policy and its complete subservience to Moscow was illustrated when, during the rise of Nazism, German Communists were ordered to concentrate their fight against the Social Democrats. This policy culminated quite naturally in the Communist policy of sabotaging the Allied war effort against Germany until Russia was attacked.

The Communist International was dissolved during World War II when Stalin sought to lull his allies and to arouse patriotic Russians in the prosecution of the war. When the cold war dawned, the International was revived as the Cominform. It established its first headquarters in Belgrade, and later moved to Bucharest. But it never achieved the significance of the Comintern. It was hard hit by its inability to destroy the Marahall plan, the collapse of the blockade against Berlin, and finally Tito's successful survival of his expulsion.

The Cominform was dissolved in 1956. But the period of de-Stalinization is now terminated, and the doctrine of each Communist Party following its own national development is abruptly halted.

The Moscow Declaration of November 22, 1957, reestablishes the absolute dogma of Moscow's leadership in the Communist world, to which the Chinese leader Mao Tse-tung specifically added that "there can be only one head for the Socialist camp, and that is the Soviet Union; and for Communist and the Workers' Parties there must also be one head, and that head is the Communist Party of the Soviet Union." The Moscow Declaration thus reestablishes, practically verbatim, the doctrine of 1928.

The text of the Moscow Declaration has dropped the formulation of the 20th congress of the Russian Communist Party according to which wars are considered avoidable, and returns to the Stalin-Zhdanov doctrine of the "dying imperialism" which can prolong its existence only through "aggressive" wars. This concept in turn is used as a justification for the return to the Comintern thesis of the "revolutionary wars."

Enemy No. 1 is significantly West Germany, about which the Moscow Declaration says that its militarism is being revived with United States help. "The struggle against West German militarism is a vital task facing the peace-loving forces of the German people and all the nations of Europe," the declaration says.

With extraordinary frankness the declaration demands that the "struggle for the liberation of the oppressed nations" shall be utilized for the achievement of Communist aims. Principal targets of the Communist campaign therefore are the Middle East, Africa and southeast Asia. In all the declarations emanating from Moscow at about that time the nations of Africa and Asia are carefully listed immediately after the Communist countries and ahead of the Communist Parties of non-Communist countries.

At the same time an attempt is made to exploit national traditions and resentments of America's European allies against the United States of America and to arouse the memory of anti-Fascist associations against Western Germany. Revival of popular fronts and any other form of alliance with workers' groups, national dissidence, national liberation movements, etc., is to demand disarmament and the outlawing of nuclear weapons as a principal propaganda target. Moscow calls also for the extraparliamentary struggle of the masses and finally for the nonpeaceful transition to socialism.

The return to the world revolutionary tendencies of the Communist International seems complete.

The Moscow declaration is not the result of a sudden change of course. It is the culmination of at least 3 years of careful preparation, which began when Khrushchev and Bulganin attempted to win Tito back into the fold but had its real start during the visit of the two heavenly twins to China. At that time, a working agreement was arrived at, which some observers interpret as meaning that Mao Tse-tung recognized the leading tactical role of the Soviet Union while he became the leading ideologue of communism.

The payoff came when the uprisings in Poland and Hungary placed Khrushchev in a difficult position. At that time China's Chou En-lai supported Khrushchev against Molotov, Kaganovich, and Malenkov, and traveled throughout Eastern Europe to bring the rebellious Communist Parties into line.

Significantly, the short period of liberalization in China came to an abrupt end at the precise moment when Khrushchev's victory became final.

These developments underline the absurdity of the theory of a growing gulf between Moscow and Peiping. The careful preparation of this event indicates that it is not the result of American intransigence, as some critics have charged, but is the result of a carefully drawn-up long-range plan which has now entered into a new stage.

[From the Los Angeles Times of January 17, 1958]

THE COMMUNIST ALLIANCE—POLES ON TIGHTROPE OF RUSS RELATIONS

(By Robert G. Neumann)

III

The virtual reestablishment of the Communist International, announced to the world by the Moscow declaration of November 22, 1957, was not accomplished without difficulties which are now beginning to come to the surface. These difficulties concern primarily Poland and Yugoslavia.

The announcement from Moscow merely confirmed that Poland had signed the declaration and gave no indication of differences of opinion. However, the report about the conference which the mayor of East Berlin, Friedrich Ebert, published in the East German newspaper Neues Deutschland aroused a number of speculations. Then Polish diplomats confirmed that there had in fact been controversy about the declaration's concluding sections concerning the preeminence of the Russian Communist Party.

The report of the Polish Communist leader, Wladyslaw Gomulka, which he gave over the Warsaw radio, indicates differences in some depth. Gomulka defended vigorously the true sovereignty of each party and opposed Suslov's demand for a formal international Communist center in Moscow.

Gomulka declared: "The dogmatic concept of the unity of Socialist countries and of the ruling Communist labor parties, which was stressed in the past during the period of the cult of personality, has done a great deal of damage to this unity."

Gomulka also judged very severely the defunct Cominform and, in agreement with the Yugoslavs, concluded that the record of that organization could not be considered a positive one. Instead of big international meetings he advocated bilateral conferences of Communist Parties and countries.

He also rejected the Stalinist practice of maintaining direct contact with individual groups within the Communist countries rather than through the official leadership itself. He categorically denied the right of such party conferences as just took place in Moscow to interfere with the affairs of the various Communist parties, and he allowed the validity of common decisions only where common interests and common problems are involved.

Gomulka's report reveals that in spite of his signature under the Moscow declaration he agrees much more with Yugoslavia, which did not sign, than with the content of the declaration. Why then did he sign? Obviously he is trying to walk a difficult tightrope between control by Moscow and his rebellious country. The fate of Hungary has shown Gomulka clearly what he and Poland cannot do. Poland must remain Communist; and where communism is attacked, freedom must be restricted.

But if the screw is tightened too much, it might lead either to a Hungarian-style development (perhaps not too likely), or to Gomulka's ouster. Poland is indispensable to Russia as an area of transit to Germany and as a guardian of the historic invasion routes into Russia. Hence an outright defection of Warsaw from the Communist camp would without doubt be bloodily suppressed.

But Moscow also holds another threat over Poland's head. That is the German frontier question. Germany lost a large part of her territory when the Potsdam conference handed to Polish administration the area east of the Rivers Oder and Neisse. This was to compensate Poland for the lands which she had lost to the Soviet Union. Hence all Poles are bitterly determined to hang on to the land they consider just compensation for their suffering at the hands of the Germans.

But the West German Government has frequently declared that it does not consider this question settled. It claims the return of that ancient German land. Every Pole knows that if Germany were ever to be reunified, the eastern frontier question would be quickly reopened. The character of this knowledge is clearly indicated by the constant complaint of Polish newspapers about the reluctance of Poles to settle in the newly acquired western provinces.

To maintain her claim to those lands, Poland needs Russia's support. Reliable Polish diplomatic circles have reported a recent conversation between Khrushchev and Gomulka in which the former said: "We actually see this border (the Oder-Neisse line) more clearly. It will remain clear for us as long as we can count Poland among our friends. This is no threat, but our attitude—clearly and unequivocally."

Even more profound is the dissatisfaction of the Yugoslavs. Their delegation refused to sign the Moscow declaration because it "contained a number of views not in conformity with those of the Communists of Yugoslavia," according to a declaration of the Yugoslav Communist Central Committee made December 7, 1957. Marshal Tito vigorously condemned the dogmatism of the Moscow declaration and heatedly refuted the accusation of being a revisionist. His remark that the accusation was also heard in 1948 (when Stalin and Zhdanov read Tito out of the Cominform) indicates the marshal's bitterness over his defeat at the Moscow conference.

Belgrade's isolation is indicated by a growing Russian press campaign against Yugoslavia. On December 10 Pravda published a leading article which accused the opponents of the Moscow declaration of nationalism and cosmopolitanism and calls them "revisionist agents of the imperialistic bourgeoisie."

And in Belgrade the fear is expressed that the growing power of Mihail Suslov and his Stalinist associates, Kuusinen and Ponomarev, highlights the danger of a rapid return to Stalinism.

Conditions within the Communist family are still too much in flux to permit a final assessment. The fact that Suslov's demand for the formal reestablishment of the Communist International, as well as the reissue of an international Communist journal, was turned down indicates that this man does not as yet have everything going his own way. It is also difficult to see why Khrushchev should not view Suslov as a dangerous rival who must be eliminated.

But whatever the outcome of this almost inevitable power struggle, the Communist front stands newly reunified, that it has declared war against the West, and has even announced the methods by which it is going to fight. If we fail to take the Moscow declaration seriously, we shall be sealing our doom.

The Pace of Change

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. BOLLING. Mr. Speaker, former Senator William Benton, of Connecticut, delivered the following challenging speech on February 4, 1958, at the conference on America's Human Resources To Meet the Scientific Challenge held at Yale University:

THE PACE OF CHANGE

(By William Benton)

During Hitler's heyday Aldous Huxley remarked that technological improvements were enabling mankind to go backwards faster.

Since Hitler's extinction technology has improved at such an accelerating rate that we now seem to be in sight of the ultimate goal—the ultimate backwardness—extinction for all of us.

You scientists and educators and you alleged masters of the mediums of communication are gathered here in New Haven to help the world discover how technological improvements may help the rest of us to hold our own—and even perhaps to move forward.

As cosponsor of this conference, I have a simple opening message for this your second day: I urge you to cultivate the politicians, and to instruct them as you can. Politicians are educable. There is perhaps no more apt example than my late colleague, Senator Brien McMahon. I watched the atomic scientists educate him, in his role as the apostle of civilian control, when military control seemed the easy way.

During my tenure in the thirties as part-time vice president of the University of Chicago—and I may say that I learned more of the devious ways of politics from the academic manipulators there on the midway that I ever learned in Washington—the great sociologist Prof. Will Ogburn used to talk about the impact of technology on society. It was Ogburn who invented the concept and the phrase "cultural lag." He predicted continuous social change, forced by science and by technology—with no plateaus for adjustment. He prophesied the ever-accelerating rate of change—an ever-steeper climb up the ladder of change for all society.

Can democracy survive the new pace of change? Professor Ogburn isn't confident that it can. He questions whether we shall preserve our freedoms intact. Thus he seems to suggest that there is a wisdom lag more dangerous in its impact than any "cultural lag."

Our second day's sessions are to be devoted to education, which is our society's best hope though not its last hope. Education is the great hope for the long pull, and most appropriate it is that we dedicate ourselves to it here today in the city of Willard Gibbs. The general public, whose opinions ultimately determine and limit our national policies, didn't know this titan of mathematical physics when he lived, and hasn't heard of him since. Similarly, the discoveries of our Shannons and Schwingers today are unknown to the public even though they are heavy with public consequences.

Einstein once said, "Politics are more difficult than physics." The world, he said, is more apt to die of bad politics than of bad physics. And political leadership is surely one of the most difficult arts ever practiced

by men—if you will permit me to call it an art. The politician, if he is interested in the works of Gibbs, or of Shannon or Schwinger, and in their political import, must reckon, in our democracy, with the offstage presence of widespread citizen indifference. He must reckon also with an uninformed and irresolute political leadership.

In 1958, we have reason to be in a hurry. In 1958 we must ask ourselves and our political leaders: Is there time for the human race to learn to avoid blasting itself and its seed into eternal gibbering night? And what can we do to prolong the time?

The present status and influence of the social sciences give scant hope for quick rescue.

Efforts at political action by the natural scientists through an occasional bulletin or petition seem little more than anguished rhetoric, however poignant. I recall during the war years, when Chicago was the administrative center of the Manhattan project, the anguish of some of the world's great scientists when the bomb became reality, and thus as the time approached to drop it. I recall my phone calls which culminated in arranging, through the White House, for the meeting of a committee of three scientists with former Senator James Byrnes, who had served as Assistant President to Franklin Roosevelt. This was a tipoff on his forthcoming appointment as Secretary of State.

In our democratic western societies we can only depend for our safety on our politicians—those specialists in the art of the possible, those compromisers and choosers of the lesser evil, those followers and leaders of public ignorance and public insight.

I am told that a debate is now going on among the natural scientists about how to win greater public understanding for science. One group contends that the effort should be directed primarily to intellectuals. Another group holds that the target must be the general public. I suggest that both are wrong, that the starting point and the focal point should be the politicians.

Now how does a scientist set about educating the politicians?

One obvious way is to seek to emulate the atomic scientists who in 1945 got themselves "Washington representation." I put this phrase in quotes. In plainer language this is supposed to be a lobby.

A second way is to organize groups among you to visit Senators and Congressmen. Your own congressional representatives will listen most respectfully, and the key and relevant committee members will be attentive, too. Ask to testify at hearings. Write letters; thoughtful letters will be read and digested. Cultivate the administrative assistants and the committee staff.

A third way can turn out to be the best way; ask Senator PAUL DOUGLAS: Get into party politics yourself, in your free time, if you have any. And don't be surprised if you enjoy it.

We are now seeing a burst of public support for science. Due to my estimate of future Soviet policy, I personally believe it will prove lasting. The task of our own leadership, it seems to me, is constantly to hold up the vision of hope and of greatness. Most of the things we may do in the fields of education or basic research, because of the Soviet threat, we should be doing anyway, if there were no Russia. Nothing could be worse for science or society than a chronic appeal to fear, which can build the conviction that science is primarily an instrument and a creature of our defense needs.

At this moment, scientists working on the missiles programs may seem to the American public as precious as the minutemen at Concord and Lexington, or the RAF pilots during the Battle of Britain. But may we not also need now, in 1958, a protective crash program of education on the Bill of Rights, along with our programs in rocketry? This is of course a rhetorical question merely, to point up the obvious, that although we here today believe in science, we recognize that it is not an end in itself.

The laws of Newton, and the tables of Kepler, and the formulas of Einstein, translated into the Russian language, have opened new paths for weapons that can render entire regions of the world uninhabitable. But they have also opened new frontiers for man in space.

Writing in Stuart England, halfway between Elizabeth's death and Cromwell's reign, when the most recent household improvements were the knife-and-fork and the neatly named water closet, Sir Francis Bacon wrote that three inventions unknown to the ancients—printing, gunpowder, and the mariner's compass—"changed the appearance and state of the whole world." Bacon went on to develop his familiar admonition that knowledge is power, a dictum that appears ironic at this juncture of history. But Bacon distinguished three kinds of ambition. The ambition of men to enlarge their personal power in their own country he considered "vulgar and degenerate." At the second level he put men wanting power for their country, to help it to control mankind; this he deemed "more dignified but no less covetous." This is the state which we in the United States are sure the Soviets have attained; and they for their part seem no less sure of us.

"More sound and more noble than the other two," Bacon said in 1620, would be "if one were to endeavor to renew and enlarge the power and empire of mankind in general over the universe. Only let mankind regain their rights over nature, assigned to them by gift of God, and obtain that power, whose exercise will be governed by right reason and true religion." This third goal of Bacon's, we may hope, will emerge as the goal of conferences such as ours here today.

Almost all of the great thinkers of our civilization have identified the goals of science with the highest purposes of man, with the individual's freedom to develop himself in his highest powers, and the triumph of virtue and wisdom in the conduct of human affairs.

What can we teach our politicians about the goals of science and the projected pace of change? What promises for the future can we give them, so that they may in turn steer our people and our policy to a right view of science and of education—to postulate of hope and not of fear?

Some of our legitimate hopes and aspirations, growing from the onrush of technology, seem simple and obvious. With leadership and with luck; with a revitalized educational system; with a technology oriented not merely to defense but to the fulfillment of man's needs and aspirations, American can expect tremendous economic gains in a quarter-century. By that time Americans may look back at the 1920's as one of the lower points in the national history of our well being.

On the basis of trends already developing, the American people in a material sense can count on realizing at least three dramatic expectations by 1938, conceding certain premises of stability:

1. We shall be richer. Average family incomes in 1983 will be $15,300 a year in dollars of today's purchasing power, 2½ times the present level.

2. We shall be physically and mentally healthier. At least half the people now being killed and maimed by the three worst causes of disability—disease of heart and circulation, cancer, and mental disorders—will avoid them or survive in good health the attacks that would kill or disable them today.

3. We shall be more numerous. By 1983 there will be 250 million Americans.

All of us know vigorous octogenarians today. In a national population over 250 millions, due to steady advances in medicine, at least 100,000 Americans who are alive in 1983 will reach the age of 100 or more.

Family income will be more than enough to pay for the finest educational opportunities the world will ever have seen. Indeed, that is true today, if we elect so to use our income.

No matter what investment we allocate to schooling, we cannot guarantee to deliver Einsteins nor Fermis nor von Neumans. But if we make opportunity for learning as freely available to talent and ability as the water we drink, we return to an historic American assumption that our natural resources reside in the capacities and the aspirations of the coming generation.

The job of cutting through today's knots is all our own—our own job, and more particularly the job of those who practice the much-abused art of politics. That is why I urge you to cultivate the politicians and to seek to instruct them.

Whether we like it or not, politicians today hold the key roles in determining policies vital to every person in this room, and crucial to our country's survival: for example, the level of support for research and development; how much of this support will go to basic studies and how much for applied; the question of secrecy or exchange; above all, perhaps, the nature and level of support for education. The pace of change, I predict, will make the politician's role ever more important.

Let us get on with our job, and with our conference.

Israel's 10 Years

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following tribute to the State of Israel. The editorial appeared in the New York Herald Tribune of February 27, 1958:

ISRAEL'S 10 YEARS

Israel is here to stay.

That, above all, is the chief fact demonstrated by this new state's first decade of existence.

Its enemies wished it to be destroyed; it refused to be destroyed. Instead, Israel thrived on adversity.

When its enemies actually resorted to force, Israel proved that it was tougher than they were. It made them learn that Israel could not be conquered.

New tests, new ordeals, undoubtedly lie ahead. On its northern march Soviet arms and technicians are piling up, like plagues of locusts. No one can say what new adventures may be recklessly attempted by the latter-day imitators of Hitler. America, which did so much to help bring Israel to birth, has made it clear that any attack upon Israel will be opposed by us.

All of us owe Israel much. Our law and our religion derive from its prophets. It may be said now, as was said centuries ago, "If I forget thee, O Jerusalem, let my right hand forget its cunning."

As Foreign Minister Golda Meir wrote in this newspaper's series on Israel's first decade, Israel is no intruder in the Middle East, but an ancient people returned there with no other ambition but to rebuild it national life and freedom and security. Its existence, as Mrs. Meir put it, "constitutes no threat to the security and independence of its neighbors";

on the contrary, it knows that "an agreed solution of all outstanding problems between our neighbors and ourselves is vital for the peaceful and progressive development of Israel and for the security and stability of the Middle East as a whole."

The star of David has risen again upon the ancient and beloved land. It flies valiantly and indomitably against all adversity. We salute it, and wish it well.

House Should Block 5-Cent Mail

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 27, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, public resentment is growing against the unfair 5-cent letter-rate proposal. A few days ago the Philadelphia Inquirer, one of the Nation's large newspapers, came out with a 3-column editorial opposing the 5-cent rate.

The public is also awakening to some of the other unjust and discriminatory features of the postal-rate bill which passed in the Senate last week.

The postal-rate features of the Senate version of H. R. 5836 are vastly different from those contained in the bill passed by the House last August. In my opinion, the House provisions are far more realistic and equitable. While we all realize that any House-Senate conference must be a mutual give-and-take proposition, I hope that the House will stand firm on basic matters of principle involved in this legislation.

There are many provisions of the bill passed by the other body which are contrary to the sentiment as expressed by a majority of Members of the House.

First-class rates for out-of-town letters would be set at 5 cents for 3 years, beginning July 1, 1958. Local first-class mail would be set at 4 cents. The House bill would establish a uniform 4-cent rate for all first-class mail. Airmail would be raised to 8 cents instead of 7 cents as provided for in the House version.

As was pointed out so clearly during the Senate debate, this dual-rate provision would cause all kind of confusion, especially in metropolitan suburban areas, where out-of-town definition would be hazy. The most eloquent argument against dual-rate first-class mail was made 2 years ago before the House Post Office and Civil Service Committee by Postmaster General Summerfield himself. Here is what he said:

> Any rate differential between local and nonlocal first-class letter mail would be discriminatory, costly, and extremely difficult to administer. * * * As a result of public confusion, there would be a sharp increase in postage-due mail, which costs the post office an additional 5 cents to deliver and is extremely annoying to the recipient.

Mr. Speaker, the 5-cent first-class rate is grossly unfair to the individual mail user. The increase will be an additional burden in several ways. Not only will their personal postage costs be increased by 60 percent, but the increased postage costs to State and local governments will probably result in higher taxes. Such an increase would cost the State of Texas an estimated $1 million a year in higher postage costs, the city of New York over $1.5 million, and similar postage increases in my State of Pennsylvania and every other State in the Union. Postage costs are a legitimate deductible business expense and would result in a drastic reduction in tax revenues by business firms to the Federal Government.

The Senate bill provides for only 3 annual increases of 10 percent each year on the nonadvertising portions and 3 annual increases of 20 percent each year on the advertising portions of publishers' second-class mail. The House bill provided 4 annual 15-percent increases on both portions of publishers' second-class mail.

While easing the rates on publishers, the other body increased the rates on second-class publications of nonprofit religious, educational, labor, veterans, and fraternal organizations. The House bill exempted these nonprofit groups from the rate increases. Many of these groups, operating on a shoestring budget, would be unable to continue their publications if postal rates were increased.

The Senate committee eliminated the amendment which I sponsored in the House to place a $100,000 annual limitation on postal subsidies to any second-class mail user. During the debate, an amendment was offered by Senator CLARK, of Pennsylvania, and Senator PROXMIRE, of Wisconsin, to restore the principle of subsidy limitation to the postal rate bill. Their amendment for a subsidy limitation of $1,800,000 was finally rejected by a 33-to-57 rollcall vote.

Mr. Speaker, I do not see how this body can, in good conscience, approve increases in first-class mail unless some limitation is placed on these multimillion-dollar subsidies to a handful of large magazine publishers, whose profits are now at record high levels. I am hopeful that the House will insist on the establishment of this important principle of subsidy limitation in any postal rate legislation finally approved.

Under leave to extend my remarks, I include the following editorial from the Philadelphia Inquirer, which urges the House to stand firm on postal rate legislation:

HOUSE SHOULD BLOCK 5-CENT MAIL

With a Senate majority voting for a 5-cent out-of-town first-class mail rate, it is at least momentarily encouraging to note gathering opposition in the House of Representatives to this measure.

The House has previously approved an increase from 3 cents to 4, which is tough enough. It should now buck the Senate's determined effort to jam through 5-cent postage. As the Inquirer has repeatedly pointed out, first-class mail at the existing 3-cent rate pays for itself.

The Senate has not justified its attitude by tacking the postal rate increases of about $700 million to a pay rise for 1,500,000 postal employees that would cost more than the rate boost. That move has raised possibilities of a presidential veto of the whole bill and drew from Senator STYLES BRIDGES the comment that the measure had become a mixed up mess.

Postal employees are entitled to increased pay, but there are more equitable ways to give it to them than through 5-cent first-class postage.

The Senate showed its hand when efforts to increase second-class mail rates by 30 percent a year for the next 3 years were swept aside on Thursday. This kind of mail includes newspapers and magazines. It is a big drain on the postal budget. According to Pennsylvania's Senator CLARK, the favorable second-class rates create a subsidy to magazines of about $32 million a year, a very juicy sop to publishers.

There are, in pending bills, moderate provisions for gradual second-class increases. But they don't approach the need to make second-class mail pay a reasonable share of the cost of the postal service.

Meanwhile, first-class mail—letters, Christmas cards, and similar communications—are to carry the load, if the Senate proposal is sustained.

That's where the House, which has uniformly opposed the 5-cent intercommunity charge, should take a stand and stick to it. Congressmen should not be deluded by a solemn Senate provision limiting the 5-cent rate to 3 years. Hard-pressed Americans can look forward to a permanent 5-cent intercity mail cost if this boost goes through. And the time to stop it is now—in the House.

Foreign Aid Is Necessary To Meet Russia's Dual Threat: Military Force and Economic Subversion

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. William Randolph Hearst, Jr., from the Hearst newspapers of February 23, 1958:

SURVEY UPHOLDS FOREIGN AID

(By William Randolph Hearst, Jr.)

Again this year President Eisenhower has asked Congress for $4 billion for the mutual-security program—oftentimes critically but erroneously referred to as our giveaway program.

It looks like he is going to have even more trouble getting Congress to ante up the desired sums this year because of our own money troubles here at home.

You may remember the United States Senate last year asked me—among others—to inspect and report our findings and opinions of the value of the tremendous amounts of taxpayers' money for mutual security in the various corners of the world each of us visited.

Regular readers of this newspaper may also remember that editorially we have been—to say the least—doubious, and often frankly critical, of the program in the past. The Senators must surely have known this when they appointed me, but they chose men who they thought would call the shots as they saw them.

It is, therefore, relevant to today's piece that, with the exception of specific detailed criticism of waste or excessive personnel, the Senate's 10 representatives who went into the field unanimously reported that the various military and economic investments had been and were necessary and approved the concept behind the program.

As concerns waste, United States Comptroller General Joseph Campbell told a closed session of the House Foreign Affairs

Committee a couple of days ago that military aid has never been subject to systematic and continous audit.

If this is so—and Mr. Campbell ought to know—it is the urgent duty of the administration and Pentagon to conduct such an audit and make it known to the people. Waste must be eliminated. But it is in American self-interest not to confuse it with the value of the program itself. Let's not throw out the baby with the bath water.

In Editor's Report of last August 25, when the issue was under debate, I wrote:

"My first point is that foreign aid is a misleading—sometimes erroneous—term. It suggests a giveaway or boondoggling waste of the money you and I contribute to Government. Actually, as it works today, we are buying defense at bargain rates."

Of the $3,900,000,000 the President is asking from Congress, more than half, or $2,600,000,000, would be used for military aid, either direct or for defense support of friendly powers. Most would be direct; that is, $1,800,000,000 to our allies such as those in NATO, the Baghdad Pact nations and SEATO (Southeast Asia Treaty Organization). Another $835 million would go to defense support of 12 nations—70 percent of this to Korea, Nationalist China, Vietnam and Turkey.

When I was in Turkey a few years ago I learned that a Turkish soldier could be equipped, trained, fed, housed, and clothed for $200 a year. That is correct, $200 a year. The cost may have gone up a little since, but it is still infinitesimal compared to the cost of maintaining an American soldier.

Similarly, when the Hearst task force was on its world tour in the spring of 1956, we learned that the cost of equipping, training, feeding, housing, and clothing more than 20 divisions of ROK troops in South Korea was equivalent to the cost of maintaining 2 American divisions. If this cost has gone up, it is only by a minute fraction.

You don't have to be an Einstein to figure out that military aid is bargain-rate defense, whether given directly in the form of arms or indirectly to support the economy of nations which otherwise could not afford troops or modern weapons in the amounts needed for adequate defense of our vital world perimeter.

Vice President DICK NIXON, in a speech in Los Angeles this past week, added to the impressive data. He said it cost 5 times as much to maintain 1 American soldier for 1 year as it does a soldier of 1 of the allied nations on the perimeter of the Communist empire.

These are facts that back up the President's warning of the consequences that would threaten us if the mutual-security program were wrecked. He listed such consequences as:

"A severe dislocation and basic impairment of free-world power.

"A certain crumbling, under Sino-Soviet pressures, of our strategic overseas positions and a forcing of these positions progressively backward toward our own shores.

"A massive increase in our own defense budget, in amounts far exceeding mutual-security appropriations, necessitating increases in taxes.

"A heavy increase in inductions of American youth into our Armed Forces.

"Ultimately, a beleaguered America, her freedoms limited by mounting defense costs, and almost alone in a world dominated by international communism."

This is just about the same warning that Adm. Arthur W. Radford, former Chairman of the Joint Chiefs of Staff, gave to the Senate Appropriations Committee last year.

So much for military aid, and I'll rest that phase of the case right here.

When you get into economic aid, for which the President is asking $1,300,000,000, the evidence is not nearly as clear, but in my opinion it remains vitally important.

Suppose I approach it this way:

In the long interview Frank Conniff, Bob Considine, and I had with Nikita Khrushchev last November, one point he emphasized was his absolute conviction that communism (socialism, he called it) was invincible and would inevitably conquer the world without the need for war.

In other words, he was counting on the weapons of economic penetration and subversion to make it easy to win.

These are not weapons merely in the figurative sense. In the Russian strategy they are weapons in a cold, hard, literal sense; weapons of actual conquest.

No one knows, of course, how much money Russia is spending to neutralize governments friendly to the United States (for example, the economic thrust of the Kremlin into Latin America); or how much it is spending to win over the allegiance of the so-called uncommitted nations (the economic thrust into Africa); or how much it is spending to turn into satellites nations that are tilted toward Russia and away from the West (Egypt, Syria, Yemen).

The amount must be tremendous. The Soviet Union is able to spend this money by depriving its people of essentials and comforts, by reneging on its bond issues—things that we would not and could not do here.

But that is not an excuse for forfeiting this life-and-death game. It is surely worth the effort to help nations out of the poverty that makes them susceptible to Soviet enticements, particularly since such aid is changing toward a loan basis, however soft those loans may be. And it is certainly to our advantage to help nations—which have shown themselves worthy of help—toward economic independence that would attract the interests of our private enterprise.

I wish to make it clear that I am not advocating blind acceptance by Congress of the President's program. Neither is he. I am not urging that it be voted without any survey or any cuts. Neither is he.

I am saying that the program ought to be considered item by item, nation by nation—thoroughly, fairly, and on the basis of what are the best interests of the United States in his battle for survival in which every American is engaged, whether he or she knows it or not.

Cushions in Our Economy

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mrs. KNUTSON. Mr. Speaker the Washington Window of the Public Affairs Institute discussed on February 28 the cushions in our economy—stopgap measures which can be used to prevent economic recession from turning into economic disaster. It illustrates the wisdom of New Deal-Fair Deal policies. Such means should be adopted as standard operating procedure by our country as guaranties toward the future of a growing economy.

The article follows:

CUSHIONS IN OUR ECONOMY

During the New Deal when the Roosevelt administration was pushing such social welfare measures as social security and unemployment compensation, there were cries from enraged conservatives in the Congress that these were out-and-out socialism.

Today, some 20 to 25 years later, our so-called modern conservatives wouldn't dream of sounding off on these measures. They may have their own private reservations about them but they are forced to accept the political and economic facts of life that they are here to stay.

It's not only that these benefits are a recognition of government's humane responsibilities but far from being give-aways are accepted as insurance against joblessness and old age.

In addition, these programs have even far greater value in the face of the economic recession we face. They are pumping millions of dollars each month back into our economy and may well take credit for the fact that the recession has not turned into a depression.

Even our most conservative economists admit that these New Deal measures as well as other stabilizers such as the graduated income tax and insured bank deposits, are providing us with at least a secondary line of defense against economic collapse.

Of course, the Eisenhower administration is being forced to resort to other pump-priming measures to meet the current emergency. It is providing added incentives in highway building, home building, defense contracts, etc.

But the comfortable thing about social security and unemployment compensation—even though the benefits are far lower than many would like to see them—is that they are always present as stabilizers in our economic system.

At the present time, with unemployment in the vicinity of 5 million, it is estimated that the State governments are aiding people who have lost their jobs to the tune of $250 million a month. This sum is not fantastically large but it is not hard to assume that every cent will be returned to the economy as these people buy the necessities of life.

Of course, if unemployment grows, then the total payments will increase. And there is an ample reserve for the fund. At the end of 1957 it was estimated at $8.7 billion.

More than 43 million persons, or 83 percent of all nonagricultural wage and salary workers are covered under the program. More than 3 million persons are presently receiving compensation and in some industrial States like Michigan, in excess of 10 percent of those insured are drawing benefits.

The amounts received by insured workers vary State to State. Louisiana pays as little as $5 a week in some of the low-wage categories while Michigan pays a maximum of $55.

There is presently pending in the Congress a bill, introduced by Senator JOHN F. KENNEDY, Democrat of Massachusetts, and Representative EUGENE MCCARTHY, Democrat of Minnesota, which would establish Federal standards, as far as length and rate of payments are concerned, far above present levels.

With many of the rates being so low, a new development has taken place in the last 2 years known as supplementary unemployment benefits. These have been negotiated by a number of unions. There are perhaps 2 million workers covered by these plans in steel, auto, rubber, glass, maritime, and allied industries.

No accurate estimate is available of the total amount of purchasing power SUB is pumping into the economy but at least $7.5 million was paid out in January. Employees of United States Steel received about one million dollars alone.

Social Security does not rise or fall with the economic tides as does unemployment compensation, but is paid out regularly whether times are prosperous or depressed.

During December 1957, $639,566,000 was paid out in Social Security benefits. Unquestionably this provided new and badly needed purchasing power for the economy.

All of these stabilizing factors—unemployment compensation, supplemental unemployment benefits and social security—have won the support of most if not all of the Nation's businessmen.

Only a couple of years ago strong words were uttered by the United States Chamber of Commerce against SUB. You don't hear such criticism any more. A good example is Donora, Pa., where bankers and businessmen as well as the workers say SUB saved the town from economic collapse.

We have come a long way in 25 years but we shouldn't forget all that we have learned.

Address of Hon. G. Mennen Williams, Governor of Michigan, to Communications Workers of America, AFL-CIO

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. DINGELL. Mr. Speaker, on February 25, 1958, the distinguished Governor of the State of Michigan, the Honorable G. Mennen Williams, made an address to the Communications Workers of America, AFL-CIO, conference of local presidents at the Sherman Hotel, Chicago, Ill.

His remarks on that evening were such that I felt they deserved a place in the CONGRESSIONAL RECORD:

EXCERPTS FROM REMARKS OF GOV. G. MENNEN WILLIAMS TO COMMUNICATIONS WORKERS OF AMERICA, AFL-CIO LOCAL PRESIDENTS CONFERENCE, SHERMAN HOTEL, CHICAGO, ILL., FEBRUARY 25, 1958

It would be pleasant to devote this whole evening to paying compliments to your great president, Joe Beirne. But I know you also want to use this time for a few thoughts on current economic events.

The American economy is in a deep recession. The dramatic evidence of this recession lies in the growing numbers of unemployed persons in communities from coast to coast.

Twenty-six of the 48 States have unemployment of more than 6.9 percent. Our economy putters along at 27 percent below full production. Privately built dwelling units slumped to less than 1,000,000 last year for the first time since 1940. The list of jobless nears the 5,000,000 mark.

The Nation's most immediate problem is to get these people back to work.

The Eisenhower administration can't seem to understand that very simple fact. The unemployed want jobs now—not conversation that next month, or next summer, or next fall employment will pick up.

What are these jobless workers supposed to eat in the meantime—secondhand Republican slogans? Are they supposed to clothe their families with platitudes, and pay the rent with promises?

Instead of action to revive the economy, the Eisenhower administration tells us to have confidence, and everything will come out all right. Well, this recession wasn't caused by talk, and it's not going to be cured by platitudes about having confidence. The economic policies of the Republican Party caused this recession, and only strong counteractions are going to cure it.

Are we supposed to have confidence in the hard-money policy? Is the record high cost of living supposed to make us delirious with joy? Is the purchasing power of unemployed workers supposed to start the factories humming again? Are we expected to have confidence in the Eisenhower-Benson farm policy, which has squeezed the small farmer dry?

The Nation has no confidence in the Eisenhower administration, because the recession itself was caused by the indifference of this administration to the warning signs of economic distress which were clearly evident early last year.

Herbert Hoover, the last Republican President, gave a speech about confidence in Pennsylvania last week. It sounded just like the Republican administration in Washington today. After he was finished speaking, Hoover admitted that the speech he gave last week was 27 years old. It was the same speech he gave in 1931—telling the people not to worry, things will take care of themselves if they just had confidence.

Well, confidence is built on deeds not on words. Confidence will be restored when leadership gives us programs for action, to build a better, stronger America. Programs to expand America, not to contract it, are the stuff of which confidence is made.

St. James tells us: "Even so faith, if it hath not works, is dead, being alone. Yea, a man may say, Thou hast faith, and I have works: show me thy faith without thy works, and I will show thee my faith by my works."

You know, if some citizen of the last century were to show up in America tomorrow, you wouldn't have to tell him there was a Republican administration in Washington.

Just tell him that we have high unemployment, high interest rates, and the highest cost of living on record—and he'd know the GOP was running the country.

There is no tragedy quite like the tragedy of mass unemployment. Unemployment eats away at the self-respect of a man. It fills his heart with fear as he watches his family cut down on food, and clothing, on recreation—on all the necessities of life.

And it brings with it despair, because the individual is trapped by circumstances not of his own making—circumstances which he, individually, is powerless to remedy. He cannot put himself back to work. Only major programs to give the economy a strong forward shove can start the wheels rolling again at full speed and reopen the jobs that have been lost.

We are a wealthy Nation—but we are not so wealthy that we can afford idle men and idle machines at a time when America's domestic needs have never been greater, and when we need all our strength to win for our way of life its contest with Soviet tyranny all over the world.

While the administration coasts along, awaiting some mysterious magic in the month of March—that's when prosperity finally begins to come around the old familiar corner, according to President Eisenhower—the Soviet Union pushes ahead on all fronts—rapidly expanding her industrial production, enlarging her foreign aid programs, energetically developing new weapons, zealously pushing the strongest educational program she can devise for her children and youth.

How does the Eisenhower administration answer the great needs of America at home and the great challenge to America abroad?

The answer is found in the budget it proposes for the fiscal year ending 1959. The Federal budget is clear mirror of the thinking of this of this Republican national administration. And the image of that thinking reflected in the budget mirror is alarming because it shows a small and narrow conception of what this Nation should be doing.

Truly, as President Truman said this week, the men of little faith are in the Republican Party. The Eisenhower budget proves it.

Under the guise of finding funds for increased military spending, the administration proposes cutbacks in health, education, housing, and welfare programs.

If the pattern they seek this year is carried through over the remaining years of this administration, it means cutbacks in Federal assistance to the needy aged, to dependent children, the blind, and the totally disabled.

They want to cut back on hospital construction funds, cut down on the Federal share of slum-clearance programs, increase interest rates in rural electrification programs, cut price supports on basic farm crops to 60 percent of partly.

No new public works starts—one at all—are included in the budget. They deleted funds to help combat juvenile delinquency, funds to train teachers to teach mentally retarded children and children with hearing and speech defects.

Federal aid to school construction—which your President, Joe Beirne was fighting for back in 1948—isn't mentioned at all, not even to say they regret eliminating this gravely needed assistance this year.

In this first Federal budget of the sputnik age, the Nation was ready for big thinking and dynamic action. Instead we got a depressing example of small ideas and stagnant plans.

The Eisenhower administration misreads the American people. It underestimates their willingness to face the challenges of today and tomorrow. It fails to comprehend at all the eagerness of the American people to roll up their sleeves and get to work rebuilding America, and rebuilding the world.

It doesn't begin to grasp that the American people have lost patience with this needless recession, with joblessness, with idle plant, with standing by and letting our mammoth domestic needs somehow get themselves fulfilled.

The Eisenhower administration has no grand design for a fuller, richer life for the American people. It has no dreams of expanding freedom at home and throughout the world. It does not feel the restlessness of people to find their way to a greater prosperity and to a stable and enduring peace.

If the Eisenhower administration understood the spirit of America, we would be rolling ahead at a speed that would make the world gasp in admiration at the resourcefulness and energy of America.

What would we be doing?

We would be building houses—not at the rate of less than 1 million a year, but at the rate of 2 million a year until every family would be able to have a decent home.

We would be rebuilding our cities, eliminating slums, finding solutions to the problems of industrial plant obsolescence, unclogging traffic.

We would be building schools as fast as bricks can be put on bricks from the primary grades to our colleges and universities. We would be training the technicians, the scientists, the scholars of all kinds by the thousands so that these precious skills could be available to advance democracy at home and abroad.

We would be planning and carrying through programs for our aged citizens—housing projects designed for their needs, medical programs for their benefit, recreation programs geared to their interests, and social security sufficient to give every aged person without exception the material means to live out the declining years of life in decency and comfort.

We would be expanding our research into mental illness a hundredfold to find the way to prevent this tragedy and to restore those unfortunate enough to be so afflicted to useful life.

We would be constantly trying new programs to distribute our agricultural surplus to the ill-fed and the ill-clad, and there are

plenty of such in America, so that our agricultural abundance would not be a burden on the market but a blessing for the people.

We would be developing our rivers and our power sites for the benefit of vast areas at home, and we would be carrying the great concept of TVA to any area of the world where it could help the people to a richer life.

We would be using all resources necessary to speed the development of atomic power for peacetime use.

We would eliminate discrimination in every part of this land and treat our fellow human beings as our brothers under God.

We would be building tomorrow's weapons today, not for the purpose of war, but for the purpose of peace.

We would be accepting the challenge of the Soviet Union wherever that challenge is made, in whatever area of strength they want to try to match us. We'd say to the Kremlin: "You think you can match us in action, in deeds, in the works of peace. Why, we'll make you look like you're standing still. We'll prove the vitality of democracy as a way of life. We'll show you what production for peace really is."

We have so much that needs doing—so much that the American people are ready and eager to do—that no short talk can include them all.

Let the American people judge for themselves who really has confidence in the strength and vitality of our Nation: An administration preferring to mouth platitudes about confidence? Or men who want to roll up their sleeves and get going? An administration with little plans, little programs, and little faith? Or the people who want bold ideas and gigantic action to realize the mammoth opportunities which lie before us?

We cannot look to the Eisenhower administration to initiate the plans and programs to give America a new lease on life. The initiative will have to come from the people in a ground swell of demand for action.

Then we can get this administration off dead center and begin to move at least a little forward between now and 1960. And in that year, I believe, the people will really move this Republican administration—right out of office, and then we'll get full speed action—from a Democratic President.

Great labor organizations, like the communications workers, can be—and I know you are—part of the ground swell right now, demanding bold plans and aggressive action in Washington.

Many Democratic Senators have proposed specific action programs to break the recession as the first order of business in getting on with our jobs. And 11 Democratic governors, of whom I was one, urged the President to act now—because the need is now.

So the pressure for action is building up across America. If the pressure builds big enough, even the Republicans won't be able to resist it much longer.

But the Republican administration can't solve these problems with slogans. Their chant of prosperity sounds pretty hollow to the nearly 5 million people looking for work. Their chant of peace sounds pretty strange to a Nation which has watched our world leadership decline steadily since 1953.

And their cliche of confidence is ironic to the families of the unemployed living on welfare payments.

All of us know we will get going again. And all of us pray that it will be soon. America is still strong, resourceful, and resilient. We can do anything we set our minds and hearts and hands to doing.

"Americans young, Americans strong,
The world awaits your rising song,
Americans strong, Americans young,
The song of songs is yet unsung."

Freedom and the Corporation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues a penetrating analysis of corporate management by one of the outstanding scholars in this field, Mr. A. A. Berle, Jr. Mr. Berle's article appeared in the Saturday Review, January 18, 1958, issue:

FREEDOM AND THE CORPORATION

(EDITOR'S NOTE.—The following article is taken from a longer piece by Mr. Berle, professor of corporation law at Columbia University, and a former Assistant Secretary of State, developed out of a continuing series of discussions, sponsored by the Fund for the Republic, on the impact of modern institutions on individual freedoms. Simultaneously with Mr. Berle's statement the Fund released an examination of freedom in the labor unions by Clark Kerr, president-elect of the University of California.)

(By A. A. Berle, Jr.)

Theoretically, the managements of American corporations got their legitimacy by the fact that they represented the will of the shareholders. This was a kind of quasi-amateur democratic legitimacy. Even so, on examination it was found that although the stockholders theoretically chose the management, in point of fact they were completely unable to do so. The management would send out a proxy naming three agents whom the stockholders appointed to cast their vote at a meeting. In older days the management often didn't even bother to say for what directors these proxies would cast their vote. Since the Securities and Exchange legislation they have to do that, but the corporation secretary who sent out the proxies was the man who really determined what happened for all practical purposes in the power relationship. The president or the directors could fire him, of course, so he did what they told him to do. When the directors wished to renominate themselves or to add to their number or to fill a vacancy, they did it. This is still the method by which the directors in a great corporation are chosen. This is an automatic self-perpetuating oligarchy.

These are a string of bad words. There was at least one court case in which it was held that a self-perpetuating oligarchy was illegal. This was the famous case in which a life insurance company in New Jersey purchased control of a trust company by buying a majority of the shares. Thereafter it caused the trust company to purchase a majority of its shares. The result was an unbreakable ring. A New Jersey court said that this was illegal, created an oligarchy and was contrary to the theory of New Jersey corporation laws.

However, thereafter, somebody asked whether corporations really should be run democratically. Should this group or that group or the other group campaign against each other, offering inducements to shareholders to vote for them instead of the other group? Could corporations assimilate this kind of democratic government? There was no answer. In point of fact, the choice of management depends not on an assent of balanced interest but on expert judgment of technical ability with a companion judgment of honesty and character. As a result, for all practical purposes, management controls the corporation unless it is itself controlled by another oligarchy with enough shares to dominate the situation at all times.

There is a good deal of loose thinking about this. It is commonly believed that the holder of 20 percent or 25 percent of a corporation's stock can control that corporation. This was the inference in the recent du Pont-General Motors case. This is not true. It is true that with 20 percent or 25 percent of the stockholders' list of a large corporation plus control of the directors it can be done. But if the directors of General Motors decided not to vote with du Pont, it is very doubtful whether the du Pont interest is sufficient to be able to go out and get the other 30 percetn of General Motors stockholders which it would need.

The control system in today's corporations, when it does not lie solely in the directors as in the American Telephone & Telegraph Co., lies in a combination of the directors of a so-called control bloc (a misnomer, incidentally) plus the directors themselves. For practical purposes, therefore, the control or power element in most large corporations rests in its group of directors and it is autonomous—or autonomous if taken together with a control bloc. And inheritance-tax distribution of stock being what it is, the trend is increasingly to management autonomy. This is a self-perpetuating oligarchy.

Meanwhile, the next phase has been emerging. It will stay with us and it will be of some interest. This involves what are known as pension trusts—welfare funds and pension-trust funds. A pension trust in most cases differs from an insurance trust in that it has an unlimited and indefinite obligation. It is there to pay pensions to X, Y, and Z, which shall be a fraction of the salaries X, Y, and Z will have collected during the years of their tenure. The pension-trust fund, if it is properly administered, has to think not merely of paying out a stated number of dollars in, say, 1980, as an insurance company does, but of having enough dollars to meet obligations later to be determined. No human being knows the future course of inflation of the dollar, prices, pay, and so forth. Nevertheless, although the payment period may be 20 or 30 years away, the pension trusts must keep abreast of inflation, at least, as it affects pay.

This suggests, of course, that they must invest in equities, whereas, classically, trust funds invested in fixed obligations. This is the sharp difference between the kind of burden resting on a pension trustee and on the directors of, say, the New York Life Insurance Co., whose business is to provide a stated number of dollars against stated contracts to pay those dollars with interest later on. The holdings of life-insurance companies include less than 5 percent in common-stock equities; in the pension-trust funds equities are running close to 30 percent of their assets and may be more. The total of pension-trust funds at the moment is almost $31 billion.

As a result of this broad-scale buying of equities, the pension trusts are slowly chewing up control of those corporations which offer the best means of equity investment. These are voting equities. Thus far no attempt has been made to make use of this, except in the case of the Sears, Roebuck pension-trust fund, which undertook to buy Sears, Roebuck stock, and presumably now has a controlling interest in the company. As a result, Sears, Roebuck is socializing itself via its own pension-trust fund, and is discovering that it is running into the same difficulty which a Socialist or any other form of oligarchic government has—that it has self-contained control and management is thus responsible to itself. Query: Does it continue to have "legitimacy" when the only mandate it can refer to is its own?

The present $30 billion in the pension trusts of course is doomed to increase. These

are compulsory savings and the funds must continue to accumulate. They now cover only about half of the nonfarm labor force; they will undoubtedly soak up a considerable part of the balance before long, and must increase, particularly in view of the population rise. In addition, it will be another 20 or 30 years before this levels off; that is, before the payment from the funds begins to balance the incoming. The pension trust funds will perhaps level out at somewhere in the vicinity of $70 to $80 billion, probably increased by the coefficient of the increase in population or the increase in labor force within the population. This will mean that if the pension trusts continue to take the good equities as they have been doing, they may well have the prevailing control stockholding position and the capacity to make it absolute. They will have, say, 20 percent to 30 percent of the good equity stocks and the capacity to increase that to 40 percent or 50 percent (45 percent for practical purposes is a majority at any big stockholders' meeting).

With the rise of the pension trusts into the "passive-receptive" end of the corporation structure the old "passive-receptive" stockholder is gradually disappearing. At best he is, shall we say, a pensionnaire. The last vestige of his power to legitimate a management by a vote is in the hands of the pension trustees. He has an expectation arising out of the fact that he may have performed a certain number of years of acceptable work and fulfilled a certain number of other conditions. But does he have any property right in the pension trust? The courts say no. The power—what is left of it—lies in the trustees, or in those insurance companies which administer trusts.

When power is lodged in a particular group it has no choice except either to exercise it or to try to revolutionize the system. There is no way of avoiding power. If you take it and refuse to exercise it you suffer the fate of King Lear—the king who wanted to be king but did not want to be bothered. The trust funds admit they have it but they have thus far refused to use it. This situation cannot last very much longer. Somebody is bound to use that power, of necessity. Pension trusts are so concentrated that a relatively small amount in equities outbalances any number of scattered holdings.

The private property system in production, which began with our great-grandfather's farm and forage, has almost vanished in the vast area of American economy dominated by this system. Instead we have something which differs from the Russian or Socialist system mainly in its philosophical content. Under a pure Socialist or Communist system, in theory, every worker has an old-age pension at the end of his labors. We are developing the same thing by socializing property without a revolution. It is one of our more amazing achievements. Whether one likes it or not depends on one's philosophy.

Possessory private property in this area has been metamorphosed. In its place is a power pyramid. At the moment this is a management pyramid, but it is beginning to be balanced by a pyramid of men who have no property interest in the actual corpus but do have the power of choice—the pension trustees. These are naked power vehicles, with the receptive end so far dispersed that it cannot even be discerned. To make the joke complete, let us suppose that a pension trust liquidated itself tomorrow and satisfied its contract obligations. If it was a well-run trust, there would be a balance left over. That balance would very likely escheat to the state because there was no claimant to it left. In the most violently private-property-minded country in the world this is perhaps one of the most magnificent economic jests the world has seen.

None of this has come about as a result of the villainy of conspiring men. That might have been true in the free-wheeling corporation days of 100 years ago, but it would be as ridiculous an assumption today as is the basic assumption of the Supreme Court decision in the recent Du Pont case. This decision apparently assumed that because Du Pont bought 23 percent of General Motors 40 years ago, perhaps hoping that it could control General Motors, Du Pont still holds to the intention of exercising this control. Actually, there has been a kind of continual biological progression over the years. Change is part of the progression. Bigger enterprise was needed to satisfy the desires of the population. In addition, the techniques which made it possible to satisfy certain necessities made it impossible to rely only on the individual. Consequently, organization and power, not ownership, had to meet the resulting problems. The progression has been natural.

Today approximately 50 percent of American manufacturing—that is everything other than financial and transportation—is held by about 150 corporations, reckoned, at least, by asset values. If finance and transportation are included, the total increases. If a rather larger group is taken, the statistics would probably show that about two-thirds of the economically productive assets of the United States, excluding agriculture, are owned by a group of not more than 500 corporations. This is actual asset ownership. (Some further statistical analysis is called for if financial corporations be included, for these, of course, double up. One of the largest and most plainly oligarchically controlled corporations in the United States, the Metropolitan Life Insurance Co., duplicates assets because it holds securities of other corporations) But in terms of power, without regard to asset positions, not only do 500 corporations control two-thirds of the nonfarm economy but within each of that 500 a still smaller group has the ultimate decision-making power. This is, I think, the highest concentration of economic power in recorded history.

We can talk about the various alleged legal controls which somehow or other, when the chips are down, neither control nor even seek to control. We can point out the fear of monopoly and restraint of trade and say that from time to time this fear has checked the process. True, our law has prevented any one of these power groups from becoming a monopoly, but it has not seriously prevented the concentration of power as power, though it has prevented certain ultimate results. The question is then: Why has concentrated economic power in America not got completely out of hand? Many of these corporations have budgets, and some of them have payrolls, which, with their customers, affect a greater number of people than most of the ninety-odd sovereign countries of the world. American Telephone and Telegraph, for example, based on combined population and wealth, would be somewhere around the 13th State of the Union in terms of budget, and certainly larger than many of the countries of South America. Some of these corporations are units which can be thought of only in somewhat the way we have heretofore thought of nations.

Whether we like it or not, this is what has happened. As noted, it is not the product of evil-minded men. I believe that we must try to work with the system. The dangers are obvious. But history cannot usually be reversed. Until engineers and economic forces give us a way by which a man can manufacture an automobile in his backyard we will continue to have organizations the size of General Motors or Ford—as long as people want Chevrolets or Fords. We will have railroads the length of the Union Pacific as long as people want to go across the continent by railroad. In other words, until a combination of technique and organization can be invented permitting individuals to do the job, we are bound to try to make the best we can out of the situation. To my mind most of the results are rather surprisingly good.

This does not mean, however, that I am not afraid. I am. I believe it is the content of these systems rather than their form that matters. Their power can enslave us beyond present belief, or perhaps set us free beyond present imagination. The choice lies with the men who operate the pyramids, and with the men affected who can demand what they really want. Our Anglo-Saxon democratic liberties, after all, were beaten out, not against the framework of the personal possessory property regime, but against the background of two of the most brutal despotisms in western history: the Angevin dynasty in Normandy and the Tudor dynasty in England.

We have to accept this power situation as, let us call it, a neutral mechanism subject to the control of the body politic as long as we keep it subject to that control. That control, I believe, will be essentially intellectual and philosophical, capable of being translated into legal rules when necessity arises. In that respect I make three points in summary:

1. The first is that whenever there is a question of power there is a question of legitimacy. As things stand now, these instrumentalities of tremendous power have the slenderest claim of legitimacy. This is probably a transitory period. They must find some claim of legitimacy, which also means finding a field of responsibility and a field of accountability. Legitimacy, responsibility and accountability are essential to any power system if it is to endure. They correspond to a deep human instinct. A man desires beyond anything else to have someone give him the accolade of "well done, thou good and faithful servant," thereby risking the condemnation of "you have been no good—get out." If he has to say it to himself, or hear it from a string of people whom he himself has hired or controls, he is apt to die a cynical and embittered man.

The medieval feudal power system set the lords spiritual over and against the lords temporal. These were the men of learning and of the church who in theory were able to say to the greatest power in the world: "You have committed a sin; therefore either you are excommunicate or you must mend your ways." The lords temporal could reply: "I can kill you." But the lords spiritual could retort: "Yes, that you can, but you cannot change the philosophical fact."

In a sense this is the great lacuna in the economic power system today. In theory the stockholders can act as the lords spiritual through their vote. In fact they cannot, and they know they cannot. Are the pension trustees or their equivalent slowly emerging as the men who can? They had not thought so—nobody had thought so. They have been essentially a method of transmission of choice and not much else. We are looking for the kind of thing that C. Wright Mills in his recent book on the American power elite rightly said did not exist. He wrongly concluded, therefore, that the system was a mess, which it obviously is not. But every time we have had the chance to construct this kind of elite we seem to have abandoned it, and chucked in an administrator instead.

2. My second summary point is that the sheer power of invading personality is great and that a doctrine is already at work which plays a second joke on our constitutional system. The United States began by saying that its Federal Government could not construct corporations and apparently by assuming that the States would not. Both have done so. It also said that corporations should be kept apart from governmental power. De facto, they have not been. We are now, in fact, beginning to converge on a doctrine which may well push right over

the line when the next case comes up. This doctrine is that where a corporation has power to affect a great many lives (differing from the little enterprise which can be balanced out by the market) it should be subject to the same restraints under the Constitution that apply to an agency of the Federal or State Government. In that case, the Bill of Rights and the 14th and 15th amendments would apply. At the moment this is one jump ahead of current law. Yet it seems probable that this will be the next phase—just as we already have the constitutional doctrine that under the first amendment you may not by private contract prohibit a Negro from buying land.

3. My third point is destined to be in infinitely greater controversy, and I do not know what the end of the controversy will be. Great corporate power is exercised in relation to certain obligations:

1. It should supply the want in the area of its production. Where the community has come to rely on a corporation for steel, oil, automobiles, or cigarettes, the corporation is obliged reasonably to meet that demand.

2. The price must not be considered extortionate. It must be "acceptable"—which doesn't necessarily mean fair or just.

3. It must provide at least some continuity of employment.

4. It must give a continuing attention to the technical progress of the art.

At every point in the individual history of large corporations there has been some moment of impact on the community when either the community felt the corporation was not fulfilling its obligations or, alternatively, the corporation realized it was up against a situation it could not handle. In every case the result has been either a friendly and orderly, or unfriendly and disorderly, hassle out of which a piece of planned economy emerged. Roughly two-thirds of American industry or much of American finance is now controlled by a formal or informal Federal industrial plan. Here are two illustrations at each end of the cycle.

The oil industry claims to be the most nonsocialist, free-wheeling, private business that ever was. But the fact is that after many vicissitudes it sought control by, and is controlled by, various acts of Congress. After orderly discussion certain laws were passed. Under these laws, first, the Bureau of Mines of the Department of Interior estimates the probable consumption month by month of gasoline and the chief oil products. Second, an interstate treaty exists among the oil-producing States, ratified by the Congress. Third, a congressional act makes it illegal to transport oil in interstate commerce which has been produced in excess of a State allowance. This legislation might break down if it were not for the fact that because there is a relatively concentrated system in the oil industry the refineries will not buy "noncertified" oil anyway. As a result, the big companies do not violate the act; the little ones cannot; and the result is a planned oil economy by which supply is equated to demand and the oil industry from well to refinery to gas station is more or less geared to meet it.

Here is a disorderly example: Aluminum was manufactured by a monopoly which was ordered to be split up under an antitrust decree. By a combination of administrative orders entirely without administrative rationale but all working toward the same end the Federal Government used the aluminum plants it had itself created during World War II in order to set up two competitors to Alcoa. It likewise required Alcoa to sell its Aluminum of Canada shares. This was not enough by itself, so the Government for a period of years handled its defense orders in such a way that the new companies had adequate assurance of a market until they could get properly underway. The policy still is to make certain that the new companies, which can stay in business only by being assured a reasonable market, will get the extent of market they need. There was a stockpiling arrangement at one time, followed later by the release of part of the stockpiled aluminum. In a wholly disorderly way which only the American system could ever conceive, there arose the equivalent of a de facto planned economy in aluminum. At the moment this industry now sails away, freewheeling. But there is not the slightest doubt that if conditions required transition back into a planned economy it would happen.

Obviously a system like this is just as good as the ideas and strength of the body politic behind it. The same system in the hands, for example, of a Latin American dictator could produce terrible oppression.

There is a gradually growing feeling that pension trusts, for example, must be controlled. A pension trust ring could be something to bind a man beyond belief. It could bind him to his job. He could not change it without losing a substantial part of his life savings. He might be controlled in all sorts of ways. We are beginning to think even that the pension trust right which cannot be transferred to some other pension trust is suspect.

As men think, so they are. We are really seeking now a body of doctrine which will control power. I close by returning to my first point, which related to the desperate search for a field of responsibility and accountability referent to some point of view outside the system: that is, to some modern lords spiritual.

Secretary Benson Presents the Facts on American Agriculture, Past and Present, and His Plans for the Future

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

Mr. JUDD. Mr. Speaker, the Secretary of Agriculture, the Honorable Ezra Taft Benson, visited my city 2 days ago to address the 12th annual farm forum sponsored by the Minneapolis Chamber of Commerce.

In his address he restated the essential principles and polices of this administration's farm program, every clearly and forcefully. Recent charges and countercharges on this subject have led to much confusion and misunderstanding in the public mind. The only way to correct confusion is to present the facts; with respect to the past—how our agricultural difficulties developed—the present situation, and his plans for the future.

Under leave to extend my remarks in the RECORD, I am happy to include this important address setting forth convincingly the economic fundamentals on which alone sound agricultural programs can be based:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON AT THE 12TH ANNUAL FARM FORUM, MINNEAPOLIS CHAMBER OF COMMERCE, MINNEAPOLIS, MINN., MARCH 3, 1958

It is both a great pleasure and a signal honor to participate in this 12th annual farm forum.

I congratulate all those who have pioneered in the establishment of this nonpartisan, impartial, and objective forum. For more than a decade this annual meeting has provided the stage for a thorough, objective and open discussion of the broad problems related to agriculture, industry and labor of this area. One of the basic concerns of this meeting today—shared by all of us—farmers, businessmen, housewives, and those of us in the Department of Agriculture—is that farmers are not participating equitably in the national prosperity they have helped to create.

There has been some real hardship among farm families. You know it and I know it, and I would be less than honest with you if I told you that I have a simple cure-all for all farm problems. No one does.

The pains of adjustment to our fast moving economy are sometimes severe, and the responsibility of the Government to help cushion the effects of these changes is fully recognized. These things cannot be accomplished overnight but I am convinced that we are moving in the right direction.

However, it is entirely fitting at such a meeting as this that we should also pay tribute to the tremendous achievements of American farmers. Never in history have so many depended on so few to feed and clothe us so well.

One farm worker on the average produces in 1 hour today what it took 2 hours to produce in 1940 and 3 hours in 1910. He is producing food and fiber for himself and 20 others. With 7,000 additional mouths to feed every day the farmer will shortly feed himself and 25 others.

Farmers can accomplish this remarkable task only by the aggregate effects of education, research, machines, plant food, specialized mixed feeds, better seed and soil added to their own unceasing labors.

Let us pay tribute to the farmers of the United States as the most efficient in the world. How else can we explain the fact that these 20 million people, less than 1 percent of the world's population, are producing between two-fifths and one-half of the world's production of eggs, red meat, and milk. Let us be unstinting in our praise of American farmers for their productive ability. This is the major factor enabling American consumers to have the best diet in the world and to spend a smaller percentage of their income for food than in most countries. This basic fact also undergirds our standard of living—the highest in the world.

Notwithstanding the remarkable production record, our farmers are confronted with problems. You recognize this in the theme of this 12th annual farm forum "Who Will Solve the Farm Dilemma?" And the particular question that has been proposed for today's meeting is "To whom does the farmer look?" He looks to several sources for help, first to himself and his own efforts.

Farms have to be run, and decisions have to be made, and responsibilities have to be borne by the families on the farms. He may join with his neighbors in self-help programs, and certainly he has every right to look to his Government for help. There are many ways in which government can help to promote stability without limiting opportunity.

I am dedicated to a principle which I am sure is equally cherished by most of you. It is that government should not—should never—be your master.

Here in Minnesota it is obvious from an examination of the facts of recent history that the farmers have chosen freedom—freedom to plant, to market, to compete. In 1957 farmers chose not to participate in the corn acreage allotment program. Only 1 acre in 10 was planted within the allotment. Also, for wheat, 1 acre out of 4 was planted in excess of the allotment—36 percent of the wheat farmers. For the allot-

ment crops 5 out of 6 acres were planted in complete disregard of the allotments.

Let me make one point clear. Contrary to myths peddled by some, the level of these allotments are determined by statistical formulas spelled out in the Agricultural Adjustment Act of 1938. I know that these acreage allotments are too low. That is why we are trying to get the law changed. Also, that is why for the first time in history, in 1956 and again in 1957, we made supports available for corn grown outside the allotments.

Let us now look at Minnesota from the standpoint of its sources of agricultural income. The propaganda mills grind out tales about the importance in Minnesota of the basic crops. Actually only 12 percent of the cash receipts of this State comes from the basic crops. In view of the Minnesota farmers' free choice to plant in excess of their allotments, they are, therefore, ineligible for full price support. Thus, it is doubtful that farmers here relied on the allotment program for as much as 2 percent of their income.

Here in Minnesota the basic-crop acreage-allotment program has resulted in the loss of corn markets amounting to hundreds of millions of bushels. Witness the expansion of grain sorghum and barley production on the acreage diverted from wheat and cotton. Witness the fact that this loss of markets to other feed grains meant a buildup in carryover stocks of corn—now estimated at 1.5 billion bushels on October 1, 1958. Witness the fact that under the Agricultural Adjustment Act of 1938 the increased carryover forced a cut in the allotments to levels so low that most farmers chose to ignore them.

Yes; I know, and you know, that corn producers can't live within their allotments—which is why only one-seventh of the corn produced in the commercial area last year was in compliance. These conditions pose a threat to hog producers—to the entire livestock industry—to poultry producers—to the dairy industry. That is another reason why we are seeking changes in the program.

The loss of productive wheat acres in the upper Midwest has been a direct result of the provisions of the Agricultural Adjustment Act of 1938. You folks know better than anyone that Minnesota, the Dakotas, and Montana have been a Wheat Belt since the time our pioneer forefathers first turned over the rich, black soil of these prairies. They worked with courage and determination and out of the sod they carved themselves homes and a vast wheat empire.

This region has appropriately been termed the "breadbasket of the Nation." Traditionally it has produced milling wheat of the highest quality. Tremendous capital has been invested in milling businesses to work and provide a ready market for farmers and utilize to the fullest the God-given resources of this area.

In many years of normal production there was not enough of your high-quality milling wheat to meet the demand. In spite of this, this region has lost wheat acreage allotments under our outmoded farm law that was based in the late thirties. For example, in 1939, North Dakota had a total wheat acreage of 8.3 million acres and by 1958 this had decreased to 7.3 million acres. In contrast, during this same period, other Western and Southern States were receiving considerable expansion of wheat acreage allotments.

Why did this happen? Because we lost large portions of our cotton and tobacco markets through pricing ourselves out of competition. Winston-Salem, N. C., was once the largest tobacco-exporting market in the world but southern Rhodesia now claims that distinction. At one time we lost 60 percent of our world cotton market by placing cotton in Government warehouses instead of selling it abroad. Those farmers who produced cotton and tobacco had no choice but to divert acres to corn, wheat, and livestock.

But as acreage allotments were cut back on your best crops in the upper Midwest, you did not have the choice of equally good alternatives that was true in other sections of the country. I have yet to see any increase in cotton or tobacco produced in Minnesota.

It doesn't make sense to me that this traditional wheat area should be deprived of production and economic wealth by unsound farm programs that lose markets and depress prices through imbalance of natural production.

That is why the President has recommended changes in the old basic farm law which would restore the rightful agricultural position of the upper Midwest and be fair to farmers in each of the 48 States. Farm programs that cause one region of the Nation to benefit at the expense of another region are unsound, uneconomic, and completely undesirable to the Nation's welfare.

Now what are the sources of cash income here in Minnesota? Two out of ever $3 come from livestock, dairy, and poultry. There is an approximately equal division between cattle, hogs, and dairy products. Soybeans provide about four times the income from wheat. Minnesota has now climbed to be the third most important soybean-producing State. These facts show how little the farmers of this great State rely on the production-control apparatus. The overwhelming majority of farmers here are those who foster freedom to plant—to market—to compete.

Those who don't want to compete in price, promotion, and quality must either build warehouses or get the Government to do it for them, or attempt to control production. I deplore the tactics of those who advocate farm programs devised to fill storehouses instead of stomachs. Farmers should not be misled by those who are more interested in keeping the Government paying storage costs on warehouses filled with grain rather than working for farm programs providing profitable markets for farmers.

If we are to develop programs for agriculture to meet the needs of today and tomorrow we must be sure the facts are presented to the American people. It is only from an understanding of the facts that we can move forward to solutions.

Let us first review some of these facts:

Income per person on farms last year—including income from all sources—was the highest income per person on record—up 2 percent over 1951, the previous high year.

The level of living on farms is higher today than ever before.

Farm exports in fiscal 1957 set a new record of $4.7 billion—68 percent higher than in fiscal 1953.

The surplus production of American farms is being made available for hungry people at home and abroad.

The postwar downtrend in prices which started in 1951 has been stopped. Prices received by farmers in February were 8 percent above a year ago and 11 percent above 2 years ago, and are at the highest level since May 1954.

The buildup of surpluses has been reversed. Government investment in surplus-farm products owned and under loan has dropped about one-sixth in the past year and a half.

These are some basic facts. I believe that the American people have a right to know them.

However, despite these favorable developments, agriculture is still having some difficult times. Nobody knows that better than I. And nobody is more deeply concerned about it.

I know that the farm part of our economy is not sharing properly in our national prosperity.

My basic and continual concern as Secretary of Agriculture is that farmers of this Nation must participate fairly in our dynamic and prosperous economy. This, too, is your concern.

Our primary effort—and to this task I am wholeheartedly devoted—must be to further improve farm income soundly—not with short term panaceas which disregard sound economics and basic facts. That being the case, I would like to spend a few minutes with you today discussing the major factors affecting net income—the cost-price squeeze. Here are some facts.

During the period from 1939 to 1952 the index of prices paid by farmers, including interest, taxes, and wage rates, more than doubled. From January 1953, the time this administration took office, to January 1958, this index rose only 6 percent. Make no mistake about it—the heritage left by the previous administration included an inflated cost structure, particularly as far as farmers are concerned.

Farmers who feel daily the impact of the cost-price squeeze, realize the effect of inflated costs on net income. They can understand the effect of these inflated costs when they know that although the 1957 gross farm income is up about $2.3 billion above 1950, farm costs have gone up $3.7 billion.

If farm costs had stabilized at the 1948 level, then the 1957 realized net income would have been higher by about $4 billion, or about $800 per farm. Think of it—$4 billion consumed in higher costs.

Every thoughtful farmer is disturbed by the recent increases in the cost of steel. It is an understatement to say that this creates hardships to farmers. Must the competitive strength of labor and management forces always be resolved in higher prices? I say no. Should higher and higher costs keep the net income of farmers from improving further? Again I say no.

It is not for me to say what labor or industry should do at this juncture. But as a spokesman for agriculture in the Federal Government, I am concerned by any action which adds to the production costs of farmers at this time. This is an area where restraint and statesmanship are needed for mutual advantage.

There are many weapons with which to fight these rising costs: Some of these are the maintenance of a responsible monetary policy, sound farmer cooperatives, and improved efficiency, particularly in marketing and distribution. Recently, in this area the cooperative efforts of farmers, processors and the railroads resulted in a reduction in the freight rates for exporting soybean oil. All those who took part in this should derive great satisfaction from this constructive effort.

However, we will never attain satisfactory prosperity by increasing gross income if rising costs are allowed to siphon off all our gains. All responsible segments of our economy should be aware of these facts and give more than lip service to a solution.

One of the major decisions which we have had to make recently has been with respect to the support level for dairy products. Let me make one point clear. One of the most compelling reasons for this decision is that it was required by law—the Agricultural Act of 1949.

Contrary to the tirades of the smoke-screen spreaders the fact is that under this legislation, the Secretary is required—notice I said, required—to establish price supports at such levels between 75 and 90 percent of parity as will assure an adequate supply.

Prior to making this determination we checked with the technicians in the Department of Agriculture for their best estimate of the probable output of dairy products in the 1958–59 marketing year at various levels of support. The technicians advised that there was no question but that support at 75 percent of parity would result,

in the production of more than an adequate supply of dairy products and that the Commodity Credit Corporation would be required to purchase substantial amounts under the support program. I must carry out my legal responsibilities as specified by Congress.

In addition, we checked with the bipartisan National Agricultural Advisory Commission and the bipartisan Commodity Credit Corporation Advisory Board. In both instances the recommendations to adjust price supports to the 75-percent level was virtually unanimous.

Dairy production has been increasing. The rising production per cow has more than offset the reduction in cow numbers. Production in 1957 was about 12 billion pounds higher than the 1952 level. In view of the record supplies of feed and the high dairy-feed ratio, it is likely that at the announced support level, production will again outstrip requirements.

We will continue to cooperate fully with the industry in promotion and merchandising programs. The Extension Service and other agencies of the Department will join with the dairy industry in stepped-up efforts to acquaint the consuming public with facts about milk as a health food.

We will continue the nationwide brucellosis cleanup, which has made such excellent progress during the past year under the accelerated program.

We will carry out field educational efforts aimed at sound programs to cull low producers from the Nation's dairy herds—as part of generally increased efficiency in dairy farm operations. The fact that beef prices are good now will help in cases where dairymen want to sell their more unprofitable animals.

We have urged the continuation of programs designed to increase the consumption of fluid milk. We have recommended to the Congress that they authorize the continuation of the $75 million special school-milk program designed to increase consumption of milk by children. In addition, we urged continuation of the program under which we are paying about half the cost of milk purchased by military agencies and veteran hospitals above their normal purchases. My fundamental pledge is that we will do everything feasible that is sound and in the interest of dairy producers. Farmers deserve better than short-term soothing syrup that results in a major, if not fatal, disease a year or two later.

One of my great problems as Secretary of Agriculture has been in being misrepresented. There are some who consciously try to do this. Because of the smokescreen of untruth about agriculture which some demagogues have poured out, it sometimes is difficult for some people to distinguish between fact and fiction.

There are several facts I should like to stress here this afternoon.

Fact No. 1: As Secretary of Agriculture, I want to make myself perfectly clear, we have never proposed—and we do not now propose that we should scrap price supports. There is nothing wrong with the idea of providing more orderly marketing and much-needed stability to agriculture through a sound and realistic storage and loan price-support program.

I should like to quote a very significant paragraph in the President's message: "For commodities like the feed grains, with respect to which the Secretary of Agriculture has had wide discretion in the past, price support has been offered at levels as high as could be justified under the criteria specified by law. This will be the Secretary's practice under the recommended legislation."

The 1958 support prices have followed the policy enunciated above and will continue that way under this administration. Incidentally, in checking back I find that in 1950 and 1951 the price supports for flaxseed, a crop in which the upper Midwest has considerable interest, were established at 90 percent of parity, 5 percentage points lower than our recent announcements.

What is wrong today—and what has been wrong for several years—is the attempt to supply price support and acreage control by rigid formula—to fix prices and acreage allotments by Government mandate. These attempts have failed. Agriculture is a dynamic, changing industry. The farms and ranches of America cannot be run from a desk in Washington, D. C.

Fact No. 2: It was not rigid price supports that forced farm prices up during the forties and early fifties—but it was war, the insatiable demands of war and wartime inflation. Farmers sold all they produced at well above support levels. In fact, their prices would have been higher yet had it not been for Government-imposed price ceilings.

Fact No. 3: It is untrue that high, rigid price supports can hold up farm income even though surpluses accumulate. The fact is there was just 1 year between 1947 and 1955 that farm income did not decline. In all these years until mid-1955, high, rigid price supports on basic commodities were in effect. Our present farm problem developed under such price supports. If high, rigid price supports were the answer, we would have no problem.

Fact No. 4: The old support program does not materially help the small farmer. The fact is that more than half of our farms market only 9 percent of agricultural production. Obviously, most of the Government dollars are routed in the direction of the biggest producers.

Fact No. 5: Most farm products are being sold competitively and on free markets. It is untrue that most farm prices and incomes are Government supported and on an artificial basis. Only 19 crops, plus dairy products, are being supported—out of 250 commodities that farmers produce.

Fact No. 6: Agricultural production cannot be successfully controlled by Government action. The fact is that since 1940, the per acre yield of corn has risen 56 percent—wheat, 40 percent—cotton, 67 percent. Last year's yields of all major crops averaged 27 percent above the 1947–49 level. To control crops effectively so as to maintain price at 90 percent of parity would mean setting allotments impossibly low. Congress would never vote such controls. No Secretary of Agriculture could effectively enforce them. And American farmers just wouldn't stand for such regimentation. Agriculture is undergoing a technological revolution which is irreversible. It cannot and should not be controlled by Government mandate.

Fact No. 7: The family farm has been, is now, and always will be the backbone of American agriculture—operated by the most efficient farmers in all the world.

The charges by our opposition that farm programs of this administration are driving people off the farm are not only false—they are ridiculous. The fact is that more people left the farms during the last 4 years of the previous administration than in any other period before or since.

I have cited some of the gains we have made since 1953—and mentioned some of the problems that still exist. To deal with these problems we need to push forward again—we need to supplement the progress that has been made. This is the goal of the new farm, food, and fiber program presented to the Congress in January by the President of the United States. Farmers can look to this program designed to provide a sound solution.

The adoption of this program will mean progress in three general areas:

First. The program will develop bigger markets. We have asked that the surplus disposal program be extended and expanded and that research into new uses for farm products be increased.

We need to drive hard for further expansion of markets. There are no satisfactory substitutes for markets and a Government warehouse is not a market. Forty percent of our record agricultural exports in fiscal 1957 moved under Government programs. The biggest factor in these programs was the Agricultural Trade Development and Assistance Act, or Public Law 480. As you know, this law provides for movement of surplus farm commodities through sales for foreign currencies, barter, donation, and other means. We must push to the limit sales through commercial markets.

Three-fourths of the surplus farm-product disposals by CCC in the past fiscal year were made through export channels. More than 60 percent of all our grain exports moved under Government programs.

I wish I could help you visualize how our exports are helping the free world meet the challenge of communism by raising living standards abroad, building good will, laying the groundwork for future markets.

We also need increased agricultural research for market expansion. Only about 7 percent of the products of our total farm acreage now go into industrial outlets. Surely we can do better than this. Research can develop new uses and new markets, and there are few things wrong with commercial agriculture that new and expanded markets won't cure.

Second. The recommended program will allow more freedom for farmers. We are seeking revision of the acreage control and price-support programs to permit farmers more freedom to plant and to widen markets.

The program changes proposed by the President would give farmers more freedom to plant by increasing acreage allotments. Some of these allotments have become so small as to cripple efficiency. Do you know that 7 out of 9 cotton allotments are less than 15 acres, and that the average burley tobacco allotment is 1 acre?

The program we have proposed would make price supports more realistic by widening the range of supports. The present range of 75 to 90 percent of parity on the basic crops and dairy products does not permit sufficient market growth. These commodities are being priced out of potential markets. Increased allotments and a wider range of price support logically go together.

The program would eliminate the so-called escalator clauses.

These are formulas which provide that the level of price support shall rise as the surpluses decline. So long as this basic law is unchanged, farm people can expect to be kept continually under the shadow of price and income depressing surpluses.

Third. We must help the forgotten segment of agriculture—those people on small, low-income farms.

The rural-development program as a new and basic approach to the problems of farm families in underdeveloped rural areas has gained wide support. This is truly a national program, going forward in all regions of the country. Objectives of the program have been endorsed by members of both parties, farm organizations, and church groups.

Here in Minnesota farm and nonfarm agencies, working closely together, have initiated a carefully planned rural-development program. Their work will give significant help to farm, business, civic, and other lay leaders in your northern counties as they move forward with a long-range program of balanced farm, industry, and community betterment.

As you know, the Minnesota Rural Development Committee has selected three demonstration counties—Hubbard, Itasca, and Carlton. In each of these counties local citizens and agency workers have joined to-

gether to take a fresh look at their resources—and their problems—and to develop a sound, long-range development program which will solve the serious problems of underemployment on farms in the northern area.

Let me congratulate you on the progress of your State in the rural-development program which a widely read midwestern farm magazine has called perhaps the soundest of all our efforts so far to deal with the farm problem.

We must move forward by adopting the President's recommendations, so we can consolidate and add to the progress that has been made these past few years.

Bigger markets—more freedom for farmers—special help for the small low-income farms—these are some of the steps which would be taken under the Farm, Food, and Fiber Act of 1958 to help farmers make the adjustments they must make. We feel certain they are sound, effective, and reasonable, and they will work to provide the freedoms farmers want.

This is not just another nation—it is not just one of the family of nations. This is a nation with a great mission. I believe with all my heart that it was established by the God of Heaven to be a beacon to liberty-loving people everywhere.

Let us pledge ourselves to keep America strong and sound—economically, socially, and, above all, spiritually—so that we may fulfill that mission.

Strength and freedom must go hand in hand. That is why we stress so much the need for freedom in agriculture—that our farm people should be free to produce, free to market, free to compete, free to make their own management decisions.

With God's help, we must—we will—have an agriculture that is prosperous, expanding, and free. Such an agriculture is the basis of a prosperous, expanding, and free America.

Statement of Judge William Old Before the Senate Committee on the Judiciary

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. ABBITT. Mr. Speaker, on February 26, 1958, the Honorable William Old, judge of the circuit court of Chesterfield County, Va., appeared before a subcommittee of the Senate Committee on the Judiciary in support of Senate bill 2646 which has as its purpose withdrawal from the Supreme Court of the United States appellate jurisdiction in certain specified fields.

Judge Old made a splendid presentation of the dire necessity of curtailing the unconstitutional and unlawful usurpation of power by the Supreme Court of the United States of America.

Judge Old is well versed in the law. He has a splendid legal background. He is an outstanding student of constitutional law. He is the father of the present-day interposition doctrine. He is beloved by all who know him and respected for his calm, judicial approach to legal questions, for his ability, his integrity and for his love of constitutional government as well as his determination to preserve for posterity our way of life and the heritage that has been handed down to us by the founders of this great Nation.

It was my honor and privilege to introduce Judge Old to the subcommittee on February 26 when he appeared before them. His presentation should be read by every Member the Congress. It is a masterpiece and points out the necessity of curbing the power-crazed Supreme Court if we are to preserve our republican form of government.

Under leave to extend my remarks, I include Judge Old's statement to the Judiciary Committee in favor of the so-called Jenner bill. The statement is as follows:

STATEMENT OF WILLIAM OLD BEFORE THE SENATE COMMITTEE ON THE JUDICIARY, FEBRUARY 26, 1958

Senate bill 2646, "introduced by Senator JENNER, would withdraw from the Supreme Court of the United States appellate jurisdiction in certain specified fields, namely, first, with respect to the investigative functions of Congress; second, with respect to the security program of the executive branch of the Federal Government; third, with respect to State antisubversive legislation; fourth, with respect to home rule over local schools; and, fifth, with respect to the admission of persons to the practice of law within individual States."

This bill is predicated upon the provisions of article III, section 2, paragraph 2, of the Constitution, which reads as follows:

"In all cases affecting Ambassadors, other public ministers and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make."

Thus, the Congress is clothed with full power to make exceptions to the appellate jurisdiction of the Supreme Court and to regulate the exercise of such jurisdiction. It is indeed regrettable that it has become necessary for the Congress to consider the expedient of withdrawing from the Supreme Court appellate jurisdiction in the fields specified in the bill under consideration. However, it is now clearly apparent, from a long list of revolutionary decisions by the Supreme Court, headed by Chief Justice Warren, that the Court is determined to destroy our dual system of government under the Constitution, and create, by usurpation and encroachment, a judicial oligarchy of unparalleled proportions.

Washington in his Farewell Address pointed out the dangers which now beset us when he said:

"The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create whatever the form of government, a despotim. A just estimate of that love of power and proneness to abuse it which predominates in the human heart is sufficient to satisfy us of the truth of this position. The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the guardian of the public weal against invasions by the others, has been evinced by experiments ancient and modern, some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them."

It seems to me that the decision in the case of Steve Nelson against Pennsylvania is fraught with great and mortal danger to the institutions of our country. For in that case the Supreme Court invented and laid down the doctrine of preemption. Under the leadership of HOWARD W. SMITH, the distinguished dean of the Virginia delegation in the House of Representatives, the Congress enacted the Smith Act to curb the subversive and seditious efforts of the Communist conspiracy in this country. It is incredible that anyone could conceive that an act proposed by Judge SMITH would intend to impair State laws in the field of sedition or any other field. Moreover, the Smith Act itself specifically negatived any such intent. Yet the Supreme Court, without any semblance of constitutional authority, held that Congress by merely entering the field of sedition, regardless of its expressed intention, preempted the whole field and struck down all State laws involving sedition. Although the State government might be in mortal danger of being overthrown by the Communist conspiracy, they could do not act to defend themselves.

Just what was the purpose of the Supreme Court in inventing that doctrine of preemption? Was the Court so anxious to free Steve Nelson, so that he might continue his subversive career, that it would destroy laws vital to the sovereign States under such a flimsy pretext? We don't know, but it seems incredible that concern for Steve Nelson could have been the motivating reason. If this doctrine of preemption were a sound constitutional principle could or should it be confined to the field of sedition? Is, or can it be, the purpose of the Court to destroy the sovereign States? To ascribe to the Court such a purpose is a horrible thought. But if that doctrine of preemption should, at a propitious moment, be extended to the field of taxation, the governments in the 48 States would be laid in ruins by one fell act, unless the States respectively should interpose their sovereignty against such a dire result.

In the Slochower case the Supreme Court held that New York City could not fire a teacher who refused to state whether he was a Communist or not, although State and municipal law required him to be fired under such circumstances. Just what is the purpose and underlying motive of that decision? And what is the constitutional principle under which it was enunciated? We don't know, but it seems incredible that the Court should have wished to reward Professor Slochower for defying the law under which he was employed. Can that decision, at a propitious moment, be extended to embrace hiring as well as firing, and force the States and municipalities to take their enemies into their employ as well as to keep them there? If not, why not?

The great and sovereign State of California has been ordered to admit to the practice of law a person whom its board of law examiners did not consider to be morally fit for such admission. The great and sovereign State of Illinois was deprived of its sovereign autonomy in the matter of appellate procedure in its own State courts. The great and sovereign State of Oregon was deprived of its jurisdiction over non-navigable streams. In the Girard College case an extremely well reasoned opinion of the Supreme Court of the great and sovereign State of Pennsylvania was nullified by a 5½ line per curiam memorandum opinion, which could hardly be considered otherwise than as a studied insult to that great court of Pennsylvania. All of these encroachments, and many more, have been inflicted upon the sovereign States by the Supreme Court of the United States during the few years of the Warren court.

But the Supreme Court has not confined its usurpations and encroachments to the sovereign and reserved powers of the sovereign States. It has thrust its tentacles into the constitutional powers of the Congress and of the Executive, which with the courts constitute the three great coordinate branches of the Federal Government. The Jencks case

encroached upon the constitutional powers of the executive branch of the Federal Government and struck a mortal blow at the ability of the FBI to deal with the subversive and criminal elements of this country. So destructive was this blow that Attorney General Brownell came before Congress beseeching relief against the Supreme Court's decision. Another lethal blow was struck at the police system of the Nation's Capital further curtailing their efforts to deal with a seething and spiralling criminal condition there. Mallory, a brutal Negro rapist, was freed by the Supreme Court upon the flimsy technical ground that Mallory was questioned by the police before arraignment. There was no question of Mallory's guilt. He admitted it. So the Washington Police Department and presumably every police department in the Nation is, by this infamous decision, precluded from holding a person, to whom suspicion points without arraignment for a few hours, for questioning and for investigating the available evidence. No police department can function under any such restriction.

These decisions probably are predicated on the nebulous provisions of section 1 of the 14th amendment. In its opinions in the cases referred to above, the Supreme Court has been particularly remiss in setting forth the constitutional basis for the inordinate power which it seeks to exercise. However, the Court simply ignores specific provisions of the Constitution which in the clearest language would seem to preclude the exercise of any such power. We Virginians and the citizens of the other Southern States, since the deplorable decision of May 17, 1954, have been bombarded with statements asserting that decisions of the Supreme Court constitute the law of the land. These assertions are made as though handed down by some Olympian oracle, without citing a single provision of the Constitution which could confer upon the Supreme Court—power to make law, or power for carrying into execution any power vested by the Constitution in the Government of the United States, without a law enacted by Congress to carry such power into execution. Suppose we should concede that the Supreme Court does have the prerogative to define the extent and limits of the power vested in the Government of the United States by section 1 of the 14th amendment and conceding further that the 14th amendment, although adopted under tainted circumstances, is a valid part of the Constitution, what then? Who is to make law for carrying such powers into execution? Section 8, article I of the Constitution is explicit on that point. The first 17 paragraphs of section 8 itemizes specific powers delegated exclusively to Congress, which cannot be exercised by the Supreme Court or by the Executive or by the Supreme Court and the Executive, without law enacted by Congress. Paragraph 18, section 8, article I, of the Constitution reads:

"Congress shall have power: To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

Can the plain and explicit language of that provision be interpreted, construed or twisted, by the process of any mental gymnastics, to mean otherwise than that the Congress is the sole and exclusive lawmaking agency of the Federal Government? If Congress is endowed with exclusive power to make all laws which may be necessary and proper for carrying into execution all powers vested by the Constitution in the Government of the United States, how can the Supreme Court validly make any enunciation or decree having the force of law, regarding any power vested in the Federal Government, unless and until Congress shall have carried into execution such dormant power by necessary and proper law? It seems certain that it was never intended that the provisions of section 1 of the 14th amendment, which is the source of all our troubles, should be self-executing or be enforced by any agency, judicial or executive, except pursuant to legislation enacted by Congress. Section 5 of the 14th amendment reads:

"Congress shall have power by appropriate legislation to enforce the provisions of this article."

We take the position that any enunciation or decree of the Supreme Court which undertakes to carry into execution any power vested by the Constitution in the Government of the United States except pursuant to valid act of Congress is not the law of the land, but is an illegal encroachment upon the constitutional powers of Congress and the sovereign and reserved powers of the sovereign States. The Supreme Court, by making the above-mentioned decisions, without legislative authority from Congress, has abused its appellate jurisdiction, and Congress is in duty bound to withdraw appellate jurisdiction in the respects enumerated in S. 2646.

The Virginia convention of 1788, which ratified the Constitution, set forth the following principle which should never be forgotten: "That Government ought to be instituted for the common benefit, protection, and security of the people; and that the doctrine of nonresistance against arbitrary power and oppression is absurd, slavish, and destructive of the good and happiness of mankind."

No Distinction Because of Nativity

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. JUDD. Mr. Speaker, one of the most stimulating experiences of my 3 months of service last fall as one of our United States delegates to the United Nations General Assembly, was the privilege of getting to know Mr. Philip Klutznick, another of our delegates. He has had a distinguished career as lawyer, Government administrator, banker, and businessman. He has an unusually incisive mind, a deep understanding of the things that are most important and unique in our American heritage, and that rarest of qualities, moral courage.

At the dinner given by the Anti-Defamation League on March 3 to honor the 85th Congress for its part in enacting the Civil Rights Act, Mr. Klutznick, who is president of B'nai B'rith, gave an address which is a classic in the sensitive insights it portrays regarding the finest things about our country and our culture, including the standards to which we aspire and by which we judge ourselves when we fall short. As long as we can honestly analyze our shortcomings and courageously move to correct them, America will be great, her heritage safe, and her influence ever-expanding.

Under leave to extend my remarks, I include the address by Mr. Klutznick:

TEXT OF ADDRESS BY PHILIP M. KLUTZNICK, PRESIDENT OF B'NAI B'RITH, AT ANTI-DEFAMATION LEAGUE OF B'NAI B'RITH, AMERICA'S DEMOCRATIC LEGACY AWARDS DINNER, MAYFLOWER HOTEL, WASHINGTON, D. C., MARCH 3, 1958

Some years ago—87 to be exact—a predecessor of mine as president of B'nai B'rith received a letter from the President of the United States, from which I quote:

"The United States, knowing no distinction of her own citizens on account of religion or nativity, naturally believes in a civilization the world over which will secure the same universal views."

The man who write the letter was Ulysses S. Grant. The man who received it was Benjamin Franklin Peixotto, a B'nai B'rith leader of estimable qualities. The purpose of the letter was a presidential appointment wherein Mr. Peixotto was dispatched by our Government to serve as the United States consul at Bucharest. His selection was dictated by persecution and the denial of civil rights of the Jews of Rumania.

Mr. Peixotto was a diplomat of persuasive talents. He held up to the people of Rumania, and to her royalist leaders, the image of his native America in which the spirit of human freedom and the dignity of the individual were then, as they are now, the cherished ideals of our national life. Even in the 1870's, the majesty of the United States was such that this point prevailed. The persecutions abated.

The object lesson is apparent that success was achieved by presenting the United States to a foreign people in that characteristic which distinguishes us as a Nation, our preference for liberty over authoritarian rule.

In this complex era of moon satellites and cold wars; of 1 billion people in Asia and Africa flushed with new-found political freedom and many reluctant to commit themselves between the Soviet Union and the free West: of grave debate on the principal issues of peace and freedom; of a seeming paradox in which the peoples of some lands threaten to abandon freedom for what they mistakenly believe to be security—in this atmosphere of stalemated uncertainty and frustration, this special characteristic which makes us what we are is more fundamental to our destiny than ever before.

People the world over recognize us by it. They applaud us for it.

The same critics who envy our abundance of wealth and resources, who deride our culture, who are quick to point out that the sputnik got there first—these same critics are genuine in their own souls in their admiration of our standards of human freedom.

That being the case, we must, in this world struggle for men's minds and hearts, make the most of it.

For, in this generation, the United States has inherited, or won, or had thrust upon her—whichever you choose—the position of champion for the cause of the free nations. It is an undisputed role and, at best, a difficult one. Inevitably, a champion is subject to the critical examination of those who surround him. His every weakness is magnified; his defects are distorted out of proportion; his motives are constantly under challenge; he cannot disguise himself in anonymity.

Ours is not a comfortable role in a world that abounds with all manner of problems and prejudices. But it is a role we cannot escape and dare not neglect. Our security as a free Nation depends on it—and no less the freedom and security of other peoples who are our partners in a global struggle.

One need but rub shoulders with the peoples of other nations in the free world, or see them in their homes or at work, to realize how much they look to us for their security and their status as free men. In this

framework of global responsibility, our sins, which are not ours exclusively, are the burden and worry of our friends—as, indeed, our achievements are their joys to share.

No nation in this world is completely free of the taint of prejudice or discrimination. Even some recently born to freedom, with fresh memories of foreign domination, cannot face the bar of world opinion with complete equanimity. Among older states, some long devoted to ideals of human dignity, there remains the persistent task of narrowing the gap between these ideals and the practice of them. History suggests that time and patience are the means by which progress in human affairs travels its inexorable path. But history also reminds us that the nation thrust into the dominance of leadership is denied the luxury of patience if its leadership is to survive and be meaningful.

A setback for human rights in our land does not escape the critical notice of either our friends or our enemies. This is perhaps an ironic business. In lands where basic freedoms and civil rights are foreclosed, all is hidden from public view. Yet, it is precisely these nations which distort and make the most vicious propaganda of even our progressive efforts to rid ourselves of ancient shackles. In this way, they exploit with cunning the incident of Little Rock, a sad and difficult experience which, under our freedoms, is available for all the world to see, while they, in turn, invoke the discriminations and prejudices which are the bitter hallmarks of tyranny.

If our freedoms are to speak for us with force and clarity we cannot allow our voice to be muffled by the misdeeds of the few that bring confusion to our friends and glee to our enemies. In our sensitive role of the champion of freedom, each misstep, inevitably magnified and overdramatized lessens our strength and reduces our effectiveness in the struggle to achieve righteousness over evil.

Against this backdrop, the action of the 85th Congress takes on its international significance. Not only did it bring us a step closer to the realization of our ideals as a Nation, but it served to strengthen the whole fabric of the free world's determination to win the constant battle for freedom and human rights. It was a robust demonstration on Capitol Hill that we are a Nation unafraid to face our own deficiencies.

I suggest to you, however, that our civil rights statutes—including the historic piece of legislation for which we honor the Congress this evening—need to be justified by positive acts of citizenship. A brilliant researcher, the late Dr. Julian Woodward, once reminded us that the true measure of our civil rights is not a statistical balance of how many good laws are enacted, or favorable court decisions rendered, against bad ones. A more realistic index, is to ask: How many citizens actually participate in the rights which are freely available to them?

On that score, we are wanting—to the detriment of our national life and our stature before the world. We cannot look for redress from legislators or jurists, since the negligence comes entirely from our own contradictory behavior as citizens in a land of freedom.

As a nation, we are, unquestionably, four-square for civil rights. We take pride in their cumulative freedoms. At the same time, we present to the world the paradox of being downright negligent about practicing some of our rights.

One of our basic credos, for example, is that "rulers shall govern only with the consent of the governed." We cherish our right of franchise. But half of us generally don't bother to vote.

We glory in our principle of free speech, and too many of us foolishly deny it to ourselves by compulsions of fear and conformity, lest we find ourselves expressing controversial thoughts.

Our vaunted economic strength flows from our freedom of enterprise. Yet, how often these days do we find our people turning their backs on it in favor of the limiting, short-sighted goal of security.

We speak of ourselves as "a nation of joiners." This is a misleading boast. In truth, the shibboleths of conformity tend to frighten many Americans away from active participation in politically-minded movements. This behaviour of the mute bystander has its corroding effect on our freedom to assemble in voluntary association with like-minded citizens.

We have freedom of inquiry. We accept it as so vital to our way of life that we strengthen it with the bulwark of free compulsory education. But we have allowed public education in our land to deteriorate, and we tend to neglect the citizen's responsibility to question and to probe instead of accepting whatever political or social gospel is handed to us.

These are among our cherished rights. If they are meaningful to our existence and to our leadership in the world, as we constantly and vociferously declare them to be—I simply propose this: let's use them more often, and with greater vigor.

No one can underestimate the security needs of our Nation or its allies in these fearsome days of outer space. But to win the race in this vital sector without liberating ourselves of the waste of discrimination and prejudice is to win a hollow prize. To defend freedom but not to have it is a fraudulent gesture; to reach the moon through science, but to keep peoples enslaved is a fool's errand which fools no one but ourselves. The greatness of America in the eyes of the world has been in the constant upward course of our human values. This task must keep apace with the achievements of science. To do less is to dishonor our heritage and to destroy the capacity of our blessed Nation to lead the world out of bondage as Moses led the people of ancient Israel to their promised land.

Annual Meeting of German Society of Pennsylvania

EXTENSION OF REMARKS

OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mrs. GRANAHAN. Mr. Speaker, it was my great privilege last fall to be among those Members of the House of Representatives chosen by Speaker RAYBURN to participate in an official congressional visit to West Germany as guests of the Parliament of the Federal Republic.

Early this year, I was invited to discuss my experiences at the annual dinner of the German Society of Pennsylania, commemorating the 193d anniversary of the founding of this organization in Philadelphia in 1764. The German Society of Pennsylvania, a cultural and charitable organization, is the oldest German Society in the United States.

Of course the members of this organization knew much more about Germany than I do, since I have been there only this one time and then only for 2 weeks, but I found the audience most interested in hearing my reaction as a Member of Congress to the things which I saw and heard in this whirlwind trip.

Other Members of the House may also be interested in the reactions of a first-time visitor to today's Germany, and so I include for printing in the Appendix of the CONGRESSIONAL RECORD my talk of January 19 to the German Society of Pennsylvania, as follows:

REMARKS BY CONGRESSWOMAN KATHRYN E. GRANAHAN AT 193D ANNIVERSARY DINNER, GERMAN SOCIETY OF PENNSYLVANIA, SUNDAY, JANUARY 19, 1958

I have heard lawyers telling each other that the best time to ask for and collect a fee in a law case is when the client's tears are still warm, not when the case is over. Others say the same thing in the phrase "strike while the iron is hot." Your president, Mr. Herman Witte, may or may not have had those admonitions in mind when he decided to invite me to this affair tonight, but I will say that he went about it in just such an irresistible manner.

For I found his letter—and a very gracious one it was—waiting for me as soon as I returned to Philadelphia from my trip to Germany last month. Of course, at that moment, my mind was full of thoughts of that wonderful trip abroad to the extent that I could think of very little else. So when I read Mr. Witte's letter inviting me to come here to talk to you about that trip, naturaly I found the invitation irresistible.

Since then, however, I have had some second-thoughts on the matter, and I am not so sure about the advisability of my acceptance of your kind and flattering invitation. You see, this was my first trip to Germany—my first to Europe. And I was in Germany only 2 weeks altogether. It was something of a whirlwind trip—on the go every moment—on a sort of conducted tour which accounted for every second of every minute of the day—and although I saw a great deal and learned a great deal and found the trip invaluable, I am very conscious of the fact that many of you, if not most of you, know much more about what I saw than I do.

Your society, I note, is approaching its 200th anniversary, and during all of these years generations of members of this society have been learning about Germany and visiting Germany and developing your wonderful and complete library about Germany.

Whereas my experience with Germany consists of a 2 week whirlwind tour. So I am very conscious of my limitations in talking to you. On the other hand, I know you will take all of that into account and not expect me to give you a scholarly and profound lecture on German history or German science or German culture or even a travelogue full of heretofore unknown information.

What I can do is this—and I assume that in inviting me you and your president had just this in mind: I can tell you of the impact of modern-day Germany on a Member of the United States House of Representatives who previously knew little about the country—and nothing from first-hand knowledge—but who must, as part of my official duties, take actions and vote in the Congress on matters affecting that part of the world.

I was part of an official delegation named by the Speaker of the House of Representatives, Speaker RAYBURN, to represent the Congress in acceptance of a gracious invitation from the German parliamentary leaders. That invitation came to us—to the House of Representatives—as a gesture of

reciprocity and friendship in return for visits which German leaders had previously made to Washington. They felt they had been treated very courteously and had learned a lot in their tour over here, and they were anxious to repay the favor.

Speaking for myself—but mindful of the feelings and thoughts of the other Members of Congress who were part of the delegation—I can say that the favor was very pleasantly returned and the trip was most enjoyable. As taxpayers, you will be pleased to know that this trip was taken at the expense not of our own taxpayers but of those of the Republic of Germany.

We left New York on November 13, by the German airline, Lufthansa, and flew to Frankfurt. I had never been much for flying before—I rather disliked the idea of a long plane flight—but I found this one most pleasant and enjoyable. On the way, of course, we were briefed on some of the things we would see and we were given a good idea of what to expect.

But of course seeing these things was so much different from being told about them that when we did arrive and plunged into a round of official sightseeing and receptions, dinners, interviews, and so on, it was a rather overwhelming experience. And one I shall always treasure.

We were only in Frankfurt for a few hours on November 14 and then flew to Munich where we had dinner and then fell into bed rather exhausted from the long journey. But beginning at 10 a. m. the next morning, we were busy every moment, for the next 2 weeks. We toured beautiful Munich, attended a reception by the speaker of the Bavarian Parliament, went to another reception that evening given by the United States Consul General, and then we attended the opera that night.

From Munich we drove to Bonn for several days of official discussions with the various ministers of the Federal Republic, with parliamentary leaders, and others, and we had dinner at the American Ambassador's. Then we drove to Cologne, to Duesseldorf, to Hanover, and to Hamburg. From Hamburg we flew to Berlin and from there back to Frankfurt.

Now I have just condensed into a few short paragraphs an itinerary which you know was worth many thousands of words and many descriptive adjectives to do it justice.

But, as I said at the start, I am not going to give you a travelogue about ground many of you have yourselves covered more leisurely and more thoroughly. But I want to give you some impressions.

There were many high points of the trip—not any single one you could pick out and say that this was the one biggest thing. Probably meeting and talking to Germany's impressive Chancellor, Herr Adenauer, would rank among the biggest of all.

But to me there was a genuine thrill in seeing and sensing the attitude not just of Chancellor Adenauer but of all of the top-ranking officials of today's democratic government in Germany with whom we came in contact—an attitude of determination to make democracy succeed this time in Germany, and to assure the German people and the German nation a place of prestige and respect and admiration and affection among the free peoples and the free nations of the world for their devotion to freedom and to the rights of the individual.

This is what we all hoped for—hoped to see and hoped to find—and it was there. We found it. We saw it. It was, as I said, a genuine thrill, and one which continued for all the time we were there.

The scars of war are still there—they still exist. But it is truly difficult for me even yet to realize the extent of the damage and the destruction and the devastation which marked Western Germany when the shooting stopped nearly 13 years ago. We saw pictures of some areas of the major cities—of whole cities, in fact—which had been reduced to rubble. But standing in those cities today, looking at the modern architecture, the good urban planning, the fine apartments and homes, the spectacular stores, the great public buildings, it is most difficult to imagine how so much could have been achieved in such a short time.

Frankly, in some parts of Western Germany, I felt I was right here in Philadelphia. The spirit was the same—rebuilding a better city than ever before; bringing beauty to areas which had been eyesores or worse; building, building, building, improving, beautifying—this was the spirit I saw and the results were simply breathtaking.

We saw German industry booming and bustling and turning out high-quality goods for world markets. We visited and toured the great Volkswagen plant, and heard how they are running a year and a half behind their orders. How Detroit would love to be able to say the same thing right now. And how all of us who are citizens of the United States and anxious for our own economy in this nervous period of recession would also wish Detroit could be saying something of the same thing.

I am, as most of you know, a liberal in politics—a believer in full employment and prosperity widely shared. I believe we have prosperity in this country as a whole only when our people are fully employed and have good purchasing power.

In view of that, I was most sincerely impressed by the German economy, for there is a soundness to it that is gratifying. People have jobs and they work hard and there is full employment and there is even an ability in that economy to absorb the thousands of refugees who stream across the border from repression and the slavery of communism to freedom and free air and light in the western sector—in Western Germany.

Now in contrast, we very briefly visited the eastern sector of Berlin. Presumably, this should be communism's showplace area, for it is a place where there is sufficient traffic back and forth so that the contrasts, if they existed, could be very striking and very damaging to communism. I am sure the Russian masters of Eastern Germany recognize that.

Even so—even despite the prod and the spur to make the contrast with West Berlin less striking—the contrast is there and it is the most dramatic contrast one could ever expect to see between 2 ways of life and 2 economies.

We were permitted in East Berlin only an hour and a half. Had we stayed beyond that, the police of the puppet regime would have been looking for us, probably to arrest us. But there were no incidents. We were driven about by American personnel who knew exactly what would be permitted and took absolutely no risks with us. So there was no dramatic incident—no guns pointed at us menacingly or anything of the sort, although that sort of thing has been known to happen in the past to Members of Congress who took pictures or otherwise violated Communist regulations there. It is unnecessary for me to say that we took no pictures.

But while the Communists could prevent us from capturing the poverty and hopelessness and despair and vacuum of East Berlin on photographic film, they could not prevent us from capturing these undying impressions on the film of our minds. We saw—and we remembered what we saw. We shall never forget what we saw.

This was a part of Berlin damaged no worse than the rest in the war. They have had equal time to rebuild. They have had the resources of Russia to help them rebuild, as part of the cold war.

They have built a front—a false front. It is like the settings of a stage play, or the frontier towns that Hollywood builds out of plywood for movies or television—just a front. The fronts of the buildings adjoining the western sector look new and prosperous, but behind those fronts are ruin or neglect or squalor.

The people we passed in the streets looked at us with a blank, sullen, hopeless look of despair. They looked as if they had nothing to live for—unless it might be to escape. And of course, each month, perhaps 2,000 persons escape from Eastern Germany to the West.

One sight I shall never forget: A young girl, perhaps 15, poorly dressed, obviously not too well fed, standing and looking in surprise—almost as if in wonder—at our cars going by. Now we were riding in just plain black automobiles, not fancy limousines. Yet this 15-year-old acted as if seeing a car was most unusual—the way we might have watched a helicopter a few years ago.

In Western Berlin and in Western Germany, where there is prosperity, and life, and delight in life, and things to see, and things to do, and good clothes to wear, and good food to eat, children went about their own happy pursuits, too busy with too many childish wonders of their own to stand and look blankly and wonderingly at adult activities. They were as bright and smiling and happy as American children on a weekend or at school recess. But not in East Berlin.

I saw one other sight which I will keep with me always—women in the eastern sector of Berlin dragging themselves about in the cold weather dressed in discarded or badly worn army overcoats.

These are impressions which underline and underscore—which emphasize and point up—the comparative well-being of the Federal Republic of Germany and its people. No one can visualize or understand the contrast between freedom and communism without seeing these two economies and societies so close together, and yet worlds apart.

What I am telling you about this is certainly not new or news to you. Let me tell you a bit then, about the political climate:

While we were in Germany, the Bundestag was not in session for the very reason that the Congress right now is not passing much major legislation. They were selecting their committees and this is done in conferences and leadership meetings. Our own Congress is in that process to some extent right now.

But although we did not see the Bundestag in session, we met many of the leaders and ministers and talked about the future of freedom in a world divided. I took away two impressions from these talks:

First, as I said, a sense of the determination of the German leaders to make democracy work. This meant, as they saw it, assuring all of their people a solid foundation of opportunity. In many respects, they are ahead of us in social welfare activities while being behind us in others. Labor and management take active partnership roles in many activities. The individual is considered important.

That was one impression. The second was this: These leaders of Germany are deeply grateful to the United States of America for every bit of help we have given them over the years. This I am sure is genuine and sincere. It is not one of those cases of "What have you done for me lately?" They know we have done much—a tremendous amount for them. And they appreciate it. They showed us plaques erected on various buildings and plants saying they were built under the Marshall plan. They have not forgotten. They have not forgotten CARE. They have not forgotten the kindness of so many Americans of German descent too.

The best spokesman for this point of view was, of course, the great Chancellor Adenauer. The arrangements for us to meet

with him had broken down for some reason or other; in any event, it was not to be on our schedule as finally worked out. But at the last moment, when we were about to go to the opera one evening, word came through we could see Mr. Adenauer if we wished, and of course we wished.

It was the day after President Eisenhower's stroke. We knew very little about the situation here at home. We were as shocked as you were and as the whole world was shocked. Chancellor Adenauer was deeply disturbed by the turn of events.

This tall, erect, youthful looking man of 82 spoke kindly of the President, as the symbol of America in the free world. What, he asked us, would we do if the President's illness was so serious that he could not attend the forthcoming NATO conference. Of course we did not know.

Mr. Adenauer said that if President Eisenhower could not come we should very definitely not send a substitute for Eisenhower is the President and he would be meeting with heads of states. He advised against sending Mr. NIXON to assume the role. If Mr. Eisenhower could not come, he said, then the conference should be changed from one of heads of states to foreign ministers. He was most emphatic about that.

In any event, after speaking of this one matter which was uppermost in everyone's mind at the time—the illness of our President in the light of the forthcoming NATO meeting—Mr. Adenauer then talked about Germany and America, our relationships and our goals for mutual progress, and about the free world. He spoke in German, through an interpreter, much to my regret. I understand he understands English but does not speak it. Unfortunately I am not conversant with German.

But despite the language barrier, his thoughts came through. He wanted us to know—and to bring back to America—the deep gratitude of the German people for our leadership in behalf of freedom in the world. He wanted to make clear to us that Germany was committed to freedom, and against communism, and was an ally which we could count on through NATO. He spoke solemnly of the Communist threat—as one who has seen it up close and recognizes its hateful face.

And then he expressed his heartfelt desire for Mr. Eisenhower's full recovery. He indicated that in view of his background and past career, Mr. Eisenhower can play a role right now which no one else in the administration could attempt in the realm of world affairs. It was almost as if this 82-year-old man was saying that the future of world affairs depends upon good health and leadership from the American President during the rest of his term in office. And we ourselves thought how much the future of Germany seems likewise to depend upon this 82-year-old man. Who could take his place if anything were to happen?

Well, we here tonight know, as Americans, that men help to make the times but the times help to make the men, too. If Germany has rebuilt well, if the instinct for democracy has been properly instilled, Germany will go on no matter what. That is the hope, and there is good solid foundation for it. Just as we go on and have gone one here in the United States despite the circumstances of individual lives or leaders. It is all according to what the people think and want and insist upon.

In that connection, I think Germany today is faced in the right direction, and determined to follow the right path. That was my impression, shared by the others in the delegation. That was our hope, too. For a free Germany, united for freedom and democracy, can be one of the greatest instruments for a peaceful, better world.

Thank you.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Use of Senate Caucus Room

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. JOHNSON of Texas. Mr. President, I have received from the chairman of the Committee on Rules and Administration a letter report on the incident which involved the use of the Senate caucus room for a press conference a week ago Wednesday. I ask unanimous consent that this report be printed in the Appendix of the RECORD for the information of the Senate and the country.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON RULES
AND ADMINISTRATION,
March 3, 1958.

The Honorable LYNDON B. JOHNSON,
United States Senate,
Washington, D. C.

DEAR SENATOR JOHNSON: Pursuant to the discussion which recently transpired on the Senate floor in connection with the use of the Senate caucus room by Mr. Walter Reuther for a press conference last Wednesday, I have obtained signed statements from the Superintendent of the Senate Press Gallery and the Superintendent of the Senate Office Building and transmit copies herewith. These enclosures substantially confirm, I believe, the factual account of the incident given to the Senate, on the following day, by Senator HUMPHREY. (See CONGRESSIONAL RECORD, Feb. 27, 1958, pp. 2630-2631.)

It is of course not the practice or policy of the Committee on Rules and Administration or af any Member or employee of the Senate to permit the use of rooms in the Senate Office Building for formal private press conferences. To the extent that the event involving Mr. Reuther was accompanied by some advance announcement, the incident was unique and isolated. I am reliably informed, however, that it is the frequent habit of our accredited newspapermen to interview Senators and other prominent persons and participants, in various rooms and corridors of the Senate Office Building, during intermissions and after recesses of committee hearings. As long as we enjoy freedom of the press and its concomitant privileges, that custom of the press is one I think no Senator would willingly proscribe.

Reverting again to the situation of last Wednesday, the circumstances under which the location of the Reuther conference was changed from the press room to the caucus room in the Senate Office Building are set forth in the attached statements. It seems hardly necessary to add that an original request for the use of the Senate caucus room for a private press conference of the representative of a commercial organization of any kind would be summarily denied.

It is the firm general rule that space assigned to the Senate will not be utilized for activities disassociated from a Senate committee or a sponsoring Senator. In the supervision of this rule, there may be an occasional difference of opinion as to the pertinency or propriety of a particular request for assignment of the caucus room, or any other Senate facility. The Committee on Rules and Administration exercises its best discretion to grant no request likely to be disconsonant with the desires of the Senate or the public interest. Individual sponsoring Senators and Senate committees are necessarily accountable for activities indulged during the periods of the temporary assignments made to them. Generally speaking, I believe this accountability has been circumspect.

I hope this letter will sufficiently answer the inquiries initiated by the interview, on February 26, 1958, of Mr. Walter Reuther by members of the press in the Senate caucus room. If you or my colleagues believe broader inquiry is necessary, please let me know. Whether or not you decide to insert this letter and its enclosures into the CONGRESSIONAL RECORD or otherwise make them public, I leave to your sound good judgment.

With warmest regards to you, as always.

Yours sincerely,
THOMAS C. HENNINGS, Jr.,
Chairman.

P. S.—I am sending a carbon copy of this letter to Senator KNOWLAND for his information.

CONGRESS OF THE UNITED STATES,
PRESS GALLERIES,
Washington, February 27, 1958.

Hon. THOMAS C. HENNINGS, Jr.,
Chairman, Rules and Administration Committee, Senate Office Building, Washington, D. C.

DEAR SENATOR HENNINGS: Upon my return Wednesday, February 26, at 11:40 a. m., from the White House press conference, I was informed by several members of the Senate Press Gallery that Mr. Walter Reuther had scheduled a press conference to be held in the pressroom of the Senate Office Building at 1:00 p. m. that day. This press conference was not cleared through me or any member of my staff.

As you probably know, there were 8 or 10 committee hearings in the Senate Office Building on that day, and the pressroom was a very busy place. Quite a number of newspapermen asked me not to permit this press conference to be held in the pressroom where some of them were typing or dictating stories.

After an unsuccessful attempt to reach Mr. Reuther's press assistant, in an effort to cancel the press conference, I went to the pressroom at 12:30 p. m. to see his press representative, who arrived at about 10 minutes to 1. I informed him that the press conference could not be held in the pressroom.

There were 75 or 80 newsmen in or around the pressroom at that time, and some of them suggested that the press conference be held in the hall or some committee room. I told them that any use of a committee room, or even the hall, would have to be cleared through the custodian's office or by an official connected with the committee now using the room.

My assistant, Don Womack, telephoned the custodian's office and requested permission to use the caucus room for this purpose. He also telephoned someone connected with the Select Committee on Labor Activities for their permission, which was also granted; in order to accommodate the press.

I gave no instructions to the police on the door of the caucus room to bar Senators or any Senate official from the room, only tourists.

Thank you for the opportunity of explaining how this happened.

Yours very truly,
JOSEPH E. WILLS,
Superintendent, Senate Press Gallery.

UNITED STATES SENATE,
SENATE OFFICE BUILDING,
February 27, 1958.

Hon. THOMAS C. HENNINGS, Jr.,
Chairman, Committee on Rules and Administration, United States Senate, Washington, D. C.

DEAR SENATOR HENNINGS: At approximately 12:30 p. m. yesterday someone called this office. The phone was answered by Harry Clarke, service officer.

The caller stated that he had read on the teletype that a press conference was to be held in the caucus room at 1 p. m. for Walter Reuther. The caller wanted to know how Mr. Reuther obtained the room and permission to use it. The unidentified caller was told by Mr. Clarke that we knew nothing about the conference. I found out last night that the call came from the office of Senator GOLDWATER.

At approximately 12:45 yesterday Don C. Womack, Assistant Superintendent of the Senate Press Gallery, called this office. Mr. Harold Brannon, service officer, received the call. Mr. Womack asked if he could use the caucus room in the Senate Office Building for a press conference for Walter Reuther. Mr. Brannon told Mr. Womack that the room was assigned for the day to the Select Committee on Labor Management, and that he would have to have the permission of that committee.

Mr. Womack called back a few minutes later and stated that he had contacted Mrs. Ruth Watt, clerk of the committee, and that she stated it was all right for them to use the room. Mr. Brannon asked Mr. Womack if he wanted the room unlocked, and Mr. Womack stated that he was already in the room.

Sincerely yours,
J. LEWEY CARAWAY,
Superintendent.

Address by Hon. Edward Martin, of Pennsylvania, to the National Guard Association of the United States

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. MARTIN of Pennsylvania. Mr. President, on October 8, 1957, at Louisville, Ky., I delivered an address to the

convention of the National Guard Association of the United States. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE CONVENTION OF THE NATIONAL GUARD ASSOCIATION OF THE UNITED STATES, LOUISVILLE, KY., TUESDAY, OCTOBER 8, 1957

It is a distinct honor to be invited to speak to this historic and distinguished organization which has worked so courageously to protect and advance the American way of life.

As members of the National Guard you hold a unique position. You are both citizens and soldiers. You know the dangers involved in excessive taxation and the high cost of government. You also realize that one of the most important obligations of American citizenship is to share in the defense of our Republic.

Over the centuries the best minds of the world have tried to outlaw war. In spite of these efforts armed conflict has come generation after generation, in greater magnitude and with greater cost in money and in human agony and suffering.

In the eight wars in which we have been engaged 965,572 Americans have given their lives and another 1,276,520 have been wounded. The overall cost in money can hardly be estimated, but it is by far the largest item in our combined budget.

We are a peace-loving people. As Americans we do not want armed conflict because we do not covet anything that any other nation possesses. Everything that is honorable should be done to prevent war. The record of history proves that treaties, resolutions, and good intentions will not bring peace to the world. Strength is the only means by which war can be prevented.

More than 300 years ago George Herbert, the English poet and philosopher, expressed that thought when he wrote:

"One sword keeps another in the sheath."

We can be brought to disaster if we allow our Nation's sword to become dull and rusty.

Our wise forefathers realized that one of the most important functions of government is to provide for the common defense. They recognized the dangers of war and that it can be avoided only by adequate preparation. Therefore, they set forth the plans for our Nation's defense in the Constitution. One of the fundamental objectives of the immortal document, as stated in the preamble, is to provide for "the common defense."

The Constitution itself provides for calling out the militia to execute the laws of the Union, suppress insurrections and to repel invasions. It further provides for organizing, arming and disciplining the militia, "reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress."

This wise reservation of certain powers to the sovereign States was to prevent an overpowerful central government from destroying the authority of the States. The National Guard is a fundamental part of that plan. It must be sacredly guarded. Even Federal appropriations for National Guard purposes must be carefully watched because they may be used to gradually destroy the direct State control of the guard. We must always remember whenever we seek financial aid from a higher level of government we may surrender some controls.

The National Guard, and its predecessor, the militia, have taken a glorious part in all our wars. They have served in the front lines from the Revolution to the frozen hills of Korea. Local pride and pride in the history of their organizations have carried them forward. From the days of the Roman legion it has been found that men make better soldiers when they fight at the side of their neighbors.

The embattled farmers at Concord and Lexington gave new ideals to military work. They stood their ground against trained British regulars because they believed in the cause for which they took up arms.

Every State has many historic outfits, many of them dating back to the Revolution.

In this discussion of national defense we must face a world of realities. Peace among nations, the great hope of mankind, will come slowly. It must grow out of education in which the spiritual will take a great part. Until the world knows how to live we must have a stabilizing police force.

While the slow process for peace continues, the American school system must provide for the education of all the children in the principles of the Republic. In that education we must emphasize patriotism, respect for the law, the rights of the individual, and loyalty to the Constitution. In this educational crusade we must also reach the many misguided American-born who have really forgotten the ideals of their fathers and the liberties we enjoy.

We must never forget that individual morality is our own responsibility. We must not forget that justice is an inward expression and not an outward force. We cannot legislate justice in the hearts of men. We all must aid the powers of righteousness so we may live in peace and good will under God. But until that great day comes, we must be prepared to defend our freedom and our national honor.

George Washington, as you so well know, wanted a well-regulated militia—well organized and well established.

In planning the military defense of our Republic, I believe we should have the best trained Regular Army in the world. It should have the most modern equipment. It should be the fastest with the greatest firepower the world has ever known. It should be prepared to move by air and sea to any place in the world.

Our National Guard should be under the control of the States until called into the Federal service. It should be trained by the best and most patriotic brains of the Regular Army.

We should have a great Reserve Corps of citizens, trained as both officers and enlisted men, and the training should be under the supervision of the best the Regular Army can provide.

We should have an Air Force so powerful that we could have complete supremacy in the air and enough planes to carry our ground troops to any part of the world.

We should have the world's most powerful Navy so that we and our allies will have complete command of the sea.

We should have a great merchant marine.

To guard and defend our liberty we must have great military strength, but equally important, we must have economic, industrial, agricultural, cultural, and spiritual strength.

We must maintain a strong and expanding economy that will provide employment for our workers at a wage scale adequate to sustain the American standard of living, and to provide the equipment for the Armed Forces.

We must have a high level of production in our mills, factories, and mines.

We must have the maximum production of food on our farms to meet the needs of our Armed Forces and our civilian population.

We must strengthen our financial position through economy in Government, and sound fiscal policies in order to prevent inflation.

We must economize in every function of Government. The cost of defense can be reduced by greater unification of procurement. There are more than 2,000 posts, stations, and camps in the continental United States with a civilian employment of more than 1 million. Many of these could be eliminated at a great saving in cost.

We must never forget that we have obligations in America as well as rights. We will have no rights of any value unless we preserve our great ideals.

Following that principle I believe that every American, regardless of his station in life, should be ready to defend his country and should be prepared by taking basic training.

A great American statesman, Daniel Webster, summarized the obligations of free men in his inspiring speech when he said:

"God grants liberty only to those who love it and are always ready to guard and defend it."

But defense means more than weapons. It means trained manpower. For many years I have maintained that universal military training is the only real solution. It is the right way for a republic, because if a republic is to survive, its wars must be fought by the people. There is much opposition to this plan. Some criticism comes from fathers and mothers and from those with deep and sincere religious conviction, but much of the opposition is expressed by politicians seeking the easy way.

Another group in opposition, and the real danger, are those subversive elements who would deliberately weaken and destroy our country by playing on the fears of others to serve their own sinister purposes.

Actually universal military training is real democracy, in that the rich and humble alike, share equally the responsibility of our Nation's defense.

If America is to be preserved as the greatest nation of all time every citizen must accept a full share of individual responsibility. Every American must join with complete loyalty and unselfish devotion to the task of building a national defense so strong that no aggressor will dare threaten our safety and security.

To meet the challenge of these disturbing times we need a great new wave of patriotic fervor. We need the power and strength of a united people, combining 100 percent Americanism with the highest moral and spiritual standards. We need the resolute courage and the high morale of God-fearing, clean-living, law-abiding people who appreciate our precious heritage of liberty and independence and are willing to make every sacrifice in defense of our ideals.

We all hope and pray that we may be spared the tragedy of another war. But if war should come, I don't want to see the youth of America thrown into battle without proper training.

That training should not only be the best in military work but the trainee should also be taught the meaning of our form of government and what the American way of life means.

When his basic training is completed the trainee could elect service for a fixed period in the Regular establishment or a longer period in the National Guard or Reserve, which would excuse him from additional military obligation, except during a declared emergency. Thus we would be able at all times to muster a citizen army, ready, trained and prepared to meet any threat to our national security.

A plan of this kind would train every American in the basic principles of military work. It could be done at a time that would least interfere with the career or the education of the citizen, such as 2 yearly 3-month periods during June, July, and

August. All of the clerical and supply work could be done at home.

The training should be done by carefully selected officers of the Regular Army, National Guard, and Reserve. It would be helpful if the training was done as near home as possible.

From the trainees, or those serving in the Regular establishment, National Guard, or Reserve, there should be selected by the officers in charge of training certain men who are qualified for schooling in our various colleges and universities. These men, with special training, would always provide a large reservoir of well prepared officers and technical men.

Universal military training would show the world that we are prepared and would be a great step for peace.

As military men we must recognize the world situation. There is a contest for world domination. It may be through a cold war or it may be a shooting war. In either case, America must be prepared and every American must do his full duty.

We, in the United States, recognize the liberty and freedom of the individual as God given. Any other philosophy is nonreligious and un-American. Anyone advocating deviation from these ideals does not belong in the United States and if he does not volunteer to leave our shores he should be sent to a country where he and his philosophy of government may be exercised.

What do we need to prepare ourselves for the great task of defending our freedom?

1. We need accurate information as to our standing among the nations of the world. We must know our enemies and their real strength. We must know who our real friends are and what they can and are willing to contribute in defenes of the common cause.

2. Our plans should be made. The part to be taken by each element should be clearly known.

3. Training should be thoroughly consistent with our financial situation.

4. Means for the production of supplies should be adequate.

5. We must have high morale as a Nation.

By precept and example we must inspire deeper love of our country, greater respect for its laws, more active support of the church and more individual assistance in all public spirited undertakings.

Let us emulate our forefathers by taking a more active part in Government.

Our forefathers were courageous and self-reliant. Without seeking governmental aid, they crossed the mountains with Bibles, rifles, axes, and plows. The axes and plows provided their food and shelter. The rifle was for protection. The Bible was the source of their deep religious faith.

Let us depend more upon ourselves and less on Government.

It is not necessary to relate to this real American audience how the early settlers toiled, suffered and died to start and then build this country. While this continent is more richly endowed by nature than any other of the world—its development was the result of the spirit of America.

That spirit built the solidity of the eastern coast line, developed the fertility of the great Central West, made the beauty of the Deep South, crossed the rugged Rockies and placed the hand of real progress on the slopes of the Pacific. That spirit made us a United Nation, the greatest in all history.

If we, in our day, live by that spirit, America will go forward to still greater achievement in the years that lie ahead.

Address Commemorating 91st Birthday of Nebraska as a State

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. HRUSKA. Mr. President, Saturday, March 1, was the 91st birthday of the State of Nebraska. It was particularly appropriate, therefore, that members of the Nebraska State Society, of Washington, D. C., should meet to commemorate the event.

Also in the spirit of the day was a short address delivered to the members of the society by Representative R. D. "Bob" HARRISON of the Third District of Nebraska. In his remarks, Representative HARRISON traced the colorful history of Nebraska to its achievement of statehood on March 1, 1967.

All Nebraskans, Mr. President, take great pride in the initiative and perseverance of those who established our great State on the plains of the Midwest. This pride is well reflected in Representative HARRISON's remarks.

Mr. President, I ask unanimous consent that the speech, Nebraska Becomes a State, by Hon. R. D. HARRISON, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEBRASKA BECOMES A STATE

(By Hon. R. D. HARRISON)

Ladies and gentlemen of the Nebraska State Society, it was very kind of you to invite me to talk to you for a few minutes, and you may be sure that the invitation was accepted with genuine pleasure. In the 7 years that I have been in Washington, I have derived very real satisfaction as a member of our State society; I have observed the pleasure we, one and all, obtain from our gatherings. And these meetings and social occasions serve a deeper purpose than mere entertainment: they serve to remind us that we are all sons and daughters of the same mother State; they forge anew the bonds between us, so that wherever in this, the National Capital, we chance to meet, we can say that the meetingplace is constructively, for the time being Nebraska soil.

I should like to talk to you for a few minutes this evening on the origin and beginnings of our statehood: I feel the more confident, not because of my own powers, but in my choice of topic, for that subject must always be of interest to us Nebraskans.

I take it that all of us know the origin of our State's name; still, "just for the record," as we say on the Hill, I will quote briefly from that admirable book on Nebraska in the American Guide Series:

"In 1842," we read, "Lt. John C. Frémont led an expedition to explore the country lying between the Kansas and Platte Rivers. On his return, he attempted to descend the Platte, but gave up the venture after dragging his boat for 3 or 4 miles over the sandy bottom of the river. In his report to the Government he wrote: 'The names given by the Indians are always remarkably appropriate; and certainly none was ever more so than that which they have given to this stream—the Nebraska, or Shallow River.'"

Recent finds in the western portion of the State point to the existence of an extremely ancient culture, estimated by conservative scientists to have existed some ten to twelve thousand years ago. These archeological discoveries whose type was first unearthed near Folsom, are known as the Folsom Culture. As for the historic Indians, at the time of the Lewis and Clark expedition in 1804–06, the Pawnee was the largest indigenous tribe of Nebraska Indians, their number probably reaching 10,000. There were four divisions, but after 1804 these united to form the Great Pawnee Nation. After various treaties with the United States Government, the Pawnees in 1875 finally ceded their Nebraska reserve and removed to Indian territory in Oklahoma.

In 1541 the Spanish adventurer, Francisco Vásquez Coronado, with 30 soldiers, moved northeastward from the Arkansas River under the guidance of the Indian Ysopete. The conquistador was seeking the Quivera—a land to the northwestward where, according to the fantastic report of a plains Indian, living as a captive at Pecos pueblo, gold was so common that the natives did not care anything about it. The old Spanish conquistadors were motivated by lust for that metal quite as much as by missionary zeal, and they were completely taken in by the report of the Indian captive who was, of course, by way of revenge, gloriously spoofing them.

The party marched for 40 days and at last came upon an Indian village somewhere near the present Kansas-Nebraska line. Here the adventurers heard of a large watercourse farther to the north—presumably, the Platte. From here, the white men moved eastward and may have reached the Missouri River. Though Coronado claimed actually to have found the mysterious kingdom of Quivera, it is not known just where he thought he had discovered it: the Republican River Valley in Nebraska has been named as the most likely place. Certainly the old conquistador found no gold; he and his followers, however, could probably claim to be the first white men to have set foot in what is now Kansas and Nebraska.

For the next two and a half centuries the region was occasionally entered by both Spanish and French explorers and by French traders and fur trappers. France's claim to the entire vast territory drained by the Mississippi was finally established by the Sieur de la Salle, who in 1682 explored the basin of the mighty river and took posession in the name of the French Crown.

American interest in the Kansas-Nebraska territory dates, of course, from the Louisiana Purchase in 1803 and the explorations of Meriwether Lewis and William Clark in 1804–06. Many of the earlier explorers were far from impressed by the region—indeed, from some reports, one would gather that it formed part of the Great American Desert. In these early years of American possession much of the exploration and all of the earliest settlements were connected with the fur trade. Manuel Lisa established the first fur-trading post at Fort Lisa in 1807, near the site of the present village of Fort Calhoun. Fort Atkinson served as a military post in the same area. Bellevue on the Missouri, in the present day Sarpy County, became the nucleus of the first permanent white settlement in 1823.

In 1934 Nebraska had been included in that territory designated by Congress as Indian country, from which all white men were excluded except the military and certain agents and officials who had special Government authorization. In 1844 Stephen A. Douglas introduced the first bill to create a Nebraska Territory. Not succeeding, he introduced similar bills in 1848 and 1852. By this time the slavery versus antislavery agitation had reached the boiling point, which was to lead to the fiery ordeal of the rebellion. After a conference at the White House with President Pierce and his Secretary of War, Jefferson Davis, Douglas submitted to the Senate one of the most fateful measures ever to reach that body. This was the Kansas-Nebraska bill. Instead of creating a single territory of Nebraska, the new bill provided for two territories, divided by the 40th parallel: Kansas, to the south, to admit slavery, while Nebraska to the north would probably be free soil. The new bill repealed the ancient, time-honored Missouri Compromise of 1820, declaring it inoperative and superseded by the legislation of 1850 (Clay's, Webster's, and Calhoun's famous compromise). The bill became law with the signature of the President, May 30, 1854. It is unnecessary to dwell upon the terrific storm which this ill-starred legislation provoked: suffice to say, that no measure laid before the Senate since the Jay Treaty with Great Britain in 1795 ever stirred such bitter opposition; that it was the greatest single concrete factor which made inevitable the looming Civil War, and that its consequences to the States, the Nation and the world were immeasurable and are felt to this very day and hour in which I speak.

So the great war came, and all else was forgotten in the fierce struggle on the part of the North to save the Union.

The war over, the thoughts of the people of the Nebraska Territory turned toward statehood, and after a long and acrimonious controversy involving considerations both of expense and national political questions, Nebraska at last became a State, March 1, 1867. A new State constitution was adopted in 1875, and revised by constitutional convention in 1920. The most magnificent subsequent revision was the adoption of the unicameral legislature, which became effective in 1937, and which was largely due to the unremitting efforts of George W. Norris.

In these brief moments at my disposal it is obviously impossible for me to offer, even in barest outline, the history of our State. This much, however, can be said in conclusion: As Nebraska near the century mark of her admission to the Union, we may look back with pride and affection upon the noble, truly heroic record of our pioneer forebears—indeed, we feel we can claim that the pioneer spirit has not departed from our midst; we hail with equal satisfaction the advances, scientific and commercial, intellectual and cultural, of the modern generation, and we feel we can honestly claim that we have lived up to, and shall continue to exemplify, the noble motto of the State: "Equality Before the Law."

I thank you.

Importance of Reaching the Russian People

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the major part of a statement recently submitted by former Senator William Benton, of Connecticut, before the Senate Foreign Relations Committee.

Mr. Benton's statement is a searching and valuable analysis of ways by which the United States can improve its cultural and psychological effort against the Soviet Union. He points out ways in which we can break the Iron Curtain and effectively reach the Soviet people and its nongovernmental leadership. This is one of the most thoughtful expositions of the problem which I have heard.

The Public Printer estimates that it will cost $216 to print this in the RECORD. Nonetheless, I ask unanimous consent that the statement be printed.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

IMPORTANCE OF REACHING THE RUSSIAN PEOPLE

Two years ago, Christian Pineau of France, present Foreign Minister and former Premier, said: "If Communist propaganda can continue indefinitely in the West, while the West cannot spread its propaganda in Communist countries, then one day we shall all be subjugated. This is my firm conviction."

Pineau said our hope of survival rests upon the ability of the Western nations to reach the Russian people. Only when propaganda becomes a two-way street, he said, will there be an opportunity to modify profoundly the intransigent attitude of the Soviet regime.

The diplomats of Washington may scoff at Bulganin's letters, but those of Asia and Africa do not. Indeed, each and every one should have been answered in exhaustive detail, not for the American people but for those for whom the letters were actually intended. The primary purpose of the most recent letters, as everyone knows, was to blanket the NATO meeting in Paris and to emphasis the great, pure and peaceful aims of the Soviet Union while the Western nations were talking about armaments. The letters reached the world, but no replies to them from us reached the Russian people.

Khrushchev's world-wide success as a publicist is founded on the fact that this is a peace-hungry world. His formula seldom varies, and good Marxist dogma it is: we want peace and you want war. His current theme is "Let's get together and talk peace."

Some weeks back, he proposed a special session of the General Assembly of the United Nations to take up nuclear armaments. Time after time he has suggested another summit meeting. He has also hinted that, to end the present impasse, Russia and the United States should perhaps go it alone in bilateral talks.

DEEDS VERSUS WORDS

Khrushchev has known in advance what the free world's answers would be. They are nearly always an anguished, "No". The world is told that we won't be taken in by Khrushchev's obvious propaganda tricks; and further that Communist Russia must prove its good intentions by deeds and not words. This last maxim has been used so often that it seems to have frozen the creative thinking of the West and indeed, in today's world is not the maxim being misapplied? Are deeds really as much more important than words as we like to think? Could it be, as Mr. Pineau suggests, that we have missed the key to Communist success, and thus helped insure our own futility?

I suspect that those of our diplomatic leaders, and these include Democrats of the last administration as well as Republicans of this—I suspect that those who keep saying, "It is the deed, not the word that counts," are doing us a great disservice. Ideally, I agree that what counts is the deed and it counts most when coupled with the word. However, the word can obscure and minimize and offset a bad deed. Furthermore, sometimes words generate desired deeds. When Khrushchev calls for a summit conference, isn't that his effort by the words of propaganda to create the deed he desires?

Since World War II, the United States has acted with unprecedented generosity in the conduct of its foreign affairs. It has given to friend and former foe alike. It even offered to forsake its monopoly of of nuclear weapons on equitable terms. During this same time, Communist Russia has followed a policy often based upon intrigue, terror, force, and the suppression of human values. Yet on the barometer of world esteem the prestige of the Moscow Government appears to be rising steadily. Ours has fallen to a new low. This hardly supports the thesis that deeds and not words form the only ultimate test.

Samuel Adams didn't hesitate to launch his Committee of Correspondence against the might of the British Empire. He got powerful assistance from the stirring words of Thomas Jefferson and Tom Paine. Are we not today, in our timid and fearful attitude toward propaganda, neglecting a powerful spiritual weapon of our common heritage? The Communists are not neglecting theirs. Lenin wrote in 1905 that "propaganda is of crucial importance for the triumph of the party." He knew that ideas are the weapons of propaganda. He knew well, as Lord Keynes put it, that "soon or late, it is ideas, not economic interests, which are dangerous for good or evil." When I served in the State Department, I watched the Communist propaganda soften up China for conquest. And China fell more to propaganda than to military might.

Last month a Gallup poll in New Delhi turned up the following percentages on its question, "Which is doing more to help peace in the world, Russia or the West?" Russia, 54 percent; West, 18 percent; don't know, 28 percent. Note the ratio—3 to 1 for Russia.

The same poll asked citizens of 12 world capitals, "Who is ahead in the cold war, Russia or the West?" Russia was rated ahead in 10 capitals—in some cases by 4 or 5 to 1 among those who gave definite answers—and the West in only 2. And, please note this, 1 of the 2 was New Delhi.

U. S. S. R. CALLS THE RULES

I believe that after investigation your committee will conclude that the U. S. S. R. is shellacking us with its propaganda. Further, I think you will discover that the United States has foolishly allowed Russia to call the rules of the propaganda game.

Now, there is no law of international comity which suggests that certain nations shall have an exclusive privilege of defaming the good names of others throughout large areas of the world. This, of course, is possible only because of the complete veto power of the Communist countries over news and information from the West. Because of this, the Iron Curtain can nullify our attempts to reach an agreement for the easing of international tensions.

There is, of course, irony in the fact that a ruthless dictatorship may use the tools of freedom to win a supreme psychological advantage over nations which cherish these tools as the touchstone of their culture. And there is further irony in the fact that Khrushchev, who wields this psychological whip, heads a Government which is deeply troubled by the urge for freedom and liberty now running among its own subjects.

I suggest that it's time the free nations got up off the psychoanalyst's couch and started hitting the Soviet Union psychologically at its weakest point. That point is

the Iron Curtain which blocks its people from exposure to the developing world around them.

For too many years, the West has accepted the delusion that the Iron Curtain is invincible. That view is a most pernicious outcropping of a Western inferiority complex.

VULNERABILITY OF U. S. S. R.

The Soviet Government is vulnerable because it has consistently deceived its own people. If we can get through to the Russian people, the arrogance of the Soviet propaganda will visibly melt. If we can crack the Iron Curtain, it should be possible to create a world climate of opinion in which no nation would dare employ nuclear weapons to make war or to use its stockpile to intimidate other peoples. Essential to this climate of opinion is the attitude of the peoples within the U. S. S. R. Increasingly it seems evident that only through their understanding can worthwhile disarmament agreements evolve. Peace talks will be futile until the Russian people are brought into the world community of thought. Further, we should do all we can to bring an understanding of this to other countries throughout the world.

The first step is to shake up our psychological approach to the Soviet impasse from cellar to garret. We must ourselves announce a peace program, both bold and imaginative, and so comprehensive in its terms that its purpose and scope will snatch the peace initiative from the Soviet Union. The bedrock for such a program lies scattered over a dozen different proposals and policies over the past dozen years. The target of the program, as Mr. Pineau suggested, must be the peoples of the Communist bloc.

It is necessary to make a change of 180° in the arc of our propaganda policy—from No to Yes. For example, why should not every Moscow peace proposal for a summit meeting—why should it not be accepted with alacrity—but with our own "if"—upon the strict proviso that such deliberations should be made known in full to the Russian people.

In his many roles beside that of peacemaker, Mr. Khrushchev fancies himself as the leading exponent for the new people-to-people diplomacy—that movement of broader cultural, social, and scientific ties across national boundaries. This is the new diplomacy of the rocket age and Khrushchev has exploited it with his usual artistry. Does this not give us a superb opportunity to challenge him to open up the Iron Curtain? And to keep challenging him to admit publicly that he is afraid to let in the truth to the Russian people?

A race to the moon is advertised as the next contest in the scientific sweepstakes between the Communists and the free nations. It would be nice for us to win that race. It might be even nicer if we asked Mr. Khrushchev to join us in a cooperative venture by which we could reach the moon together. But in my judgment it is infinitely more important to reach the Russian people than it is to get to the moon.

Mr. Khrushchev's speech of January 22 in Minsk, which hasn't received the attention it deserved in this country, illustrates my thesis that ideas can get through the Iron Curtain, and that the Kremlin is sensitive to the impact of ideas on its public. This was a speech intended for a local audience, and apparently spontaneous. Much of it was a belligerent reply to President Eisenhower. The status of the countries of East Europe is not a subject for discussion at a summit conference, Khrushchev said; the idea of a plebiscite is ridiculous. The idea prevalent in the West that the 20th congress of the Communist Party caused or revealed division and confusion in the socialist world must be controverted. Khrushchev agreed with President Eisenhower's thesis that deeds, not words, are what count; let the United States display deeds by giving up the bases which ring the Soviet Union.

(I shall be happy to submit the text of Khrushchev's speech, which I do not believe has been published in the United States.)

Has there perhaps been a subtle transition in American thinking and policy within recent weeks? If so, this is most promising. Governor Stevenson has suggested a world conclave of distinguished private citizens to explore and make recommendations for ending the deadly armaments race. President Eisenhower has suggested a meeting of humanists, gathered from across the earth, to assess the world's condition and to make suggestions for making it a better place in which to live.

Recently, and more importantly, President Eisenhower wrote a letter to Bulganin which posed positive and constructive proposals, such as the abolition of the veto in the U. N., a letter which the Soviets haven't seemingly known how to answer, at least not yet.

Such ideas are positive though tentative steps which express the genuine idealism of the American people. I suggest to this committee today that we must group these overtures and develop them into a full symphony.

HOW TO BREAK THE IRON CURTAIN

We have at hand the weapons to break the Iron Curtain. One weapon, as suggested by Khrushchev's speech in Minsk, is the worldwide moral power of the Presidency of the United States. Great Presidents like Jefferson, Lincoln, Wilson, and Roosevelt never hesitated to use it and the influence they wielded stands unmatched in the temporal affairs of men. They literally shook up the world with their ideas about freedom and the essential need for human brotherhood.

Here are some further suggestions of the kind of positive things which I believe we should be doing; these are merely samples:

1. President Eisenhower might announce his desire to make a peace appeal directly to the Russian people and request the cooperation of the Soviet Government in providing the necessary press and radio facilities. A talk of this nature would be one of the most dramatic in world history. As an aid to peace it could be worth a dozen summit meetings. He could even ask for a monthly talk to the Russian people, and offer Khrushchev the same opportunity here.

2. The Soviet proposal for a special session of the General Assembly of the United Nations to discuss disarmament should be accepted—with the strict proviso that the deliberations at this meeting shall be fully reported by the Soviet press and radio to the Russian people, as they will be to ours.

3. The Congress could adopt a resolution expressing its sense that the United Nations should take the lead in sponsoring complete freedom in the exchange of news and information between the people of the Communist countries and the people of the United States. (This was the dream of the United States delegation, of which I was chairman, at the U. N. Conference on Freedom of Information in Geneva in 1948.)

4. Some engineering experts are now convinced that a breakthrough is possible of the Soviet radio jamming. Responsible estimates put the cost to the U. S. S. R. of jamming at $114 million annually, more than the total budget of the USIA.

One responsible expert tells me there is a possible way to end the jamming—not a certainty, but with perhaps an even chance of success—and that a research expenditure of less than $1 million might produce the new technique required. I happen to think such a technique would be a bargain to the United States at the Soviet annual cost of $114 million. Our top physicists are needed on this project at least as much as for satellites.

5. The United States should tell the Russians again and again that we shall be glad to have them operate a radio station in Washington if they will permit us to operate one in Moscow. This was a proposal I made publicly 12 or more years ago when I was serving as Assistant Secretary of State.

6. The world should be told once again that if Soviet Russia will agree to a rigid system of nuclear disarmament, the United States is prepared to spend as much as 10 billions annually to help the economic development of less favored nations. The savings on armaments alone would make this possible. This was a proposal of my colleague, Senator Brien McMahon.

7. Why shouldn't we ask the Soviets to take all of our students they are willing to accommodate at their universities? We need young people who speak Russian. I happen to think our students there, as evidenced by countless reports, would be great ambassadors for our way of life.

(There's of course no real hope of the Soviets agreeing to exchange two or three hundred thousand students, though the offer seems worth making. But why should we not encourage a quarter million American students to study abroad? The tidal wave of American youngsters due to hit our colleges will raise the number of qualified applicants from the present 3 million to 6 million by 1970. College administrators see little or no hope of doubling their facilities. Tuition and living costs at foreign universities, even the most famous, average substantially less than private United States colleges and universities. Would it not contribute greatly to international understanding if 250,000 young Americans were enrolled abroad every year? This seems to me a good idea, and it's a cheap idea because it won't cost our economy any more than if we keep these students at home. Such a positive proposal would, I believe, arouse world-wide interest, particularly if coupled with a more aggressive program to bring foreign students to this country.)

8. We should at once begin the construction of vastly expanded and more powerful radio transmitters, beamed behind the Iron Curtain; and indeed we would press with more vigor every idea that holds any reasonable promise of eroding the curtain.

9. We should mobilize our science and engineering talent to devise means of obtaining compulsory access to the Soviet audience. Further, Soviet scientists want contact with ours; they don't argue about the facts of science; our scientists can become most potent ambassadors.

There is no belligerency in proposals such as these. Indeed, they reflect the desire of the American people for lasting peace.

A talk by the President to the Russian people will capture the imagination of men everywhere if only because all mankind has a stake in the outcome of the present armaments race. Our Chief Executive could assure the frightened masses of the U. S. S. R. that our democratic and spiritual background is a firm guaranty that nuclear weapons will never be used for an assault upon the Soviet Union. He can give renewed assurance that the United States and its allies are ready now, as they have been for a decade, to enter a fair and effective pact for the banishment of nuclear weapons.

Indeed, the summit meeting, which the Kremlin is promoting and which seems increasingly imminent, could provide the perfect opening for a talk by the President to the Russian people.

Next, the moral prestige of the Congress in world affairs is great and we have neglected this potential weapon. In suggesting that the United States should assume the lead in boring a hole in the Iron Curtain, the Congress will be following the precedent it established 7 years ago when it passed the McMahon-Ribicoff resolution expressing the sincere desire of the American people for lasting friendship with the people of Russia. This resolution was sponsored by two of the mose eminent Representatives of my State who have served in the Congress. President Truman sent it to the

Soviet Government with the request that it be made known in full to the Russian people. Stalin not only gave it complete coverage by press and radio but he even said that he was willing to approve a limited exchange of news articles between Soviet and American journals. Unfortunately this chink in the Iron Curtain was never followed up. This may have been one of our mistakes.

There are members of this committee who sponsored this friendship resolution who will be interested to know that a prominent official of our overseas information program assured me not long ago that it was one of the best good-will gestures this country ever made.

Thus I believe that an occasional congressional resolution can do an immense amount of good and beyond this can uphold the President in his dealings with the U. S. S. R. For example, if Congress should suggest that both President Eisenhower and Mr. Khrushchev appear before the United Nations to state their views on disarmament, with full publicity in all countries, this might help us get through to the Russian people.

A KEY SOVIET GROUP: THE MIDDLE LEADERSHIP

In our efforts to penetrate the Iron Curtain, we must remember that it is necessary particularly to reach the middle leadership in the Soviet world, its new and rapidly growing class of well-schooled engineers, professional men and administrators. I reported 2 years ago on this expanding group to the Joint Committee on Atomic Energy. I think it is wise for us, in formulating policy, to share Mr. Allen Dulles' cautious hope that it is impossible to educate men and women to think about mathematics, physics and biology—without opening their minds to the possibility of thinking about politics and disarmament and even about justice and freedom.

The top Soviet leadership, which we identify with the Kremlin, can only agree to effective measures of arms reduction and control if the middle leadership is in favor of it. The top leadership must count upon support from the middle leadership; otherwise it will be knifed in the back by rival factions which may interpret any attempt to make a genuine agreement as a betrayal of Soviet interests.

This middle leadership is a tacit constituency that does in fact provide administrative and moral support for the top layers of the Soviet system. Its members tend to favor measures to increase the standard of living of wider and wider circles in the Soviet world. The middle leadership tends to favor measures of decentralization, and a far higher level of reward for skill. It includes the scientists and engineers, and many from the creative arts; the administrators of education, agriculture, transportation, mining, manufacturing, public health planning, construction and finance; and a segment at least of the officers' corps.

Unless the middle leadership has a steady stream of accurate information about the nature and intentions of Americans, it is left entirely to rumor and to official channels of Soviet propaganda. Its members are now cut off from access to information about us that is in fact vital to their own security. A prime objective of American policy should be to achieve direct contact with this powerful group. If wars begin in the minds of men, as stated in the UNESCO charter which I helped to frame, then hydrogen wars can only begin in hermetically sealed minds. As the London Economist states, "Truth is no longer the first casualty of war; it must be assassinated before war can be made."

However, we shall go wrong in our propaganda policy if we neglect the man at the bottom. We must pursue him too, and with every available means. I like the remark of Voltaire. "History is written by the satin slippers going downstairs as the wooden shoes go up."

THE UNITED STATES–U. S. S. R. CULTURAL PACT

Your committee asked me to state my views on cultural pacts. The present pact with Russia seems to me to be good, even though it is in one sense a disappointment. It is good in arranging for a small-scale exchange of professors and students. It is a disappointment because under its terms the Kremlin retains a complete veto power over the exchange of ideas and political talks. In that sense, the Iron Curtain remains intact.

There is a fundamental difference between what Moscow wants and knows it wants—and what we should want and don't know we want—to accomplish by such pacts. The Kremlin wants technical information to improve its economy. We should be driving for a free flow of ideas as one great way to avoid war. We not only want the Soviet peoples to know more about us; we want to know more about them. It seems to me that we should demand that in exchange for our technical information we be granted access to the U. S. S. R. We should seek free play within the U. S. S. R. for American journalists, broadcasters, sociologists, cameramen, political scientists, motion-picture operators, labor leaders, and opinion makers generally. We want their admittance into Russia and free movement throughout Russia for a frank review of the contrasting values of communism and democracy and a constant check on Soviet life and progress. This is what the Soviet Union has to give us in a program of exchanges. This is what we want and what they haven't yet given. In return we are glad to welcome their engineers, technicians, and specialists.

The pact states that the proposal to exchange delegations of deputies of the Supreme Soviet and Congress shall be subject to further discussion. I hope this exchange comes off. There are some plain-spoken members of this committee I should delight to see addressing the Supreme Soviet of Russia and doing so without those inhibitions which naturally circumscribe the work of our diplomatic corps. In fact, an exchange of delegations by Congress and the Supreme Soviet could be the most fruitful exchange of all.

As part of our own efforts within the United States, the signing of this recent pact with the Soviet Union presents another reason why we should seek to untangle our own Redtape Curtain, the cumbersome maze of visa, immigration, and postal provisions that lead many peoples, including the Russians, to accuse us of erecting our own impenetrable barriers.

CONCLUDING SUM-UP

Summed up, the essence of my testimony is this—let's start talking peace and then back up our words with genuine proposals big enough to meet the menace of rocket warfare. For too long the Russians have called the rules for international debate. It's time for us to establish a few rules of our own. Lieutenant General Gavin has used that powerful phrase "missile blackmail" to describe the present course of the Soviet Government.

Khrushchev's success in stealing the mantle of peace is perhaps without precedent. The United States has the moral weapons to cut Khrushchev's ideas down to manageable proportions. Until that happens, the only alternative seems to be an endless armaments race or something infinitely worse.

FOOTNOTE ON THE USIA

I am not here to discuss the USIA. The head of USIA is at this moment opening the defense of his budget before the House Appropriations Subcommittee. I will only say that the USIA budget request for fiscal 1959—$105 million for operations and $5 million for construction of radio facilities—is far too small—if we assume that the USIA is to be adequately led and staffed. It is smaller than the USIA budget for fiscal 1957, and this at a moment when it is becoming dramatically clear that we are losing the psychological duel.

I would urge the immediate return of United States information activities to the Department of State. The USIA was removed from the Department largely on the personal desire of Secretary Dulles to be rid of it. Outside the Department, the USIA has no real voice in policymaking. It can only try to pick up the pieces afterward.

USIA belongs in the State Department for many other reasons, including the coordination of its career service with the Foreign Service, and the elimination of duplicating policy staffs and duplicating research and intelligence services. But perhaps the best argument for a reunion is the continuing necessity for improving and educating and building up the State Department, which must remain the key to our overseas operations. The Department, I am told, and especially since sputnik, has become increasingly sensitive to, and puzzled by, public opinion in foreign lands. I submit that the Department will benefit greatly by such a reunion. The USIA may suffer temporarily. But United States foreign relations will improve.

I recommend that, under the overall direction of the Secretary of State and an Under Secretary, three major divisions or departments be created within the State Department, the Department of International Political Affairs, the Department of International Economic Affairs, and the Department of International Public Affairs. These cover 3 of the 4 major areas of foreign policy—with which I began those of deals, goods, and words—leaving force to the Department of Defense. Each of the three departments should have its own Under Secretary, or perhaps even its own Secretary as in the Defense Department. Each should have its own Assistant Secretaries. Each of the three departments should have full line operating authority—and all officers should report up to their own Under Secretary or Secretary, who in turn would report to the Secretary of State.

The Honorable Henry C. Dworshak, of Idaho

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. SALTONSTALL. Mr. President, on February 24, 1958, the Boston Herald published a very pleasant and truthful article, written by Holmes Alexander, concerning the distinguished senior Senator from Idaho [Mr. DWORSHAK]. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Herald of February 24, 1958]

DON'T BLAME CONGRESS—SENATOR DWORSHAK SHARP ON FACTS

(By Holmes Alexander)

WASHINGTON.—Senator HENRY DWORSHAK, Republican, of Idaho, is built hefty yet agile,

like a big-league catcher, and he doesn't let many wild pitches get past him.

The other day Dr. Alan T. Waterman, Director of the National Science Foundation, was throwing some high and fast ones at a Senate Subcommittee on Research Development. DWORSHAK broke in and called for pitches in the strike zone with some astute questioning.

Why had Russia surpassed the United States in certain phases of science? Why did Russia have more graduates in science? Had the American volunteer system of education choosing and job seeking failed? Had the American free-enterprise system proved itself lacking? Had Congress neglected to supply the necessary funds? In short, where did the source of the trouble lie in our educational shortage?

IN THE GROOVE

Dr. Waterman's answers were very much in the groove. Every young Russian with any talent is trained for science, a field which offers many special privileges in the Soviet Union. There is little need for compulsion. As for the American shortcomings, Dr. Waterman, with admirable candor, laid the blame where it belonged—on the American people in general; on American parents in particular. The Waterman quotes as I caught them were:

"Whatever the answer (as to who's guilty), it seems to me (to be) the lack of appreciation on the part of the people, not the Congress or the Government."

And again: "If the parents realize that (science education) is very important, they are in the best position to do something about it."

DWORSHAK fights shy of national publicity and seldom gets any. But he's a good ambassador for his State at the National Capital. He's a Senators' Senator in that he pores over his homework and rates at or near the top each year in attendance to Senate sessions. For more than a decade DWORSHAK has served on the moneyraising committees of the House and Senate. He has been saying lately that the American public is getting the wrong idea about this country's alleged lack of defense and educational facilities.

At no time, says DWORSHAK, who is speaking from the record, has Congress been niggardly on funds for defense and/or education. In the case of weapons, Congress has pushed money on both Presidents Truman and Eisenhower faster than their administration could spend it. And in the matter of education, as Dr. Waterman testified, there is no reasonable way to blame Washington for the apathy or contrariness of schoolboards back home.

REASSURING OUTLOOK

Luckily, there are many ground-level efforts to stimulate the American educational system, not just in science but in culture. Hundreds of American individuals and corporations are offering scholarships to students who show an aptitude for science. Dr. Waterman seemed to feel that our volunteer system is a natural selection, and that it would suffice in the end. He said that young scientists with a single eye for research gravitate toward the industrial or governmental laboratories. Others who feel the intellectual stimulation of exchanging ideas go into the universities—and gladly teach.

There is a danger, often mentioned by the educators, in an overconcentration on science and technocracy. The cultural subjects suffer, and among these subjects would be contemporary history—notably a knowledge of the difference between the United States of America and the U. S. S. R. Particularly, this is a crucial matter in a day when we are beginning a large-scale exchange program with the Russians. When you send a boy or girl out in the world, you should give him the facts of life. And in this mingling with the intellectual saboteurs of communism, we should be sure our rising generation is better prepared than we were.

Letter From Federation of Teens of America Clubs Relating to Shocking Case of Charles Starkweather

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. HRUSKA. Mr. President, some weeks ago I made mention of the shocking case of Charles Starkweather of Lincoln, who committed some 11 brutal murders, before his apprehension and imprisonment.

Mr. President, I recently received a letter from the president of the Federation of Teens of America Clubs, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERATION OF TEENS OF AMERICA CLUBS,
Omaha, Nebr., February 18, 1958.

Senator ROMAN HRUSKA,
Senate Office Building,
Washington, D. C.

DEAR SENATOR HRUSKA: I have been reading in the World-Herald that the distinguished Members of Congress have been discussing the recent, shocking case of Charles Starkweather, of Lincoln.

Starkweather and his 11 brutal murders is indeed an unfortunate case, but even more unfortunate is the fact that many adults read of things like this and the New York situation and form opinions that all teenagers fit the hoodlum category. I am sure that you and all your colleagues realize that this is not true. The typical "hood" may wear a long duck tail, wear a black-leather jacket, and wear his jeans low, but these characteristics do not always mean a "hood," and it is very unfortunate that the two are usually associated.

Rock and roll, hotrods, wild ideas, and lives, and little reponsibility do not mean juvenile delinquency; simply growing up. I realize that when you look at the teenagers of today it must be hard for you to believe that we will soon be called upon to carry the burdens of the world, but past generations have had their "flapper" girls, their Charleston, and what-have-you, and the world is still in good hands. A few years ago the present leaders were in their roaring teens.

It is high time that teen-age crime got back-page space in the news and the many great achievements and deeds of the decent—the majority—teens were headlined on the front page.

Sir, you may assure the Members of Congress that Charles Starkweather is definitely not a representative of the youth of Nebraska. He is, in fact, an awful example of youth anywhere.

There should be a national campaign to give youth the tribute it deserves, and I can think of no better place than the Halls of Congress to start it.

Thank you and I remain,
Sincerely yours,

L. JACK ALLEN,
President of the Federation of Teens of America Clubs.

Claim by Cyprus for Self-Determination

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement recently written for the Boston Daily Record by Archbishop Markarios.

This statement defines clearly the Cypriote position regarding this matter which is one of the most serious unresolved crises within the NATO alliance.

Archbishop Markarios, the religious and national leader of the Greek people of Cyprus, develops the position which he has taken during the discussion and negotiation which so far have failed to resolve this issue. While there may be disagreements with some portions of this statement, I believe it important that this point of view be a matter of public record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Boston Daily Record of December 12, 1957]

CYPRUS' CLAIM FOR SELF-DETERMINATION

(By Archbishop Makarios)

The discussion of the question of Cyprus is now pending in the United Nations. The claim is for the right of self-determination to be applied to the people of Cyprus. It is a claim founded upon the inalienable right of every people to attain their independence and decide their own status and political future.

The people of Cyprus once more look to the United Nations with heightened expectations. They await a decision leading to freedom and peace. For they realize that it is only in freedom that a people can work out their national life and fulfill their destiny.

The efforts of the people of Cyprus to throw off colonialism and attain their independence are of long standing. They date back to the earliest days of British occupation. Since then the Cypriote demand for freedom has been voiced repeatedly by every available means of public expression.

The official rejections of the claim were often coupled with semiofficial British explanations of the refusal and have been varying in nature and often conflicting.

In 1907 the reply of Winston Churchill, as Colonial Under Secretary, to the Greek members of the legislative council was to the effect that the convention of 1878 by which the island was taken over from the Turks, a convention then in existence, prevented Britain from satisfying the national aspiration of the people of Cyprus, which he termed as natural and patriotic.

Yet, after the elimination of that impediment in 1914, by the abrogation of the 1878 convention, the Cypriotes were nevertheless again refused their freedom.

In 1929, it was Britain's difficult position toward India, then struggling for independence, that made it impossible to accede to the Cypriote delegation's claim to self-determination. India has long since achieved its full independence but Cyprus remained static.

In 1946 the reason given for a similar refusal to a new Cypriote delegation was that Britain required Cyprus because she had a

base in Suez. Conversely in 1954 it was because Britain no longer had a base in Suez that Cyprus was said to be necessary.

On each occasion external circumstances, it was said, rendered the timing of the claim wrong. But timing is an ever elusive phantom. The time for freedom is always the present.

So with moving times, new reasons and excuses were continually found and brought to the fore. At one time it was the requirements of free world defense. When that defense was shown not to tally with colonial domination in Cyprus, the reason was shifted to the necessity of protecting British oil interests in the Middle East.

As international developments and new weapons minimized the military importance of Cyprus, emphasis was increasingly laid on Turkey's objections. It is well known that the recent Turkish attitude on the subject is British-inspired in its origin, and has been conveniently adopted and magnified by the Turkish government. But Turkey can have neither a legal nor a moral right to dictate on the future of Cyprus and stand in the way of Cypriote freedom.

The attempt to draw argument from her past occupation of Cyprus, during the period when Turkey ruled by force over the whole eastern Mediterranean, seems ludicrous. She might equally put in a claim over all the free states of the Balkan Peninsula and the Middle East.

At a time when people are no longer bartered as chattel, and an actual ruler's possession cannot be evoked against the people's right to freedom, how could anyone speak of the rights of past foreign rulers?

The argument of proximity to the Turkish coast is no less farfetched. Numerous are the cases of closer proximity, as for instance the channel islands to France, Ceylon to India, and others, but it has never been claimed or suggested that any such territories should be deprived of their freedom because of the wishes of neighboring foreign states.

Syria and Lebanon, who are equally near Cyprus, or even Egypt might upon the same strange logic also claim a similar right.

As to the other argument that because of the presence of a 17.5 percent Turkish minority in Cyprus, the will of the large majority should be frustrated and overridden by that of the minority, is as undemocratic as it is unreasonable.

Adequate protection of minority rights is to be found in international safeguards, in accordance with all similar precedents.

We are ready and willing to guarantee such safeguards to the Turkish minority with whom the Cypriot Greeks have in the past lived together in amity, and look forward to doing so in the future to the common benefit, and in the broader interest of Greco-Turkish understanding.

The main obstacle to the solution of the Cyprus problem is still the reluctance of the British government to adjust itself to present day realities and abandon unfruitful concepts of outmoded colonialism. Diplomacy aimed at the rule of one people over another is barren and should be replaced by one aiming at cooperation in equality and freedom.

The will of the people cannot be denied forever; nor can world public opinion be ignored. As Woodrow Wilson said, "Self-determination is a dynamic principle that statesmen can only ignore at their peril."

In the debate on Cyprus in the United Nations we expect to have the support of America and all nations dedicated to freedom.

It has been said that the United States finds it difficult to take a definite stand on what is termed a difference between friends, and prefers to stay neutral. We could well understand the difficulty, if the matter were one not involving basic principle.

There can be no neutrality as between right and wrong. Particularly should there be no American neutrality in a case of justice and freedom. An indifferent attitude would seem to run counter to the very spirit of the great American Nation and its responsibilities in the moral leadership of the world.

Last year during the Suez crisis the United States took a clear stand in support of right and principle, even against a close ally and in favor of one who was not. That was a policy of imagination and wisdom.

How much more would that policy be fitting on an issue of freedom where both sides are equally friends and allies. Sacrificing principle to supposed expediency defeats its own purpose.

There cannot be two standards. Freedom is one and indivisible; and history has proved that expediency in the long run can only be served by doing what is right. Indeed, wisdom cannot be divorced from morality and continue to be wise.

The early termination of the present unnecessary strife and tension over Cyprus by a just solution of the problem based on self-determination is a compelling necessity not only in the interests of Cyprus but also in those of peace, security and freedom in the whole Middle East area.

The people of Cyprus will in any case continue their efforts until justice prevails and freedom makes its home in the island.

Visit to the Senate by Students of University High School, Baton Rouge, La.

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the names of the 39 students and 4 chaperones from University High School of Baton Rouge, La., who are visiting the Capitol today.

The full name of the school these young men and women represent is the University High Laboratory School of the College of Education of Louisiana State University. In 1933, I had the honor of being president of the freshman class of that school and today my two daughters are both students of that school.

The total enrollment of University High is only 250, and this figure is augmented by a little less than 200 in the grammar school grades. Although small in size, the school is constantly making a name for itself, both scholastically and in the field of athletic competition. At the present time, 6 members of the senior class are finalists in the national merit scholarship award, which select group represents one-half of 1 percent of the top scholars in the Nation. Last year 1 University High senior earned a scholarship from this competition and the previous year 2 students were successful.

This high school has for its specific educational mission the training of future teachers and the conducting of demonstration classes where supervisors teach new and improved methods. Throughout the years of its existence, the school has done an outstanding job in performing these missions and it gives me a great deal of pleasure to welcome the senior class on its third annual trip to Washington, D. C.

There being no objection; the list was ordered to be printed in the RECORD, as follows:

Chaperones: Mrs. Julius Mullins, Miss Nina Jean Carruth, Mr. Oran Teague, Mr. Coburn Hood.

Students: Nell Jacks, Ann Holloway, Peggy Owen, Ann Warriner, Flo Wallace, Jeanie Mullins, Madelon Manner, Adele Sherrill, Helen Reddy, Bert Durrett, Carolyn Asbury, Jo Ann Huenefeld, Suzanne Sabin, Carol Loree, Sarah Hood, Nita Clare Roberts, Mary Ann Johnson, Bill Alford, Mac Vick, Joel Safer, David Smith, Pat Rickey, Byron Kantrow, Charlie Malone, Bob Terry, Charlie Kennon, John Kean, Creighton Miller, Jim Field, Jarrie Long, Beck Payne, Arthur Haas, Lyttleton Harris, Floyd Cox, Ernest Hanchey, Foster Semple, Jorn Dakin, John Wilson, Ward Bond.

A New World Bank

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Another World Bank?" The editorial has to do with the statesmanlike proposal of the Senator from Oklahoma [Mr. MONRONEY] for the establishment, on a multilateral basis, of a long-term, low-interest-rate banking agency. The editorial was published on March 3 in the Christian Science Monitor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER WORLD BANK?

Senator A. S. "MIKE" MONRONEY, of Oklahoma, has come forward with a proposal for a new world bank. It would aid underdeveloped nations that have not been able to qualify for loans from the International Bank for Reconstruction and Development. Eugene R. Black, president of the International Bank, says it is willing to explore this idea for a second organization.

It would be linked to the World Bank, and its purpose would be to make loans in mixed currencies (dollars and other national currencies). The loans would be repayable in the currencies of the borrowers instead of dollars or other hard currencies (i. e., currencies readily exchangeable for gold or dollars).

Loans would be, moreover, under control of an international, multilateral group. Presumably they would be free from what some people have regarded as a sort of dollar veto, which arises from the World Bank's rule that loans can be made only when there is prospect of repayment in hard currency.

There are many resources on which such a bank could call for capital. For example, there are the foreign currencies the United

States is now accepting for surplus commodities sold abroad; these funds may grow embarrassingly large unless new uses can be found for them. There are also unexpended counterpart funds of European currencies in European banks as a result of Marshall plan rules.

And this money could be profitably lent at lower interest rates than the World Bank is required to charge. At 2 percent the new loans might give Moscow some real competition on the economic cold-war front. Senator MONRONEY says Russia is now offering better terms than the United States to underdeveloped countries.

As Mr. Black of the World Bank has said, the plan certainly deserves exploration. At this writing there seems good reason to believe that Senator MONRONEY is offering a timely, creative, and economical idea for action in a direction others also have urged.

Hoover Book To Expose Communism

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. TALMADGE. Mr. President, on next Monday Henry Holt & Co., of New York City, will release a book which is destined to be acclaimed as one of the finest and most authoritative works ever written on the dangers of communism.

It is Masters of Deceit by Hon. J. Edgar Hoover, the distinguished and respected Director of the Federal Bureau of Investigation.

Masters of Deceit is the first book of its kind to reveal the complete story of communism in America and to expose the menace to this country and the American way of life posed by international communism.

No American is better qualified to write such a book than is Mr. Hoover and it should be required reading for every American who is proud of his heritage and concerned about its preservation.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD the review of Mr. Hoover's book as contained in volume VII, No. 5, of the Firing Line, official publication of the National Americanism Commission of the American Legion.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

FIRING LINE,
Indianapolis, Ind., March 1, 1958.

FULL DISCLOSURES OF THE COMMUNIST THREAT IN AMERICA

In our life-and-death struggle against the worldwide Communist revolutionary movement, every American must be constantly alert to the dangers of this increasing menace. To fully enable us to expose, isolate, and destroy the Communist enemy, it is imperative that we first have an accurate and complete understanding of this Soviet-directed conspiracy which is unceasingly active in our country. Every citizen should read and study FBI Director J. Edgar Hoover's new book entitled "Masters of Deceit," an exhaustive report on the Communist Party in the United States. Published by Henry Holt & Co., of New York City, Masters of Deceit will be available at your local bookstores on March 10, 1958, for $5 a copy.

Appropriately titled, "Masters of Deceit" scholarly describes the origination of communism in the Soviet Union and its subsequent development in the United States. The book takes the reader behind the scenes of life in the Communist Party and fully exposes its many conspiratorial activities on a day-to-day basis. Masters of Deceit thoroughly discusses and reveals many important facets of this destructive international movement, including such subjects as: Who Are the Communists? How the Party Is Organized, Why Do People Become Communists? Why People Break With Communism, Communist Discipline, Infiltration, The Communist Front, Communism and Minorities, How the Underground Works, and Espionage and Sabotage.

Masters of Deceit is completely documented by actual case histories which not only clarify the various subjects but maintain a continuous pattern of absorbing reading. The book contains many excellent features, including a valuable index, appendixes, and bibliography of major Communist classics. In fighting this powerful subversive force, the author has recognized the importance of providing a glossary of over 40 terms frequently used by the Communists. Among the Communist jargon listed in his glossary, Mr. Hoover has comprehensively defined the following: bourgeoisie, capitalism, chauvinism, class struggle, communism, democracy, democratic centralism, dialectical materialism, historic mission, Marxism-Leninism, party line, proletariat, self-criticism, socialism, united front, and war.

In addition to being the first book of its kind which authoritatively reveals the complete story of communism in America, Masters of Deceit carries a forceful message of how the menace can be fought. Mr. Hoover's purpose has been to assemble, organize, and present basic, everyday facts of communism which will be of maximum help to the people of our country in recognizing and fighting the enemy in our midst. The author, who is more intimately familiar with the Communist problem than any other American, has warned that our danger may lie in not recognizing the Communist threat until it is too late.

Facing the Communist challenge, Mr. Hoover declared, "Never has there been a time when we have so much need for one another. * * * If our Government is to remain free, it needs the help of every patriotic man, woman, and child."

St. John's University, Collegeville, Minn.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. HUMPHREY. Mr. President, the Minneapolis Star for February 21, 1958, contains an excellent feature article on St. John's University, Collegeville, Minn., and its distinguished priest, scholar, editor, and coach, the Rev. Dunstan Tucker, O. S. B.

We in Minnesota are proud of St. John's University, and we are proud of the gifted and talented Father Dunstan Tucker who symbolizes so much of the best in our private and public life.

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ST. JOHN'S PROUD OF FATHER DUNSTAN
(By Herm Sittard)

The coach didn't call for hard base running when the oldtimers played the varsity last spring on St. John's University baseball diamond.

The oldtimers—most of them in their early thirties—weren't in condition; so their coach, Father Dunstan Tucker, O. S. B., decided against calling plays that would demand undue exertion.

If you'd seen him at that game—or any game—you'd pick out Father Dunstan as a coach. Though his hair has greyed, he has a healthy young man's complexion.

His rugged features reflect a serenity you don't ordinarily associate with coaches. He's softspoken; gestures frequently, cigarette in hand while he talks.

"The pitcher," recalls Father Dunstan, "wasn't able to go the full nine innings; so, as soon as his arm tired, we'd put in a sub. The oldtimers had slowed down since their student days," he chuckled, "but they were crafty, and they could still hit well."

Despite some hilarious errors, the oldtimers taught the varsity a trick or two—trounced the students 12 to 6.

During the game the old-timers didn't argue much with the umpire. As St. John's baseball coach for 20 years prior to 1951, Father Dunstan taught his players not to use the umpire's decision as an alibi for their mistakes. He had learned this lesson from his father, Oliver Tucker. Oliver was a good amateur baseball player; but Father Dunstan can recall only one instance—he was 17 at the time—when his father coached him.

He had watched a game in which I was called out on strikes with the bases loaded. Like most ballplayers, I had growled at the umpire.

That evening at dinner he turned to me and remarked very coldy, "Young man, with the bases loaded, any pitch good enough to be called a strike is good enough to hit."

The atmosphere suddenly became tense. For once I did not argue. But I understood what he meant. I think that was my last hitting alibi.

Later, as a coach, I used the same words with my teams—and with equal effectiveness.

Before he entered the Order of St. Benedict, Father Dunstan played center field 2 years on St. John's team in Collegeville. At that time, a scout from the Minneapolis baseball club asked if he would like to play professionally.

"I told him I was flattered," said Father Dunstan, "but that I was going to study for the priesthood."

When a man enters the Order of St. Benedict, the abbot gives him a new name as a member of the religious community. The late Abbot Alcuin Deutsch of St. John's abbey selected the name Dunstan, for William Joseph Tucker.

Abbot Deutsch told Dunstan he had chosen the name because of his English descent and because St. Dunstan was abbot of the Benedictine abbey of Glastonbury, England, in the 10th century.

By coincidence, it was from this part of south central England that John Tucker, Father Dunstan's grandfather, had come to Minnesota.

John Tucker took a homestead at Hassan, Minn., (near Fergus Falls) when he met and Oliver Tucker, was born at Hassan. Oliver was operator of a grain elevator at Tintah, Minn., an English settlement near Osseo. married Alice Flynn.

Oliver Tucker retired in 1946 after 56 years Tintah.

"I knew grain from the time I was a little boy," recalls Father Dunstan. "I used to get a job in the grain elevator in the summer, helping my father. I helped load grain into railroad boxcars.

"You had to put paper on the floors and walls of the boxcars first to prevent grain leakage. I stood near the spout of the chute that brought the grain from the elevator bins down to the car. If the grain backed up to the spout, I'd shovel the grain out of the way."

After Dunstan got his bachelor's degree at St. John's in 1925, Abbot Deutsch sent him to the Benedictine International College in Rome to study theology.

At Aix les Bains, a Benedictine monastery in southern France, Dunstan brushed up on French during his first summer vacation in Europe. The following summer, he stayed at the order's monastery at Beuron in southern Germany, and polished his German.

After talking Italian a few months, he became interested in Dante's Divine Comedy. Later he made an original contribution to Dante scholarship by analyzing the influence of the Catholic liturgy on Dante—as revealed in passages of his famous poem.

Later he became interested in Spanish—wanted to read Don Quixote in the original. (He's been teaching Spanish classes since 1953.)

Before returning from Europe in 1927, Father Dunstan visited Downside Abbey in England, near the site of the monastery where St. Dunstan had been abbot. He returned to St. John's, completed the required 4 years of theological studies and was ordained to the priesthood in 1929.

Postgraduate work in literature and languages at the University of Chicago, Fordham University, the University of Minnesota (master of arts in English), and the University of Mexico gave him background for his position as chairman of St. John's modern language department.

He's been teaching English since 1931, taught French literature a few years, headed the English department for 20 years prior to 1952.

But he isn't the only teacher in the Tucker family. One of his sisters became a Benedictine nun, taking her mother's name in religion. Sister Alicene, O. S. B., teaches history and Latin at Regis High School, Eau Claire, Wis. Mrs. John Zimmermann teaches in Owatonna. Still another sister, Mrs. George Zimmermann lives at 4584 16th Avenue South.

To reach Collegeville and the campus where Father Dunstan teaches, you make a left turn off U. S. Highway No. 52 about 80 miles northwest of Minneapolis, and swing south a mile through a heavy stand of timber. You are cruising down a corridor of towering Norway spruce trees when your car suddenly noses over a rise in the blacktop.

Ahead of you—hugging the ground as though it had grown there—is the new St. John's monastery building.

Marcel Breuer, famed Hungarian architect, designed the rugged three-story structure. Concrete slabs divide its walls into giant shadow boxes faced with chunks of rough granite and sheets of glass.

Breuer's design expresses the centuries-old monastic tradition. The monastery's strong, clean lines are in the best contemporary vein; yet honest use of granite outside and natural wood finishes inside retain the atmosphere of a monastic rule with roots in the past and interest in the future.

Just past the new monastery stands the historic old (1879) red brick abbey chapel. Its tall twin towers house massive clocks and heavy steeple bells that count the hours as the monks pursue the worship and work St. Benedict prescribed for his companions more than 14 centuries ago.

The monks of St. John's are not exactly newscomers to the Minnesota scene. In its one hundred and first year, St. John's is the oldest Catholic institution of higher learning in the upper Midwest.

A century sounds like a long time—and it is, but the Benedictines have been dedicating their lives to work and worship ("Laborare et orare") for 1,429 years thus far.

During 36 years in the order, Father Dunstan became acquainted with many students. "Before the Second World War you knew everybody," he reminisced, "but there are too many students now to recognize them all."

Congressman EUGENE MCCARTHY, of St. Paul, was one of Father Dunstan's students. "I'm very proud of him," he commented. "He was an A student, completed 4 years' work in 3 years, and received his bachelor's degree in English summa cum laude.

MCCARTHY taught English at St. John's from 1941 to 1942, and was assistant baseball coach with Father Dunstan in 1942.

From 1940 to 1943, Father Dunstan edited the Catholic Art Quarterly, a magazine promoting the Catholic philosophy of art. A year later he became a Navy chaplain, served aboard the aircraft carrier, *Point Cruz*. He returned to the university in 1947.

Right now, he is working on the further development of the St. John's humanities program. (He is chairman of the curriculum improvement committee.)

"Like most professors," says Father Dunstan, "I have little tolerance for the idea of a young man going to school only to play at a sport. It's the most expensive way of having a good time I know. I was always proud of my ballplayers—particularly when they became good professional men.

"Four of my former players are now successful doctors, a few are dentists, some are bankers, businessmen, priests, and teachers. Only 2 of the 20 or so who entered professional baseball are still in the game—Vedie Himsl with the Chicago Cubs, and Vincent Plumbo, a manager for the Kansas City chain.

"Ernest Sowada, who pitched for Minneapolis just before the war, is now a doctor in St. Paul. Austin McCarthy (Representative MCCARTHY's brother), now a doctor at Willmar, had an offer to join the Detroit Tigers. I begged the scout not to speak to him about it before he graduated, for fear that a fine potential medical man might be lured away prematurely from his profession.

"We all played for the fun of it—very much as I coached them—and I think we had great times together."

Death of John Hearding, Pioneer Iron Executive

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. THYE. Mr. President, there appeared in the Duluth News-Tribune of Sunday, March 2, 1958, an article referring to the death of John Hearding, a pioneer for iron ore activities.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN HEARDING, PIONEER IRON EXECUTIVE, DIES

John Harris Hearding, Sr., pioneer iron ore mining executive and 15th member of the Duluth Hall of Fame, died Friday night at his home at the age of 93.

Mr. Hearding lived at 2305 East Third Street, the same home he and Mrs. Hearding established in 1909.

His rise as a mining man reflected the growth of United States Steel's Oliver Iron Mining division. In 1932, he retired as OIM's assistant general manager.

His influence and leadership was felt in Duluth and on the Iron Range for many years because of efforts on behalf of civic enterprises.

Mr. Hearding's career in volunteer public service started in 1888 when he joined the Ironwood, Mich., volunteer fire department.

In 1939, his work was recognized by the American Legion when he was named Duluth's "First Citizen for 1938" at the annual Hall of Fame dinner.

He was honored for his 30 years of activity in the then St. Louis county poor commission, his work in organizing the North Star council, Boy Scouts of America, Duluth Lighthouse for the Blind and service in the Duluth YMCA.

As a mining man, Mr. Hearding was widely known throughout the United States and held membership in many mining groups.

Born February 3, 1865, in Houghton, Mich., Mr. Hearding was the son of William H. Hearding and Jane Sanger Hearding. His father was a Government engineer who made the first survey of the Duluth harbor in 1861.

The family moved to Milwaukee in 1867 where Mr. Hearding attended elementary and high schools. After graduation from high school, he worked as a machinist apprentice until obtaining an appointment to the United States Military Academy at West Point at the age of 20 in 1885. He was a classmate of the late Gen. John J. Pershing, who later commanded troops during World War I.

He left the academy after 1 year's study and returned to Milwaukee where he was employed by a railroad. He moved to Ironwood in 1887 for his first job in the mining industry. He was hired as a timekeeper at the Norrie mine and rose through the ranks to become chief clerk and master mechanic when he left in 1894.

In November of that year, he entered northeastern Minnesota mining activity which was to occupy him for the rest of his professional career.

He went to Eveleth as superintendent of the Adams mine, a Lake Superior Consolidated Iron Mining Co. operation which was later taken over by the Oliver division. At that time, a forest covered the wealth of the mine, which still is operating today.

Under his direction, stripping operations were begun at the mine, heralding open pit work in the Eveleth district. For more than a month, the new superintendent hitch hiked about 5 miles a day to and from his work. He moved from Virginia to Eveleth on Dec. 12 when a shack was made available for his use.

At Eveleth, Mr. Hearding evidenced his love for civic activities. He was the first president of the St. Louis County club and first master of the Eveleth Masonic lodge, which was formed in 1901.

If there was a fire in Eveleth, Mr. Hearding was at the scene, usually handling a hose nozzle as an unofficial member of the fire department. During the 1908 Chisholm fire, he headed a committee to obtain supplies for the stricken citizens.

In 1901, his duties were expanded to include supervision of both the Adams and Spruce mines. He became general superintendent of the Eveleth district for OIM

and served in that capacity from 1904 to 1909.

He became a member of the Eveleth school board and was instrumental in the construction of the Spruce and Fayal elementary schools. He was transferred to Duluth as assistant general manager in 1909.

Mr. Hearding also was supervisor of Missable Mountain township from 1895 to 1901, and a director of school districts Nos. 22 and 39 in Eveleth. Aurora's Hearding High School, dedicated in 1911, was named after him.

Mr. Hearding was president of the Businessmen's Association, Eveleth's first commercial club organized in 1903. As a member of the county poor commission from 1903 to 1933, he was instrumental in the formation of a Duluth hospital that bore his name for many years.

Each year he headed Christmas seal campaigns. A former president of the North Star Council, Mr. Hearding served on the executive board for 21 years.

After helping to found the Lighthouse for the Blind, he served as president from 1925 to 1938. He also was a director of the Duluth YMCA from 1909 to 1916.

As a member of the Duluth Chamber of Commerce, he attended meetings of the chamber of commerce agriculture and health committee until 1952.

In fraternal life, he was a member of the Eveleth Masonic lodge. He was active in the Royal Arch Masons, Knights Templar, and Aad Temple of the Shrine, and was a 33d degree member of the Scottish Rite bodies. On November 19, 1945, he was made inspector general honorary at a Minneapolis ceremony.

In recognition of his long service to OIM, firm executives presented him with a 45-year medal on July 18, 1932.

Other notable service and memberships included the Elks lodge, county Republican committee, and presidential elector for Theodore Roosevelt in 1904; Northland Country Club, and the Duluth Kiwanis Club. He was a member of the Lake Superior Mining Institute from 1893 to 1930, and St. Louis County chairman of the Citizens Military Training Corps (CMTC), Fort Snelling, for 16 years.

His particular interests included history and biographical research. He lectured and wrote extensively on the early history of mining and the development of Minnesota, Wisconsin, and Michigan mining areas. A member of the St. Louis County Historical society, his writings are on file in its library and in that of the Minnesota historical societies. He served on the executive board of the county organization.

Mr. Hearding was a member and vestryman of St. Paul's Episcopal Church in Duluth. He served many years as a trustee of the Duluth Episcopal diocese.

Surviving are his wife, the former Lucy Hartwell, who he married in 1896 in Zenia, Ohio, and a son, John H. Hearding, Jr., now general superintendent of OIM operations in the Hibbing-Chisholm district, and a daughter, Mrs. O. C. Davidson, Rochester, N. Y., and 5 grandchildren and 7 great-grandchildren. A second son, William Sanger Hearding, was killed in a railroad accident in 1928.

Funeral services will be conducted at 2 p. m. Tuesday in St. Paul's Episcopal Church, Duluth. In lieu of floral tributes, the family suggests contributions be made to the church or to the North Star Council.

The Career of Judge John A. Carver, of the Fifth Judicial District of Idaho

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. CHURCH. Mr. President, the Pocatello (Idaho) Sunday Journal on March 2 carried an account of a life of service and devotion to the public which ornaments the recent history of Idaho as do few other similar accounts. The career of Judge John A. Carver, of the fifth judicial district of Idaho, is one in the highest tradition of the American bar and bench. His service as an attorney in private practice as prosecuting attorney for Franklin County, as municipal judge in Pocatello, as a United States district attorney for 20 years, and finally as a member of Idaho's judiciary, has always been marked by a high degree of dignity and probity, and by an inflexible determination to put the public's welfare ahead of his own convenience and repeated opportunities for lucrative private employment. Judge John Carver's 40 years of service to that stern yet rewarding taskmaster, the law, deserves the gratitude of every citizen of Idaho. As one such grateful Idahoan, I wish to extend my congratulations to him in these pages, and I ask unanimous consent that the article referred to above be printed in the Appendix of the RECORD following these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUDGE CARVER FINDS DISTRICT BENCH MOST SATISFYING

(By Ken Robison)

On the occasions that the Fifth District Court convened in Preston in the years just before World War I, one of its most faithful observers was young John A. Carver.

Forty-one years later, he returned to the same scene as judge of the court, a position he regards as the most satisfying of many in a distinguished 40-year law career.

Between those times, he passed the bar examination before going to law school, and was elected to a probate judgeship he couldn't take over because he was too young.

Judge Carver was elected to the district court here in 1954, a year after the return of a Republican administration had led to resignation from his position as United States attorney for Idaho after 20 years.

He was becoming a pretty good lawyer while in high school when he sat in on district court sessions in Preston in the years from 1913 to 1915.

He learned from the courtroom work of able lawyers like the late T. D. Jones and Gen. D. C. McDougall, both of Pocatello. On the bench was Judge Alfred Budge, father of Idaho Congressmen HAMER H. BUDGE.

Judge Carver has been blind since a childhood accident at 5, but has never let the handicap be an obstacle to achievement.

After elementary schooling at the Utah State School for the Blind in Ogden he attended high school in Preston, where his father farmed. A close friend of the family who had received his doctor of jurisprudence degree from the University of California was starting a law practice, and also teaching morning classes at the high school.

BECOMES ASSISTANT

Carver became his typist and stenographer, and a devoted student of the law. He was at the law office between class hours, on Saturdays and for long periods in the summer.

Before he finished high school, he was handling collection cases on his own. When he graduated in 1915 he started his own collection agency, still using a friend's office, and continued to study law.

He met his wife in 1917 and they were married the same year. She began reading law to him intensively, so that in 1918 he felt ready to take the Idaho Bar Association examination. He passed it.

After 3 years of practice in Preston, however, he enrolled at the University of Idaho law school, "because I had a feeling the college lawyer had something I didn't have."

He returned to Preston, where he was elected to three consecutive terms as Franklin County prosecuting attorney. In 1928 he moved his family to Pocatello and opened a law office. Shortly after he was appointed municipal judge and served for 4 years.

Judge Carver developed an early interest in politics. He ran for probate judge and was elected in 1916, then couldn't take the office because the term began 60 days before his 21st birthday.

He was defeated in a bid for prosecuting attorney in Bannock County, but his political activities led to his appointment by President Roosevelt as United States attorney in 1933.

Three years later he ran for a nonjudicial position, the United States Senate.

LOST NOMINATION

"I lost the nomination [to the late Idaho Governor C. Ben Ross]," he recalls. And he also lost the election to the late William E. Borah—"as I would have lost it if I had won the nomination."

Judge Carver is interested, but not active in politics, in his present position.

When he was sworn in as United States attorney, he was immediately confronted with a flood of claims against the Government by World War I veterans. They were claiming money under insurance policies to compensate for total and permanent disability resulting from war injuries.

Judgments were being given the veterans at about the same rate cases were filed, although it was obvious to many that men who had been working for 10 years were not totally disabled. Judge Carver's office brought a reversal to the pattern as the Government started winning cases.

The New Deal brought another interesting series—the hot oil cases arising under the National Recovery Act.

During World War II the office was involved in evacuation of Americans of Japanese descent from the West Coast. Tom C. Clark, later a Supreme Court justice, was sent by the Department of Justice to work out of the Boise office on one phase of the evacuation. Judge Carver visited communities in the State where feeling was strong against the Japanese in an effort to bring calm.

His office handled legal work in the procurement of military installations, including the Naval Ordnance Plant here, a major part of the Atomic Energy Commission site near Arco and the Mountain Home Air Base.

INTERRUPTED FBI CHIEF

Judge Carver was elected vice president and presided over one session of the United States Attorney's Association in Washington, and recalls having to interrupt FBI director J. Edgar Hoover who was running overtime in a speech. He resigned as United State Attorney after the Republican victory in 1952.

"We were glad to return to Pocatello in 1953," he said. It had always felt like home. He opened a law office, and served 15 months as justice of the peace before winning election to the district court bench in 1954.

Of his long legal career, he regards his work on the district bench as "the most interesting, the most challenging, and from my standpoint, the most satisfying."

His 20 years of work with Federal courts helped shape his approach to the district court here.

Discipline and decorum in the courtroom and speed and dispatch in handling cases are stressed.

When he first went on the bench, veteran lawyers here at first offered some objection to the rigidity in way the judge conducted the court, but that has passed.

The pretrial conference, an important device under Federal procedural rules, is a powerful tool in the hands of Judge Carver. Because of it, many cases never get into the courtroom, and if they do, the trial is faster and the issues clearer.

It is an informal meeting of the attorneys with the judge in his office.

"I sit down with them informally and we examine the pleadings, narrow and spotlight issues, and get the parties to concede certain factual points," he explains.

LEAD TO SETTLEMENT

Often the conference leads to an out of court settlement.

"Many attorneys feel if they try to negotiate a settlement, it is a sign of weakness in their case. But in the conference the court will look at the pleadings and suggest a settlement."

"I ask the plaintiff's attorney if there has been any attempt to negotiate. Or the defendant's attorney if he has any kind of an offer. In a few minutes I've got them talking and the ice is broken.

"I've sent lawyers out time and time again, saying 'You fellows go over and get a coke and settle this lawsuit,' and they have."

That not only saves the parties time and money, but saves the taxpayers the cost of paying a jury to hear a courtroom fight.

In his office, Judge Carver is helped by his wife, who is a capable secretary. She works without pay from the State. The Judge also has high regard for his reporter Ray D. Bistline, who has served the court for more than 40 years, and for his clerk, Mrs. Antoinette Webster.

All the Carvers' seven children had left home before they moved here from Boise. There are four sons, John Jr., who is administrative assistant to Idaho Senator FRANK CHURCH; Monroe D., with the United States Bureau of Mines in Albana, Oreg.; Dr. Terrell O., administrator of the State Health Department, and Murray A., with a Boise insurance company.

Three daughters are all married, Anna, in Citrus Heights, Calif.; Helen, in Boise, and LaVerne, in Bozeman, Mont.

As to the future, Judge Carver plans to stay on the district court bench. He will mark the 40th anniversary of his admission to the bar by running for reelection this fall.

What the Schools Can Do for Themselves

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. PROXMIRE. Mr. President, when I announced my cosponsorship of the School Assistance Act of 1957, introduced by the distinguished senior Senator from Montana [Mr. MURRAY], I pointed out that one of the elements of the crisis in American education is the need for good teachers to staff our classrooms. The provision for Federal grants to the States, as contained in that bill, will go far to meet the need.

Nevertheless, Mr. President, if 3 out of every 5 college graduates prepared for high-school teaching do not enter teaching, and if many who do, later on leave teaching, no amount of Federal money is likely to be enough to solve the problem. Yet, this is precisely the present situation.

One of the things that keeps qualified teachers out of the classrooms is the discouraging burden of nonteaching duties they are called upon to carry, according to Miss Malvina Lindsay, as her views on this subject are set forth in her regular column in this morning's edition of the Washington Post and Times Herald. In other words, they quit teaching because they have been given so little chance to teach.

Miss Lindsay's article suggests that the teaching force could be increased simply by assigning clerical and other nonteaching chores to those who are not teachers, thus leaving the professional teacher more time to do what only he or she can do. This seems to me to make good sense. Our hospitals have discovered that it does not take the same training to know how to carry a tray into a sickroom that it does to know how to help a doctor in surgery. They have found that a division of labor and responsibilities among their staffs allows them to make the maximum use of their trained nurses. Our schools might well ask themselves whether they are making best use of the human resources they now have.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Miss Lindsay's article entitled "Teachers Need Chance To Teach."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEACHERS NEED CHANCE TO TEACH

(By Malvina Lindsay)

No oracle or quiz program has yet come up with the answer as to where the needed teachers of the future are coming from. Even money won't buy enough, though it will increase the supply of competent ones. But other bait will be needed to entice new teachers into the classroom, to keep experienced ones there.

The competition of other occupations is drawing away many teachers, especially those able to teach science and mathematics. It is a shortage of science teachers rather than of scientists that is the main educational problem, Dr. Robert J. Havighurst of the University of Chicago told the American Association of School Administrators last week.

A recent study by the National Education Association shows that only three of every five college graduates prepared for high-school teaching do so. In the last decade high-school enrollments have increased 39 percent, high-school teachers 33.4 percent.

But able teachers already in service leave the classroom and that is the greatest loss of all. Many could be held by better salaries. But many also leave because of teaching conditions.

Much discontent with teaching used to arise because of its social restrictions. If a woman teacher married she generally lost her job. The Mrs. Grundys of communities strictly supervised the personal lives of teachers.

But now the village and its social mores have largely lost their hold on American life. The new discontent with the classroom grows out of trends in today's culture—the emphasis on bigness and mass production, on unceasing activity, organization, paperwork.

All this means that modern teachers have too little chance to do what they are primarily interested in doing—teach. They must be traffic directors, policemen, organizers, coaches, masters of ceremony, impressarios and, above all, clerks, and bookkeepers.

The amount of recordkeeping and other paperwork that teachers must handle is overwhelming. In an article, Why the Able Public School Teacher Is Dissatisfied, in a recent Educational Research Bulletin of the College of Education of Ohio State University, Dr. Robert E. Jewett of the university presents a partial list of the actual load of clerical tasks during one school year of a city high-school teacher.

It included 29 clerical tasks, many being daily activities. Reports, often in duplicate or triplicate, had to be made out on attendance, grades, number of recitations, excuses, passes, lunch permits, schedules, pupils' backgrounds, personalities, character traits, geographical distribution, parents' names, occupations, addresses, telephone numbers.

This teacher had to provide reports on pupils for local community organizations, check tuition fees, keep track of lost books, collect money for needy families, for senior dues, and miscellaneous social functions, count and sort sales stamps.

Dr. Jewett, who made an investigation of why capable teachers were leaving teaching, reports that in "school after school, when I have asked teachers to enumerate the working conditions that stand in the way of teaching, they listed clerical work as the chief obstacle."

He points out that while most of this work is related to the efficient operation of the school, it should be assigned to nonteaching personnel and the teacher be freed to teach. This, it would seem, would be one way of stretching the limited teacher supply of the future.

Repeatedly Dr. Jewett found that teachers with the scholarship, insights and skill necessary to promote learning were being drained of energy and ardor through extra duties. Most had too many pupils to permit effective teaching. Too much was required of them in overseeing or promoting school activities. What Dr. Jewett calls the "rhythm of the teacher's total school day" was too breathless. He observes that "prize fighters rest between rounds."

This march of detail, spurred by today's complex living, invades many occupations.

But teachers, particularly, need relief from it if they are to do what the country is calling on them to do—find and develop the young talent so urgently needed.

Klamath Indian Termination Question

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. NEUBERGER. Mr. President, with the Senate soon scheduled to consider the thorny Klamath Indian Reservation problem, I believe that my colleagues should see all major expressions of opinion and sentiment from the State of Oregon, where this valuable reservation is located.

We seek to protect the public resources of the reservation, and to do justice and equity to the Indian owners of the resources.

I ask unanimous consent that a thoughtful editorial on this problem which appeared in the Portland Journal of February 24, 1958, be printed in the Appendix of the RECORD. The title of this editorial is "Uncle Has a Responsibility."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNCLE HAS A RESPONSIBILITY

Probably the simplest solution to the complex Klamath Indian termination problem would be for Congress to repeal the 1954 act, amended in 1957, which calls for the sale of reservation assets and release of the Indians, those who want to be released, from wardship under Uncle Sam.

As the act now stands, it calls for liquidation sale of 750,000 acres of perhaps the finest pine timber in the United States by August 1960. This poses the threat of clear-cutting of a stand which has long been managed on a sustained-yield basis, and almost everybody with knowledge of the situation recognizes this would produce chaos in the lumber industry and spell economic disaster for the Klamath Basin.

But to repeal the act would fly in the face of a conviction which has been developed slowly over a long period of time that the Indians ought to emerge from their special status. They ought to integrate, if they want to, with the general population and become like other citizens. The Klamath termination is a sort of pilot program. It may set the pattern for the gradual release of other Indian tribes across the country where the disposition of assets of like value is involved.

It is for this reason that the Federal Government has a special responsibility, and herein may lie the clue to a better solution than the present act offers.

In the Senate are 2 bills, 1 by Senator NEUBERGER and 1 by Secretary of the Interior Seaton, which are really more similar than they are different. The Neuberger bill calls for outright purchase by the Federal Government of all the timber assets, at an estimated value of $123 million. The Seaton bill would first offer the timber to private operators, requiring them to pay retail value but stipulating they must manage the timber on a sustained-yield basis for 75 years. It would call for selling only that part of the timber required to pay off those Indians who want out of the tribe. This is estimated at 70 percent. The Seaton bill provides that if no private operators bid, the Federal Government would buy it.

Seaton objects to that part of the Neuberger bill which requires the sale of all the timber. NEUBERGER objects to some features of the Seaton bill, although, as chairman of the Indian Affairs Subcommittee, he introduced it by request.

As a practical matter, few persons believe that, under the Seaton bill, any private operators would or could pay retail prices for timber that has to be managed on a sustained-yield basis. Some regard this feature as a sop to those who object to more timber going into Federal ownership.

Oregon's bipartisan legislative interim Committee on Indian Affairs unanimously approves Federal purchase. It testified in Washington in behalf of the Neuberger bill but did not oppose the Seaton bill.

Actually, the two bills provide the basis of compromise. Reports from Washington indicate a better understanding of the termination problem is seeping through and the chances are deemed better now that Congress will act to prevent the disaster which the present act could bring. But only Congress can solve it, and no better plan than Federal purchase of most of the timber seems to be in the cards.

Poll in the Manchester (N. H.) Union Leader on Key Issues Facing the 85th Congress

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the results of a public opinion poll which appeared on Monday, March 3, in one of New Hampshire's leading daily newspapers, the Manchester Union Leader.

The questions in this poll were published at an earlier date by the Manchester Union Leader, consistent with that newspaper's highly commendable policy of stimulating discussion and response by its readers on current matters of vital concern to our country. While the entire results of this poll are both interesting and thought provoking, I was particularly impressed by the almost unanimous opposition, expressed by readers of the Manchester Union Leader, to the continuation of military and economic aid to Communist Poland and Communist Yugoslavia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Manchester (N. H.) Union Leader of March 3, 1958]

Results of the just concluded Union Leader poll on the key issues facing the 85th Congress reveal that 79 percent of those polled disapproved of President Eisenhower's handling of the presidency.

Out of a total of 602 ballots received, 561 answered the question: "Do you approve of President Eisenhower's handling of the Office of the Presidency?" One hundred and eighteen answered "yes" and 443 "no."

The Union Leader statewide poll, conducted February 17–21, also shows 85.2 percent in opposition to a summit conference with the Communists and 82.4 percent opposing to inviting the heads of Communist countries to visit the United States for conferences.

Other revealing results show that although 57.9 percent of those polled are in favor of sending economic aid to friendly nations, 97.9 percent expressed themselves as being opposed to military aid and 92.7 percent opposed to economic aid for Red Poland and Communist Yugoslavia. Opposing economic aid for India are 71.2 percent.

The complete results of the 13-question Union Leader poll: "How do you vote on these key issues?" follow:

1. "Do you favor a summit conference meeting with the Communists?" Yes, 88; no, 508. Opposed are 85.2 percent.

2. "Do you favor inviting the heads of Communist countries to visit the United States for conferences?" Yes, 105; no, 490. Opposed are 82.4 percent.

3. "Do you favor the President's recommendation to extend Reciprocal Trade Agreement Act?" Yes, 138; no, 412. Opposed are 74.9 percent.

4. "Should we send military aid to friendly nations?" Yes, 373; no, 186. In favor are 66.9 percent.

5. "Should we send economic aid to friendly nations?" Yes, 326; no, 237. In favor are 57.9 percent.

6. "Do you favor military aid for Red Poland and Yugoslavia?" Yes, 12; no, 579. Opposed are 97.9 percent.

7. "Do you favor sending economic aid to Red Poland and Yugoslavia?" Yes, 43; no, 544. Opposed are 92.7 percent.

8. "Do you favor economic aid to India?" Yes, 162; no, 400. Opposed are 71.2 percent.

9. "Should we further liberalize our immigration laws?" Yes, 76; no, 502. Opposed are 86.9 percent.

10. "Should we share atomic secrets with our allies?" Yes, 186; no, 369. Opposed are 66.5 percent.

11. "Do you favor Walter Reuther's profit-sharing proposal?" Yes, 263; no, 302. Opposed are 53.4 percent.

12. "Do you approve of President Eisenhower's handling of the Office of the Presidency?" Yes, 118; no, 443. Disapproving are 79 percent.

13. "Do you favor President Eisenhower's recommendation of a 6 percent cost of living pay increase for Federal civil service and postal workers?" Yes, 341; no, 220. In favor are 60.8 percent.

An Open Letter to Members of Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. KNOWLAND. Mr. President, from time to time Members of both Houses of Congress, those in the executive branch of the Government, those in industry, and those in labor have made their views known on what might best be done to meet some of the economic conditions facing the Nation. Recently there was published an open letter to Members of Congress, expressing the views of the National Federation of Independent Business.

Mr. President, because I believe the Members of Congress should have an opportunity to consider all views that are presented, I ask unanimous consent that the open letter to Members of Congress be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO MEMBERS OF CONGRESS

You were home during the recent congressional recess. You heard directly what is foremost in the minds of your constituents. Your small-business friends are in trouble. Many of them are having to close their doors. Unemployment is growing. You know that small business hasn't been given the consideration by Congress that it rightfully deserves. If present trend continues there will be many questions asked this fall that will hard to explain away. There is a solution to many of these problems and, bear in mind, without Congress having to run to the money till for any sizable amounts.

LET'S PUT FIRST THINGS FIRST

You found the health of American free enterprise first and foremost in their minds. Full employment demands it. After all, 7 out of 10 jobs in retailing, wholesaling, and service industries are in small, independent firms. Strength against communism demands it. Many in Government forever talk about dealing from strength. What greater strength to deal from for America, for the entire free world, than a strong independent business and economic system.

ACT NOW BEFORE YOU'RE BOGGED DOWN

It's understood the internationalists, free traders, socialist schemers now swarm around you like flies in Maytime. Take time to listen to them now, you'll be tied up through summer. They'll wait. They can afford to; after all, they want billions from you. Small business wants no handouts. In addition, much groundwork is already done. Small business only asks action from you now. Get it over in a couple of weeks, and then, if you like, you can take the rest of the session to listen to the high-level moochers.

NOT MORE SURVEYS BUT ACTION NOW

Don't let any group or groups sidetrack you by advising still further studies. Who would throw another shovelfull of dirt on Mount Everest? And who would throw another report on the mass of data and testimony you have already taken showing the urgency of these measures? You now have studied enough facts. In addition, in your own files, personally signed by your business constituents, are the mandate ballots of the National Federation of Independent Business giving their sentiments.

ARE WE DOING AS ROME DID?

Ancient Rome's Senate contained men whose intellect and integrity are legendary even today. Yet because they concentrated all attention on foreign matters, they failed to keep Rome economically strong. And when the chips were down, free bread and circuses had failed to provide the citizens the spiritual strength to stem the barbarians from the north. Mighty legions, while most necessary, are not by themselves sufficient to guard against the 20th century savages of northern steppes.

WHO LAUGHS AT MEIN KAMPF NOW?

Once it was thought very funny that a madman named Hitler wrote down his plan of conquest. But after more than 20 million violent deaths, who laughs now? Neither should the published blueprints of communism be considered comical. Lenin wrote the greatest obstacle to American communism is the great number of independent enterprises. Karl Marx wrote that eventually the American system could be influenced to bankrupt itself into destruction. These are not the ravings of imbeciles.

RUSSIA IS WINNING THE STRUGGLE

Without firing a shot, Russia is winning. Face the facts. They are cunning. They look to the day when the American economy is concentrated in the hands of few. Before communism there must be monopoly to sap individuals of hope, of opportunity. Remember the 1940 lesson of France. Discouragement at home is the prelude to defeat from without. Two blood baths in this century taught West Germany the necessity of antitrust laws. No nation with antitrust laws has succumbed to communism.

YOU CAN'T MAKE A GIFT OF EQUITY

You will be assailed by those who would have you believe that just tax-relief measures for small business is favoritism. Yet many of these false prophets pleaded with you for relatively unknown, if not actually hidden, tax advantages for huge corporations in the form of fast writeoffs, other benefits, on the grounds such measures were necessary for expansion. Is it sound to only water the big trees to bear more fruit and let the young growing trees die of drought?

PROPAGANDA WINDS SCATTER FACTS

You in Congress may well have remarked at this session's opening: "This is where I came in," for in recent years every session has been presented with a shiny new crisis accompanied by pleas for more billions for more bureaucracy. This course, it is claimed, is the will of the people. But the people can speak for themselves, and are doing so in the voted mandate ballots which they are sending to you, which are signed by the responsible, thinking people you know personally back home.

SMALL BUSINESS ASKS FOR NO DOLE

It costs little, or no money, to strengthen small business. For just a fraction of the money poured out into global boondoggling, small business can have the tax and other relief needed to expand. This expansion in turn will produce even more tax revenues in years ahead, eliminating constant need to increase the national debt limit. For literally peanuts now, you can avoid killing the goose that lays the golden eggs. And you can also look forward to bigger golden eggs in the future.

ACT NOW ON VITAL DOMESTIC ISSUES

Before becoming too occupied with matters of less importance, act on these vital issues now. The promotion of foreign gifts and bureaucracy will be with you, yea, verily, until the end of your days. When home you found your constituents demanding action on small-business problems and Government economy. What they want to know is this: Are you going to take quick action to safeguard American independent business and the present and future jobs of this Nation? It is a temper of the times that party regularity will not serve as an excuse for failure.

HERE'S HOW THE BOX SCORE STANDS ON SMALL-BUSINESS MEASURES

Measures on third base

1. Act making Small Business Administration permanent. Passed by House 392-2. Needs Senate action.

2. Act slashing redtape in small-business stock offerings up to $500,000. Passed by Senate. Needs House action.

Measures on second base

1. Act strengthening Government's arm in blocking monopoly-producing mergers. Has passed House committee. Needs final action on floor of House and Senate.

Measures on first base

1. Acts defining good-faith interpretations of antitrust laws to protect small business against ruinous price cutting. Has gone through Senate hearings. Needs action on floor of Senate and House. House, in earlier Congress, voted overwhelming in favor.

Measures needing to go to bat

1. Correct labor laws that are designed only to meet production requirements of large manufacturers, but under which small producers cannot operate efficiently, or compete effectively in the market place.

2. Reduce corporation taxes on first $25,000 of taxable income.

3. Reduce costly reporting burden by reducing number of withholding and social-security forms businessmen must file.

4. Permit fast tax writeoffs on purchases of used property to $50,000 value per year.

5. Permit installment payments of estate taxes.

6. Permit corporations choice of paying taxes at lower partnership rates.

(NOTE.—There are other important small-business bills that demand your attention and action now, but these are the basic measures.)

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
C. W. HARDER, *President*.

Letter From a Fulbright Scholar From Alabama

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. SPARKMAN. Mr. President, I have just received a letter from a young Alabamian which I think merits the attention of each Member of the Senate. This young man is a Fulbright scholar and is studying international relations at the University of London. He states so well the importance of the Fulbright program that I ask for unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LONDON, *March 2, 1958.*

The HONORABLE JOHN J. SPARKMAN,
United States Senator from Alabama,
Senate Office Building, Washington, D. C.

DEAR SIR: I realize that this is the time of year in which you must receive voluminous correspondence requesting favorable budgetary consideration of various projects and agencies. I hesitated before adding to this deluge of letters, but I have finally been overcome by the importance, in my opinion, of this very small item in terms of the total appropriation. It is an appropriation for which I am sure there is no external lobby or pressure group; thus, maybe an individual's letter will carry a little weight.

In my occasional visits to the United States Educational Commission in the United Kingdom, I have recently become aware of the apprehensiveness over new appropriations for the Fulbright scholarship program. (I might say here that this letter is being written solely on my own initiative.) From an educational standpoint I think that this is one of the more valuable governmental programs. If anything the program should be liberalized and expanded, not curtailed. In the rush to provide funds for scientific and technological education, whose importance I do not wish to minimize, to overlook

or to neglect other educational programs would be a great disservice to the Nation. As Dr. Killian recently said, we need not just to train more people in the technical and physical science disciplines, but also to give more priority to high-level talent which has the capacity to lead, to innovate and to imagine—and thus to advance our society. If we are to maintain our place in the world in the cultural, social, and political spheres, we cannot afford to neglect the arts, the humanities, or the social sciences; to expand technical education at the expense of the latter fields would in my opinion be a horrible mistake.

The value of the Fulbright program extends far beyond the opportunity for purely academic pursuits and achievements. It provides the student an opportunity to observe and study at first hand the origins of our own political and cultural heritage. (I feel that this is especially true in the United Kingdom.) But probably more important, the opportunity to study abroad provides the student with an insight into the social, economic, and political conditions of the host countries, an idea of the prevailing public opinion and attitudes that exist, and some understanding of the internal and external pressures that determine political and social policies. This knowledge is invaluable to a real understanding of the international scene today, and those who have an opportunity to gain such knowledge can make a great contribution to international understanding. And, if I may say so without seeming to deprecate the latter, the student is generally better able than the serviceman or tourist to leave a favorable impression of his own country while at the same time showing an appreciation of the host country that adds to the respect and good will shown toward the United States. We must not be satisfied that we may now have the political support of a Government in office, but we should seek to maintain that support and understanding by giving it a broad base among the people. Only in this way may we assure perpetuation of that support regardless of what political party or coalition may form the Government.

I am now studying international relations at the University of London under a Fulbright grant; thus this is not an appeal for an appropriation from which I expect any considerable personal gain in the future. My experience has been invaluable in my own field, and I am sure that most other students here feel the same. My only regret is the lack of time and financial ability to take greater advantage of the opportunities available. If there is any change in the program I feel that it should be an increase in appropriations and an extension of the opportunities available to future Fulbright scholars.

If my plea seems excessively long, it is only an indication of the importance I attach to this program. I apologize for any unnecessary time I may have taken.

Respectfully yours,

CHARLES D. WARD.

Federal Expenditures for Rivers, Harbors, and Flood Control

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. CASE of South Dakota. Mr. President, on the Senate floor on Tuesday, March 4, the distinguished Senator from Louisiana [Mr. ELLENDER] presented a comprehensive report on Federal expenditures for rivers, harbors, and flood control. The Senator from Louisiana presented this material in rebuttal to an article which had recently appeared in the Saturday Evening Post.

Just today an article in the January-February 1958 issue of New York Waterways, written by Brig. Gen. J. L. Person, came to my attention. The Senate knows that General Person is the Assistant Chief of Engineers for Civil Works.

The article entitled "Pork Versus Caviar," concerns itself with some of the issues which Senator ELLENDER raised, and I would like to commend it to the attention of the Senate. I ask unanimous consent that the article be printed in the Appendix of the RECORD following my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORK VERSUS CAVIAR

(By Brig. Gen. J. L. Person, U. S. Army, Assistant Chief of Engineers for Civil Works, U. S. Corps of Engineers)

I'm going to talk today for a little while about my pet hate—the term "pork barrel" which so many people, including some sincere and honest individuals, are so fond of applying to river and harbor and flood-control projects. The term implies just what it is used to imply—that projects for water resource development are wasteful, boondoggling, political raids on the Treasury. This is simply not true, as I intend to demonstrate by citing a few facts.

The corps has been in the so-called pork-barrel business since 1924, when Congress appropriated $75,000 for the removal of snags in the Ohio River. Since that time we have spent a total of about $10.5 billion in planning, constructing, and operating river and harbor improvements. What have the American people bought with this $10.5 billion?

The list is a long one, and I will try not to bore you with too many details. But we have, on the navigation side, produced 22,600 miles of improved inland waterways, over 400 improved commercial harbors, and, of course, the Great Lakes navigation system. In the last year of record, our inland waters carried 385 million tons of cargo, our harbors handled 496 million tons, and 211 million tons moved on the Great Lakes, giving a total for the United States of over a billion tons. The ratio of the annual benefits to the annual costs of our overall navigation system is estimated at about 3 to 1—in other words, we are getting $3 in benefits for every dollar we are spending. Of even greater importance—incalculable importance—is the effect of navigation on our national economy. For example, without our pork-barrel program our great seaports could not handle our vast world trade, our steel industry would starve for lack of the ore that comes through the Soo locks, and the Ohio Valley would not have earned its nickname of Atom Valley and the Ruhr of America without its adequate water supply and its free water transportation.

FLOOD CONTROL

The first major activity of the Federal Government in flood control began in 1928 when Congress authorized the project for flood control in the Alluvial Valley of the Mississippi. Flood control on a nationwide basis had its beginning some 8 years later when, in 1936, Congress passed the first general flood control act. During the intervening period about 500 projects have been completed or placed in partial operation for flood control purposes. On the average this group of projects has been in operation for a period of less than 15 years, yet they have already prevented flood damages totaling about $8⅔ billion, about twice the total Federal appropriation for construction of flood-control projects, including those multiple-purpose power projects which also serve flood-control purposes.

This is a part of the story the public hears too little about. Maybe it is not as spectacular for a reporter to tell of the damage that is prevented, the many lives that are saved, and the human suffering that is avoided because projects operate effectively, as it is to tell of the ravages and havoc caused by the major floods such as those that occurred in the Northeast and on the west coast in 1955, and in the Southwest in 1957.

The fact that such disasters still occur is not an indictment of the effectiveness of projects that are in operation. On the other hand, they emphasize the fact that we are not progressing fast enough with our flood control plans. The results obtained through operation of flood-control projects have proven that most of the flood damage now experienced can be prevented by comprehensive river basin development of our water resources. Gentlemen, if that is "pork barrel," I say let us have more pork.

Navigation and flood control alone do not represent the total benefits realized from the civil works program. Large additional values also accrue through conservation and the use of our water resources through multiple-purpose development. These include development of hydroelectric power, storage of water for industrial, municipal, and agricultural use, and the numerous benefits which result from improvement of low river flows. In many cases the projects also provide large public recreational values and opportunities for the preservation and enhancement of fish and wildlife resources. To mention but a few figures showing the impact of these important collateral functions:

HYDROELECTRIC POWER

A total of 22.6 billion kilowatt-hours was generated at Corps of Engineers' installations during fiscal year 1957, representing 18.2 percent of the hydroelectric power produced and 3.6 percent of the total production by all sources of the Nation's utility systems. This hydroelectric power has been of vital importance to industry and development generally in many parts of our country. This is particularly true in the Pacific Northwest which is almost wholly dependent upon water power.

WATER SUPPLY

The Corps of Engineers is providing over 1 million acre-feet of storage space in the interest of domestic and industrial water supply, and almost 4 million acre-feet is being operated either exclusively or jointly for irrigation and other uses. In addition, conservation and power releases from reservoirs operated by the Corps of Engineers have in many cases improved the quantity and quality of water available for downstream supplies. These releases in fiscal year 1957 amounted to about 30 million acre-feet (almost 11 trillion gallons). During the recent drought in the southern Great Plains area, water in these reservoirs or releases from them prevented the shutdown of important industries and provided the margin of water supply that enabled many communities to endure through that difficult period.

PUBLIC RECREATION

Land and water areas at Corps of Engineers projects provide abundant recreational opportunities to the general public for such activities as boating, swimming, camping, fishing and hunting. In 1956 over 70 million visitor-days of recreational use were counted at Corps of Engineers reservoirs.

The importance of this use can be seen when it is realized that it is in the same

order of magnitude as the attendance at all of our national parks. This large public recreational resource, nationwide in scope, has been provided at a Federal cost of only $10 million for basic access and public use facilities, while States and other non-Federal agencies have spent more than ten times as much in developing the recreational potential.

I have tried in brief to give you some concept of what the civil works program has and will accomplish. The solid facts of the record speak for themselves. They are the main reason why I detest this term "pork barrel" which is tossed around by critics who are uninformed of who wilfully choose to ignore that record.

We do not object to healthy and constructive criticism. I know that any agency which handles a large public works program and which deals with a controversial resource like water must expect criticism. But I do strongly object to attacks which mislead the public as to the value of a large Federal program and reflect upon the integrity of the Corps of Engineers. On this latter point I can refer you to the findings of the second Hoover Commission (an agency certainly not biased in favor of the corps and not benefiting from "pork"), which stated:

"The Corps of Engineers has an enviable record for safe and adequate engineering design, that it has demonstrated its ability to carry out very large engineering projects, and that it has been signally free of any taint of fraud or dishonesty in the administration of the vast construction program with which it has been entrusted.

"And this applies to 131 years during which it had those great responsibilities.

"The Commission wishes no sentence in the report to be construed as a reflection upon the corps."

Now, let's look for a minute at the Russian version of pork-barrel activities. Theirs is not a pork barrel, it's a caviar jar. We have invested a total of $10.5 billion over a period of 134 years. Just one of their bond issues, about 6 years ago, was for $7 billion for increasing their water-resource development program. Comprehensive development on the Volga, which has pushed forward largely since World War II, already has provided the 3,000-mile main stem of an integrated inland waterway system extending from the Black and Caspian Seas, now interconnected by a canal, on the south, to the Baltic and Arctic White Sea on the north. East to west it stretches from the foothills of the Urals far across the European Russian plains. Construction is well advanced, and vessels of 11.5-foot draft regularly travel the approximately 1,000 miles between Moscow and the Black and Caspian Seas. Each of the 17 dams has or will have good-sized navigation locks which we estimate to be possibly as large as 100 by 1,000 feet with minimum depth of 18 feet over the sills.

Quite impressive hydroelectric plants are being built at the Russian dams. The largest, on the Volga, at Stalingrad, scheduled for operation next year, will have 2.3 million kilowatts capacity, about 18 percent greater than that of our largest hydro plant, Grand Coulee. Project development is already underway or planned in other river basins, including three mammoth hydroelectric plants in Siberia with capacities in the order of 3 million to 5 million kilowatts each.

If development of water resources is a wasteful pork-barrel or caviar-jar program, why are our Russian friends proceeding with this program at a rate far ahead of ours? In 1939, Sir Winston Churchill said that "Soviet policy is a riddle wrapped in a mystery inside an enigma, but perhaps there is a key. That key is Russian national interest." Former Governor Miller of Wyoming, in a recent Saturday Evening Post article, joins the chorus of many who combine the term "pork barrel" with "logrolling" and "political back scratching." Well, gentlemen, Mr. Khrushchev does not need to roll any logs. And Mr. Khrushchev does not need to scratch any political backs. Mr. Khrushchev has repeatedly said that Russia does not need to defeat us in a war—she will defeat us on the economic front. I don't mean that she would not defeat us in a war if we dropped our guard, and I certainly don't mean to belittle the vital urgency of maintaining and improving our armed strength. But I do not believe that we can afford to neglect our economic strength and our economic growth. Certainly, in these days of tremendous demands on the Federal Treasury we must look ever more critically at the economics of all projects, and must concentrate on those which are most urgently needed. Certainly we must continue to encourage the increasing assumption of responsibility by local and State governments. But if we neglect the development of our water resources we jeopardize the development of our national economy. This we cannot afford if we mean to maintain our position of strength, on which rests the future of the free world.

Rural Businessmen Join Farmers in Protests Against Dairy-Support Cut

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. PROXMIRE. Mr. President, it gives me great satisfaction to be able to report that Wisconsin small-business men and professional people are continuing to line up with their neighbors on the farms in opposition to the cut in dairy prices ordered by Secretary of Agriculture Benson.

This week I received a letter from officers of the Valders, Wis., Lions Club stating that this fine organization strongly opposes the order to cut milk price supports.

I ask unanimous consent, Mr. President, to insert this statement from the Lions Club of Valders, Wis., in the Appendix of the RECORD, along with similar statements by a rural cooperative and an officer of a dairy farmers' organization. These three statements symbolize the unity in my State in opposition to Secretary Benson's order.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

VALDERS, WIS., *February 27, 1958.*
The Honorable WILLIAM PROXMIRE,
United States Senator,
Washington, D. C.

DEAR SENATOR PROXMIRE: The Valders Lions Club strongly opposes the Secretary of Agriculture's plan of lowering the price support for milk. We feel that such talk is unwarranted when farmers have been receiving a smaller and smaller percentage of the dollar. We can see the repercussions in agricultural communities with further curtailment of the farmers' purchasing power.

We feel the benefits of price support far outweigh its cost. The surplus milk is but a small amount of the whole amount of milk produced. The cost of absorbing this small amount goes way ahead of what can be gained from keeping the price of milk at a respectable level to give the farmer a fair place in the American standard of living.

We feel it is your duty to help maintain the farmer's fair share in our economy. Do not let milk price supports slip to the point suggested by Mr. Benson.

Sincerely yours,

EARL MULLENS,
Lion President.
WILLIAM DAYTON,
Lion Secretary.

TAYLOR COUNTY ELECTRIC COOPERATIVE,
Medford, Wis., March 3, 1958.
The Honorable WILLIAM PROXMIRE,
Senate Office Building,
United States Senate,
Washington, D. C.

DEAR SENATOR PROXMIRE: Whereas we, the members of the Taylor County Electric Cooperative, 217 South Eighth Street, Medford, Wis., in 1958 annual meeting assembled, and representing 1,851 farm families either directly engaged in dairy farming or primarily dependent upon dairy farming for our livelihood, fear that if Secreary Benson's proposal to cut dairy price supports on April 1, 1958, is permitted to take effect, the agricultural economy of Wisconsin will suffer a staggering blow: Now, therefore, be it

Resolved, That we petition Congress to immediately enact legislation which will hold the line on dairy price supports heretofore in effect until such time at least as there has been an opportunity for a full hearing, study, and careful consideration of self-help proposals such as contained in bill S. 3125; be it further

Resolved, That copies of this resolution be sent to Senators WILEY and PROXMIRE and to Congressman O'KONSKI.

TAYLOR COUNTY ELECTRIC
COOPERATIVE,
ALVIN LISKE,
Secretary-Treasurer.

EAST TROY, WIS., *February 26, 1958.*
Hon. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SIR: As vice president of the Mukwonago local of the Pure Milk Association, I would like to put a big "No" against the reducing of dairy support prices as announced by Secretary of Agriculture Benson, for Mr. Benson's plan, I believe, would make a bad matter worse, would hasten an already started depression.

Where are our learned men who should know that when you lower or remove the farmers' buying power, you slow down or stop industry? When industry slows down or stops, what happens to the laborer? And the one-man dairyman-farmer works 7 days a week. What would happen to milk prices if the dairyman organized a labor union and got paid skilled laborer wages?

I feel sure Mr. Benson and his followers would quickly change their program, if they visited average dairy farms and studied the dairy situation from the raising, feeding, and milking of dairy herds on through the consumer.

I also believe there would be no dairy surpluses if the great difference in price between the dairyman and the consumer could be lowered and the average and below average American family could buy the milk they needed.

Duplicates of this letter are being sent to our other Senators and Representatives in hopes that each will help get things started back on the right track and that business and industry will again prosper.

Sincerely,

G. GAROLD KEGLEY.

Freeman Sets Pattern for Small Town

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. CASE of South Dakota. Mr. President, recently one of the more progressive communities in South Dakota held its annual community achievement day. It is an occasion when the farmers of the community and the folks in town get together, share with others their hobbies, skills in handicraft, culinary art, and the produce from the fertile soil.

Mr. John Kennedy, publisher and editor in chief of the Sioux Falls Argus-Leader, was invited to speak on his recent trip to Russia. He was accompanied by Editor and Mrs. F. C. Christopherson, which prompted the editor to write of his pleasant experience.

I congratulate the good people, both town and country, on their community spirit, their faith in the future. With such unity the small town will and can meet all competition to its existence.

I ask unanimous consent that an editorial entitled "Freeman Sets Pattern for Small Town," which was published in the Sioux Falls (S. Dak.) Argus-Leader, of February 13, 1958, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEMAN SETS PATTERN FOR SMALLER TOWN

FREEMAN, S. Dak.—It is good to get out occasionally into the board and fertile area that surrounds Sioux Falls and to refreshen our association with what is in effect the heartland of South Dakota.

South Dakota actually isn't a State of big cities. Sioux Falls, its largest community, is in truth just a big small town. And we're glad of that.

In general South Dakota is made up of communities such as Freeman, comfortable, well-ordered and wholesome centers of population where life is pleasant and friendly. To know and understand Freeman is to know and understand South Dakota.

PROUD OF ACHIEVEMENT DAYS

Reason for the visit to Freeman was its annual Community Achievement Days. John A. Kennedy, publisher and editor-in-chief of this newspaper, was scheduled to make a speech on Russian education and Mrs. Christopherson and I went along for the ride. And glad we are that we went.

Freeman is proud in a modest way of its Community Achievement Days. Set aside for the occasion is Pioneer Hall at Freeman Junior College. Filling its spacious basement were countless exhibits of handiwork and farm produce.

Erwin R. Gross, general chairman of the event, beamed with a wholly warranted satisfaction as he escorted us around the booths and the displays.

"Everybody participates," he explained, "and it is good for us to have this little get-together each winter. It brings a closer association between the community and the farm country and it is helpful to all of us."

DO IT YOURSELF DISPLAY

One small display, with ribbons indicating prizewinners, caught our interest and I must confess that the three visitors from Sioux Falls were at a loss to identify the items.

Our first guess was that it was cheese. But the absence of odor dispelled that idea.

A friendly farm woman, however, straightened us out. "That's homemade soap," she said. "I always make my own soap and so do many others."

The soap, however, was but one example of the many evidences of handiwork to be seen in Pioneer Hall. Hobbyist, young and old, had brought to the event their best specimens and took a modest pride in explaining why and how they were made.

Evidences of abundance were everywhere—grains from the fields and luscious pies from the kitchens. Ears of corn that seemed almost perfect, potatoes, carrots, onions, and beets, magazine racks, ball bats, pictures, and trays, aprons, too, and dresses and needlepoint. All in all, a striking demonstration of a do-it-yourself program in a practical application.

EXAMPLE FOR OTHERS

My purpose in dwelling at some length upon the event at Freeman is because of its significance and its example.

What Freeman is doing, other communities of similar size can do. The opportunities exist everywhere.

The difference, if any, is that the civic leaders in Freeman are aware of their opportunities and make the most of them.

The Community Achievement Days constitute but one example of Freeman enterprise.

In the first place, it is well to recognize that the people of Freeman are proud of their town. They like it and they say so and they are constantly striving to make it a better town.

As a consequence, the community has good schools, excellent public facilities, a splendid small college and an active civic program.

WHAT DETERMINES SIZE

The role of the smaller community in South Dakota is a frequent subject of discussion.

Are such communities to grow smaller as transportation improves? Will they fade away? Or do opportunities exist?

The answer, of course, is to be found in the future. It may be said, however, that communities, both big and small, will be influenced by the service they supply and the role they occupy.

If they offer little or nothing, they will shrink. If they offer something, they will hold their own or advance.

Some of the smaller communities just conclude that there's nothing they can do about it, fold their hands and gradually die.

Other communities—and Freeman is a good example—realize what they can do to maintain and broaden their town's value and proceed to do it.

FREEMAN'S OBJECTIVE

In all of this, a lesson is to be found and learned. One need not wonder why two communities, similarly situated, move along different paths. The reason usually is the civic attitude and the approach to public problems.

Freeman—and we employ it again as an example because of this visit—is demonstrating the way to constructive growth.

The citizens of Freeman have in mind no bustling metropolis. They don't expect to exceed Sioux Falls. They move forward instead with a practical appreciation of the scope of their sphere of service. In so doing, they are building solidly on a substantial foundation.

Not in their program is any visionary development that could rise a bit and then topple with disturbing consequences. They know that that kind of activity isn't a part of their prospects and proceed with that understanding.

That's why Freeman is a good town and that's why, I am confident, Freeman will continue through the years to be one of South Dakota's better towns.

F. C. CHRISTOPHERSON.

A Small-Business Problem

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. SPARKMAN. Mr. President, last week I received a letter from a small-business man in Texas, presenting a problem which I feel may be of interest to other Members. It concerns a matter which was forceably brought to my attention during the tax hearings of the Senate Small Business Committee last fall. Like other matters discussed in the committee Report No. 1237, Tax Problems of Small Business, this situation arises chiefly because of the manner in which the Treasury interprets and administers an act of Congress.

The Western Hemisphere Trade Corporation Act was passed by Congress in 1942 to promote trade with our neighbors and allies in this hemisphere. It provided tax benefits for concerns which derived income solely outside of the United States, but from countries within this area.

It now seems that a regulation by the Treasury largely nullifies the purpose of this law for smaller business concerns. As was pointed out in the testimony of witnesses before the Small Business Committee last fall and in the letter which I have here, the Treasury hinges the application of this provision completely on a legal question, passage of title. This technical point was not mentioned in the law nor in the original regulations.

The letter to which I have referred is from Mr. John H. Wilson, Wilson Export Corp., Wichita Falls, Tex. Mr. Wilson's letter clearly and concisely states the problem caused by the relatively recent interpretation of this provision by the Treasury. I ask unanimous consent that this letter may be printed in the Appendix of the RECORD so that all Senators may know of this situation.

There being on objection, the letter was ordered to be printed in the RECORD, as follows:

WILSON EXPORT CORP.,
Wichita Falls, Tex., February 19, 1958.
Hon. JOHN J. SPARKMAN,
Senate Building, Washington, D. C.

DEAR SIR: On October 21, 1942, the Congress passed an act which is commonly known as the Western Hemisphere Trade Corporation Act. This act was originally known as section 109 of the Internal Revenue Code of 1939, as amended. It is now known as section 921 of the Internal Revenue Code of 1954. In these acts a Western Hemisphere trade corporation is defined as "a domestic corporation all of whose business is done in North, Central, or South America, or the West Indies, and which sat-

isfies these conditions: (1) At least 95 percent of gross income for the 3-year period immediately preceding the close of the taxable year (or for that part of this period during which the corporation was in existence) was derived from sources outside the United States; and (2) at least 90 percent of gross income for this period (or part thereof) was derived from the active conduct of a trade or business" (sec. 941; 1.921–1).

In pursuance with the terms of this act, and in order to promote the sale of our products in the Western Hemisphere, we incorporated a company known as the Wilson Export Corp. and a charter was issued on January 2, 1948. This company successfully promoted the sale of drilling rigs and winches manufactured by the Wilson Manufacturing Co. of Wichita Falls, Tex., and did a fairly extensive business of this kind, and was recognized by the Internal Revenue Department as a Western Hemisphere trade corporation and taxed in accordance with the regulations for a Western Hemisphere trade corporation for a period beginning January 2, 1948, through and including the calendar year 1954. But when the 1955 return was checked by the Internal Revenue Department they issued a ruling that they would no longer recognize this as a Western Hemisphere trade corporation and entitled to the tax benefits accorded such a corporation. A hearing was held in the Federal Building in Wichita Falls, Tex., in which the facts regarding this matter were presented and while as a result of the information given during this hearing it was recognized that the Wilson Export Corp. met all the requirements of the law and regulations governing Western Hemisphere trade corporations which had been published in the various Internal Revenue Regulations, nevertheless they arbitrarily decided that they could no longer recognize it as a Western Hemisphere trade corporation. The basis for this decision was that they claimed that title to the goods sold passed before the goods left the United States and that, therefore, the sale was made in the United States and not in a foreign country.

The regulations as set up for the Western Hemisphere trade corporation (being the regulations issued under the 1939 Code), which are in paragraph 39–109–1 state "The gross income from sources without the United States and within the United States shall be determined as provided in section 119 and the regulations prescribed thereunder." The only applicable paragraphs which affect us are in section 39–119 (a)–6, which reads as follows:

"Income derived from the purchase and sale of personal property shall be treated as derived entirely from the country in which sold. The word 'sold' includes 'exchanged.' The 'country in which sold' ordinarily means the place where the property is marketed."

You will note that it states specifically that the "country in which solds means the place where the property is marketed," and in every case the country in which the property is marketed is a South American country such as for instance Mexico, Argentina, Venezuela, etc. There is no reference whatever in the act or the regulations to "the place where the title to the goods passes." It was freely admitted by the hearing examiner that we met all the published regulations 100 percent, but the new regulation which, to the best of our knowledge, has never yet been published, on which the decision was based, hinges upon "the place where title passes."

Now, as far as we can see, any sale made in a foreign country and where the material is shipped by steamship, title would almost necessarily pass in this country, or at least upon the delivery of the goods to the steamship line which would accept the goods in an American port. And, therefore, quite plainly speaking it would be practically impossible to have a sale in a foreign country where the title to the goods passed only after it left the United States. And, therefore, it would be practically impossible to have such a thing as a Western Hemisphere trade corporation, if this criterion should apply.

When the Congress passed this act or amendment to the Revenue Act in 1942 it recognized the need for promoting trade with Western Hemisphere countries. It recognized that it is considerably more difficult to deal with customers in foreign countries than it is in the United States proper, and usually considerably more expensive as well, and it also recognized that this foreign trade was desirable to provide an outlet for the sale of American products and to provide work for the American working man, and so this act was passed to promote these purchases. But now by simply changing a regulation and not even publishing the regulation, the Internal Revenue Service has nullified an act of Congress and made it impossible for a company set up under the terms of this act of Congress to receive the benefits which Congress plainly intended they should receive.

Two bills have been introduced in Congress which are titled H. R. 3805 introduced by Mr. BOGGS, and H. R. 128 introduced by Mr CURTIS of Missouri, which are substantially identical and either of which would reinstate the Western Hemisphere trade corporation as originally enacted by Congress, and we feel that whereas the Internal Revenue Service has arbitrarily usurped the power of Congress and in effect changed the law by writing new regulations, we respectfully request your vote, aid, and assistance in restoring to the Western Hemisphere trade corporations the status originally given them by the Congress.

We feel sure that there are a considerable number of small businesses affected by this change in Internal Revenue regulations. And we particularly want to call to your attention the fact that it is mostly small business that is so affected. Larger companies simply set up a corporation in a foreign country which pays no United States tax at all. An example of this among our own competitors is the National Supply Co., and the National Supply Co., of Mexico. Here the profits are completely untaxed in this country unless and until these profits are returned to this country. Thus large corporations pay no tax in this country while small business is taxed the full 52 percent on any profit it may make.

In these times of high cost, slow business, and growing recession a small business is hard pressed and is in urgent need of tax relief to help it pull through the difficult days ahead, and restore prosperity to our country.

The domestic oil business is in such a depressed condition that relatively little equipment is being bought in this country, while in foreign countries, particularly South America, a considerable amount of equipment is being bought. But under the Internal Revenue regulation Western Hemisphere corporations are as heavily taxed as any other domestic corporation, while foreign corporations are completely untaxed in this country on the profits they make on sales to these Western Hemisphere countries. And we believe that this is contrary to the intent of Congress as shown by their act passed in 1942.

To sum up, we believe the following are true facts:

1. That the plain intent of Congress has been ignored and nullified by a change in regulations of the Internal Revenue Service which completely reverses all previous regulations, and prescribes criteria which are not to be found in the act passed by Congress.

2. That this change in regulations will cause great harm to small business, and will increase the power and profits of large business.

3. That the final result of this change will be an actual loss of revenue to the United States Treasury because the profits from the sale of this equipment will go to foreign subsidiaries of large corporations which are untaxed in this country, instead of smaller American companies which cannot compete because of the burdensome taxes imposed upon them.

4. That in a period of growing recession and increasing unemployment, it behooves Congress to enact measures which will assist business in general, and small business in particular, and which will provide more jobs for American workingmen.

And, so again, we respectfully request your vote, aid, and assistance in restoring to the Western Hemisphere Trade Corporations the status originally given them by Congress by supporting and voting for either H. R. 3805 or H. R. 128.

As briefly as possible the above letter states the circumstances regarding the Western Hemisphere Trade Corp. which we formed some years ago, and which is wholly owned by the Wilson Manufacturing Co., Inc. If the regualtions now in effect are to be continued it will be necessary for us to fold up this corporation for the simple reason that any profits which are paid back to the parent corporation will be subject to a 15-percent tax in addition to the full 52-percent tax levied on all corporation profits. And if this becomes necessary it will also become necessary to practically withdraw all efforts to sell in export and this in turn will mean a decreased amount of business and probably lay off some of our employees.

We sincerely urge that you give this matter your immediate attention and do everything you can to correct an unfair condition and one which can cause considerable increased unemployment, not only to our own company, but surely to dozens of other small companies all over the United States.

Thanking you in advance for any assistance you may be able to give us.

Very truly yours,

WILSON EXPORT CORP.,
JOHN H. WILSON,
President.

Antitrust Laws for Labor Unions

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 6, 1958

Mr. MARTIN of Pennsylvania. Mr. President, our distinguished colleague, the senior Senator from Maryland [Mr. BUTLER], delivered on the Dean Manion Forum an outstanding speech which should have the thoughtful consideration of every American.

Too many Americans—labor leaders, industrial leaders, agricultural leaders, and intellectual leaders—seem to be advocating the philosophy of prosperity at any price, soft living, and the get-rich-quick theory.

I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Senator BUTLER. Thank you, Dean Manion. At the outset, let me make this perfectly

clear: I know the vast majority of men and women constituting organized labor are as dedicated to the perpetuation of the free-enterprise system as I am.

However, in far too many cases our citizens have formed opinions about the American economy and the integrity of its leaders from statements by certain labor bosses and political demagogs.

In this time of crisis, when the fate of humanity hangs by a thread, our military security requires a strong domestic economy. We must produce a larger national income in dollars of constant value so that the increased burdens of defense can be borne without reducing the American standard of living.

This will require hard work. We cannot afford to continue to generate inflationary pressures. Unions cannot force round after round of wage increases which greatly exceed the increase in the productivity of our economy without jeopardizing our security.

Yet, with the threat of more inflation on the horizon, the well-worn legend that business has been reaping excessive profits is once more abroad in the land. As usual, in the forefront in advancing this charge is CIO President Walter Reuther. His accusations, and the facts concerning wages and prices, need careful examination.

Some people forget that the compensation of employees is not only income to the employee, but also a cost to the employer. It must be recovered in the price charged the consumer or we shall have neither employers nor employees.

An examination of the distribution of the increase in the national income through the last decade shows that for every additional dollar of corporate profits after taxes, employees receive an additional $40.

Furthermore, labor's share of the total national income rose from 65.3 percent in 1947 to 70.3 percent in 1956. On the other hand, corporate profits after taxes dropped from 9.3 percent of the national income in 1947 to only 6.1 percent in 1956.

If all corporate profits before taxes in 1956 had been paid as additional compensation to employees, their total income would have been increased by less than 18 percent. However, if there were no corporate profits, the Government would have received $22 billion less from corporate income taxes.

With the existing level of Government expenditures, higher personal income and consumer excise taxes would have been required. Since income taxes in the upper brackets have already reached the point of diminishing returns, most of this increase would of necessity have been imposed on lower-bracket taxpayers.

All of this goes to show that the profiteering legend will not stand up as an explanation for the inflation that besets our economy.

From my close observation of Reuther's political interests, I am convinced that he regards the bargaining table as a platform for the acquisition of political power. His statements clearly show that if he were in a position of greater political power, he would attempt to destroy competitive capitalism.

For a concrete example, we need only to turn to Mr. Reuther's latest proposal to the automobile manufacturers. He advocates that 50 percent of all profits in excess of 10 percent of invested capital before taxes be shared evenly between workers and consumers. He alleges that, under such a procedure, in 1956 General Motors workers would have received $286 million in additional compensation and that consumers of its products would have received a rebate of the same amount. What he fails to say, and this is an important point, is that corporate income taxes for this one firm alone would have been approximately $300 million less.

HAS BIG BROTHER COME OVER THE HORIZON?

If Mr. Reuther's plan were universally adopted, the Government would lose upwards of $4 billion in corporate tax revenue. Incredibly, he must now vision himself as an economic dictator representing consumers, stockholders, workers, and citizens alike. In fact, he would supplant the Congress of the United States in determining the Government's revenue.

Obviously, this is more of Mr. Reuther's special brand of economic hogwash—all of which is pointed to an eventual destruction of the free-enterprise system. His statements are propaganda in its most vicious form.

Before the advent of pattern bargaining, lower prices for all Americans were the result of improved technology and increased capital investment. Every individual had an opportunity to advance further through experience and the development of superior skills. In recent years, however, national productivity has been preempted by certain union agreements. Labor costs have outdistanced national productivity, thus forcing prices to rise.

As a result, Government employees, retired people and farmers have suffered a great disadvantage. The efforts of these groups to equalize their position with organized labor has placed additional demands on budgets at all levels of Government. Increased labor costs require additional appropriations for Federal expenditures on defense materiel, one of the largest items in the Federal budget.

Similarly, the budgets of local and State governments have been strained to equalize the compensation of firemen, policemen and schoolteachers. With limited tax resources, some have pressed for Federal aid to education and other grant-in-aid programs to States and local communities.

Meanwhile, price increases for manufactured goods have depressed the parity index for farm products. This automatically results in great expenditures by the Federal Government under our price-support programs. The harassed taxpayer is thereby denied needed relief.

This is the deadly circle of inflation and economic intervention by government; it must be broken. After careful study, I have concluded that the first step in reversing this dangerous trend is to make it impossible for any group to exercise monopoly power.

Let no one misunderstand my position. I am opposed to monopoly—so much so that I have publicly stated that I would support legislation to have our antitrust laws apply to all segments of our economy. I would even make them apply to unions which were granted exemptions for many of their activities by the passage of the Clayton Act in 1914.

Certainly labor unions with millions of members, and controlling the investment of many billions of dollars through welfare funds, are in a position to exert monopoly powers.

BIGNESS NO CRIME; MONOPOLY—SOMETHING ELSE

I steadfastly believe that the antitrust laws have made this country strong. They have given us the competitive society upon which our future rests. I do not believe that bigness and monopoly are synonymous.

The Congress, during the 67 years since the Sherman Act was placed on the books, has never adopted legislation making bigness a crime. Repeated decisions of the United States Supreme Court have also stated that bigness per se is not a violation of the antitrust laws. I am interested in strengthening these laws so as to preserve a vigorous competitive society. We cannot operate in the world of today without big business.

However, some labor leaders primarily interested in exercising political power have attempted to justify their activities on the basis that they are working for the good of the entire economy to increase purchasing power by the device of raising wages.

Prof. Edward H. Chamberlin, one of the most distinguished economists of our generation, has just made a detailed study of the economics underlying this theory. Professor Chamberlin's views are of particular interest to those concerned with monopoly. He was the originator of the phrase "monopolistic competition". His theories have influenced economists, legislators and businessmen since the late 1930's. In his most recent study, Professor Chamberlin said:

"Whoever receives a higher money income gains relative to others who do not, and there is nothing in the argument to indicate why union laborers any more than anyone else should be chosen to have the agreebale privilege of mysteriously spreading prosperity in this way.

"But since some laborers, and some other elements of society) have more power to raise their money income than others (some, such as receivers of contractual incomes, life insurance beneficiaries, pensioners, etc., have zero power) those who have more power gain at the expense of those who have less. The interest of those who gain is hardly to be identified with the whole, if the whole includes also those who lose."

This statement is in complete contradiction to Mr. Reuther's high-sounding economic theories. His carefully designed scheme to replace our competitive enterprise system with variegated socialism, or Reutherism, as I choose to call it, must be nipped in the bud. The doing will require the wisdom, cooperation and patience of government, labor, management and the general public alike.

It is my considered conviction that we must now establish equality of treatment before the law for all organized groups in our economy—labor as well as business.

During the early days of the labor movement, there may have been some justification for labor unions receiving special treatment under the antitrust laws. Today, they have great financial resources and exercise vast political and economic power. Special treatment is no longer justified.

Cotton Figures

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD some cotton figures. They relate to other cotton data I placed in the CONGRESSIONAL RECORD January 23, 1958, page A518, and June 27, page A4769.

The table follows:

COTTON.—*Average value per allotment, and number of allotments 1950 and 1955, and increase or decrease in value per allotment and in number of allotments 1950–55, by State and county*

State and county	Average value per allotment, 1950	Average value per allotment, 1955	Increase or decrease, 1950-55	Number of allotments		
				1950	1955	Percent increase or decrease (−) 1950-55
ALABAMA

The American Red Cross, Our No. 1 Instrument of Humanitarianism

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. WILEY. Mr. President, my colleagues are aware that, in all our home States there commenced Tuesday a nationwide appeal on behalf of our No. 1 instrument of humanitarian assistance—the American Red Cross.

For example, Vice President Nixon has called upon the American people to refill the Red Cross pocketbook which had been emptied by 650 disasters in the past 2½ years.

As every American is aware, 365 days of the year, 24 hours a day, the Red Cross is on the job.

There has never been an instance where it has been found wanting, when emergency has struck, for the American people.

GENERAL CLAY'S ADDRESS IN MILWAUKEE

As was explained last week in Wisconsin's largest city, Milwaukee, by Gen. Lucius B. Clay, the American Red Cross faces an emergency of its own today.

For the first time since World War II, General Clay told a meeting of Red Cross volunteers there, "We come before the people with no reserves."

The $65 million reserve with which the Red Cross emerged from World War II has been wiped out by extraordinary expenses.

This reserve must be replenished.

Fittingly enough, General Clay pointed out in his address that the city in which he spoke is a real "Red Cross city" for, in 16 consecutive years, Milwaukee has gone over the top in its campaign appeals. Other Wisconsin cities likewise have an excellent record, as does my State as a whole.

And, fittingly enough, too, it was General Clay who pointed out that 1 out of every 3 Red Cross dollars is spent on service to the Armed Forces and the families of servicemen.

INTANGIBLE VALUE OF RED CROSS

The morale-boosts which Red Cross service represents cannot be measured in material value in dollars and cents any more than we can measure the value of split-second assistance to stricken Americans in time of flood, hurricane, tornado, and other natural and man-made disasters.

And so, I urge the American people to join in making this current drive an outstanding success.

I salute Red Cross officers from Gen. Alfred M. Gruenther down to all the grassroots civic leaders and volunteers throughout the country whose work is so indispensable to the success of the Red Cross.

I send to the desk excerpts from the 1957 Annual Red Cross Report, which I have received, which eloquently describes some of the diverse humanitarian work of this great organization. I ask unanimous consent that these excerpts from the annual report be printed in the Appendix of the RECORD, to be followed by a list of the worthy Americans who serve at the Red Cross' helm through the land.

There being no objection, the excerpts from the report and list of names were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM 1957 ANNUAL RED CROSS REPORT

A Nation's character shapes its institutions. For 350 years the belief that individual freedom and well-being are largely dependent upon people helping themselves and one another has been a cherished part of the American credo. Nowhere is this belief more strongly held and practiced than in the Nation's great voluntary organizations, of which the Red Cross is one. For 76 years the Red Cross has reflected in its activities and services the will of the American people, keeping pace with the demands of the times and of the American conscience.

The record of things done under the emblem of the Red Cross during the past year spells continued faith in this American concept. It is a record written in the hearts of the 40 million junior and adult members of the organization and by the hands of the 2 million volunteer workers whose interest and effort made it possible. It is also indelibly imprinted in the minds and hearts of the millions whose needs were met in time of suffering and distress.

The meaning of the American Red Cross to the people of the country and to the world is well expressed in the words of newspaper columnist Roscoe Drummond. Writing from the scene of relief operations after Hurricane Audrey had lashed the coastal region of Louisiana and Texas, he called the Red Cross "the trustee of the Nation's humanity."

DISASTER

The year 1956–57 was another bad disaster year. Red Cross services were provided in 295 relief operations, 16 of which were of major proportions. Wind and water were the chief destroyers. Hurricanes, tornadoes, and other winds of high destructive force cut wide swaths through inhabited areas, flattening buildings and driving people from their homes. Torrential rains, swollen rives and streams, and tidal waves forced other thousands to flee for their lives, leaving their homes and belongings to the mercy of the elements. The spectacular sinking of the *Andrea Doria* and numerous fires and explosions brought tragedy and suffering to still others.

Despite the strain upon its workers and the drain on its resources, the Red Cross was at the scene of every disaster. It provided for all displaced persons needing them, shelter, food, clothing; and, for the sick and injured, medical and nursing care as long as the emergency condition continued. Not least of the services rendered immediately following each disaster was the handling of thousands of inquiries from anxious relatives and friends concerned for the welfare of persons residing in the stricken areas. And after the emergency was over, the Red Cross moved efficiently to the less glamorous task of rebuilding and repairing, helping to resettle and reestablish disaster victims in their homes and at their means of livelihood. Significant in this connection was increased activity by local advisory committees in helping to determine the soundness of family rehabilitation plans and in granting funds.

This huge task was accomplished only through effective and coordinated effort by all concerned. Red Cross volunteers in chapters in the stricken communities gave heroic service in the early hours of disasters. Later, their efforts were bolstered by those of Red Cross workers from surrounding chapters and of highly skilled area and national headquarters relief workers dispatched to the scene. Disaster operations during the year were characterized by excellent understanding and working relations between the Red Cross, the Federal Civil Defense Administration, and other agencies and organizations. Each did what it was best equipped to do in a cooperative effort to get the disaster-stricken community back on its feet.

Between disasters great progress was made in arriving at understandings and agreements between the Red Cross and other organizations and agencies (both private and governmental) that are vitally concerned with one or another aspect of disaster relief. These agreements help prevent overlapping of activities and help insure the best and most effective use of available funds. Progress was made, too, in planning for full cooperative effort in future disasters or in the event of enemy attack upon this country.

SERVICE TO THE ARMED FORCES

This was a big year of service to the men and women of the Armed Forces, veterans, and their families. Approximately 2,800,000 men and women in uniform were deployed far and wide in the United States and around the world. Distance and isolation created many problems and made service difficult at times. Nevertheless, the traditional high standard of Red Cross service was maintained.

Red Cross fieldworkers were with the Armed Forces everywhere, counseling and guiding servicemen and aiding and comforting the sick and injured. Helping them in their efforts at many installations, particularly overseas, were service wives acting as Red Cross volunteers.

On the home front, Red Cross workers, mostly volunteers, performed similar tasks for the families of servicemen and women and at domestic military installations and military hospitals.

Between the Red Cross field director anywhere in the world and the Red Cross chapter at home a world-encircling network of rapid communication made possible the exchange of information that did much to help solve problems and to maintain the morale of both the man in the service and the family at home.

Thus it was possible in thousands of cases for chaper workers to help servicemen's families apply for Government benefits or to help them financially pending the receipt of allotments or allowances. In this way hardship was frequently avoided. On the other end, it was often possible for the field director to get information through the chapter concerning the welfare of the serviceman's family that dissipated his anxiety regarding them. In many cases, too, the field director was able to get accurate information regarding family situations and conditions that helped military authorities to determine need for emergency leave or arrange for emergency discharge from military service if necessary.

Of considerable importance during the year were the activities of Red Cross workers with convalescent patients in military hospitals. Medically approved programs of entertainment, recreation, crafts, hobbies, and personal and welfare services contributed immeasurably to the recovery of thousands of patients.

Recreation programs were provided for able-bodied servicemen in communities adjacent to isolated installations in France and Morocco and by clubmobile visits to outposts in South Korea.

Noteworthy was the joint development by Red Cross and FCDA of a basic course in emergency mass feeding. New in the disaster scene this year were four unusually well-equipped mobile canteens donated to the Red Cross by the AFL–CIO. They proved their worth many times over as they moved from disaster to disaster and were a constant reminder of the friendly cooperative relations that exist between the Red Cross and the working men and women of America.

Last year 593 chapters in 44 States, Alaska, Puerto Rico, and Hawaii gave assistance following disaster, 311,000 persons received emergency mass care, 88,000 families received assistance to aid them in recovery, and 82,000 volunteers were active in disaster relief and preparedness activities.

Many veterans of World War I sought hospitalization and medical and nursing care last year because of infirmities. In increasing numbers, veterans of World War II required medical attention and hospitalization. Ever mindful of the debt owed to the men and women who served their country, the Red Cross has moved steadily ahead in its program for veterans in chapters, at veterans hospitals, and in Veterans' Administration offices.

Last year 144,000 members of the Armed Forces, veterans, and their families were served each month in chapters, 98,000 members of the Armed Forces were served each month in military hospitals and installations here and overseas, and 8,200 volunteers served each month in home service to help members of the Armed Forces, veterans, and their families.

* * * * *

THE VOLUNTEERS

In every activity and program carried on by the American Red Cross during the year the faithful, hard-working volunteer performed magnificently. From its volunteer officers and Board of Governors, who formulate national policy, determine program, and guide the destinies of the Red Cross, to the volunteer serving in the smallest chapter, the volunteer was the backbone and substance of the organization during the past year, as in every year.

Volunteers officered and constituted the boards of directors of more than 3,700 chapters throughout the land. Volunteers planned and conducted the local campaigns for members and funds, by means of which the money required for Red Cross operations was raised. Volunteers gave leadership, trained other volunteers, and did most of the work of the organization throughout the year.

Outstanding were the community services rendered by Red Cross Gray Ladies, nurse's aids, staff aids, social-welfare aids, motor service drivers, canteen workers, and the volunteers serving in entertainment and supply, arts and skills, and production activities. The services they provided to others were of incalculable value.

The record of achievement of the American Red Cross here set forth is one of which all Americans can be proud.

Last year 1,900,000 hours of service were given by Red Cross volunteers in 2,185 military hospitals and installations; 2,206,000 hours of service were given by Red Cross volunteers in 176 Veterans' Administration hospitals; and 4,980 civilian hospitals, including 180 civilian mental and 3,400 other community institutions and agencies were served each month by Red Cross volunteers, such as Gray Ladies, nurses aids, and canteen workers.

HONORARY OFFICERS

Honorary chairman, Dwight D. Eisenhower, President of the United States; honorary counselor, Herbert Brownell, Jr., Attorney General; honorary treasurer, George M. Humphrey, Secretary of the Treasury.

BOARD OF GOVERNORS

Members appointed by the President of the United States

E. Roland Harriman, Chairman of the American National Red Cross, and Chairman of the Board of Governors; Loy W. Henderson, Deputy Under Secretary of State; W. Randolph Burgess, Under Secretary of the Treasury; Donald A. Quarles, Deputy Secretary of Defense; William H. Francis, Jr., Assistant Secretary of Defense; Dr. Frank Brown Berry, Assistant Secretary of Defense; James P. Mitchell, Secretary of Labor, Marion B. Folsom, Secretary of Health, Education, and Welfare.

Members elected by the chapters

Terms expiring in 1958:

Clarence S. Beesemyer, vice chairman, consultant, General Petroleum Corp., Los Angeles, Calif.; Durwood DuBois, vice president, Ohio Citizens Trust Co., Toledo, Ohio; Benjamin Goodman, lawyer, Memphis, Tenn.; Thomas W. Gregory, Jr., senior vice president, First National Bank of Houston, Houston, Tex.; Howard L. Kelly, executive director and secretary, Manufacturers Association, Erie, Pa.; Mrs. Thomas L. Kerney, chapter vice chairman, Trenton, N. J.; W. W. Overton, Jr., board chairman, Texas Bank and Trust Co., Dallas, Tex.; Mrs. Franklin E. Parker, Jr., vice chairman, Connecticut Council of the Red Cross, Greenwich, Conn.; J. G. Ragsdale, lawyer and municipal judge, El Dorado, Ark.; Philip K. Robinson, vice president, Northwestern Mutual Life Insurance Co., Milwaukee, Wis.

Terms expiring in 1959:

E. La Mar Buckner, partner, Buckner Insurance Counselors, Ogden, Utah; Edward P. Curtis, vice chairman, vice president, Eastman Kodak Co., Rochester, N. Y.; Mrs. Joe Hume Gardner, former national director, office of volunteers, Marshall, Va.; Mrs. Charles W. Goodyear, Jr., chairman of volteers, Bogalusa, La.; Matt Himsl, automobile dealer, Kalispell, Mont.; Harry G. Kincaid, lawyer, Jacksonville, Fla.; Phil H. Lewis, lawyer, Topeka, Kans.; Alan R. Morse, president, United States Trust Co., Boston, Mass.; Taylor M. Simpson, realtor, High Point, N. C.; Joseph R. Stewart, vice chairman, associate general counsel, Kansas City Life Insurance Co., Kansas City, Mo.

Terms expiring in 1960:

Louis J. Colombo, Jr., lawyer, Detroit, Mich.; William H. Crow, physicist, Los Alamos, N. Mex.; Cornelius T. Dalton, public-relations director and board member, Courier-Journal and Times, Louisville, Ky.; Philip B. Deane, retired business executive, York, Pa.; Samuel F. Downer, vice president, Exchange National Bank, Colorado Springs, Colo.; W. Croft Jennings, lawyer, Columbia, S. C.; Robert G. Fraser, lawyer, Omaha, Nebr.; Russell V. Hokanson, lawyer, Seattle, Wash.; Dr. Charles N. Leach, physician, Newfane, Vt.; William L. Travis, lawyer, Hammond, Ind.

Elected by the board as members at large

Terms expiring in 1958:

Margaret Hickey, public-affairs editor, Ladies' Home Journal, St. Louis, Mo.; Dr. F. D. Patterson, Director, Phelps-Stokes Fund, New York, N. Y.; John S. Sinclair, President, National Industrial Conference Board, New York, N. Y.; James D. Zellerbach, United States Ambassador to Italy.

Terms expiring in 1959:

Stanley C. Allyn, President, National Cash Register Co., Dayton, Ohio; Fred Lazarus, Jr., Chairman, Federated Department Stores, Inc., Cincinnati, Ohio; Mrs. John J. McCloy, President, Board of Managers, Bellevue Hospital School of Nursing, New York, N. Y.; Mrs. Bernice T. Van derVries, Board Member, Chicago Transit Authority, Winnetka, Ill.

Terms expiring in 1960:

Erle Cocke, Jr., Vice President, Delta Air Lines, Atlanta, Ga.; David J. McDonald, President, United Steel Workers of America, Pittsburgh, Pa.; Dr. Alonzo G. Moron, president, Hampton Institute Hampton, Va.; William F. Schnitzler, Secretary-Treasurer, American Federation of Labor and Congress of Industrial Organizations, Washington, D. C.

AREA ADVISORY COUNCIL, EASTERN AREA

Terms expiring in 1958:

Ned C. Boatright, Lebanon, Ind.; Mrs. William A. Howe, Rochester, N. Y.; Kirtland J. Keve, Montpelier, Vt.; Arthur A. Kron, Englewood, N. J.; Charles D. Littleton, Troy, Ohio; Mrs. J. Alvey Long, Hagerstown, Md.; Thomas Motley II, Boston, Mass.

Terms expiring in 1959:

John S. Andrews, Youngstown, Ohio; Marian Dunlop, Providence, R. I.; James W. Griswold, Exeter, N. H.; S. C. Lampert, Norfolk, Va.; Mrs. James M. Mason III, Charles Town, W. Va.; Joseph S. Schuchert, Pittsburgh, Pa.; Mrs. E. W. Skilton, Winsted, Conn.

Terms expiring in 1960:

Robert P. Crawford, Glens Falls, N. Y.; Lyman A. Cousens, Jr., Portland, Maine; Mrs. Karl M. Harrop, Bristol, Va.; Carleton W. Pierson, Summit, N. J.; Willard G. Rouse, Baltimore, Md.; Henry V. Scheirer, Allentown, Pa.; Mrs. Leo C. Wardrup, Middlesboro, Ky.

AREA ADVISORY COUNCIL, MIDWESTERN AREA

Terms expiring in 1958:

Mrs. John A. Bohnert, Pine Bluff, Ark.; Clarence E. Hinds, Lincoln, Nebr.; John Kaney, Blackwell, Okla.; Frank T. Nye, Cedar Rapids, Iowa; Walter Schimmel, Wichita, Kans.; Mrs. Bert W. Wallace, Kearney, Nebr.; Mrs. Lloyd L. Fisher, Kansas City, Kans.

Terms expiring in 1959:

Donald E. Barnes, Boulder, Colo.; J. W. Hedges, Atlantic, Iowa; Marshall E. Jones, Laramie, Wyo.; F. W. Mohr, Jr., Fargo, N. Dak.; Mrs. L. M. Peters, Rhinelander, Wis.; Theodore S. Scibienski, Corpus Christi, Tex.; Mrs. Mahlon B. Wallace, Jr., St. Louis, Mo.

Terms expiring in 1960:

Judge Jan Clawson, Lubbock, Tex.; Morys Hines, Albuquerque, N. Mex.; Mrs. C. J. Reese, Muskegon, Mich.; Mrs. Arthur C. Regan, Minneapolis, Minn.; Mrs. Edwin Sale, Kankakee, Ill.; J. J. Warkentin, Aberdeen, S. Dak.; E. Grainger Williams, Little Rock, Ark.

AREA ADVISORY COUNCIL, SOUTHEASTERN AREA

Terms expiring in 1958:

Wilmer S. Guillory, Lake Charles, La.; Ralph G. Holberg, Jr., Mobile, Ala.; William Dudley Human,, Wartburg, Tenn.; Mrs. Stovall Lowery, Clarksdale, Miss.; Mrs. C. Kersey Smith, Kinston, N. C.

Terms expiring in 1959:

Frank Binford, Thomaston, Ga.; E. F. Reddy, West Palm Beach, Fla.; King W. Rogers, Jr., Dyersburg, Tenn.; Mrs. Benjamin C. Russell, Alexander City, Ala.; Charles W. F. Spencer, Jr., Rock Hill, S. C.

Terms expiring in 1960:

Elmer D. Conner, Jennings, La.; Lauren J. Drake, Clearwater, Fla.; C. C. Hope, Jr., Charlotte, N. C.; Jack Pace, Magee, Miss.; Mrs. Ralph Pope, Gainesville, Ga.

AREA ADVISORY COUNCIL, PACIFIC AREA

Terms expiring in 1958:

L. Gray Beck, Everett, Wash.; Mrs. John S. Day, Medford, Oreg.; Mrs. Thelma Farmer, Florence, Ariz.; Carroll V. Henderson, Bozeman, Mont.; Eric Brooks Kirkland, Moscow, Idaho.

Terms expiring in 1959:

Myron J. Fulrath, Provo, Utah; William D. Ray, Walla Walla, Wash.; Mrs. Samuel Roberts, Reno, Nev.; Paul Straniford, Fresno, Calif.; Mrs. Albert L. Ward II, San Diego, Calif.

Terms expiring in 1960:

Frederick Greenwood, Portland, Oreg.; Mrs. Almon F. Manspeaker, Palo Alto, Calif.; Paul H. Marston, Pasadena, Calif.; King Taylor, Phoenix, Ariz.; H. Allyn Wood, Berkeley, Calif.

CORPORATE OFFICERS

E. Roland Harriman, chairman; Alfred M. Gruenther, president; James T. Nicholson, executive vice president; Harold W. Starr, counselor and secretary; W. Randolph Burgess, treasurer.

ADMINISTRATIVE OFFICERS

Ramone S. Eaton, vice president; Robert F. Shea, vice president; DeWitt Smith, vice president; John C. Wilson, vice president; Presnell K. Betts, comptroller; Joseph L. Carter, manager, eastern area; W. W. Jefferson, manager, southeastern area; Frederic S. Laise, manager, midwestern area; Walker L. Millner, manager, Pacific area.

THE RETIREMENT SYSTEM, BOARD OF TRUSTEES

Eliot Wadsworth, chairman, Daniel W. Bell, Robert V. Fleming, George A. Garrett, E. Roland Harriman, Joseph M. Hartfield, Mary B. Settle, DeWitt Smith, vice chairman, Harold W. Starr.

Officers: Eliot Wadsworth, chairman; DeWitt Smith, vice chairman; Joseph M. Hartfield, counselor; J. H. Finkle, secretary and comptroller; C. Wade Downing, treasurer; Ella Costello, assistant treasurer; Harold B. Atkinson, assistant secretary; George M. Schneider, assistant comptroller; George B. Buck, consulting actuary.

THE ENDOWMENT FUND, BOARD OF TRUSTEES

Members whose terms expire December 31, 1957:

H. P. Davison, president, J. P. Morgan & Co., Inc., New York, N. Y.; B. M. Edwards, chairman of the board, the South Carolina National Bank, Columbia, S C.; Robert V. Fleming, chairman of the board, Riggs National Bank, Washington, D. C.

Members whose terms expire December 31, 1958:

S. Sloan Colt, chairman of the board, Bankers Trust Co., New York, N. Y.; Marion B. Folsom, Secretary, Health, Education, and Welfare, Washington, D. C.; James B. Forgan, vice chairman of the board, First National Bank of Chicago, Chicago, Ill.

Members whose terms expire December 31, 1959:

Daniel W. Bell, president and chairman of the board, American Security & Trust Co., Washington, D. C., Gale F. Johnston, vice chairman of the board, Mercantile Trust Co., St. Louis, Mo.; W. Randolph Burgess, Under Secretary of the Treasury, Washington, D. C.

Officers: Daniel W. Bell, chairman; C. Wade Downing, secretary; S. M. Nichols, assistant secretary, Riggs National Bank, Washington, D. C., treasurer and fiscal agent.

NATIONAL MEDICAL ADVISORY COMMITTEE

Terms expiring in 1957:

Dr. Randolph Lee Clark, Jr., director and surgeon-in-chief, University of Texas Hospital and M. D. Anderson Hospital, and Tumor Institute, Houston, Tex.; Dr. James R. Reuling, member, board of trustees, American Medical Association, Windermere, Fla.; Dr. Maxwell M. Wintrobe, professor and head of department of internal medicine, University of Utah School of Medicine, Salt Lake City, Utah.

Terms expiring in 1958:

Dr. Frank W. Konzelmann, director of laboratories, Central Dispensary and Emergency Hospital, Washington, D. C.; Dr. William D. Stovall, director, State laboratory of hygiene, Madison, Wis.; Dr. George M. Wheatley, third vice president, health and welfare, Metropolitan Life Insurance Co., New York, N. Y.

Terms expiring in 1959:

Dr. David N. W. Grant, Washington, D. C.; Dr. John S. Lawrence, University of Califor-

nia School of Medicine, Los Angeles, Calif.; Dr. John S. Lundy, Rochester, Minn.

NATIONAL NURSING ADVISORY COMMITTEE

Helen L. Bunge, chairman, executive officer, Institute of Research and Service in Nursing Education, Teachers College, Columbia University, New York, N. Y.; Katherine J. Densford, director, School of Nursing Education, University of Minnesota, Minneapolis, Minn.; Rena Haig, chief, Bureau of Health Nursing, California Department of Public Health, San Francisco, Calif.; Mrs. Lillian Holland Harvey, dean, School of Nursing, Tuskegee Institute, Tuskegee Institute, Ala.; Dr. Elizabeth L. Kemble, dean, School of Nursing, University of North Carolina, Chapel Hill, N. C.; Helen L. Fisk, chief, division of public health nursing, Maryland State Department of Health, Baltimore, Md.; Julia Miller, dean, School of Nursing, University of Arkansas, Little Rock, Ark.

How To Attract Industry

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Willard V, Merrihue, manager in charge of personnel practices and community relations for General Electric Co., of New York, before the Metropolitan Area Economic Development Conference in Washington on November 27, 1957.

Mr. Merrihue lays out a blueprint in this address for attracting new industry to cities while not forgetting the employers they already have.

Recognizing that a diversified economy is the strongest economy, cities and towns all across this great Nation, including those in my own State of South Dakota, are seeking to attract new industries. Their success in this endeavor is important not only to them and their citizens, but also to the Federal Government, for a city that is strong economically will not be so quick to look to the Federal Government for aid in the form of costly construction programs or other Federal assistance.

Under the leadership of Gov. Joe Foss, South Dakota has created a special agency, known as South Dakota Industrial Development Expansion Agency—SDIDEAA, headed by Mr. Noel Tweet, which is achieving notable success. Towns and cities working on similar programs will find many helpful suggestions in Mr. Merrihue's address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT A COMPANY LOOKS FOR IN SEEKING A NEW LOCATION

(By Willard V. Merrihue, manager, personnel practices and community relations, General Electric Co., New York)

In the short period that I will have with you today, I hope to achieve two goals:

1. To tell you what a company, such as our own, looks for in seeking locations for its new plants.

2. To suggest some action that a community, or an integrated economic region such as metropolitan Washington, might do to improve its batting average in holding present employers and seeking new ones.

Let me emphasize the virtue of showing some affection for the employers you already have. Certain areas of the highly industrialized Northeast suffered grievous losses because of their indifference and apathy toward present job-producing enterprises. In fact, the attitude of many of these areas reminds me of the Vermont farmer who stopped rocking one evening and said in a crisp nasal twang: "Eliza, when I think of how much you've meant to me well nigh these 40 years, it's sometimes more than I can stand not to tell you about it."

COMPETITION FOR INDUSTRY

Currently, there exists a competition, so healthy that at times it approaches the status of a cold war, between entire States and regions, in an attempt to bring in new business and industry. Hardly a month passes that some governor does not come to New York with loud fanfare and a battery of public-relations experts to charm national companies into bringing some of their expansion into their particular States. Having had luncheon with a number of them, I can tell you that cigar passing and baby kissing are passe if you want to be a successful governor. Today you've got to be a success at economic development if you want to be considered a favorite son in 1960.

Why are cities, regions, and States so interested in attracting new employers? What is the prize? The economic research department of the Chamber of Commerce of the United States has studied the effect of industrial expansion in the community. For example, it estimates that a new plant of only 250 employees will bring these benefits to a community: 740 more people in the community, 240 more households, 428 more workers in other establishments, $1,474,000 more personal income per year, $675,000 more bank deposits, and $900,000 more retail sales.

These are desirable results to contemplate, but—how does one go about bringing such a bonanza into a community?

NEW CRITERIA

The most useful information I can give you is this: Progressive industrial companies are today utilizing a new set of criteria for evaluating prospective plant locations.

The old orthodox criteria—such as nearness to marketing centers, accessibility to raw materials, adequacy of transportation facilities, adequacy of electric power, availability and quality of water supply are still important.

But there are other more important cost factors from the standpoint of their effect on the long-term success of the new plant. These are the factors represented by the attitudes, actions, morals, prejudices, and political behavior of the people in the community, region, or State being evaluated.

Therefore, whenever our company seeks a location in which to expand, we make two surveys. First, our real estate staff studies a community, using the orthodox criteria. Then our community relations staff at headquarters surveys it from the standpoint of its business climate.

BUSINESS CLIMATE

Now what is business climate? It is a composite of a number of important factors which are controllable by the citizens and employers in a prospective location. Among these are:

1. A progressive attitude on the part of political and civic leaders toward sound community growth and city planning.

2. Citizen understanding of community and business problems.

3. Honest, efficient government, supported by a safe majority of alert, intelligent voters who have the balanced best interests of the community at heart.

4. An absence of unreasonable restrictive regulations and discriminatory taxes imposed on business by the local and State governments.

5. A sound working relationship between employers and employees as evidenced by an absence of unwarranted strikes and slowdowns over a number of years and, wherever collective bargaining contracts are in effect, a constructive and responsible union leadership which acts as the servant rather than the master of its membership.

6. An adequate supply of people to fill employment needs, people with good work attitudes, with required educational levels, and preferably, people who have some understanding of how our business system operates and their stake in its success.

7. Prevailing wage and salary rates which are fair to employees, but which, at the same time, enable employers to compete profitably.

8. Adequate community services and facilities such as utilities, banks, hotels, shops, health facilities, and the required commercial services needed in operating a business.

9. A social and cultural atmosphere that will attract and hold good professional employees. This would include adequate schools, museums, libraries, little theaters, an enlightened press, radio and TV and an abundance of healthful recreational opportunities.

10. A serious-minded assumption of business citizenship responsibilities on the part of all employers in the community as evidenced by consistently good employee relations and courageous leadership in civic and political affairs.

Business climate, in other words, might be defined as: "The total result of all external conditions affecting the cost and ease of operating a business in a community, region, or State."

COMMUNITY ATTITUDE

Many of these factors are intangible, as you can see, and many of them stem from the community's attitude toward business. Speaking of attitudes, let me quote the managing director of one of the many so-called industrial parks springing up around the country—as reported in the November 10 issue of the Providence Journal:

"Community attitude has become an exceptionally important factor to industry. Companies today do not want to be the panacea of the ills incurred by many communities, due to heavily increased residential building and population. Most firms want to settle in an area that has shown foresight and progressiveness in solving its problems, that has carefully and logically zoned its areas to have adequate space for balanced residential, commercial, and industrial growth. New industry is not seeking to burden itself with the problems of communities.

"No businessman or industrialist is going to take a superficial glance at a State or community, admire its fine residences, picturesque resorts, gardens, and parks, and decide here is the perfect location for his facilities. He will cut deep below the veneer and probe into the political background, tax records, the productivity of the people, the courage of the civic leadership, and the attitude of law-enforcement agencies. He will also seek counsel of the established companies to determine how they have fared under the policies and practices of local and State governments."

DISCOURAGING FACTORS

Attitudes are reflected in many ways. For example, an unfavorable record of strikes and slowdowns over the years is probably one of the most discouraging factors of all to a prospective employer.

The physical condition of housing, shops, and neighborhoods is one of the most dependable attitude-indicators. What prospective employer wants to settle in a community where people appear to be shiftless—where no one seems interested in cleaning up, in painting his house and properly maintaining his personal property—or where slums and neighborhood blight, like termites, keep eating away at the heart of the city? Such things indicate public apathy.

Productivity is a reflection of work attitudes. Direct comparisons of turnover rates, safety records, plant absentee records, and on-the-spot observations tell much about work attitudes.

Basically, the way a community measures up depends upon good understanding by the workers in that community of the simple economic facts of life and their individual stake in prosperous, expanding industry. We particularly like a town where a serious attempt is being made both in the schools and in adult education to explain the basis of our high economic standard of living.

TWO-WAY STREET

Right here I should like to emphasize that measuring up is a two-way street and that employers have a prime responsibility for earning favorable community attitudes. At places where General Electric plants are located, we try continuously to deserve, and then to get, the warm understanding and approval and support of the community. We strive for this by doing right voluntarily in the area of employee pay and benefits; being a good taxpayer with no special bargains asked; purchasing materials and supplies locally, where possible; and giving proportionately proper support to the needs of worthwhile charities. Of course, the mere doing of these things is only one part of the job. The other important part is to communicate continuously with all members of the community to make sure they understand what is being done. Be discriminating as to the employers you attract to your town. One bad apple employer can affect the whole barrel.

WHAT INDUSTRY SEEKS

Now with this general philosophy as a backdrop, let me tell you quickly what we look for when we survey a community. I have a sample report here with me. Let's call it Newtown. Let's see what's in it:

First, what kind of people live here, how fast is the population growing, what is the size of the reserve labor force? Is skilled labor available or will it have to be trained? If so, are there adequate vocational training facilities? In other words, what are the basic vital statistics and other information about the community that will affect the operation of the plant.

Labor turnover rates, absenteeism, and good work habits are always much better in the more stable, conservative, and better educated communities and, as you know, these are very important to a business enterprise.

The next item is industrial makeup. Obviously, there is an advantage in having a community with an industrial background that is compatible with the type of product we wish to manufacture. It is also important, of course, that a community's economy be diversified in order to insure economic stability. We believe it is bad for both the community and the company when a community is too dependent on one company. Accordingly, we try never to employ more than 6 percent of the total population or 15 percent of the working population.

BUSINESS FACILITIES

The next series of consideration has to do with business facilities. These include such important items as transportation, utilities, banks, hotel facilities, and other specific services important to the operation of our plant. Speaking of hotels, we find that a first-class hotel is, indeed, a wonderful asset for a community. It is a source of pride for the citizens of all ranks and a focal point for most of the leadership activities. Unfortunately, very few fine new hotels are being built because of the high initial cost per room, and the competition from motels and the uneven load factor. Perhaps our planners should be planning community hotels for the future that will contain a minimum of bedrooms and a maximum of meeting rooms and feeding facilities. These latter facilities seem to be in the greatest demand by business.

In addition to business facilities, it is important that we also have adequate community services both from the standpoint of operating a plant and in order to attract and hold good employees. Here we make a careful check on such things as hospitals, churches, organizations, recreational facilities, and cultural opportunities.

SCHOOLS

One of the really important items in any business climate survey nowadays is the adequacy and quality of schools. What is the average teacher compensation? What is the expense per pupil? What is the teacher-pupil ratio? In several of our recent plant locations, the adequacy and quality of schools was considered to be at or near the top of the list by the department manager and his staff. This is not only important from the standpoint of providing us with the best type of employees, but with our current shortage of technical personnel, it is difficult to attract key people to a community unless there are good educational opportunities for their children. Another aspect of this school item is the fact that in some cases, it is almost mandatory that the operation be close enough to work on a day-to-day basis with a technical university.

The progressiveness, fairness, and courage of the local newspapers, radio and TV are a very important factor in our evaluation. Are they courageous? Do they provide community leadership? Are they espousing local self-reliance and do it yourself or are they for increasing Government subsidies and regulation?

GOVERNMENT COSTS

Certainly one of the important cost factors in operating a plant is cost of operating the local and State government. For instance, Newtown has a great many fine assets and would make an excellent location for certain types of operations; but perhaps one of its weaknesses is its debt position. At the present time its bonded indebtedness is $24 million which amounts to more than $200 per capita. On the other hand, in Newtown this may not be serious since it is a fast growing city and much of the debt will be absorbed by the expanding population. But then there is still another side to this financial picture of Newtown. Forty percent of the property within the city limits is either Government owned or tax free because it is owned by schools and churches. This places an unusually heavy burden on individuals and companies, who, in effect, help support the nontaxable property.

But the financial position of the community is only one part of the Government picture. There are many important Governmental considerations such as outright corruption, inefficient administration, outdated codes, lack of law enforcement, unreasonable ordinances. The worst liability by far is a dual standard of law enforcement. In the recent McClellan investigations, the city police were reluctant to prosecute the offenders. Speaking of codes, I read with interest this morning of Alexandria's new minimum housing code, the sole purpose of which, said Mayor Bendheim, is to eliminate what can truly be considered slums.

TAX RATE IMPORTANT

Time permits mentioning only one additional of the more than 60 factors surveyed in Newtown. It is the tax rate. And here I'd like to quote your own Jerome Pickard, research director of the economic development committee:

"Though the real-estate tax rate and income taxes are most often quoted, actually, the significant tax factors are:

"1. Total taxation (excepting Federal): State, county, and local, all taxes.

"2. Community services provided in return for the taxes. "Many communities and counties which loudly proclaim the virtue of low taxes are speaking of today, not tomorrow. Others are speaking merely of local tax rates. Communities which do not advertise low tax rates, may, in fact, offer the greatest bargains to prospective industry if their existing capital improvements are substantial and services offered for industry and its personnel represent a good return for the taxpayment."

To that I say, amen.

THE HOUSING SITUATION

Now another factor which cannot be passed over lightly is the housing situation. This, of course, is especially true where large numbers of people would have to be transferred to the new plant location. Taking Newtown again as an example, here we have a very attractive situation, with a large supply of fine homes at very reasonable prices and a wide selection of homes and apartments for rent at low rates. More importantly for tomorrow, each neighborhood is vigilantly protecting itself against that great killer—urban blight.

Labor attitudes, although an intangible, have a vital bearing on the success of the prospective plant. Sure, the type of management in a plant has a great deal to do with the productivity of people. On the other hand, anyone who travels around from one part of the country to another knows there are differences in productivity and dependability of people from one place to another. In some cases, this increased productivity amounts to as much as 60 to 80 percent. No sensible employer is interested in putting a new plant in a community where poor labor attitudes result in continual lost time, labor-management arguments, feather-bedding, jurisdictional disputes, and so on.

CREATING JOBS

So much for what we look for in a community. Now, to my second point, let me make a few hesitant suggestions as to what this region might do to bring in more jobs that quantitatively and qualitatively can help satisfy the ever-expanding population. First, I would not carry on a mail-order business by sending out expensive brochures or investing heavily in advertising the region.

Having formerly been advertising manager for our company, I fully understand the power of advertising—but I have grave skepticism as to the value of much of the economic development advertising and promotion I have been seeing.

The Federal Reserve Bank of Boston conducted a study about industrial development programs in New England which brought out some interesting revelations on the use of advertising and promotional materials. Depth interview techniques were employed to sound out the attitudes of nearly 100 men who are responsible for selecting industrial locations for their companies.

ADVERTISING SURVEY

Three of the conclusions of the survey are of particular interest to many in this group because you are representative of smaller communities, and I assume do not have unlimited funds at your disposal for

your development activities. These findings showed that:

1. Media advertising is generally the most questionable use of industrial development funds. The great majority of executives who make location decisions reported that they were not at all interested or affected by the great amounts of competitive advertising of various industrial areas which appear in the newspapers or periodicals.

2. Most promotional brochures are a waste of money. There seem to be only two occasions when a brochure might be helpful. First, if it contains factual material which can help the company appraise the location, and second, if the company just happens to be looking for a site in a particular area when a brochure about that area arrives.

3. Personal contact and service is the most effective industrial promotion technique. The executives clearly emphasized their feeling that direct solicitation made the greatest impression.

MAKE HONEST APPRAISAL

A far better investment of your time and funds is to make a completely honest and objective appraisal of your liabilities and then to embark on a program to correct them.

The New York Journal of Commerce conducted a survey last spring to determine what mistakes development groups make in their efforts to induce industry to locate in their towns and States. Three-fourths of the areas replying ranked failure to analyze their own qualifications as the most serious mistake. One of my associates, who has surveyed hundreds of towns as possible plant locations, tells me the best impression was made by a community which had not only analyzed its situation thoroughly, but had a listing of weak conditions as well as the strong ones, along with a program for improving the weak ones. Communities that seek to attract industry with promotional programs which attempt to sweep shortcomings under the rug are making a grave error. They fool no one but themselves.

There are a number of survey forms available to analyze the strengths and weaknesses of a community. We have developed our own Guide to Making a Business Climate Appraisal which contains 167 questions. These questions are considered in determining a new plant location. The guide is also used by operating management at our present plant locations to pinpoint outside conditions affecting their business operation and to determine what constructive action they can take for their improvement. The United States Chamber also offers a very useful appraisal guide.

FOUR STEPS TO TAKE

The appraisal is part of a better business climate plan which we recommend to all of our local operating managers. It has four recommended steps:

1. Make the business climate appraisal.

2. Determine short and long-range goals for improving poor or deteriorating elements in the business climate.

3. Schedule company and employee activities which will help to achieve these goals.

4. Work cooperatively with other employers and civic leaders who are interested in taking the same approach to business climate improvement.

You see, not all of our managers can operate plants in communities where employees and community neighbors eagerly cooperate on a something-for-something basis to make their business enterprises successful. Many of our managers must continue to operate in communities where poor business climate practices eat up most of the gains in new technology and improved management practices.

To them we say, don't curse the darkness—light a candle. Don't complain about the climate, do something about it.

GAINING COOPERATION

It is amazing to me to see how eagerly and effectively employees and civic leaders will cooperate if we will but show them the relationship between our goals and their goals and explain how they can be helpful.

With America industrializing so rapidly, the day is coming when there will be no new frontiers where business can move to start life anew.

The challenge now, particularly for large parts of the eastern seaboard which are farthest removed from industry's frontiers, is to plan for tomorrow as well as today and to make no little plans. Your planning should include a vigorous attack on such problems as urban decay, new approaches to mass transportation, industrial parks or other provision for business expansion, 19th century building codes, taxation that inhibits rather than encourages the providing of new jobs for an expanding population; local and State legislation and law enforcement that steadily creates abuse of power by either unions or management.

WISEST PLANNING

The wisest planners will give particular attention to individual and community attitudes and morals. Through the help of schools, churches, and the press they can make it fashionable once more to give an honest day's work for a good day's pay; to make something for nothing unfashionable; to obey the moral manmade laws when no policeman is around; to explain the great role of private business in creating ever higher standards of living for a free people.

Just one more suggestion. As a starter, why not make a survey of 50 of your present employees. Ask them to name three things that will help them grow and prosper most. Ask them if they are planning to expand in this area, and why. Ask them if they would advise other manufacturers to locate in this area. If they say, as one respondent down east said, "Yes, my competitors," then you better conduct a depth interview with them.

Gentlemen, I know of few efforts on your part that would make a more favorable impression on new-plant-site shoppers than such a realistic search for your real problems as a basis for your future planning.

In closing I salute you for this day's vigorous attack on your problem.

Unfair Penalty on Circulation

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 6, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by David Lawrence entitled "Unfair Penalty on Circulation," which appeared in the Washington Evening Star of March 5, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNFAIR PENALTY ON CIRCULATION

(By David Lawrence)

DISCRIMINATION SEEN IN MAIL RATE PLAN BASED ON NUMBER OF READERS

Only 22 years ago the Supreme Court of the United States, in a unanimous opinion, ruled that governmental authority in America must never be used under the guise of the taxing power to penalize publications of large circulation as against those of smaller circulation. To do this was held to be a violation of the first amendment to the Constitution, which forbids the enactment of any law that abridges the freedom of the press.

Yet last week in the United States Senate, 28 Democrats and 5 Republicans voted to do that very thing when they demanded higher postal rates be imposed on publications of larger circulation than on publications of smaller circulation. Fortunately, 39 Republicans and 18 Democrats combined to defeat the attempt. But there still remains a provision of the same kind in the bill originally passed by the House of Representatives and which soon will be considered by a conference committee of both Houses.

This correspondent remembers well the 1936 decision of the Supreme Court because it was a big news story at the time. The State of Louisiana, under the pressure of its Governor, the late Huey Long, had enacted as a reprisal against the larger newspapers of the State a law dividing all newspapers into two classes—those with less than and those with more than 20,000 circulation. A special tax of 2 percent was levied on the gross receipts on all advertisements published in the newspapers of larger circulation, but this was not applied to the newspapers of smaller circulation.

The Supreme Court of the United States said the effect of the tax would be to curtail the amount of revenue realized from advertising and would involve a direct tendency to restrict circulation and then added: "It might well result in destroying both advertising and circulation."

What is most interesting to note about this form of censorship is that it has been tried many times before, in fact as early as 1712 when the British Parliament imposed a special tax on all newspapers and upon advertisements. Justice Sutherland, who wrote the Supreme Court's opinion in 1936 reviewed the history of such laws in England and said that these taxes constituted one of the factors that aroused the American colonists to protest, and that the American Revolution "really began when, in 1765, the British Government sent stamps for newspaper duties to the American colonies."

Justice Sutherland referred to such imposts as "taxes on knowledge." Speaking of the Louisiana law's attempt to classify newspapers by circulation and to put a special tax on advertising, the Supreme Court opinion says:

"It is seen to be a deliberate and calculated device in the guise of a tax to limit the circulation of information to which the public is entitled by virtue of the constitutional guaranties. A free press stands as one of the great interpreters between the government and the people. To allow it to be fettered is to fetter ourselves."

Senator MIKE MONRONEY, of Oklahoma, Democrat, said bluntly to the Senate last week that the imposition of higher postal rates on large-circulation magazines than on smaller ones would penalize a magazine because it had a large circulation. He added:

"If a publishing firm is able to build up a circulation of one of its own magazines to 3 million or 5 million copies, should we penalize it because the public wants to buy the magazine? * * * I do not believe Congress should legislate in that way."

Publishing companies of all kinds, of course, must pay the same general taxes as any other profitmaking enterprises. There is no doubt that the Post Office Department needs more money, and certainly the newspapers and magazines should pay the increased costs for transportation of their issues in the mails when it is conclusively ascertained by an impartial commission of accountants, authorized by Congress, just what such costs actually involve. But discrimination in postal rates as between publications of the same kind is a violation of

the Constitution, not only because it deprives them of equal protection of the laws under the fifth amendment, but because it is also an infringement on the first amendment.

The weight per copy—and not the total circulation—says Senator MONRONEY, is the only sound way to measure the rates that should be paid for postage by publishers.

It is significant that in the debate last week there were various references made by Senators to the editorial views held by publications which they dislike, and the inference was left that some Senators were voting in reprisal against certain publications of larger circulation of whose content they disapprove for political reasons. Thus is the Bill of Rights trampled upon by some of the very men who take pride in calling themselves liberals.

Oil Imports

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I desire to include the testimony of Mr. C. E. Brehm, of Mount Vernon, Ill., before the Ways and Means Committee of the House of Representatives on Tuesday, March 4.

Mr. Brehm, president of the Tri-State Independent Oil Producers and Land Owners Association, in his testimony before the Ways and Means Committee was representing the independent oil producers of Illinois, Indiana, and Kentucky.

In his testimony, Mr. Brehm urged more positive and stricter limitations of excess oil imports:

My name is C. E. Brehm. I live in Mount Vernon, Ill. I am an independent producer of crude oil and president of the Tri-State Independent Oil Producers and Land Owners Association. Our organization represents the small independent producers operating in Illinois, Indiana, and Kentucky.

By way of background I would like you to know that in 1956 in Illinois, independents drilled 80 percent of the total 3,650 oil wells drilled, in Indiana we drilled 97 percent of the 606 wells drilled, and in Kentucky, also, independents accounted for 97 percent of the total 1,866 wells drilled.

We want to continue to do this important job and, in so doing, we are helping the economies and tax revenues of these three States. For example, our county records show that during the year 1956, Henderson County alone produced 3,168,112 barrels of oil, therefore returning to the county over $92,274.88 in road funds and to the State almost twice this amount. This being in addition to the annual ad valorem taxes. The total 1956 assessed value of oil properties in Henderson County was $9,041,625. This oil property paid a total county tax in 1956 of $185,353.31, this in addition to the road-fund tax and State tax. We also feel that we are making an important contribution to the National Government and to national security.

But cheap-to-produce foreign oil imports are supplanting domestic production with increasingly serious effects in our area. This brief tabulation will show what I mean.

Total number of wells drilled and rigs active in the tristate area

	1956	1957	Percent increase or decrease
Total number wells drilled:			
Illinois	3,808	2,708	−28
Indiana	741	699	−6
Kentucky	1,936	1,531	−21
Total	6,485	4,938	−24
Average number rotary rigs active:			
Illinois	75	50	−33
Indiana	9	6	−33
Kentucky	10	9	−10
Total	94	65	−31

You can see that total number of wells drilled is down an average of 24 percent from 1956 to 1957. The average number of active drilling rigs is down 31 percent.

On a personal basis I have averaged drilling 90 wells per year from 1947 through 1956. In 1957 I drilled only 68 and in the first 5 months of my fiscal year, September 1, 1957, to February 1, 1958, only 26 wells. Further, all our equipment has been shut down since the first of January 1958 except for the drilling of 3 wells made necessary by prior commitment. Our company has not yet turned to secondary recovery oil to keep our production rate up, but if we and others must do so, it will not be very long before exploration is completely halted and no new production will be found to replace that being used up at present.

The chairman of the board of one of the major purchasing companies of this area recently stated his company intended to spend fifteen to twenty million dollars constructing a pipeline extension which will bring foreign oil from the eastern seaboard to the company's Kentucky refinery. This, in spite of statements from the same oil purchaser that there is an oversupply of crude oil. It is obvious that there is to be a severe and increasing curtailment of drilling and exploration here at home.

Another example of what is happening in our area as a direct result of foreign oil imports is the situation explained recently by the assistant treasurer of the Farm Bureau Oil Co., Inc., the largest supplier of petroleum products in Indiana. He stated that east coast refineries at one time were supplied by domestic crude, chiefly from the gulf coast, but as Middle East crude began moving into the east coast this domestic crude had to find another market. As a result a large part of this gulf coast crude is now moving into Middle West refining areas and thus reducing the demand for Illinois Basin crude.

An editorial appearing December 19, 1957, in our local area paper titled "A Crises in Local Economy," states in part as follows:

"Few people recognize this problem. Locally it is of vital interest because a recent reduction in the price of crude oil has an adverse effect on the economy of the area. The fear harbored is that the independent producer will cease developing new fields unfair market and that foreign oil will take its place. The effect will be felt in Henderson and surrounding area."

This situation has created a great amount of serious economic instability in our area and has been caused directly by unreliable Middle East crude oil imports.

Men responsible for discovering crude oil reserves cannot afford to spend their money in this hazardous business of looking for new oil reserves unless they can sell their product already discovered. Unless you find this oil you do not have an oil reserve, and that is where national security comes in. It is only the oil that we know is there that can be counted on in times of national emergency.

In conclusion it is our belief that when Congress recognized this problem and set forth a provision for relief in the 1955 Trade Agreements Act it intended this law to be used. It has not been used yet. It is our hope that the Congress will now take more positive action and thus prevent our domestic industry from being drowned in a flood of imports.

13th Anniversary of the Communist Takeover of Rumania

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of the House to the fact that today, March 6, marks the 13th anniversary of the Communist takeover of Rumania. In that connection, I would like to read the text of a letter dated March 4 which I have received from Mr. Mihail Farcasanu, president of the League of Free Rumanians, 1056 Fifth Avenue, New York 28, N. Y.:

I take the liberty of drawing your attention to the date of March 6, which marks the tragic anniversary of the Soviet Communist enslavement of Rumania 13 years ago.

It is important, we believe, that notwithstanding the official expediency veil of a status quo technical recognition, the real situation of Russian enslavement and the denial of human rights should be recalled.

The Russians had hardly put their signature on the Yalta declaration, when by the use of overwhelming military force, they replaced the legal Rumanian Government of General Radescu with a Moscow-sponsored Communist puppet regime. This took place at a time when the whole Rumanian Army was fighting on the front, alongside the Allies. The field thus being free, Vishinsky and Malinovski, with the help of the Russian tanks, were able to perform this coup in Bucharest by occupying the Government buildings and key institutions and exercising the whole gamut of their terror tactics on the helpless population.

Nevertheless, this Communist stooge Government has been recognized by the Western Powers and later even elected to membership in the United Nations. The peace treaty concluded with this nonrepresentative Communist Government has been totally disregarded by them. They proceeded during this entire period with the Kremlin-planned sovietization and exploitation of the country.

The Russians took control of the vast oil resources of Rumania and all other industrial enterprises. Political and religious persecution, deportations, confiscation of property, and total denial of the most elementary human rights have been as elsewhere the methods of Communist oppressive rule. Forced labor has been utilized on a large scale, culminating in the Danube-Black Sea project with its thousands of dead and now in the Danube Delta camp other thousands are doomed to a similar fate. Yet the strong pro-American feelings of the Rumanian people have not been shaken and a deep-rooted passive resistance constantly harasses the Communist government and disrupts its Kremlin-directed schemes.

It is the potentialities of such situations behind the Iron Curtain on which is based Moscow's concern with the United States attitude toward the occupied East Europe. It would help enormously the Soviets to consolidate their rule over a hostile population looking with hope to the West, if she could bring the United States to officially sidetrack the issue of central and eastern Europe.

May I add that the longing for freedom of the millions behind the Iron Curtain is a powerful latent ally, to whom in these times of crises moral support should be given whenever possible.

We would be deeply grateful if you could mention in some way in Congress this sad occasion of the Soviet seizure of Rumania on the 6th of March 13 years ago.

I think, Mr. Speaker, that it is appropriate to recall to the enslaved people of Rumania as well as all other captive peoples behind the Iron Curtain the fact that the great majority of the peoples of the free world are hoping and praying for the day of their liberation and have the utmost confidence that that day will surely and inevitably come to pass. Further, I think they should also be reminded that this Government has repeatedly and recently made it crystal clear that it believes in the freely exercised right of self-determination for the captive peoples of Eastern Europe and still adheres to the position that such a topic properly belongs on the agenda of any future so-called summit conference, in the event this ever comes to pass. I hope the observance of this sad occasion will help to keep alive the spirit of freedom and independence in the hearts of the people of Rumania.

The American's Creed

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to insert in the CONGRESSIONAL RECORD's Appendix some important words that we need to remember always. I refer to the American's Creed. Reference was made to this in the American Legion magazine on page 9 of the March issue.

There is nothing that I can add to these beautifully simple words but I can and do express the wish that every American could have a copy of this creed to be placed in a prominent spot in his home, office or school. The author of this creed is that noted patriot, William Tyler Page.

One of my lawyer friends and comrades, John E. Devereux, of Chicago, called this to my attention in a recent letter to me. Mr. Devereux is well known for his activities in the interest of America in behalf of the American Legion.

THE AMERICAN'S CREED

I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

WILLIAM TYLER PAGE.

A Sign of the Times

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. CANNON. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I am including a page advertisement in the Mexico Ledger, of Mexico, Mo., by the Citizen's Committee for a Strong America Based on a Sound Economy, and also append a related editorial from the Ledger by Robert L. White, one of the ablest editorial writers in America:

Hon. DWIGHT D. EISENHOWER,
President of the United States, The White House, Washington, D. C.
Hon. JAMES T. BLAIR, JR.,
Governor of Missouri, The Executive Office, Jefferson City, Mo.
Hon. THOMAS C. HENNINGS, JR.,
Senator from Missouri, Senate Office Building, Washington, D. C.
Hon. STUART SYMINGTON,
Senator from Missouri, Senate Office Building, Washington, D. C.
Hon. CLARENCE CANNON,
Missouri Representative, Ninth Congressional District, House Office Building, Washington, D. C.

GENTLEMEN: We are deeply concerned about the future of our Nation, and we feel it imperative that you take immediate action to safeguard our country from without and our economy from within.

The very life of our Nation and the freedom of generations to come may well depend on the wisdom and unselfish courage of our present leaders who must solve the most vital problems that have ever confronted America.

The additional billions of dollars required for national security in this atomic-space age will be spent because the American people demand that America be strong and that national defense be given top priority.

On the other hand, we are seriously concerned at the tendency of some people to demand greatly increased spending on nonessential Government programs at a time when the Nation's safety and economy are threatened. Nonessential Government expenditures should be postponed or eliminated, or in any event greatly curtailed during this critical period.

We know that we are facing years of Communist threats requiring an American economy which must continue sound and strong in order to survive.

Actions that yield only temporary results or fleeting benefits may, in the long run, tend to undermine our economy as a whole and weaken our ability to maintain a continuing strong national defense and a sound national economy.

We are alarmed at the reports of continued waste, duplication, and inefficiency in many Government operations. To correct these conditions is a big job but it must be done now when the fate of our national economy, the basis of our national defense, is at stake.

In the face of reduced business activity, the public is indignant and alarmed at the continuing rise in the cost of living, the decreased purchasing power of the dollar and the increasing costs of doing business—and they want Congress to do something about it now.

In view of the present critical circumstances we insist that our leaders in Government approach these problems and decisions on a nonpartisan, unselfish, and entirely constructive basis, that will assure maximum results for national security and business recovery.

The great majority of the people are willing to make the necessary sacrifices and to put forth the extra effort for the safety and strength of our country.

We feel that this crucial period is no time for self-interest pressure groups to promote selfish advantage through actions that will inflate living costs. All groups and individual citizens must be prepared to make sacrifices and cancel, postpone or modify actions that create inflationary pressures and force higher prices.

These pressures must be restrained lest they do serious and continuing damage to our economy and add greatly to the dollar cost of national defense due to higher production costs.

We will do our part and we expect business industry, labor, and our public officials to do the same.

The success and leadership of the United States, in peace and in war, has been due to a large degree, to the preeminence of American production. An attitude of helpful and constructive understanding by government toward this basic fact will be most important in building stronger confidence and stimulating all segments of the economy. This is the proven method of helping to bring an upturn in business conditions and an increase in employment.

This confidence on the part of the American people in business is essential to build and maintain the strong economy necessary to support the cost of enlarged national defense and an expanded economy.

A united effort by the people and their representatives can solve these problems.

Respectfully,

Mexico, Mo., Citizens' Committee for a Strong America, Based on a Sound Economy: J. B. Arthur, Judge George Adams, Arthur D. Bond, Bradford Brett, Ray B. Carroll, Alan Coatsworth, W. R. Courtney, Dr. Thomas L. Dwyer, Frank Edwards, Paul Ekern, John Erdel, Lowell Hagan, L. B. Hawthorne, Maurice Kemp, William S. Lowe, Elmer MaGee, Herbert Morris, Mize Morris, Edward P. O'Brien, Herbert B. Plunkett, George Stahl, Walter G. Staley, Hollis Stolte, Col. C. R. Stribling.

ABOUT SPENDING FOR YOU, AND AGAINST YOU

There are two kinds of sputnik spending. One is for you; and one is for Russia.

The sputnik spending that is for you has to do with the defense of your Nation.

Your Nation is challenged today, perhaps more seriously than at any time since the British burned Washington in the War of 1812.

The Russian sputnik was the key. It proved to all people that the Russians have applied themselves fully to the ultimate weapon—the intercontinental ballistic missile.

Their 1,126 pound Sputnik II—the one now circling this earth with a dead dog inside it—proved the Russians have developed the propulsion for all the range needed, and all the explosive-head weight needed to—to threaten this Nation.

The two missing components needed to wrap their steel fingers about the neck of the free American—your neck—is guidance and reentry.

Both are sure to come from the top scientific minds already plowing day-and-night this fantastic Red battlefield.

So, one kind of sputnik spending is for you—to defend you against this Russian progress; to help our Nation catch up, pass, and plunge ahead of the Reds to establish, God willing, this Nation for generations to come as the unassailable citadel of freedom and decency on earth.

The other kind of sputnik spending is against you—for Russia.

It is for nonessential United States Government spending. It is for waste, duplication, inefficiency in your Government. It is against this kind of spending that 24 Mexicoans run a full-page ad in today's Ledger, reproducing their letter to the President, the Missouri Senators, and to Mr. CANNON.

Unessential sputnik spending drains the lifeblood from our greatest weapon—the American free-enterprise system. Weaken that system with higher and higher costs, higher and higher prices for the wherewithall of day-to-day living, slashing the value of our dollar—and you have helped Russia.

Perhaps, you have helped Russia to the world.

This second, needless sputnik spending must be prevented.

It can be.

All we have to do is insist on it, back up our leaders in Government when they rise above pressure groups, rise above special-interest groups, rise above all but the needed—absolutely imperative—spending of your tax money for the defense of the Nation.

Resolution Urging Increase in President's Budget for Reclamation in Kansas, for Fiscal Year 1959

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. BREEDING. Mr. Speaker, President Eisenhower's fiscal 1959 budget, presumably reflecting the administration's rigid economic policy designed to "balance the budget or bust," called for no new reclamation project starts, among other domestic program cutbacks.

Approximately 1 month after the President presented his January budget message to the Congress, the press reported that the White House was "considering a new program of reclamation projects that may be launched as part of the administration's overall effort to reverse the current business decline."

I can only hope that the administration is better equipped to handle the economic remedy than it is the diagnosis. In so hoping, I should like to join with and lend my support to, more than 200 Kansans, from many sections of the State, who have signed the following resolution urging increases in President Eisenhower's budget for reclamation in Kansas for 1959:

RESOLUTION URGING INCREASE IN PRESIDENT'S BUDGET FOR RECLAMATION IN KANSAS, FOR FISCAL YEAR 1959

Whereas it is our belief that the economic progress and development of our region is dependent upon our being freed from the recurring ravages of drought and flood, and we strongly feel that continued construction of reclamation projects is necessary to our long-term economic prosperity; and

Whereas our respective communities are suffering severe economic reverses, caused by a succession of years of drought, superimposed on the generally low state of the agricultural economy, and therefore are greatly in need of the stimulus of sustained or increased public works programs; and

Whereas irrigation offers relief of farm problems in the plains area by providing for adjustments in farming practices, since islands of irrigation can support an increase in livestock operations by assuring a stable local feed supply; and

Whereas in view of the current national recession, going public works programs should not be curtailed, and additional projects should be readied for construction in order that, if the economic picture becomes worse, a pronounced upturn in worthwhile public-works expenditures could be instituted rather than resorting to leaf-raking projects; and

Whereas, in our preoccupation with the race with the Soviet Union into space, we are losing the race in the field of water resources development, a concern which has caused a resolution to be introduced in Congress to conduct hearings on a memorandum of the chairman of the Senate Committee on Interior and Insular affairs, entitled, "Relationships of River and Related Water Resources Development Programs of United States, Soviet Russia, and (Red) China"; and

Whereas going construction programs can be stopped and restarted, or slowed down only with increased costs to the Government and the water users; and

Whereas the various segments of the reclamation program in the Kansas River Basin are inadequately provided for in the President's budget request for fiscal year 1959, specifically as follows:

(a) Bostwick division. The proposed budget allows no funds for construction of block III of the Kansas-Bostwick Irrigation District, which will entail at least a year's delay in completing the district's system. This stretchout of construction places an additional financial burden on the district on two counts: (1) Uneconomical rate of construction increases costs of the distribution system to be repaid by the district and (2) compels the district to maintain a system not yet delivering water to its designed capacity. Such increased costs threaten the limit of the repayment ability of the water users as estimated in negotiating the repayment contract. An appropriation for fiscal year 1959 of $2,136,000 would be required to carry out an orderly program of construction without undue delay in final delivery of water to the entire unit.

(b) Webster unit. The storage facility for this project was completed in 1956, the irrigation pool was filled last year, so that water can be applied to farm lands as soon as canals and laterals are constructed. A repayment contract between the Webster Irrigation District and the Government has been executed and confirmed by the district court. The proposed budget will finance for fiscal year 1959 only one-half of the program required for most economical rate of construction. An economical rate of construction, without undue delay in final full utilization of the water supply for irrigation, would require an appropriation of $2,218,000 for fiscal year 1959.

(c) Cedar Bluff unit. Cedar Bluff Dam and Reservoir was completed in 1951. The reservoir was filled that year and the irrigation pool has been maintained at near capacity ever since. The dam served notably in curbing flood damages in 1951 and again in 1957, but full use of the reservoir will not be made until the canals and laterals are built to deliver water to the project lands. All necessary work has been done by the Bureau of Reclamation for immediate completion of this unit which is already 75 percent complete. A petition for organization of Cedar Bluff Irrigation District No. 6 has been signed by a substantial majority of the landowners. Hearing on such petition will be held by the chief engineer of the Kansas State Board of Agriculture on April 24, 1958. No funds are included in the proposed fiscal year 1959 budget to construct the required irrigation facilities. These facilities are seriously needed to improve and stabilize the economy of the area. An amount of $700,000 would be required to initiate an orderly program of construction in fiscal year 1959.

(d) Almena unit. All required steps have been met to start construction on this project. A definite plan report has been approved by the commissioner and an irrigation district has been formed. Norton Dam and Reservoir, the principle feature of the project, will give essentially complete flood protection to the city of Norton and other communities and farm lands from above Norton to the mouth of Prairie Dog Creek. This area has suffered repeated flood damage and remains under constant threat from the highly erratic flows of Prairie Dog Creek. The city of Norton is badly in need of the municipal water supply from Norton Reservoir, since the present supply does not meet minimum standards to provide for health and fire protection of the community. The city of Norton has agreed to terms of a contract with the Government for repaying the allocated cost of the water supply. The Almena Irrigation District has passed a resolution agreeing to the repayment provisions asked of them. The district is collecting taxes to meet predevelopment expenses, and farmers are at a disadvantage in planning their operations, while waiting to see when Congress will initiate the construction. It is estimated that an appropriation of $1 million is required in fiscal year 1959 for the initial year's construction.

(e) Kanopolis unit. This is an authorized unit of the Missouri River Basin project on which a definite plan report is being prepared. Local interests are active in urging the early completion of such a report with a view to initiating construction in fiscal year 1960. A water supply for the unit has already been developed through regulation of the Smoky Hill River by Cedar Bluff and Kanopolis Reservoirs. The water has been available since 1951 and is not being used. The early utilization of the water supply will hasten the economic stabilization of the community by the irrigation of 18,500 acres of productive land. The Government has already spent a considerable amount of money in advance planning. The sponsoring committee is circulating a petition for irrigation district organization and the local sentiment is such that the organization should be complete this summer. It is urged that $100,000 be made available for fiscal year 1959 to hasten completion of the definite plan so that construction funds can be appropriated for fiscal year 1960.

(f) Glen Elder unit: This unit has been authorized as a part of the Missouri River Basin project. Funds are required to complete a definite plan report in fiscal year 1959 to permit a start of construction in fiscal year 1960. Some 20,000 to 25,000 acres of land can

be developed through regulation of Solomon River flows by construction of Glen Elder Dam and Reservoir. In addition to the irrigation development, the reservoir will meet important requirements in flood control and municipal water supply. The reservoir is a major component in the comprehensive flood-control plan for the entire Kansas River Basin as well as for the more immediate protection of the Solomon Valley. Severe local flood damages were incurred as late as last summer. The city of Beloit, as well as some of the smaller communities in the valley, has a critical municipal water supply problem which could be met by construction of the reservoir. From both a short- and long-time view, the area is greatly in need of an economic boost. Loss of population and sharp decline of economic activity are giving great concern to residents of Beloit and Mitchell County. Local sponsors of the Glen Elder unit have organized a group known as citizens for Glen Elder Dam. They report very favorable sentiment among farmers for organization of an irrigation district. A sum of $200.00 should be provided to insure completion of a definite plan report in fiscal year 1959.

(g) Potential but unauthorized units: To provide a continuing program of water resource development in the Kansas River Basin, some attention must be given to potential but as yet unauthorized additions to the Missouri River Basin project. Such projects include, but are not limited to the Nelson Buck unit on Beaver Creek, the Ellis unit on Big Creek, and irrigation potential in connection with some eight tributary reservoirs in the lower Kaw Basin, currently under study by the Corps of Engineers as part of the basin's comprehensive flood-control requirements: Therefore be it

Resolved, That the Congress of the United States be asked to insure orderly progress on the Bureau of Reclamation's program in the Kansas River Basin, by making available appropriations for fiscal year 1959, as follows:

(a) Bostwick division, $2,136,000 or $1,000,000 in addition to the provision in the President's budget.

(b) Webster unit, $2,218,000 or $1,000,000 in addition to the provision in the President's budget.

(c) Cedar Bluff unit, $700,000 in lieu of no provision in the President's budget.

(d) Almena unit, $1,000,000 in lieu of no provision in the President's budget.

(e) Kanopolis unit, $100,000.

(f) Glen Elder unit, $200,000.

(g) Potential but unauthorized units, $100,000; and be it further

Resolved, That a copy of this resolution be sent to each member of the Kansas delegation in the Congress of the United States with the petition that every effort be made to induce Congress to make the provisions stated herein.

Recession in America

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. MACK of Illinois. Mr. Speaker, the distinguished Associated Press economics writer, Mr. Sterling F. Green of AP's Washington bureau, is writing a series of reports on the economic state of the Nation. This series is based on interviews by AP men throughout the country with persons in various walks of life, from jobless janitors to chamber of commerce executives. I include here the first of Mr. Green's articles from the March 2 issue of the Washington Evening Star:

DOWNTRENDS PUT CHILL ON ECONOMIC OUTLOOK

(By Sterling F. Green)

How's business? Not bad, really; lots of dollars changing hands. But not good, either, because the trends are wrong.

Unemployment is going uphill, production downhill. Signs of the promised summer recovery are not yet visible.

There is neither pessimism nor panic in the land. But an Associated Press survey in every State and major city suggests that the personal problems of 4.5 million jobless breadwinners—probably approaching 5 million by now—are sending chill ripples throughout the economy.

For this series of reports on the economic state of the Nation, AP men interviewed a cross-section—bankers and jobless janitors, chamber of commerce boosters and corner storekeepers.

HERE'S CROSS SECTION

Here's a sampling of what they heard:

"They don't look scared, just a little surprised that getting another job is tougher than it used to be."—An employment office director, Little Rock, Ark.

"The hospital bills are killing us. I don't know if I can save the house. Last month I had a tough time meeting the payments."—A former $9,000-a-year aircraft worker, laid off in Los Angeles.

This is a recession, in short, which has many facets. Factory output is down, but profits haven't skidded badly. The banking and insurance industries have seldom had it so good. Total consumer income is high, retail sales are holding up well.

The utilities are still expanding even while the railroads are depositing pools of jobless men at every division point from Portland to Portland.

CONTRAST MARKED

By contrast with the hardest-hit towns, there are cities and a few whole States where the recession is mostly something you read about in the newspapers. The streets are full, stores are busy; the auto dealer is about the only man in town who is complaining.

No region has widespread hardship. The bulk of unemployment is clotted in a few great industrial States and in a handful of depressed industries. But the latter reach deep into the mill towns, mountain hamlets and backwoods.

At a recent estimation, New York had 426,000 jobless. Pennsylvania had 435,000, California 312,000. Michigan had 325,000, or 11 percent of its whole working force.

HAVE SOME INCOME

Probably 2 out of 3 of the idle had some income; they were getting unemployment compensation. Almost 3 million Americans were drawing jobless pay in February. An uncounted number had exhausted their benefits and, still without work, had gone on relief. In steel and autos, supplemental employer-paid benefits have prolonged income.

It is not just a big-city phenomenon. From Maine to the Deep South, the eastern seaboard is dotted with closed textile mills and apparel factories working part time or not at all.

Similar trouble in the sawmills and logging camps can be traced from the Carolinas to the Pacific Northwest.

Slack demand and falling prices for copper, lead, and zinc have hit the Mountain States—and spilled over into Canada, where unemployment is at its worst since the 1930's.

RAIL EMPLOYMENT DIPS

Railroad employment has dropped to the lowest level since 1899. Coal mining, the erstwhile sick industry which perked up during the big boom of 1955–57, is ailing again.

But the big job trouble is in the hard goods manufacturing industries, backbone of American industrial might. Somewhere, somehow, nearly 1¼ million factory jobs have evaporated in 13 months.

It would be easy, but inaccurate, to make the auto industry out to be the prime villain of the piece. This is the overwhelmingly dominant job producer—and so far its fancy-finned, slightly higher priced 1958 models haven't sold well.

When Detroit suffers, a lot of other places have more than sympathetic pains. The problem of auto employment fluctuation, once a Detroit specialty, has been exported to Buffalo, Los Angeles, Cleveland—wherever the industry has spotted its enormously efficient new plants.

Five new tires go unsold with every new car that isn't built. Akron feels the pinch, and so does Miami, Okla. Synthetic fiber goes into cars as well as stockings—Du Pont has laid off hundreds in the South. Toolmakers in Cleveland, steelworkers in Pennsylvania, iron miners in Minnesota, glassmakers in several cities, all feel the pinch of a disappointing auto year.

The housing slump spread similar widening circles of joblessness. When new home starts in 1957 dropped below 1 million for the first time in years, thousands of men who make refrigerators, home laundries, garbage disposals, and furniture stopped getting paychecks.

But if housing and autos are villains, so is Uncle Sam. When Washington clamped an economy lid on military spending last summer, the mighty aircraft industry nosed into a steep dive and its farflung suppliers did ground loops.

LID IS NOW OFF

The lid is now off in that area, thanks mainly to Russia's sputniks. But how soon can the new contracts be translated into actual jobs on factory floors?

"Not until next fall, for the most part," says a California plane builder.

After the recent announcement that total joblessness jumped 1 million in January, the greatest 1-month increase since the depression, President Eisenhower issued a chins-up economic statement predicting unemployment will decline in March.

TWO MILLION IS KEYNOTE

It was a fairly safe forecast. Never since World War II has joblessness failed to drop when the weather opened up for farm, construction, and road work.

But the improvement must be substantial or it won't mean a thing. The average February-to-March decline in job hunters has been 200,000. In other words, unemployment must drop by 200,000 next month just to stay even with the seasonable ebb and flow within the working force.

If the March figures—which won't be known until April—show a substantially smaller improvement than that, and if April fails to better the situation, then watch the fur start flying in Washington.

Crucial School Test

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the Wash-

ington Evening Star on February 5, as follows:

CRUCIAL SCHOOL TEST

Prince Edward is a small and largely rural Virginia county situated some 60 miles southwest of Richmond. But it is a place to watch. For Prince Edward apparently is destined to provide the first really crucial test of the feasibility of enforcing school integration in the face of united and determined white resistance.

The Prince Edward case has run its course through the courts. Some months ago Federal District Judge Sterling Hutcheson refused to set a time limit within which the county must comply with an earlier order forbidding compulsory segregation. This ruling was appealed to the fourth circuit court and that tribunal directed Judge Hutcheson to enter a decree ordering the Prince Edward School Board to make a prompt and reasonable start toward compliance with the no-discrimination order. The Supreme Court now has refused to review this order, the effect being to sustain the circuit court. So the stage is set, or seems to be set, for a head-on collision between the law and public opinion in Prince Edward County. Furthermore, the outcome of this clash in Prince Edward probably will foreshadow the results of similar clashes in countless other communities in the South.

The school population in Prince Edward is about 54 percent colored and 46 percent white. The schools for colored, according to Judge Hutcheson's findings, are equal, if not superior, to those for white children in terms of curriculum and physical equipment. There is every reason to believe, however, that both white and colored schools are going to be shut down. This, in Judge Hutcheson's words, "would be highly and permanently injurious to children of both races." The judge did not say so, but it is obvious that the greater injury will fall on the Negro children.

This is true because the white adults in the county, numbering about 4,500, have banded together against integration. They have raised money, obtained teachers and arranged for makeshift housing for a private school system for their own children. They say they are prepared to abandon their public school system rather than integrate, and there is every indication that they mean it. No comparable arrangements have been made by the Negro parents or for the Negro children.

This is a tragic outlook. For Prince Edward is not ready for school integration. Those who are forcing the issue at this time are making a deplorable mistake, the penalties for which will be visited upon the children. This is the more true in light of the testimony of most of the Negro parents named as plaintiffs in the desegregation suit, a suit brought in their behalf without cost by lawyers for the NAACP. These Negro parents told the Thomson committee of the Virginia Legislature that they thought the purpose of the suit was to obtain better schools for their children and that they did not know it was designed to bring about integration.

Neither side can hope for any victory in Prince Edward. And the losses in store for both sides are incalculable.

The Curtis Bill

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. DOOLEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a speech made by Mr. August Ihlefeld, president, Savings Banks Trust Co., before the savings banks of Westchester County, at the Roger Smith Hotel, White Plains, N. Y., on February 18, 1958.

The savings banks of Westchester County have served that community well over the years and to jeopardize their future status by legislation designed to restrict their interest rate and their reserve balances seems to me to be unwise. It appears inequitable to me to base a tax—as with the Curtis bill—upon the excess rate of return that one class of savings institution, namely, savings banks, pays over that paid by a less efficient competitor.

Mr. Ihlefeld's speech is a trenchant one and I feel that it should be reprinted in the RECORD:

THE CURTIS BILL: A MISUSE OF TAXATION TO STIFLE COMPETITION

(Address by August Ihlefeld, president, Savings Banks Trust Co., before the savings banks of Westchester County at the Roger Smith Hotel, White Plains, N. Y., February 18, 1958)

A healthy, growing economy needs an adequate flow of savings to finance business, home ownership and Government. Only if new capital is provided mainly by savings rather than by commercial bank credit expansion can we achieve growth without inflation.

The favored savings medium of the American people is the savings account. Last year, about $12 billion was added to savings accounts. This was more than half the total increase in liquid personal savings during 1957.

Our laws recognize the vital economic role of the savings account by actively fostering the development of institutions to provide such service to the American people. First savings banks, and later savings and loan associations, were chartered as mutual institutions. Stockholder-owned commercial banks were empowered to pay interest on savings deposits. Credit unions also entered the field. The Postal Savings System, a public agency, was created to provide a similar service.

Competition is the mainspring of a free enterprise economy. Public policy in this country has favored active competition between mutual and stock institutions, and even a Federal agency, to attract and hold savings. These institutions, by competing vigorously with each other, have greatly stimulated saving. Our highly developed, keenly competitive savings system explains why per capita personal savings are far higher in the United States than in any other country of the world.

STIFLING COMPETITION

Adequate competition has been assured in rendering savings account service by the keen rivalry between mutual and stock institutions to serve the saver. Great as has been the contribution of competition to our well being, it is constantly threatened by those who prefer a less rigorous way of economic life.

Attempts to stifle competition, in violation of the basic principles of a free-enterprise system, assume many forms. A particularly effective way to destroy competition is to use the taxing power of Government to wipe out the advantage that a more efficient competitor possesses over a less efficient rival.

Mutual thrift institutions are threatened today by a cunning attempt to use a Federal tax bill to stifle the competition they give commercial banks in savings account service.

The bill designed to achieve this result is deceptively brief and simple. But legislative history contains very few, if any, examples of so brazen a proposal to use the taxing power to undermine and eventually destroy more efficient competitors for the benefit of the less efficient.

THE CURTIS BILL

This bill, introduced by Representative THOMAS B. CURTIS, of Missouri, is officially called the Savings and Loan Association and Mutual Savings Bank Tax Act of 1957. More accurate and descriptive titles would be the "Destruction of Competition for Savings Act," or the "Act To Discourage Savings."

The novel and most significant part of the bill is its section 3, which would tax up to 52 percent the return credited by a mutual savings institution on savings accounts in excess of 3 percent per annum.

Under this section, a mutual savings bank which now pays its depositors 3¼ percent would have to pay an income tax of 52 percent on the ¼ of 1 percent distributed in excess of 3 percent. The depositor receiving 3¼ percent on his savings, in turn, would have to pay personal income tax on the whole amount credited to him, so that payments to him in excess of 3 percent would be doubly taxed. Such double taxation of the return paid on savings violates every canon of sound taxation and sound economics.

However, and this of course is the purpose of the bill, it is very doubtful that mutual savings institutions would be able to pay more than 3 percent on savings if this bill were to become law. In effect, all earnings of mutual savings institutions above 3 percent, whether paid out or retained, would be taxed at 52 percent by direct levy on these organizations, regardless of their need for adequate rserves and surplus to protect depositors. To make even small additions to reserves and surplus to safeguard the additional savings that will be entrusted to them in the future, mutual thrift institutions would as a practical matter be limited to paying a 3-percent rate under the Curtis bill.

It is true that commercial banks are now limited by Federal Reserve regulation to paying 3 percent on savings deposits. But that limitation is imposed because the supervisory authorities do not feel that commercial banks, with the higher costs and added risks they incur as department stores of finance, can safely pay more. It is precisely because mutual savings institutions specialize exclusively in savings service and are barred by law from entering such profitable but uncertain fields as risk loans to business and consumer credit loans that they can pay a higher rate of return upon savings.

THE PURPOSE OF TAXATION

The purpose of taxation is to raise revenue for Government without imposing an undue or unfair burden upon taxpayers or the economy as a whole. To base a tax upon the excess rate of return that one class of savings institutions pays over that paid by a less efficient competitor is a crude perversion of the taxing process.

This principle of taxation, once adopted and upheld in the courts, would set a most unwholesome precedent. It could be used, for example, to impose an added tax upon mutual insurance companies that charge lower premium rates than their competitors. Applied generally, this principle calls for a surtax upon more efficient competitors in all branches of commerce and industry based on the lower prices they charge as compared with less efficient rivals.

WHY THE CURTIS BILL?

Stripped of pretense, the Curtis bill would use the taxing power of the Federal Government to force mutual savings institutions, the greater number of which are State chartered, to reduce the rate of return they pay the saver. This is so improper and unsound a proposal that one inevitably wonders why it is being pushed so vigorously, I might even say feverishly, by its advocates, organ-

ized groups of national and State commercial banks.

The reason becomes clear when we review recent banking history.

Commercial banks, the department stores of banking, have shown limited interest in savings deposits during most of their history. They have preferred to concentrate on attracting demand deposits on which no return is paid, since they could not be sure of earning a profit for their stockholders from savings deposits after paying a competitive rate of return to the saver. During the decade ending in 1956, the average rate of return paid on time deposits by commercial banks was less than half that paid by mutual savings institutions. Commercial banks have thus been content to leave to the specialized mutual thrift institutions the major part of the savings account business of the country. As late as 1956, mutual savings banks and savings and loan associations gained $6.8 billion in savings, while commercial banks had an increase of $2.2 billion in savings and other time deposits.

Last year, commercial banks experienced an unprecedented demand for loans of all kinds at the highest interest rates witnessed in decades, while the restrictive credit policy of the Federal Reserve authorities limited their ability to expand loans and demand deposits. Savings deposits seemed highly desirable under such conditions, and commercial banks sought and received permission from the Federal Reserve Board to pay up to 3 percent to compete more actively for such deposits. A vigorous drive to attract savings deposits was launched by commercial banks all over the country, with what looked like impressive initial results.

But the mutual thrift institutions were also benefiting from higher interest rates, since they could invest funds at much higher yields in gilt-edge bonds and quality mortgage loans. A number of mutual savings banks in New York State raised their rate to 3¼ percent. This was quite frustrating to the commercial banks that were hoping to attract a large volume of savings deposits away from the mutual institutions. In fact, commercial bankers soon found that a major part of the extraordinary gain in savings deposits they achieved at such high cost during the past year came out of their own checking accounts rather than from mutual savings institutions. Thus, they found themselves paying 3 percent on the very same funds they previously had for nothing as demand deposits.

Commercial bankers obviously could not ask legisaltures and supervisory authorities to clamp a rigid ceiling upon the rate of return paid on savings by mutual institutions, so that these savings could be diverted to commercial banks. Instead, efforts followed to attain the same result by devious means. One such effort was the proposal in New York State for legislation to authorize commercial banks to absorb mutual savings banks by merger after distributing their surpluses. When Senator Pierce and his joint legislative committee had the good sense to bury this iniquitous proposal, which flies in the face of every economic and moral principle, the persistent foes of competition turned to the equally improper device of a Federal tax law to stifle competition for savings. The Curtis bill has been gleefully endorsed because it aims to compel mutual savings institutions to reduce the rate they pay on savings to that paid by commercial banks. Once it is enacted, commercial banks hope to draw billions of dollars of savings deposits from mutuals because of their many branch offices and their "banking under one roof" promotion appeal.

The real objective of the commercial bank advocates of the Curtis bill is clearly revealed in resolutions adopted by the administrative committee of the American Bankers Association on January 18 and by the New York State Bankers Association at its annual midwinter meeting on January 20. The resolution of the latter association requests that the Curtis bill be amended so as to apply the 52 percent income tax to any return paid by a mutual savings institution on savings in excess of whatever maximum rate of interest the Federal Reserve authorities will permit commercial banks to pay on savings deposits. With the recent downturn in interest rates, commercial banks expect that the maximum rate they may pay on savings will soon be reduced again to 2½ percent. In that event, mutual savings banks and savings and loan associations would also be forced to lower the rate of return they pay because everything in excess of 2½ percent would be taxed at 52 percent.

The specialized mutual savings institutions invest savings in long-term mortgage loans and bonds. Hence, they will continue to receive for many years to come the increased yields obtained on mortgage loans and other investments made during the period of high interest rates. The Curtis bill, if enacted, would tax away these higher returns which could otherwise be paid out to savings depositors and so stimulate the volume of personal savings over the years ahead.

Commercial banks, by contrast, expanded their business and other short-term loans while interest rates were high. Hence, they will be forced to reduce the rate of return paid on savings accounts in many cases now that short-term interest rates are dropping sharply. The American Bankers Association's administrative committee and the New York State Bankers Association hope to see commercial banks escape this basic competitive disadvantage of the department store type of bank by punitive double taxation of any return paid by a mutual savings institution in excess of that permitted a commercial bank.

The ability of commercial banks to stimulate needed new savings in the years ahead will be lessened as the rate of return they pay on savings accounts declines. They propose that the effectiveness of mutual thrift institutions in stimulating new savings be likewise diminished by punitive double taxation of a part of the return they pay to savers.

If our Congress would want to discourage and penalize savings, one could hardly imagine a more effective way to do so than by enacting the Curtis bill.

FROM 12 PERCENT TO 5 PERCENT

The Curtis bill seeks to prevent mutual thrift institutions from serving savers effectively not only by taxing the return they pay in excess of 3 percent per annum, but also by levying a tax on them for all earnings not paid out where their reserves and surplus are in excess of 5 percent of deposit or share accounts, instead of 12 percent as at present.

When mutual thrift institutions were first made subject to the Federal income tax in 1951, Congress recognized that the safety of these institutions should be the first consideration. Hence, it was provided that earnings not paid out should be added to reserves and surplus accumulated by these institutions to absorb possible future losses. Only when this safety margin exceeds 12 percent of current deposits of savings banks, or of share capital of savings and loan associations, are retained earnings taxed. The 12-percent ratio is modest for institutions that hold large portfolios of mortgage loans and that receive a steady flow of new savings.

The Curtis bill would replace the 12 percent with 5 percent and so make it impossible for mutual savings institutions to accumulate adequate additional reserves and surplus to keep pace with the growth of their deposit and share liabilities in the future.

Let us take the case of a mutual savings bank currently earning 3¾ percent on its deposits, after expenses, and having a reserve and surplus ratio of 10 percent of deposits. This bank can pay 3¼ percent to depositors and add one-half of 1 percent to its reserves and surplus. This would margin an annual deposit growth of 5 percent without reducing the ratio of reserves and surplus to deposits. Under the Curtis bill, this savings bank would have to pay a 52-percent income tax on annual earnings in excess of 3 percent of deposits, leaving earnings after taxes of 3.36 percent of deposits. Were this savings bank to continue to pay 3¼ percent to depositors, the balance available for additions to reserves and surplus would be only about one-tenth of 1 percent, enough to margin deposit growth of only 1 percent per annum. Since this savings bank would have a much greater deposit growth annually merely by crediting 3 perecent to its depositors, the rate paid would have to be reduced. Steps to discourage the growth of deposits would also have to be taken to avoid too rapid a decline in the surplus-to-deposit ratio.

SPURIOUS TAX EQUALITY

The commercial bank advocates of the Curtis bill base their endorsement of this unwholesome measure on the alleged principle of equality. They claim it would place taxation of stock and mutual institutions on a comparable basis.

This equality argument is intentionally fallacious reasoning.

Interest paid depositors by commercial banks is deductible in full from their taxable income. Income of regulated investment companies and capital gains paid out in accordance with applicable provisions of the Internal Revenue Code are not taxed at all to these companies because the shareholders pay personal income tax on such receipts. But the Curtis bill would make dividends paid depositors in mutual savings banks and shareholders in savings and loan associations, payments exactly comparable with interest paid on time deposits by commercial banks, deductible only up to 3 percent. Any return paid depositors or shareholders in mutual savings institutions above 3 percent would be taxed to these institutions and also to the depositors and shareholders. This would be blatantly unequal, discriminatory taxation of mutual thrift institutions. To advocate such legislation on the ground of tax equality is worthy of Alice in Wonderland.

Taxation of all retained earnings of mutual thrift insitutions when reserves and surplus exceed 5 percent, rather than 12 percent, is similarly proposed for the alleged purpose of equalizing taxation of stock and mutual insitutions.

But commercial banks, like mutual savings banks and savings and loan associations, are accorded special tax treatment to safeguard their financial strength. One of the cornerstones of a sound national economy is a strong banking and thrift institutional structure. As an aid to preserving a sound banking system, the Bureau of Internal Revenue a decade ago authorized commercial banks to charge against taxable income sums credited to a reserve for loan losses equal to three times the average loss on loans during the worst 20 years of the bank's experience. If a reserve of this size is not adequate for the purpose ,and many commercial banks have argued heatedly that it is not—and I agree—the amount should be liberalized by regulation or legislation.

Moreover, commercial banks, while making unfounded charges that mutual savings institutions enjoy an unduly favored position under our tax laws, are themselves a major beneficiary of special favor in the tax-

tion of capital gains and losses. The Revenue Act provides that banks may deduct in full from taxable income net realized losses on investments without limit as to amount, a privilege not accorded other classes of corporate and individual taxpayers. Net long-term capital gains, on the other hand, as with other taxpayers, are taxed at only 25 percent. By deducting net realized losses on investments from ordinary income, while paying a tax of only 25 percent on net realized long-term gains, the commercial banks have reduced their taxes by hundreds of million of dollars over a period of years.

Thanks to tax-free additions to loss reserves and the deduction of realized net losses on investment in full from taxable income, commercial banks have paid much less than the 52-percent rate of income tax applicable to corporate taxpayers generally, even though they are stock enterprises conducted for the profit of their shareholders.

Let me hasten to add that these extraordinary benefits accorded commercial banks under our tax laws are entirely justified. They are, in fact, a small price to pay for maintaining a strong banking system and saving the country from the scourge of commercial-bank failures which proved so disastrous in the early 1930's. It is far more important to have a strong banking system than to collect a few hundred millions of dollars of added income taxes.

Yet it ill befits commercial bankers, as beneficiaries of these special tax favors, to agitate for unfair and unsound taxes to undermine the strength of mutual-savings institutions on the specious ground of tax equality.

SPECIAL VERSUS THE PUBLIC INTEREST

I have sought to analyze the Curtis bill objectively and dispassionately from the viewpoint of the public interest.

Let me add a personal note of disappointment and frustration over commercial bank endorsement of this bill.

In a dynamic economy, changes are required from time to time in banking laws and regulations. Leaders in commercial and savings banking in the Empire State conferred recently to seek a common program of legislation that would strengthen the ability of all our banking institutions to serve the public adequately and efficiently.

The breakdown of these promising discussions coincided with formal approval of the Curtis bill by the New York State Bankers Association, coupled with its request that the bill be made even more effective as a means to stifle competition between mutual and stock institutions and to reduce the return paid to savers.

The State Bankers Association thus allowed itself to go on record as favoring a bill which, to advance the narrow self-interests of commercial stockholders, would be highly inimical to the public interest and the future welfare of our whole economy.

I cannot believe that the majority of professional commercial bankers in the State are aware that, by this action they have been ranged behind the highly vocal extremists fringe who have openly dedicated their energies and their talents to the extinction of mutual savings institutions because they stand in the way of local commercial bank monopolies.

AN UNSOUND PROPOSAL

The Curtis bill is not a tax measure designed in good faith to raise additional revenue for our Government.

Its primary objective is to prevent mutual thrift institutions from paying higher rates of return on savings than do commercial banks. This is to be done by double taxation of returns paid on savings by these institutions above rates which commercial banks can afford to pay. This is being proposed for the selfish benefit of the stockholders of commercial banks, with contemptuous disregard of the interests of over 25 million Americans who save in mutual thrift institutions and of the welfare of the economy as a whole.

Its second objective is to weaken mutual thrift institutions by preventing them from building up the reserves and surplus required to margin future growth. This is to be done by taxing all additions to reserves and surplus whenever the latter exceed 5 percent of deposit liabilities or share capital. Such a low ratio is obviously inadequate for growing institutions that seek to serve the needs of the economy through investing savings in mortgage loans and other long-term securities involving some measure of risk.

I cannot conceive that our Congress will give serious consideration to so spurious and unsound a proposal.

Remarks by the Honorable Christian A. Herter, Under Secretary of State, Before the Conference of Grand Masters of Masons in North America, Statler Hotel, Washington, D. C., February 20, 1958

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. SIKES. Mr. Speaker, the excellent work done by the Honorable Christian A. Herter as a Member of the Congress is well remembered here. Since that time he has served as Governor of his State and now holds a very responsible and important position as Under Secretary of State in which all of his friends in the Congress wish him well.

It is my pleasure to present for inclusion in the Appendix of the RECORD a speech made by Mr. Herter before the conference of the Grand Masters of Masons in North America on February 20, 1958:

Twelve years ago, when World War II ended, we hoped in this country we could return to the type of existence that has been traditionally ours—one of comparative isolation, one of living in peace—of minding our own business in our own homeland, carrying on our peaceful pursuits, untroubled by hostilities elsewhere in the world. Unhappily, it soon become evident that one of the nations which had been our ally during the fighting would not keep the pledges it had made to us in treaties and other agreements dealing with postwar arrangements. By its acts, the U. S. S. R. clearly indicated it was no longer an ally but was determined to pursue the Marxist goal of conquering the whole world either by military means or by subversion.

Within the next 2 years we were faced with a very grave problem. Europe, unable to recover from the ravages of war, was faced with a very serious threat of the growth of communist, a growth that was showing extraordinary and frightening vitality at the polls and in organization within those nations. As a nation which after the war still had very considerable resources, we were called upon to help. We did help. The so-called Marshall plan involved a great bipartisan effort between the administration then in power and the Congress of the United States to carry out what to us then seemed a risky but nonetheless essential experiment if the continuing growth of communism was to be checked. Within the next 5 years, the people of the United States contributed to the economic recovery of Europe about $13½ billion. It was a gigantic effort on our part. We were working at the time with nations, sophisticated from an economic point of view, who had among their peoples skilled technicians and who had a great desire to help in their own organization and to help pull themselves up with this aid that we were offering.

As I say, at that time it was a bold experiment. We didn't know the outcome, we didn't know whether we could save that situation but we made the effort. It was amazingly successful. Actually, estimates were made in the early days of 1948 that a total of $17 billion would be required. We spent 20 percent less than that and as of today those nations of Europe have not only recovered but as a measure of their recovery are spending annually on the defense of the free world alone more than we put in during that entire 4-year period.

That however, did not end our responsibilities. In that period after the war, there were very rapid changes taking place all over the world. In the last 10 years, 20 new nations, totaling roughly 700 millions of peoples, gained their independence. Every one of them had been a part of a colonial system, dependent upon European nations for their administrative skills and for their welfare. They achieved their independence as a result of a great ferment of the kind we experienced 150 years ago, when we determined that we were going to become an independent Nation and were willing to fight for it. Some fought, some achieved independence by peaceful means. But what emerged from the great ferment of the birth of these 20 nations, most of whom had a standard of living so low that it is very difficult for us to visualize?

I had occasion only recently to go to the independence ceremonies of the most recent of these 20 nations to become independent—the Federation of Malaya. That nation is the wealthiest of any of the 20—actually the wealthiest nation in Asia—and its annual per capita income is roughly $300 per year. Many of the other nations who have become free have per capita incomes ranging from $25 per year to $75 per year. They have lived in misery and poverty for centuries. But they are now free nations, terribly proud and jealous of their independence. Moreover, they have learned in recent years that it is not necessary for their peoples to continue in the degree of poverty and misery they have endured over the centuries. So they are determined to find the quickest route by which they can raise the standard of living of their peoples and emulate what they have seen in the Western World, our world, whose prosperity they hope to achieve.

I have recited very briefly what has happened only because it is an essential part of the setting in which we are now living. I needn't recite to this audience our relationship with Soviet Russia over the last ten years. It is a relationship that has been frightening in the sense that a large bloc of nations under the grinding domination of a small clique has achieved a solidarity and an advancement not alone in the scientific field but in the industrial field as well which are a serious challenge to us. During that period the U. S. S. R. has made it clear to the whole world that the doctrines under which its revolutionary government was founded are still in force and that, whether by military means or by subversion, the ultimate objective of conquering the world is being actively pursued.

We were forced to maintain and improve our Defense Establishment because we realized that nation was rapidly increasing its military potential. We thought we had achieved a safe lead. Sputnik suddenly destroyed our complacency and made us realize that not only had the military potential of Russia and its satellites increased far beyond the point we had estimated but that its economy, its industrial strength, was far greater than we had anticipated.

We have also discovered in the last 2 years that the U. S. S. R. is not content with the military threat, which has been capable during the last 12 years of bringing into the Soviet orbit the whole of Continental China and the satellite world, forming a solid bloc of approximately a billion people. It has been able to spare enough from its own economy to begin an economic offensive which, added to its propaganda offensive, is attempting to bring over to its side and into its bloc many uncommitteed nations or nations weakly committed toward the free world in order to strengthen itself and bit by bit, nation by nation, increase its dominance of the world.

In the last 5 years, the U. S. S. R. has achieved no notable successes. But that doesn't minimize the fact that it is trying and that its techniques are flexible. I spoke a moment ago of its economic offensive. That is of comparative recent date. On our side we discovered after the success of the Marshall plan that our task from the point of view of trying to hold the free world together was not finished. Through a series of alliances with some 42 nations stretching around the world we have put togther a free world defensive group with which we hope to match or exceed the strength of the military alliance formed by the Soviet bloc. Within our defensive system there are many nations unable to sustain the military strength required to hold their frontiers against Russia or Communist China. We have had to help them from a military point of view; we have had to help them also from an economic point of view. We have done so through the military part of what has been called our mutual aid program.

But in addition there are many countries in dire poverty whose peoples had never known freedom in the sense that we have known freedom, but whose peoples were fired with this determination to join whatever countries and accept whatever help would bring them the soonest assistance in raising their standards of living. These people had no long-term appreciation of freedom as we have known it. By the same token they didn't know the meaning of communism as we knew it. They were interested only in achieving release from poverty as fast as they could.

Now in those countries we have met what you might call a very severe and very effective competition. It is a competition both of subversion and of economic assistance. The subversion takes an extremely interesting form entirely aside from the propaganda with which we are familiar. It is a constant repetition of the claim that the Communist system can bring assistance faster and can raise their standard of living faster than the free world system. This propaganda constantly hammers on the theme that Russia started as an agrarian nation some 40 years ago and today has becomes a great industrial nation—a nation of tremendous strength that can defy the entire free world.

To prove their point, Soviet bloc emissaries are now offering economic aid and promises of credit with "no strings attached." Technical missions are going into these countries with Soviet experts extraordinarily well trained not only in the language and habits and customs of these countries but trained technically in a very surprising way. We have got to meet this very real challenge.

The military challenge is easy for us to understand. It is something with which we are familiar. We don't have to know the names of countries thousands of miles away from us that we can't find on the map. We can realize the importance of the sputniks, we need no diagrams to bring home the threat of intercontinental missiles. These are tangible and vividly meaningful. But there are intangibles much more difficult to comprehend and I want to bear on those for just a minute.

The intangible threats come first of all in the economic field. We have not only the 20 new nations looking somewhere for help and frankly in many cases indifferent to ideological dangers, but many other nations in the fringe area on whom we are dependent for an essential part of our Military Establishment. The economic aid that we have been giving, and in my opinion must continue to give, through the mutual security program has, I think, already kept a number of countries from going into the Soviet orbit in the last 5 years. It is terribly hard for us, particularly at a time when we have unemployment here at home, to realize that what we are doing abroad is something that is vital to our own survival. It is just as important as our military assistance because the danger of having subversion take over one country, then its neighbor, then another—the old Hitler technique—is just as great as the threat of a great military surprise attack upon us and our allies. In the Far East for instance, if nations like Cambodia, Laos, Vietnam were to fall prey to Communist blandishments, you would soon find Communist China moving straight through Singapore into Indonesia with Japan having great difficulty holding out and the Philippines having serious trouble.

On the other side of the world, if north Africa goes, Europe would be in terrible shape. If north Africa goes, it would mean the Middle East would go or, conversely, if the Middle East were to go, there would be great danger of north Africa going. Furthermore, should north Africa go the same process would take place right through the continent of Africa until by degrees we might well find ourselves alone in this hemisphere, hoping that Canada would stick by us, wondering whether or not the same subversion which has been so successful elsewhere would not take over Central and South America, leaving us isolated against 2½ billion peoples in the world.

This may sound as though I am trying to tell a horror story but it isn't. This is a frank appraisal of what we have to face, and face realistically and with fortitude.

There is a third element that again is difficult for us as a nation to comprehend because of our tradition of going it alone and avoiding all the annoyances of overseas entanglements and troubles. It relates to our foreign-trade policy.

Today, this Nation, and I am quoting now figures recently submitted to the Congress by our brother Sinclair Weeks, Secretary of Commerce, annually exports about $19½ billion worth of goods other than military items. We are importing only about $13 billion. Exports represent about 6 percent of everything that we produce in this country and foreign-trade activities provide the livelihood of about 4½ million of all our people who are working today. It represents a very key segment of our entire economy. It is not easy to keep up foreign trade, particularly in times like these when there is the normal and natural temptation to protect those small industries that are having difficulties surviving because of foreign competition. Yet, in order to continue buying from us the wide range of goods they need, our foreign trading partners must earn the wherewithal by selling to us their products and services. In short, they must be able to compete, on reasonable terms, for a share of the market in this country.

This is a difficult problem but it is one we must face up to directly in our own interest. I know something about it coming from the State of Massachusetts, where a number of small industries feel they are being hurt by foreign competition. But, let us remember also that we have to buy. We are the greatest trading nation of the world. We have to import tremendous amounts of raw materials which we don't possess in sufficient quantity here at home, things like coffee, iron ore, tin, rubber, etc. We have to buy not only these things, but in order that we may export our own produce we have to buy some manufactured goods. Today we export nine times as much in manufactures as we import in manufactures. This again is a part in trying to hold the free world together. We were successful, as I said at the very outset, in trying to pull Europe together beginning in 1948. We put it back on its feet so that it could get into the trading field, and it did. It can only survive by foreign trade. Countries like England and Italy and Germany can't possibly produce enough food to exist. They buy their food in large measure from us. Japan is in the same situation. They won't be able to pay for that food nor can they pay for the essential raw materials for their factories unless they sell their manufactured goods somewhere in the world and that includes us. To repeat, foreign trade is a matter of survival for many of our allies and friends. If they find themselves going under from an economic point of view because of dwindling foreign markets, they will offer an easy target for Communist encroachment and domination.

Thus we are living in a world where a very real threat hangs over our heads. I am not too worried about it if we have the fortitude to hang on. I am not too worried about it because basically our ideals, our convictions, our way of life are infinitely better than what we are opposing. The question is whether we have the discipline and the fortitude to hang on with this threat facing us so that we can outlive that day which Lenin 40 years ago described as the day when either the capitalist system or the Communist system would preside at the wake of the other. I believe we have that fortitude. I am convinced that we can carry it through and I am not worried as to who will be sitting at the wake.

Downgrading Carl Rowan Will Not Change the Facts About the Farm Communities

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mrs. KNUTSON. Mr. Speaker, those who have been worried about the sort of effect on farm communities that Carl Rowan has been talking about in the Minnesota Morning Trib series, have been predicting this and warning against it ever since the inception of this administration's farm policies.

Time magazine tells of a Rumpus Over Rowan on page 57 of the February 24 issue. Carl Rowan's reply to this is a very real challenge. One answer might

be to bury our heads in the sand and think the farm depression "will just go away quietly." Another is to face the facts with strength, wisdom, and imagination, and set about the long, hard job of reversing the deteriorating situation. Merely "cussin' out" the author of a documentary of this sort will not slow down the spread of the farm depression to the farm communities, to the suppliers, and ultimately to the entire national economy.

Under permission heretofore granted, I insert in the RECORD the Time magazine article, together with the final article in Carl Rowan's stark series in the Minneapolis Morning Tribune, this one from the February 14 issue:

[From Time of February 24, 1958]

RUMPUS OVER ROWAN

"You should ship Carl Rowan to Russia," a smalltown attorney angrily urged the Minneapolis Tribune (circulation 212,873). The Tribune's prizewinning Reporter Rowan (Time, March 4) was raising tempers all over Minnesota last week. When somebody invited him to make a speech in one rural community, the town fathers promptly refused use of the school auditorium. Jeered a rural editor: "If Rowan visited a town where a funeral and a wedding were taking place simultaneously, he'd go straight to the funeral."

The rumpus over the Tribune's 32-year-old Negro star arose from an explosive 11-part series reporting that funeral bells are, in fact, tolling for whole communities throughout predominantly agricultural Minnesota. Assigned to look into economic and social conditions in depressed farm towns, Rowan returned from a 90-day tour convinced that scores of communities will have to shift gears or perish. He found that a long-term drop in the State's net farm income (down $97 million since 1949) was aggravated by an agricultural revolution that is eliminating the country town's long-time function of market place and supply center. Yet, he reported, bigwigs in many rural communities are more interested in keeping out unions than bringing in industrial payrolls that would give their towns economic balance.

In the statewide clamor stirred by his series, more than half the 300 readers who had bombarded the paper with letters last week plainly agreed with Rowan. Though rural papers split evenly over Rowan's soul-searching report, none challenged his facts. To one Farm Belt editor who accused him of exaggerating his conclusions, Carl Rowan replied: "Sure, the truth hurts, and if I have spiked some tender toes—well, I'm not sorry. I viewed my job much like that of a doctor diagnosing an ailing patient. It would be a silly doctor who spent 2 hours telling the patient how pretty his teeth are, how strongly his heart beats, how good his reflexes are, only to add a postscript as the patient walks out the door: 'By the way, you may have cancer.'"

[From the Minneapolis Morning Tribune of February 14, 1958]

GROW OR DIE: WHAT IS FUTURE OF SMALL TOWNS?

(By Carl T. Rowan)

(Last of series)

What, then, can we say is the future of our small towns?

The first and obvious fact is that many rural communities will live and grow, for our good farming areas will never become a barren wasteland.

Still, some of our towns will waste away. Part of the agricultural revolution that neither Washington nor our legislature can repeal has decreed that some of our towns belong to a bygone era.

Our speedy, all-weather roads, the trend toward bigness in every area of our economy and the changing tastes of the people have wiped away what once were compelling reasons for the existence of some towns.

Rural sociologists and others have concluded generally that communities of 2,000 or more population have the best chance of prospering and that smaller towns must struggle constantly for survival.

Yet, many very small towns will continue to exist as minor service centers catering to the special needs of a few farmers and others.

Other small towns will become "bedrooms" for growing industrial towns nearby, with smalltown workers commuting to and from work.

Already, small towns near Rochester have been aided in the struggle to survive because their residents have found jobs at International Business Machines and other Rochester firms.

But the experts agree that survival may depend not so much on the current population figures as on the willingness of the people to face this revolution in rural society and ask themselves some soul-searching questions about its painful implications.

The towns that prosper, the experts say, will be those in which the people admit that changes are occurring in our State and area which go to the very heart of rural life.

The impact is great, and it has jarred not only the housewife who struggles with the family budget, but the churches and schools which have been such major factors in rural and small town life.

What is happening in religion? Our churches are becoming more urban as it becomes more and more difficult to fill pulpits in rural parishes.

Dr. Philip Dybvig, home-missions director of the Evangelical Lutheran church, said: "We have 130 to 140 vacancies. These are spread all over—I can think now of one very large church that is vacant. But the large church that can pay a good salary and is located in a nice, convenient place to live usually stays vacant only 2 or 3 months.

"But rural parishes—especially those of three or more congregations—stay vacant a long time because the people have to call several ministers before one accepts.

"Even though there has been no retrogression of our work in rural areas, there definitely is a disproportionately high number of vacancies in small towns."

Dr. Theodore Matson, American missions director of the Augustana Lutheran church, reports 41 vacant churches in 24 parishes in rural Minnesota.

He says there is a general shortage of ministers and an acute shortage of those willing to serve rural areas.

"We have altogether too many places where there is a church structure based on horse and buggy days," said Dr. Dybvig. "We need to consolidate some congregations. But the rearrangement comes slowly because of petty jealousies, animosities, family feuds and the sort.

"Yet all of us must face up to this fact: there now are many communities where farms have been consolidated, leaving many beautiful farmsteads with no one living on them because the land has been rented to a neighboring farmer.

"In a few of these places churches have died out completely simply because of lack of people to support them. The consolidation of farms has made more urgent this need to consolidate some churches."

Small town school authorities are acutely sensitive to any suggestion that the educations they provide are less than the best. I heard many angry jibes at Minneapolis School Superintendent Rufus Putnam, who made such a suggestion a few months ago.

Yet, small town school officials pass out casual bits of information that can lead to only one conclusion: some current developments are jeopardizing the quality of education in our small towns.

The farmer who says he's too broke to buy a new tractor also is too broke to vote in favor of a new school bond issue.

Listen to these comments from the school superintendent in one Minnesota town of more than 5,000 population:

"Every teacher I approach is mighty reluctant to come this far from the big cities.

"We used to have a choice of 3 to 5 teachers for each position. Now we sing hallelujah to have one, and we don't ask that one any questions.

"Now what does that do to the level of education? It's bound to hurt it."

One banker said his small western Minnesota town could not run its schools if the bigger town nearby did not have the somewhat controversial policy of banning married women as teachers.

"We've got 8 or 9 married women commuting from that town to teach here," he said.

"Don't get me wrong," he added. "They're good teachers and we're mighty grateful to them. But from the standpoint of our economy, it means we're sending $40,000 to $50,000 a year to another town."

Since a teacher's contribution to a community ideally does not end with the last class bell, it also means something else: The banker's town and its children lose many of those intangibles that accrue from having resident teachers who influence the cultural and moral level of a town, who provide leadership in many of the extra-curricular activities that go a long way toward the making of men and women.

The medical outlook is no brighter. Trying to get a doctor to set up practice in some rural towns is like trying to get Khrushchev to denounce vodka.

When Wood Lake lost its doctor about 5 years ago, townspeople tried vainly to get another. Finally they built a $12,000 clinic, a most aggressive move for a town of 600 population, but still no doctor. The clinic has been empty for 2 years, except when a doctor from another town comes in.

One prosperous town, where a general practitioner might easily expect to gross $40,000 a year, advertised for a doctor for months without getting a nibble.

According to Dr. Lowry Nelson, professor of rural sociology at the University of Minnesota, there has been a steady increase in the number of physicians in Minnesota during the last 15 years, but—

The number of doctors in towns under 1,000 population has dropped sharply.

There has been a marked overall decrease in the percentage of physicians in communities under 5,000.

The proportion of doctors in towns of from 5,000 to 10,000 population has remained constant.

In communities of 10,000 to 25,000 population there has been a large increase in the percentage of doctors—but even this is due largely to the marked increase in the number of doctors in one town—Rochester, site of the Mayo clinic.

While the number of doctors has increased steadily in the Twin Cities and Duluth, the percentage has risen only slightly.

What do these unhappy situations in religion, commerce, education, and medicine add up to for our small towns?

One conclusion is that these problems interplay on each other. To solve one, a community almost has to solve them all.

Rarely does a gifted young teacher care to go to a community that is in the throes of economic decline, or where the morale of the mass of the people is depressed, or where the sons of poorly paid employees come to school more for the hot lunch than for knowledge of grammar and science.

Nor does a young doctor care to choose as his life site a town beset by economic problems where educational facilities and staff are so poor as to handicap any children he may produce.

Nor is industry (so often regarded in itself as the small town's cure-all) likely to locate in a town that lacks the ability to get a doctor or good teachers or a minister.

What we may have, then, is a problem too big and complicated for any one town to solve alone. It may be necessary, before substantial progress can be made in luring industry, for Minnesotans to attack on a statewide level other problems such as education and health.

Legislatures in some States already have set up sweeping scholarship plans under which the recipient agrees to practice medicine in a small town for a certain period.

It is not inconceivable that our society, on an organized basis, also may have to offer scholarship or other inducements to gifted teachers in order to get them to go back to rural America and refuse some of the raw resources of manpower and brainpower that have been wasted in the past.

Painful as the transition is, one cannot help feeling that smalltown life, with all its benefits, can be preserved on a prosperous basis if the people in these towns see the need for change and for bold action.

Too many places, though, are dominated by the attitude that the golden age will come automatically if only we can find the right secretary of agriculture. Or if one of a dozen other simple moves were made.

The wife of one businessman told me, "Most of this mess would end if the Government would ban wholesale catalog firms. Our busines places just can't compete with these cutrate mail-order places."

Another woman said, "Co-ops are the ruination of the small town," and that to outlaw them would be to restore tranquillity.

Yet few people would say publicly what many said privately, that in too many towns the people with the education, the ability, and the financial resources to promote growth are satisfied.

In many communities the spirit of resigned hopelessness is strong. In three towns in particular I heard waves of talk of economic fear.

No one in any of these towns has ever contacted the State department of business development or the other agencies charged with helping produce economic growth in Minnesota.

There are many indications that although the revolution makes change inevitable, for the great majority of our small towns death can come only by default.

As of now, the bloom is off the boom, and those who feel the pinch for the first time have sensed that all good things do not come to those who merely wait.

Many of our rural residents feel the whip of the revolution upon their backs, pounding relentlessly. Their challenge is to cast off lethargy, to banish pessimism, to grow with change.

When this challenge is met, perhaps a technological revolution that now seems so painful can be harnessed and turned into a giant laborer, the modern Paul Bunyan, of our prosperous countryside.

H. R. 8002

SPEECH

OF

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8002) to provide for improved methods of stating budget estimates and estimates for deficiency and supplemental appropriations.

Mr. BASS of New Hampshire. Mr. Chairman, I urge the House of Representatives pass H. R. 8002, to provide for annual accrued expenditure budgeting. H. R. 8002 is identical to H. R. 7427 which I introduced, and carries out one of the major recommendations of the second Hoover Commission.

The House should never turn its back on efforts to increase the public's understanding of the Federal budget and costs of government. In my judgment this bill will go a very long way toward making sense for millions of people in this country out of the present budgetary hodgepodge. If this bill did nothing else, its passage would be justified.

However, other real advantages exist. We will have better knowledge and control of dollar expenditures in any 1 year. We will be able to better judge the effects of Government spending on the national economy—a point of vital importance to the country this very day.

The Appropriations Committee and the Congress will retain more practical and effective control over appropriated funds with a year-by-year review of all proposed expenditures. Vast carryover funds will be eliminated or brought under greater control.

The advantages of this bill far outweigh the possible disadvantages, and I urge the House to pass this needed legislation.

Ballyhoo for Foreign Aid Fails To Obscure the Issue

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. HENDERSON. Mr. Speaker, the Eric Johnston party is still very much in the news, and, insofar as the headlines are concerned, there seems to be only one point of view—that of Mr. Johnston and those who favor an increased program of foreign aid. Therefore, it came as a welcome surprise to read an editorial in the Ohio State Journal of Columbus for Friday, February 28, 1958, which asks the very simple question, "Was anybody fooled?"

Copies of this editorial have been sent to me by numerous constituents because the content probably represents their own feeling and also because of the final paragraph, which says:

Any voters who agreed with the speakers will think, of course, that the Conference on Foreign Aspects, etc., was a smash hit. Those who didn't can still write letters to their Congressmen. Their two bits' worth may go a lot farther than did Mr. Johnston's effort to outdo Mr. Todd.

The editorial is as follows:

WAS ANYBODY FOOLED?—BALLYHOO FOR FOREIGN AID FAILS TO OBSCURE THE ISSUE

The promoters of foreign aid have just staged in Washington a propaganda event that challenged at one and the same time the prowess of Mike Todd and of Madison Avenue in New York.

Mike Todd has set something of a record in producing and publicizing Eighty Days Around the World. Madison Avenue is the symbol of smart promotion in today's propaganda-plastered world—the staging of publicity stunts, the creation of a demand for this or that product by pure synthesis.

Eric Johnston, front-office man for the motion-picture industry, just about outdid Todd and all the rest when he staged his amazing production, the Conference on Foreign Aspects of United States National Security, in Washington a few days ago.

Just imagine getting President Eisenhower, Vice President Nixon, Secretary of State Dulles, former President Harry Truman, former Secretary of State Dean Acheson, Adlai Stevenson, Tom Dewey and Bishop Fulton J. Sheen all in one act.

The act played to about 1,200 specially invited men and women from everywhere in the country and, of course, it was broadcast by radio and television and filmed for motion-picture reproduction.

The result was a chorus of accord in promoting President Eisenhower's request to Congress for $3.9 billion in foreign aid, which had not been very happily received on Capitol Hill.

Realizing his request was headed for trouble, the President asked Mr. Johnston, who has been a troubleshooter for the White House in foreign affairs on previous occasions, to do something to rally public support.

Mr. Johnston came up with the idea for The Conference on Foreign Aspects of United States National Security. The White House gave him some office space, a couple of secretaries from the White House pool and some White House stationery.

Using sources of his own, Mr. Johnston made a list of over 1,000 people around the country who mold public opinion, specifically those who could be counted on to build a fire under Congress for foreign aid. From another list he solicited contributions for staging the extravaganza.

The guests for the most part paid their own transportation and hotel bills, flattered at a chance to hobnob with the Washington VIP's. That left only the luncheon and dinner checks to be picked up by the financial backers of the scheme.

There wasn't a sour note in the whole chorus of ayes for the foreign-aid bill—except, of course, some partisan potshots from little Harry Truman who started the postwar giveaway program in the first place.

We recite these events and background lest there were some gullible Americans who viewed the Conference on Foreign Aspects of United States National Security as a great outpouring of coast-to-coast public sentiment for spending precisely $3.9 billion this year for global aid.

It long has been obvious that the two major political parties have become almost indistinguishable in the philosophies backed by their leaders in power. One of the least distinguishable is any difference on foreign aid.

Since World War II, the total cost to American taxpayers of the foreign-aid program has been $60 billion. The end is nowhere in sight.

It is repeatedly urged that "politics must stop at the water's edge," "let's take foreign aid out of politics," and so on. In other words, "Let's not create an issue on which the voters can take a hand."

In the case of the conference on foreign aspects, etc., the idea was to try to overwhelm Congress with the thought that there is unquestioning, universal approval of the proposed $3.9-billion foreign-aid bill.

It almost seems as if the boosters for foreign aid don't want the issue debated. We submit that it ought to be debated. Exchange of views is the essence of representa-

tive government. It is the democratic process at work in a real and effective manner.

After all, isn't representative, democratic government what we are fighting for in this world?

We can't believe the Members of Congress were taken in by Eric Johnston's "dress parade" in Washington. We don't believe they heard anything they didn't know before. They already knew that each of the speakers was for the foreign-aid bill—otherwise they wouldn't have been permitted to speak.

Any voters who agreed with the speakers will think, of course, that the conference on foreign aspect, etc., was a smash hit. Those who didn't can still write letters to their Congressmen. Their 2-bits' worth may go a lot further than did Mr. Johnston's effort to outdo Mr. Todd.

Long Beach Veterans' Administration Hospital Complimented

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. HOSMER. Mr. Speaker, gratitude if often felt, but less often expressed. It is, therefore, with considerable pleasure that I read a letter to the Vice President from a veteran who is a patient at the Long Beach Veterans' Hospital. Because Dr. V. V. Edwards, the administrator, and each of the fine employees of that hospital give so much of themselves to serve their patients and make their hospitalization period as pleasant as possible, it occurs to me that recognition of their efforts by the publication here of the letter, written by John F. Fitzsimmons, is appropriate:

VETERANS' HOSPITAL,
Long Beach, Calif., March 1, 1958.

VICE PRESIDENT OF THE UNITED STATES, HON. RICHARD NIXON:

It is a difficult thing to try to express your appreciation to the Congress, the Senate, and the various organizations who made the veterans' program possible.

I am a patient in the veterans' hospital at Long Beach, Calif. My service was peacetime.

I expect to be released in about a week. May I tell you a fellow couldn't ask for better treatment? I haven't been singled out for any special treatment or attention. There are 49 patients in this ward, and they are constantly coming and going. The doctors and nurses are kind, considerate, and understanding—and the food. So many times I was sure I didn't care to eat but the trays were fixed so appetizingly that I ate in spite of myself.

A year ago my sight failed. The Veterans' Bureau entered me in the hospital last July and removed the back lens from my right eye and last week they removed the back lens from my left eye. Dr. Delgado and Dr. Farr did the work, and I don't think you could find any better surgeons anywhere. It amazes me the way they look out for you. My right eye turned out excellently, and I'm confident the left eye will also.

To see the grass and the coloring of the fruit blossoms again is wonderful. So may I take this way and say I'm deeply grateful to the Government and the Veterans' Bureau for the return of my sight and the pension I've received through the years.

JOHN F. FITZSIMMONS,
La Habra, Calif.

"An Ordinary Guy" Replies to Harry Truman's Speech

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I include the following letter to the editor of the Pittsburgh (Pa.) Sun-Telegraph written by Mr. Harold A. Ross, Falls Creek, Pa., which appeared in the February 27, 1958, issue of the Pittsburgh Sun-Telegraph:

"AN ORDINARY GUY" REPLIES TO HARRY TRUMAN'S SPEECH

I am just an ordinary guy, tradesman at Jackson Vitrified China Co., Falls Creek, Pa. I read about Harry Truman's speech in the Sunday Sun-Telegraph. The more I read, the more disgusted I became.

1. He charged the administration with losing the race to the Russians. The biggest race ever lost to the Russians was in the loss of China and North Korea to the Communists during the Roosevelt and Truman administrations.

2. Truman mentioned a Republican recession. The recession during his administration was a dandy—the only time in 20 years that I lost time at work.

3. Truman said the people would not be gullible again. They aren't gullible enough to swallow Truman's absurd expressions any more. Even the Democratic delegates ignored his ravings at their last nominating convention.

4. Harry mentioned smear technique of economic critics. Truman is a master at smearing, an aid to Russian propaganda.

5. He said that the country may be on the brink of a 1929 type of depression. The only thing that lifted us out of that depression was World War II, not the Democrats. The Korean war rescued us from Harry's recession.

6. Truman said, "The people want the truth." You can't get it from Harry.

7. He accused the administration of neglecting the farmer. Should the administration approve the artificial program of storing surplus foods to hold the price up? Much of the food spoiled, and the rest cost the taxpayers millions of dollars for subsidies and storage.

8. Truman talked of price rises. The worst inflation of 20 years came about in the Roosevelt and Truman administration.

9. He called the Democratic Party the party of working men and women. Where did the inflation of Truman's administration leave people with savings, people with pensions and fixed income?

Harry would use Federal aid, a Socialist measure, rather than contracts to private enterprise to cure unemployment.

I believe it is Truman who can no longer bamboozle the people.

HAROLD A. ROSS.

FALLS CREEK.

Inflation Danger Must Be Watched in Taking Steps To Revive Economy

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. ROBISON of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following column recently published in the Binghampton (N. Y.) Press of February 23, 1958, by the financial writer, a Mr. J. A. Livingston. Mr. Livingston points up the dangers which must be guarded against in any attempt the Federal Government may make to revive the economy:

READJUSTMENT HELD DOING SOME GOOD
(By J. A. Livingston)

PHILADELPHIA.—In an era in which the slightest touch of unemployment is a cardinal sin, it is reckless for a financial writer to suggest that a recession—a readjustment—has a purpose. He becomes a hair-shirt lover, an unfeeling through-the-wringer guy: "He has a job, so doesn't give a hoot about people walking the streets."

Yet a readjustment has its place. Adversity is not sweet for its own sake, but for what it accomplishes. Americans have been beefing about the high cost of living, about the styles and prices of automobiles, about the expenses of renovating a room or putting up a new house.

How do you get automobile manufacturers to change their styles? Or cut their prices? By not buying cars, by heaping adversity on the manufacturers, and, unfortunately, by causing unemployment.

And how do you get prices of home renovation down? By making contractors a little hungrier for jobs. When work piles up so high that construction firms are far behind commitments, they don't bid close. They don't spend time and effort on getting costs down. They make fast while they can.

But when things get tough, everybody watches pennies—in the home, office and factory. Many a firm, which didn't care about postage costs, decides to reexamine its mailing list, see if it is up to date. Many an executive, no longer worried about placating customers sweating for deliveries, has the time to look around his own shop and see the laxity and waste developed during easy-come, easy-go prosperity.

Right there, then, is the great dilemma of 1958. To stop the recession without starting inflation. The Reserve Board has reduced the discount rate. It has purchased Treasury securities. It has just cut reserve requirements. Commercial banks are borrowing less from the Federal Reserve System and have excess reserves. This enables them to expand investments, seek out borrowers.

President Eisenhower has speeded up defense spending, initiated a program to expand Federal post office and office building, spurred aids to home construction. Blueprints for public works are being hauled out of files for future use. Held in abeyance is tax relief—in case a seasonal pickup in employment doesn't take place in March and April.

Both the President and the members of the Federal Reserve Board are anxious to check unemployment before it gathers such mo-

mentum that a recession becomes unstoppable. And yet, they don't want to initiate another happy-go-lucky period of confidence: "Everything has to go up. Prosperity is underwritten by Uncle Sam."

The President is under great political pressure. The Republicans want to wave the prosperity manner high in September and October. In an election year, no time is too soon for an increase in employment, payrolls, production, and sales. But, economically, too much can be done too soon.

If the sole problem was to invigorate demand, that would be simple. The Reserve could reduce reserve requirements again, buy more Treasury securities, or reduce the rediscount rate, thereby easing credit further. President Eisenhower would call for an immediate tax cut, as some Democratic Congressmen are already urging.

But latent consequences must be considered. To transit immediately into another inflationary whirl would be postponing the unpleasant. The Federal Reserve Board, at a later date, would have to throttle down the expansion, introduce credit constraints, and bring about another readjustment.

Consider the automobile wage negotiations coming up shortly. If automobile production were booming, workers would expect a big boost in wages. Walter Reuther, head of the United Auto Workers, would be forced to demand a big increase. The companies, not willing to interrupt the flow of production and profits, would grant a big increase.

But if sales are slow, auto executives will be fighting to keep down costs. Auto workers will be less anxious to strike. The wage-price-cost spiral will not get an automatic boost.

Both in 1948–49 and 1953–54, the recessions hit hardest in the winter months.

That's because in January and February, unemployment usually makes its seasonal high. But production recovered in the spring and so did employment. It would be foolish to trust history to repeat. It is well for the President to get plans set—in case business doesn't pick up. But it would be equally foolish to move too fast and thus lose the benefits of cost-and-price reducing adversity.

Mississippi Valley Association Favors Reciprocal Trade Agreement Extension

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Everett T. Winter, executive vice president of the Mississippi Valley Association before the Committee on Ways and Means of the House:

STATEMENT OF EVERETT T. WINTER, EXECUTIVE VICE PRESIDENT, MISSISSIPPI VALLEY ASSOCIATION, BEFORE THE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES

My name is Everett T. Winter, 1978 Railway Exchange Building, St. Louis, Mo. I am executive vice president of the Mississippi Valley Association.

Our association was organized in 1919, and at our 39th annual convention, held in St. Louis on February 10–11, a number of resolutions that constitute the platform of the organization, were adopted. There were present approximately 1,500 delegates from 31 States. To give you a cross-section of the makeup of the Mississippi Valley Association, our membership (as of last October when last analyzed) consisted of the following:

Number of accounts	Classification	Percent of all income
68	Associations (floods, navigation, chambers of commerce, etc.)	16.7
79	Barge operators (inland waterway)	7.3
48	Metal products (distributors, fabricators, producers)	6.9
11	Merchant marine	5.4
70	Financial institutions (including insurance)	5.3
25	Light and power	5.2
24	Harbors and terminals	4.5
32	Petroleum products	4.2
22	Industrial and farm machinery manufacturers	3.4
92	Individuals, miscellaneous and unclassified	3.3
63	Retail stores	3.2
26	Construction, contractors	3.1
24	Municipalities and government subdivisions	2.8
42	Marine supplies and services	2.7
27	Building material suppliers	2.7
37	Grain-seed-feed	2.6
18	Ship and boat manufacturing	2.5
16	Levee, drainage, and irrigation districts	2.5
14	Public utilities (other than light and power)	2.1
25	Radio and publications	1.7
49	Professions	1.6
9	Beverages	1.3
19	Food products	1.2
16	Drugs and chemicals	1.1
17	Industrial and farm equipment dealers	1.0
6	Coal	1.0
9	Livestock and meat	.8
18	Timber and lumber	.8
13	Real estate	.7
8	Containers	.6
5	Shoe and clothing manufacturers	.5
5	Railroads	.4
4	Airlines	.5
8	Printing and office supplies	.3
3	Trucks	.2

You will note that about every known business and profession is represented in our organization. None is represented to the extent where any one or two industries can determine the policy of the organization.

To get a plank in our platform requires the project or statement to be cleared through a screening committee such as the traffic advisory committee, then by the resolutions committee, which is an elected committee, and then if it passes that committee, it goes to the general convention. The following resolution was passed without a dissenting vote in any committee, and at our general meeting without a single dissenting vote:

"RECIPROCAL TRADE ACT EXTENSION

"We believe that the reciprocal trade agreements program, begun in 1934, has served the United States extremely well, has substantially contributed to expanded and healthy two-way foreign trade, and has put the United States in the lead for liberalization of trade which is a major contribution to world peace. We stand for the indefinite continuation, without hampering amendments, of the program and urge Congress to renew the law for a number of years when it comes up for consideration this year (1958)."

Mr. Chairman and gentlemen of the committee, we make no claim that we are experts in the field of tariffs. I am sure that there are any number of experts in this field, perhaps serving on the staff or as members of this committee, who could ask me many questions of a technical nature that I could not answer intelligently. My entire story is contained in the resolution passed by a cross section of American industry and agriculture as recorded at our meeting in St. Louis recently. It seems to me that the thinking of this cross section of America is important.

We hope the Congress will extend the Reciprocal Trade Act.

Thirteen Years of Enslavement in Rumania

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MACHROWICZ. Mr. Speaker, this 6th of March is a sad day for the Rumanian people. It marks 13 years since Rumania's enslavement by the Soviets. This occasion should bring to our minds more vividly the tragedy of modern slavery.

Victims of Moscow's aggressive expansionism and of international failures which abandoned the eastern part of Europe to the absolute rule of the Russians, the Rumanians have since then been subjected to merciless Communist oppression.

The starting point for this Rumanian drama was one of the most flagrant and brutal examples of interference and seizure of a free nation by the Soviets. Two weeks after the Yalta declaration, one of the signatories, Soviet Russia, was ruthlessly crushing the independence of the country with a brazen display of brute force. While 19 Rumanian divisions were fighting alongside the Allies, Vishinsky, backed by the Russian tanks, ousted the legal government of General Radescu and imposed a Communist stooge government of Soviet agents.

It is to the honor of the Rumanian people that after 13 years of Communist terrorism, deportations, slave labor camps, religious persecution, and economic bleeding, their spirit of resistance is still alive today. I am informed that a new huge slave labor camp is now functioning with thousands of miserable, prowestern, pro-American prisoners, in the swamps of the Danube Delta. But in spite of all this the nation's spirit is not vanquished.

The pro-American sentiment of the people is shown on every occasion. For instance, the first day the American exhibition of architecture was recently opened in Bucharest, more than 20,000 despite the risks entailed, visited it.

The Rumanians like other East Europeans are deeply attached to Western culture and aspirations. Notwithstanding the long Soviet Communist occupation and the apparent Western acquiescence in this state of affairs, they are obstinately clinging to their beliefs and hopes in the free world. This fact is a major problem for the Kremlin throughout East Europe, because its rule requires the periodic deflating of those expectations and hopes. It is for this reason that Moscow tries to induce the United States to officially drop the issue of the status of the Russian controlled Eastern Europe and is continually pressing for a disengagement which would help consolidate the status quo.

The Rumanian people have undergone these last 13 years untold suffering and disillusionment.

On this sad anniversary of the Soviet seizure of Rumania, I convey to its people our hopes and faith that the future will bring to them freedom and liberation.

National Farm, Business, Organization Leaders To Meet on Rural Development Program

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I wish to comment on the announcement of a most important rural development program conference to be held June 16 and 17, in Memphis, Tenn. We have the opportunity to lend encouragement and offer suggestions to this meeting. The progress of this program in less than 3 years is most encouraging.

It is a program which adds strength to our total Nation as low-income rural families and families on small farms attain more adequate incomes.

For example, the great metropolitan area of St. Louis, which I serve, draws many of its workers and leaders from rural areas where there is underemployment and small farms. These people serve best the cities and industrial centers when they have grown up with adequate medical care and received more education than is now usually the case.

Also, every town, city, and trade area is aware of the fact that the 1.5 million farm families with $1,000 or less of income per year are not very large customers for all the goods and services that most families are able to enjoy.

The private citizens and nongovernmental organization representatives who gather in Memphis will discuss ways in which they can be even more effective in helping move the rural development program forward. Its success depends upon the way in which State and local leaders team up and make a determined effort to get at the problems of underemployment in rural areas.

I serve on the Agricultural Policy Subcommittee of the Joint Economic Committee. We held very extensive hearings this winter. At the conclusion Senator SPARKMAN, our chairman, issued a statement for our committee which, in discussing low-income farm families in agriculture, said in part:

> The third problem is the need to develop local nonfarm resources and otherwise to assist farm-reared people who have poor opportunities in agriculture to earn income in other ways. The need is to assist farm people in making a normal change reaching back to Colonial days. But there is no implication that any program should try to push people out of farming * * *.
>
> Development of local nonfarm resources, vocational training, and improved employment information and assistance are among the means suggested for widening the employment opportunities for farm-reared people.

Missouri is one of the 30 States in which there are pilot or demonstration counties. There are some 1,000 counties in the Nation in which farms are small or land is poor and fine farm families need more income. This is not a new problem. It has existed all down through the years—but now an effective program is underway. All of us have an obligation to lend the rural development program support and encouragement. We should applaud especially private citizens and organizations for the fine work they are doing.

NATIONAL FARM, BUSINESS, ORGANIZATION LEADERS TO MEET ON RURAL DEVELOPMENT PROGRAM

National farm, business and organization leaders will meet in Memphis, Tenn., June 16 and 17 to review progress in the rural development program, and the contribution private groups are making to the work now going forward on a demonstration basis in 30 States.

The conference is being called by the Committee for Rural Development Program, which includes Under Secretaries of five Federal departments, the Administrator of the Small Business Administration and a member of the President's Council of Economic Advisers. The chairman, True D. Morse, Under Secretary of Agriculture, issued the announcement on behalf of the committee.

It is expected that all major national organizations working in such fields as agriculture, business, labor, education, conservation, health, welfare, youth programs, and religious affairs will be represented at the Memphis conference.

During the 2-day meeting, individual speakers and panel members will appraise the importance to the Nation of increased incomes and opportunities for families in rural areas of underemployment and small farms. They will also suggest ways in which private citizens and nongovernmental organizations can help on rural development programs.

Speaking for the Committee for Rural Development Program, Under Secretary Morse said the following would be among the main topics of discussion at the meeting:

Social and economic effects of underemployment among farm families.

Industrial development in rural areas.

Education beyond the high school for rural youth.

Contribution of service and civic clubs to rural development.

Role of churches and religious organizations.

Participation in rural development programs by private banks and businesses and their organizations.

Importance of participation by youth organizations.

Communications media as means of encouraging interest in local programs.

The rural development program is a cooperative Federal, State and private effort to promote balanced economic development in rural areas with substantial numbers of underemployed people. On January 1, 1958, some 100 counties in 30 States were participating on a demonstration or pilot basis. Planning and program organization are going forward in many other rural counties as well.

The forthcoming meeting will be held at the Peabody Hotel in Memphis.

Committee for Rural Development Program, Washington, D. C., is made up of:

O. Hatfield Chilson, Under Secretary, Department of Interior.

True D. Morse, Under Secretary, Department of Agriculture (chairman).

Walter Williams, Under Secretary, Department of Commerce.

James T. O'Connell, Under Secretary, Department of Labor.

Dr. John A. Perkins, Under Secretary, Department of Health, Education and Welfare.

Wendell Barnes, Administrator, Small Business Administration.

Dr. Joseph S. Davis, Member, Council of Economic Advisers.

Mail Rates on Weekly Newspapers

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would appreciate permission to insert a letter from a high-caliber publication, the Columbian, the official newspaper for Chicago and Cook County in matters relating to activities of the Knights of Columbus and other fraternal, religious, and educational subjects.

As a reader of this publication, and a member of the Queen of Martyrs Council of the Knights of Columbus, I am interested in their views on matters proposed which may jeopardize their publication.

There are many other publications which are similar in that the material printed relates to religious, educational, and fraternal matters of the city in which it is printed.

The letter follows:

THE COLUMBIAN PUBLISHING CO.,
Chicago, Ill., March 1, 1958.

Congressman EMMET F. BYRNE,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BYRNE: Indicated reports regarding second-class mail increase, as such, can severely jeopardize many medium-sized weekly newspapers.

Particular references are intended regarding proposed increase from charge now on one-eighth cent per copy minimum basis to one-half cent per copy minimum cost. This increase in itself, according to my calculations, represents an increase of 300 percent—not a good way to avoid inflation, but a darn good way to create great depression because of the inability of publishers to assume such increases.

A 100-percent increase would be a terrific boost by any analysis, but would be agreeable to most. What do you think?

The Columbian weekly post-office bill is now approximately $45 per week. The new rate, without considering the increase in reader and advertising zone changes, means $135 increase or total minimum charge of $180 per issue.

The Columbian, with 35,000 circulation, as you know, is the official weekly Knights of Columbus paper for Chicago and Cook County—fraternal, religious, educational. We have never earned in any one year the amount of this proposed increase, and, after 50 years, dislike being forced out of our chosen profession.

Anything you can do to reduce this contemplated uncalled-for postage increase will merit my sincere appreciation.

Sincerely yours,

FRANK J. QUINN, *Publisher.*

The Omnibus Rivers and Harbors and Flood-Control Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. BALDWIN. Mr. Speaker, considerable opposition has developed to section 205 of S. 497, the omnibus rivers and harbors and flood-control bill, which will be considered by the House of Representatives next week. Serious objections to this section have been voiced by the American Farm Bureau Federation and by many States. Section 205 deals with water law. The major objections to section 205 have resulted from its broad and loose general approach to the problem. In order to give recognition to some of the objections which have been raised to this section, it is my intention to offer an amendment to section 205 when this bill is under consideration by the House of Representatives.

The language of my amendment is much preferable to the language in S. 497, since this revised language provides for the establishment of definite standards and guides for the Corps of Engineers and the Secretary of the Army to follow in connection with development of water supplies in Federal reservoirs on such important matters as consultation with the States and the Public Health Service, repayment periods, interest rates, provision for future needs, and modification of authorized projects to provide for water-supply storage. The need for these provisions to be spelled out in legislation is self-evident. The adoption of the generalities contained in section 205 (b) and (c) of S. 497 could result in administratively established standards which could set up a program far different from that contemplated by the Congress as being necessary to meet the Nation's need in the future; a program which could be in direct conflict with the standards of section 9 of the Reclamation Project Act of 1939 which governs the development of water supplies in connection with Federal reclamation projects, and which could touch off another round of competition between the Corps of Engineers and the Bureau of Reclamation over which agency will construct water-supply projects. The language in my amendment will minimize conflicts, and establish a program which will permit Federal participation in the development of water supplies on a sound basis.

The wording of my amendment is as follows:

On page 102 of S. 497, beginning with line 13, strike out all of section 205, ending on line 20, page 103, and substitute in lieu thereof the following new section:

"SEC. 206. (a) It is hereby declared to be the policy of the Congress to recognize the primary responsibilities of the States and local interests in developing water supplies for domestic, municipal, industrial, and other purposes and that the Federal Government should participate and cooperate with States and local interests in developing such water supplies in connection with the construction, maintenance, and operation of Federal navigation, flood control, or multiple-purpose projects.

"(b) In carrying out any authorized navigation or flood-control survey, or review investigation, involving improvements which may be useful in developing water supplies, the Corps of Engineers shall consult with the State or States affected and the United States Public Health Service, Department of Health, Education, and Welfare, with a view to including in the reports thereon submitted to Congress, plans for the development of water supplies for domestic, municipal, industrial, and other purposes, and such reports shall include the views and recommendations of the States and the United States Public Health Service on the plans for water supply. Features for providing water supply storage capacity, facilities, or services may be included in any navigation, flood control, or multiple-purpose project recommended for construction by the Corps of Engineers, subject to the following provisions of this section.

"(c) Before construction of any project including water-supply provisions is completed, State or local interests shall agree to pay the costs allocated to water supply. Such costs shall be determined by the Chief of Engineers in such manner that all authorized purposes served by the project shall share equitably in the benefits of multiple-purpose construction. The schedule of payments by States or local interests of such costs may provide either for paying the share of the construction expenditures during construction of the project, plus annual payments for operation, maintenance, and replacement costs as incurred; or for equal annual payments for the construction costs, and interest on the unpaid balance, plus annual payments for operation, maintenance, and replacement costs as incurred: *Provided*, That the entire amount of the construction costs, including interest during construction, allocated to water supply shall be repaid within the economic life of the project, but in no event to exceed 50 years after the project is first available for the storage of water for any purpose. The interest rate used for purposes of computing interest during construction and interest on the unpaid balance shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction is initiated, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due nor callable for redemption for 15 years from date of issue.

"(d) The plans for any authorized navigation, flood control, or multiple purpose project on which construction has not been initiated, or any existing project, may be modified or its operation changed by the Secretary of the Army to provide additional storage capacity, facilities, or services for water supply as he considers reasonable: *Provided*, That before construction is completed, or in the case of projects under construction or completed, before changes for the benefit of water supply are made in the project, or before operation is modified in the interest of water supply, State or local interests shall agree to pay the costs allocated thereto as provided in subsection c of this section: *Provided further*, That such modifications which would seriously affect the purposes for which the project was authorized or constructed or which involve major structural or operational changes shall be made only upon the specific authority of Congress.

"(e) The plans for any authorized navigation, flood control or multiple purpose project on which construction has not been initiated may be modified to include provisions for future water supply when directed by resolution by the Public Works Committee of the Senate or of the House of Representatives, or when approved by the Secretary of the Army upon recommendation of the Chief of Engineers: *Provided*, That the cost of such provisions for future water supply shall not be more than 30 per centum of the total estimated cost of the project and reasonable assurance is given by States or local interests that the use of the future water supply provided for will begin within not more than 10 years after the time the project is first available for the storage of water for water supply purposes, and that necessary water rights for such use have been or can be obtained: *Provided further*, That States or local interests indicate a willingness to pay for such water supply in accordance with subsection c above, beginning when the water supply is used, and costs allocated to water supply shall be repaid within the economic life of the project, but not to exceed 50 years after the time the project is first available for the storage of water for water supply purposes: *And provided further*, That in arriving at the costs to be repaid, the interest charges on the initial cost of provisions for future water supply during the period until the water supply storage is used will not be included, but in no case will the interest-free period exceed 10 years.

"(f) Responsibility for complying with any applicable State law relating to water supply or water use shall rest with the State or local interests contracting to pay the costs allocated to water supply or utilizing the water supply services.

"(g) That part of the second proviso of the first paragraph of section 5 of the Flood Control Act of June 22, 1936, as amended (33 U. S. C. 701h), pertaining to modification of reservoir projects is hereby repealed, except as to contracts and agreements in force at the date of this act."

Trade and Labor Assembly in Heart of Family Farm Community Suffering From Depression Farmers Have Felt Since 1952

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mrs. KNUTSON. Mr. Speaker, I have received a letter from the central labor council in Fergus Falls, in the heart of Otter Tail County, which has the largest number of family farms in the State of Minnesota. The letter minces no words in explaining how the members are being hit by the economic recession that has affected our farmers since 1952. I ask permission to insert this letter from the Trade and Labor Assembly of Fergus Falls, Minn.

FERGUS FALLS, MINN., *March 3, 1958.*
WILLIAM SCHNITZLER,
Secretary-Treasurer, AFL–CIO Building, Washington, D. C.

DEAR SECRETARY SCHNITZLER: The notification from your office calling a national AFL–CIO economic legislative conference for March 11, 12, 13, 1958, has been received and presented to our membership. Being located in an agricultural area in Minnesota, we have seen the economic recession that has affected our farmers since 1952, and now

working people and small business are feeling the effects of this economic squeeze.

Unemployment is becoming serious even in this area. Small family farmers are being forced to bolster their incomes by seeking employment in the towns and cities, adding more people to the already overloaded labor forces in our communities. Our newly organized central body is not financially able to send delegates to this important legislative conference, but want to go on record supporting a program to put the people of America back to work.

Therefore, the Fergus Falls AFL-CIO Trades and Labor Assembly took this action at their regular meeting held in Fergus Falls, Minn., on February 25, 1958, speaking for organized labor in the Fergus Falls area; do hereby state that this serve as a petition to the Congress of the United States, asking them to take immediate steps with constructive work programs to bolster the purchasing power in our sagging economy.

Respectfully submitted.

HAROLD SCHMIDT, *Secretary.*

Deaths on Road Actually Murder

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most interesting statement made by one of our former colleagues in the House, but now Governor of Connecticut, the Honorable Abraham Ribicoff.

The chief executive of that State has endeavored since taking office to reduce the numberless automobile accidents by a strict "no-fix" enforcement of the motor vehicle laws to prevent accidents, many of them resulting in fatalities. He is to be commended on his concentrated drive for the protection of all the people driving in and through his State.

The statement, which appeared in the Boston Daily Globe on March 4, 1958, follows:

DEATHS ON ROAD ACTUALLY MURDER
(By Abraham Ribicoff, Governor of Connecticut)

Two years ago I made one of the most important discoveries of my life. It was December 1955, and I was puzzled. It had been a bloody year on our Connecticut highways.

Now, it was holiday time—the season when men wish each other good health and long life—and December was the worst month of all. In that month 44 people in Connecticut started out for a Christmas party or a family reunion and ended up in the morgue.

I was puzzled because people accepted these deaths as normal—even natural. If a little girl is clubbed to death on her way home from school, it's front-page news in every city in the country. But, if that same little girl had been killed by a speeding car, the story wouldn't have been given 2 inches on page 16 anywhere but in her own town.

The difference I think is just that killing by automobile has become so common it has lost its power to appall us. But when God told us not to kill, he meant for us not to do our killing with a club or an automobile. I think the one is murder just as surely as the other.

I called it murder, but I didn't know what one puzzled individual could do about it. This killing was a violation of God's law as well as man's. I decided that I need not be afraid to act, simply because I could never save all the lives that were being taken. What, if through my efforts, I was able to save just one life?

I decided to try.

Next morning I called to my office the State commissioner of police and the State commissioner of motor vehicles.

"What," I asked them, "is the one greatest cause of fatal automobile accidents?"

Their answer was simple. It can be told in one word: "Speed."

If speed was our killer, the next question was, how could we get people to slow down?

And then, we had an idea. How about telling the driver that speeding will cost him—not his life—but his driver's license?

It was a new idea, a bold idea, and, as far as my political career was concerned, a risky one.

I talked it over with my wife before I made my decision. "I'd like to save one life," I told her. "If I never hold another political office again as long as I live, but save that life, I think it will be worth it." She did too. I decided to try my idea for exactly 1 year.

Two days before Christmas, 1955, I announced to the people of Connecticut that anyone who was convicted of speeding would have his license suspended for 30 days.

There were two keys to the program.

First, punishment would start with the very first offense—30 days for the first conviction, 60 for the second, indefinitely for the third. The second key was just as important—enforcement was going to be strictly "no fix."

We summed it up in 7 words, which we posted on enormous 8-foot signs on every major highway leading into Connecticut: "Don't speed. Conviction means loss of license."

Overnight the cry of outrage went up. My advisers were horrified. They told me I'd committed political suicide. Maybe I had.

During the first month of the drive, I refused to take care of a suspension for one of the bigwigs in my own party—a man I've worked with for years.

He paused as he was leaving my office, looked back at me, and said, "I'll never vote for you again as long as I live."

One of my oldest personal friends lost his license, too. His wife had to drive him to work for a month. He doesn't speak to me now when we meet on the street.

And as the test year entered its second month, along with the gripes and protests and angry letters, we began to get letters from people who felt differently about the new ruling.

I shall never forget the one from a widow whose husband was killed in an automobile accident the day before the program started.

"Don't relax the campaign," she wrote, "even though it came one day too late for us. I have an answer for those who speak of the unbearable hardship that a suspension imposes. The violent way my husband died and the pain he suffered was unbearable. I also find it hard to make a living without my husband. My two boys and I didn't get a 30-day suspension. Ours is a lifetime sentence."

But the support that's been especially heartening happened toward the end of the year.

In October, a group of 22 ministers, priests, and rabbis in the town of Greenwich launched a month-long churches' crusade for safety, based on the clear directives of the commandment: Thou Shalt Not Kill.

At the end of the year we had suspended 10,346 licenses for speeding. Had we saved that one life?

Nineteen hundred and fifty-six was the worst year ever on American highways. The death rate for the Nation rose 5 percent over 1955.

What happened in Connecticut? In our State there were 50,000 more vehicles registered in 1956 than in 1955. There were 95,000 more operator's licenses issued, and 390 million more miles driven on our roads.

But in spite of these facts, the death rate in Connecticut did not rise, as the national rate did. Instead our rate dropped 11.7 percent.

In terms of human life, this means not just 1, but 38 people are alive today who were "supposed" to appear in the death columns of Connecticut's annual traffic report.

But there are even more startling statistics than these.

Safety experts who have studied the Connecticut program assure me that if every State in the Nation were to adopt a similar program right now, we would save, during the coming year alone, a minimum of 10,000 lives.

God's laws for the world don't change. The commandment speaks to us today as surely as it ever did. And today it speaks especially to those of us who have in our garages the deadliest weapon ever invented. Let's make it the commandment of the highway.

Central Valley Project

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SCUDDER. Mr. Speaker, I am in receipt of a letter from the President of the California Farm Bureau Federation, Mr. Louis A. Rozzoni, in response to a letter I wrote to him asking for an approximation of the membership of their organization who are farmers in the Central Valley of California and are pumping water for irrigation.

I made this inquiry on account of certain testimony that developed during the hearing on my bill, H. R. 6997, to provide for the partnership program in the construction of the power facilities on the Trinity River. I am definitely informed through this letter that the Central Valley Project was authorized by the Congress, "for the purposes of improving navigation, regulating the flow of the San Joaquin River and the Sacramento River, controlling floods, providing for storage and for the delivery of the stored waters thereof, for the reclamation of arid and semi-arid lands and lands of Indian reservations, and other beneficial uses, and for the generation and sale of electric energy as a means of financially aiding and assisting such undertakings."

In other words, power was to be used to assist the farmer.

Now, it so happens that at least one-half of the consumers of power for irrigation purposes are members of the California Farm Bureau Federation who wholeheartedly endorse the partnership

program. It would seem to me that the Congress should give favorable consideration to a program which is so well-supported by practically all of the newspapers and various other organizations in Northern California.

The letter addressed to me from Mr. Rozzoni is as follows:

CALIFORNIA FARM BUREAU FEDERATION,
Berkeley, Calif., February 21, 1958.

Hon. HUBERT B. SCUDDER,
United States Representative,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE SCUDDER: This will acknowledge your letter of February 7, in which you inquire as to the agricultural power load in the Sacramento Valley. As I understand it, this information is sought more clearly to highlight the fact that the Central Valley project was authorized by Congress "for the purposes of improving navigation, regulating the flow of the San Joaquin River and the Sacramento River, controlling floods, providing for storage and for the delivery of the stored waters thereof, for the reclamation of arid and semiarid lands and lands of Indian reservations, and other beneficial uses, and for the generation and sale of electric energy as a means of financially aiding and assisting such undertakings * * *." In other words, revenue from power was to be used in part at least to reduce the cost of Central Valley water to irrigators.

It should be noted that this is the only authorization ever emanating from Congress. It might also be noted that electric power since 1906 under reclamation statutes was always to be handled so as not to impair the efficiency of the irrigation project. There is no question that the statutory language clearly means that power revenues were to be used to reduce the cost of water to irrigators.

I think it is a fair statement to say that virtually one-half of the rural-electric load of the Pacific Gas & Electric Co. in the areas to which the Central Valley project delivers water is supplied by customers affiliated with the California Farm Bureau Federation. The sale of a large portion of the Central Valley electric energy at less than cost, which is the case now, disregards the will of Congress and prejudices the irrigators, whom Congress specifically made preference beneficiaries. If the electric power developed by the Trinity Division is turned over to the Bureau of Reclamation, the present practice will be continued and power sales will be made below cost to the present favored few. Thus, if the partnership proposal is rejected, the Government will be faced with tremendous additional capital investments from which it will derive substantially less revenue to the prejudice of the Government, the irrigators and the will of Congress.

Another feature of the unjust treatment accorded the pumping irrigators is that while they pay the rates fixed on a fair and reasonable basis by the California Public Utilities Commission, approximately 23 cents of every dollar they pay is transmitted by the power company to various tax collectors, one of whom is the Federal Governemnt. On the other hand those who are now being favored with below-cost energy, as electric customers, pay nothing in taxes and their share in the tax bill is paid by others.

Sincerely yours,

LOUIS A. ROZZONI, *President.*

Is There Anything Wrong With the Financial Institutions Act, S. 1451 and H. R. 7026?

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 4, 1958

Mr. MULTER. Mr. Speaker, the following item came to me, unsolicited, from Robert S. Burns, of New York City. He is only one of many persons who were denied the opportunity of presenting their views to the House Banking and Currency Committee in connection with the Financial Institutions Act, S. 1451 and H. R. 7026.

Mr. Burns is an investment analyst of many years experience. He has no ax to grind. As a matter of fact, his livelihood is based on trading in stocks, and more particularly bank stocks.

Mr. Burns' article is as follows:

By way of introduction, I should like to point out that however otherwise equipped to write on the subject of bank stocks I may or may not be, thirty-odd years of hard work on the subject lie behind my opinions. As an analyst of practical rather than theoretical experience, I have lived with my subject during most waking hours since that wild bull market of the twenties.

As bank analyst for one of the biggest trading houses in Wall Street, I was, for years, in daily contact with the actual trading of these issues on a large scale. Also, on a much smaller one, as investor, too, I am familiar with the market that may be said to exist over the counter. Believe me, many, many years of face-to-face meeting with the subject lie behind my statements. They are those of a professional analyst without any ax to grind.

Should the reader go no further than here, let me state that the whole of this article is summed up on these few words: "The capital shares of our large banking institutions should be listed on a stock exchange just as soon as possible."

There are some 1,075 common stock issues now listed on the New York Stock Exchange. They include the shares of a wide range of corporate endeavor, from the giant General Motors Corp. down.

For instance, there are 116 different machinery and metals companies shares, 113 utilities, 69 chemicals, 81 railroad and railroad equipment stocks, 64 automobile companies, 43 textiles, 37 steel and iron stocks, 31 aircrafts, and 38 financial issues. The list is a long one, embracing some 25 different kinds of American companies. The share total exceeds 4½ billion and their year-end, 1957, market value total was $185,401,000,000.

In view of this, doesn't it seem just a little strange that there is not even one solitary bank stock listed on the big stock exchange in New York? (None on American Stock Exchange, either.)

Why, then, is none listed? And the answer to that is that bank managements just refuse to have their shares go on the exchange. They do not want them listed, period. For many years, until October 1954, when it merged with the Chemical Bank & Trust Co., the 750,000 shares of stock of the Corn Exchange Bank Trust Co. was listed on NYSE, the only such issue thereon. Since that time, there has been no bank stock "on the Board" and bank managements seem in no hurry to list any, it is observed.

I was of the opinion, at the time, that Chemical Bank stock should have gone on the exchange; I am still of that opinion and feel that the capital stocks of all the major commercial banks should be listed. Narrowing it down a little, I should say that any big bank with a million or more shares or a total market value of say $100 million should be on the Exchange. (In New York City this would still exempt Bank of New York, Empire Trust, United States Trust, and even J. P. Morgan & Co.)

This would mean that at least eight big New York City banks would have to list a total of some 55,645,000 shares, having a total market value in excess of $2,750,000,000. These banks reported a total of over 344,800 shareowners at the close of 1957 (an average holding of 162 shares). A rather important segment of the economy, it would seem, almost by any standard. Listing, then, must be good for most other types of corporation stocks but not for bank shares—there are even two big insurance companies' shares listed on NYSE.

It should be pointed out here that in cities outside New York there are probably another 15 big banks falling into such a category—that is, with either a million shares or with $100 million of market value.

There are 15 such banks, to my knowledge, having a total share capital of about $60 million and a total market value of $2,800,000,000 or more. These, along with the 8 located within New York City, make a total of at least 23 big commercial banks with about 115,650,000 common shares and with a combined market evaluation of $5,550,000,000. (At the year-end 1957 bid price.)

Now, I am certain that when a banker takes in common stock in a collateral loan, he likes to have stocks that are listed on the Exchange where he can obtain quickly such data as the last sale, high, low, and volume. But, he is willing, even glad, to let the owners of his business go fumbling around in the disorganized unlisted market looking for a quote on his stock. Sure, a stock exchange member firm will handle a bank stock order but they, in turn, have to go to the specialist in an over-the-counter house to get the market. Bank stocks just cannot be traded on the floor of the stock exchange.

To me, this just means that shareowners in big banks are being deprived of access to one of our greatest real market places when they wish to purchase or sell a piece of valuable property. Here again, all right for auto stocks, steel shares, aircrafts, mining stock, shipbuilding, paper, foods, the rubbers, tobacco, textiles, utilities, or what have you but—no good for bank stocks.

Now, how much longer are the people who own bank stocks going to stand for this obvious mistreatment at the hands of their elected directors and the officers employed by those directors? Actually, one of the mysteries of the century is that they haven't already raised a rumpus about it. It is just unbelievable, in this day of corporate democracy and its accent upon shareowner relations, that these stocks are left to what

seems to be a rudderless voyage around the Sargasso of approximate quotations and mumbo-jumbo.

Bank shares should be listed on an exchange where, like other stocks, the last sale of a round-lot will be printed upon the tape for all concerned to see, and the open, high, low and close will be a matter of public record, instead of the flimsy bid and asked quotes printed in the daily newspapers now. Such quotations are, for the most part, unreliable and are more often than not, mere guesses on the part of the trader giving them out to the paper. I have taken these quotes over the wire for publication in a newspaper and, therefore, am well aware of how sketchy and unreliable such figures are.

Although not generally realized today, it is a fact that up until about 1928, many bank stocks were listed upon the New York Stock Exchange. Along about that time, the security affiliate was a most important adjunct to many of our banks. These affiliates were trading organizations, dealing in stocks and bonds and underwriting large issues of both. It was only natural that they should make a market in the stock of their own bank and they did. Consequently, to better control the market and to do away with that tell-tale print on the ticker tape, the banks had their stocks delisted or stricken from the stock exchange. What happened is, of course, history and needs no repeating here. However, I will say that I think it extremely doubtful if National City Bank's stock would have sold even anywhere near 580 or 480 if it had been left on the stock exchange during 1929.

For the record, I am listing here the stocks that were listed years ago and the date when they were delisted.

Name of Bank	*Date stricken or suspended because of merger*
Bank of New York & Trust	Dec. 31, 1935.
Chatham & Phenix	Apr. 12, 1928.
Bank of Manhattan	Oct. 25, 1928.
Bank of America	Apr. 12, 1928.
Chase	Jan. 12, 1928.
Commonwealth Bank	Sept. 18, 1929.
Continental Bank of New York	Dec. 16,1929.
Continental Bank & Trust Company of New York	Jan. 22, 1930.
Greenwich Bank	July 28, 1927.
National City	Jan. 12, 1928.
Farmers Loan & Trust	June 29, 1928.
Chemical	Feb. 8, 1929.
National Bank of Commerce	Jan. 29, 1929.
Equitable Trust Company of New York	Nov. 7, 1929.
First National Bank	May 31, 1929.
National Park	Do.
United States Trust Co	Oct. 11, 1934.
Hanover National	May 16, 1929.

Yes, bank stocks were listed for many years on the New York and other stock exchanges. It is true that a great deal of the trading in them was done off the exchange and I have no doubt that there would be such offboard trading in them today were they listed. The point is that they were then listed and they should be listed today, despite how little or how great the volume might or might not be thereon.

Back in 1792, when the earliest form of stock exchange was first organized, shares of Hamilton's First United States Bank, Bank of North America, and those of the Bank of New York were traded. By 1827, we are advised in the booklet called "Understanding the New York Stock Exchange," the stocks of 12 banks were being traded on the exchange.

Today, it must seem strange indeed, to a visitor from afar to visit our great New York Stock Exchange and to learn that no single bank stock is listed or traded on that exchange. Puzzling indeed. And perhaps of great satisfaction to the medicine-men at the Kremlin?

(I am reliably informed that all of the London "big five" banks have their stocks listed on the London Stock Exchange.)

Well, why is it there is none listed, then? There are probably a number of reasons, best known to the bankers themselves. But, one of the answers may be found on page 25 of the little booklet previously referred to and published by the stock exchange. It states: "the SEC requires officers, directors and principal stock holders of companies with securities listed on the exchange to report, within 10 days after the month in which it took place, any transaction by them in the stock of their company. These reports are made public by the SEC and by the exchange with which they are filed."

Then, too, there are other SEC rules and regulations that would have to be obeyed and the bankers just do not want to have to do it. As it is now, they feel nice and safe behind that part of the law which specifically exempts banks from the provisions of the securities acts. But, if they were to put their stock issues on the exchange, then they would become subject to certain of the SEC regulations having to do wtih proxy statements, reports, etc. This would be all very well and good if they were mutual associations, but they are not; they are capital-stock companies and their shareowners are entitled, I think, to a fair and open market for their stock whenever they please to find out what it is bid for and what the last actual sale was per share.

I do not know whether you already know it or not, but there is no law now that says a commercial bank has to give a shareowner any information about earnings or any other phase of its operations. The display statements of condition and the annual reports they do issue are entirely voluntary on their part. They do not have to tell you anything unless they please to. And, you cannot go to the Federal Reserve, Comptroller's Office, or New York State Banking Department and examine any reports of any kind on an individual bank. They are confidential documents, mind you. On the other hand, the very complete annual statements filed with the State Insurance Department are public documents and can be examined by any citizen, whether shareholder in the company or not. But, a shareholder in a banking institution cannot see the last examination report on his bank.

Several times during each year, the Federal and State banking authorities will send out to all banks a call for statements of condition as of some certain date. Such call statements do have to be published in a newspaper of general circulation in the area in which the bank is located. These are usually buried away in a trade paper or local neighborhood paper under legal notices and are seldom read by any save bank analysts and bankers themselves. Such statements give little actual information, and in most cases, include, for instance, only deposits in the bank's domestic branches. As of last December 31, this made a difference in the case of First National City Bank, in New York, of $881,913,000 between its legal call statement total deposits and those in its display statement. A State bank, Bankers Trust Co., had a difference of $53 million between the two types of statement as of the same date. The point here is that publication of these legal statements by banks does not do the shareowner a bit of good. They are not mailed out to the shareholders; even if they were sent, he would know no more than he already did about his bank. The statement does not even tell the par value per share, or state how many shares are outstanding. Suffice it to say here and now that there is much room for improvement in such published information.

Returning to the subject of the purchase or sale of shares of a bank stock: How does one ascertain the last sale price? Is there a central agency where it is recorded and printed for the record? No, there is not. You take a dealer's word for it as to what his last sale was or go without it. Don't bother to call the bank; they don't know and care less. The newspaper that quotes the stock? The National Association of Security Dealers? The SEC? No, don't bother to call any one of them; you might just as well call the fire department or Mr. Hoover's FBI. And, if you call the stock exchange, they will be polite and sympathetic, I am sure, but bank stocks are not listed there, remember?

So, you call your broker or dealer. What's the best bank stock to buy? Why, the one the house has the biggest position in, if any. Why should he waste time trying to sell you a good bank stock, the market for which he doesn't even know, when he can sell you a nice uranium stock on which there is a long profit? Now, these things are exaggerated here only a little bit, I assure you.

It all adds up to the fact that the recent unpopularity of bank shares can be traced to just this sort of thing. The dealers are not doing as good a job in making markets as they should be doing. Few houses are actually making real primary markets; they do not want to get loaded up with them either; this just attests to how utterly bad the markets are in these issues. Only when they are reasonably certain of selling them will a trading house load up with a block of bank stock.

In the Wall Street of today, there is missing from the scene that old bank stock specialist of former years, like Clinton Gilbert and Gilbert Elliot, to name a couple. Today, big houses operate bank stock departments only as adjuncts to their larger businesses. Trading profit margins are too small to allow of payment of a commission to salesmen to go out and sell bank shares, as a steady diet.

To be sure, bank stocks are in the doldrums, as some newspaper writers say. Many have unusually good values behind them at current levels, where they are selling around 11 times last year's net, to yield 5 percent or better. It is my feeling that they will stay within a very narrow range from now on, unless something is done. The situation is not likely to better itself and it very well may worsen.

I suppose that bankers do not like analysts like myself who delve too far into the works of their clocks. Several have shown resentment to things I have said and written about them, I know. They would like us to remain mute while these things go on and they continue to kid their shareowners with a lot of doubletalk. And, how easily they get away with it. I have sat in many shareholder meetings and marveled at the glibness of their sidestepping in reply to questions. Year after year, the same old "blarney" is dished out to the long-suffering owners of the enterprise, as it were.

Although by now quite bored with their antics, I always get a great lift from that part of the production wherein the banker sanctimoniously defends the fact that his stock is not listed by saying that they don't want the stock on the board because of violent price changes that might possibly be construed to cast doubt on the financial stability of the bank. Of all the "goop" I have ever heard, that one really takes the cake for sheer idiocy.

What they forget is the fact that bank share prices had their very worst price gyrations after they were removed from the stock exchange. And, to my knowledge, any banks of any consequence that failed from 1929 on were not listed upon any stock exchange, either. The boys have the proverbial cart before the proverbial horse, again.

Within the last year or so, the stock price of one of our very finest Wall Street banks fell out of bed to the tune of about 15 points, a record far worse than that of its neighbors. It was a mighty serious drop when measured in dollars, about 163 million of them, and percentagewise it was also large, being 20 percent. It was so bad they sold some more stock for about $120 million to fill in the dollar gap, as it might be termed. Yet, at the annual meeting last month, not one shareowner asked one question about it. It was ignored, just as if it hadn't ever happened. And, the head of this great bank is one of those fellows most worried about what might happen to the price of his stock were it listed.

Does our press pick up and report on such trivia? Of course not. Don't you know that it is against some law or other to say anything unbullish about a bank whose deposits are guaranteed by the FDIC? Well, I guess I'll just sit here and await a call from John E. Hoover's men.

Whether we agree with Mr. Burns or not about compelling the listing of bank stocks on any of the national exchanges is unimportant. What is important is that under the Financial Institutions Act, S. 1451 and H. R. 7026, as presented to us, bank officers and directors, the insiders, will be permitted to deal with themselves and their institutions in connection with bank stocks and options for bank stocks, without being required to publicly disclose the information which they would be required to disclose if their stocks were listed on any of the exchanges.

The real reason why most bank stocks were delisted is because bank management dared not make public disclosure of the vital facts about management and operation of the banks, without which disclosure they could not continue to be listed.

I do not agree with Mr. Burns that the way to solve the problem is to require the stocks to be listed. I do believe the solution of the problem would be attained by requiring all banks to publicly disclose the same information that the Securities and Exchange Commission and the stock exchanges require of all institutions whose stock is publicly held.

The Financial Institutions Act, instead of correcting the evil, compounds it.

Sound Argument for Scholarships and Loans for Higher Education

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mrs. KNUTSON. Mr. Speaker, in a letter to the editor of the Warroad Pioneer, Warroad, Minn., February 26, a correspondent gives very sound reasons for scholarships and loans for higher education. People who are financially unable to attend colleges, or sometimes even complete high school benefit from such aids. And there is no question, our country needs these trained minds which might otherwise be unable to make their full contribution to the country. I ask permission to insert the letter in the RECORD and call attention to my Student Loan bill, H. R. 5479, first introduced 3 years ago, and just as necessary today as the day it was first introduced:

To the EDITOR:

A short time ago it was stated that Government scholarships encouraged laziness among students who didn't need financial aid. I think this example is irrelevant. First, the Government as of yet does not give scholarships to individuals, although Congress is contemplating it. Scholarships are provided through industries, private funds, alumni associations, foundations, etc. Secondly, in applying for a scholarship a student must prove his financial need except in cases of exceptionally gifted persons, and the aid given is based on the student's need. Thirdly, it must be proven the student is a sound investment and exhibits certain personal qualifications.

In the United States, money guarantees a college education more than intelligence does. Scholarships help to equalize opportunity.

Without some scholarship aid, persons who could do excellent college work find their energies channeled into outside work.

PAT HICKMAN.

World Law To Protect World Investment

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. PORTER. Mr. Speaker, under unanimous consent I include the full text of "World Law To Protect World Investment, an address delivered by Charles S. Rhyne, president of the American Bar Association, before the midwinter trust conference of the American Banker's Association on February 12, 1958, at the Waldorf-Astoria in New York City.

Mr. Rhyne, a Washington lawyer, is a personal friend of mine. He has dedicated his year as president of the American bar to promoting world law as the promising way to world peace. I commend him and his words for your close attention:

Ever since I first received your invitation back in early September of 1957, I have been looking forward to this meeting. I am extremely pleased to be your guest on this occasion and attest to the fact that our professions now enjoy a fruitful and harmonious relationship due to the excellent work of the National Conference of Lawyers and representatives of this trust division of the American Bankers Association. Ours has been a most happy experience in cooperative solution of mutual problems. The major credit for these achievements belongs to my dear friends the chairman of our respective committees Bob Griswold and Ed Otterbourg.

I now suggest that we should go beyond this ironing out of domestic frictions and make a contribution to the ironing out of international frictions through a combination of our talents in a field where we often work separately, but where we have made no concentrated joint effort in the past. I believe we can best serve the public—the service to which both of our professions are dedicated—by lifting our minds from domestic to international affairs at this critical turning point in the history of mankind. I believe we can make a great contribution to world peace by developing world law to govern world investment. If we are as successful in the new joint field of endeavor as we have been in our other joint efforts the public benefits will be incalculable.

I welcome this opportunity to present to you bankers some personal views on this area of great common concern to both of our professions. I sincerely believe that development of world law to protect world investment can enable the export of the genius of our great free enterprise creative know-how and open a new avenue paved with such stable elements as to offer a new route to world peace. Such could be the end results of the commercial interlocking and friendships created by the plan I am here to propose.

ECONOMIC PATH TO PEACE UNDER LAW

We of our professions are conservative in our approach to nearly every problem. We like to base new plans on the wisdom of experience. And the plan I now discuss with you is not an abandonment of that approach, it is merely an expansion of the old and enduring concept of the rule of law to new frontiers so as to live up to our duties and responsibilities in this shrunken world. This plan of an economic path to peace under law has the great virtue that work on it can only lead to constructive rather than destructive achievements. No bombs or missiles or satellites are involved. Unlike the ever-accelerating arms race this plan can never end in the holocaust of world war but only in such economic advancement as to bring increased good will and happiness and a greater well-being in areas of the world that participate therein. The plan is admittedly designed not only to serve those peoples of other lands where present poverty and discontent creates one of the causes of war but our own self-interests, our own desire to increase world investment and trade and to make a profit on that trade and investment. To me there is nothing wrong in such objectives.

As background for this presentation I ask you to pause a moment to focus upon the world in which we now live. The satellites have forcefully focused worldwide attention upon the almost miraculous technological achievements of our day. We are faced with unprecedented peril from abroad and unprecedented change and growth at home. Rapid transportation and communications have made ours a physically indivisible world. Distance is almost meaningless.

Recent census reports and forecasts clearly indicate that the earth's population will double and triple in the near future. To meet the increased material and economic burdens of this expanding populace, combined with the increased needs resulting from higher living standards, every means must be used to assure that the ultimate in productivity is realized from all available resources. This means that hundreds of backward areas of the world must be developed so that they may carry their share of this production.

Economic development of the less advanced countries of the world calls for a continually increasing measure of assistance on the part of the Western industrial nations. These less advanced countries, regardless of their own good intentions and ambitions, are not able to provide, either through private capital or tax revenues, the funds necessary for their own development. Unless adequate capital is made available to these areas so that their natural resources may be developed to contribute to the earth's overall productivity, their inefficiency will become a drain on the advanced nations. Today in our shrunken world all peoples are

acutely aware of the standards of living that exist elsewhere. And peoples of underdeveloped countries naturally yearn for the higher standards of living that exist in, for example, our own Nation. The best way for us to serve that yearning is to export the genius of our great free-enterprise system.

INTERLACING OF ECONOMIC INTERESTS BUILDS CONFIDENCE

In addition, the need for increased world investment exists in highly developed countries. Capital can and does serve to compensate imbalances in international payments. The interlacing of economic interests builds up confidence and nurtures the vitally needed cooperation and trust among nations. Major economic projects clearly can best be realized by coordinating the economic resources of countries giving and countries receiving.

Thus, the great need for increased world investment is evident. The logical question then arises as to how this need should be met. Let us consider for a moment the merit of the two alternative methods: (1) government loans or gifts, and (2) meeting the needs that exist through private investments.

VALUE OF GOVERNMENT LOANS AND GIFTS

Let us examine, first, government loans and gifts and their value in meeting world needs in this field. Frankly, the usual stimulus for this type of aid is political advantage, and generally there is no serious intention of requiring repayment. Although this sort of grant, made at the expense of the grantor's taxpayers, may be necessary in emergency situations, it cannot satisfy the long-range needs of development countries. In addition the overtones of charity which exist often breed ill feelings among the people of the nations involved. Waste and political administration are often present as this money filters out and down through political channels.

Few persons will contend that government-to-government aid can compare in efficiency and productivity with private investment through private enterprise. Aid from and through government officials is seldom creative in result.

PRIVATE INVESTMENT SYSTEM IS BEST

Under the second method, private investors supply the capital and the local persons put it to use, and working hand in hand for their mutual benefit, a feeling of partner rather than master-beggar is thereby created. In the many underdeveloped nations where newly won independence is so precious and jealously guarded this method may offer a more appealing approach then government aid or loans which so often carry a political label. Certain it is that a system of free enterprise usually offers a better chance to more people of underdeveloped countries to get ahead personally. It develops the necessary reservoir of technicians, skilled workers and entrepreneurs so that the working people of these development areas, can truly begin to carry their own weight and take pride in their accomplishments. Such a program offers such peoples their best opportunity to develop with human dignity and fulfill their aspirations for a higher standard of living. Let us show them our private investment system is best for them—it is certainly best for us. Individual incentive with its creative urge through economic freedom of a private enterprise system offers more hope than governmental aid or control.

The people-to-people programs and all other means whereby the people of the world can know and work with each other are tremendous contributions to world peace. If the people of the world are doing business together the holocaust of war is less apt to explode. This route of private investments brings people into close working relationships and offers an excellent opportunity to further this objective.

GOVERNMENT AID AND PRIVATE INVESTMENT BOTH NEEDED

My personal opinion, on which I know that I do not stand alone, is that state aid should be restricted wherever possible, perhaps to emergency situations or to financing projects which are inaccessible to private investment. I realize, of course, that this cannot always be our national policy, because the protective guaranties essential for private investment in many underdeveloped countries do not now exist. The so-called foreign-aid program is not one I oppose. In fact my only feeling is that it may be too little and too late. We must use it to defeat Soviet economic penetration into underdeveloped countries. The economic development fund requires expansion not contraction. The point I make is that private investment offers a better method and that we should use both methods to meet the needs that exist. Government aid must continue and the proper mechanism must be developed for private capital to play a greater role in underdeveloped Nations.

We should never forget that our own great Nation was aided in the development of the resources of our virgin North America by the private capital of investors of European nations. Through our integrity as a debtor, and our respect for private property, we were able to secure permanent foreign investors. Then, through our initiative we have so developed our resources that today we stand among all the nations on the earth in the best position to help others. Further, we are today the world's greatest trader and we need to expand that trade to meet the needs of our Nation.

PROTECTION OF PRIVATE CAPITAL NECESSARY

Where a nation offers effective legal guaranties that the rights of private outside investors will be respected and protected, there is little difficulty. Our own history and that of Canada are excellent examples. And western capital is readily available for other nations. Unfortunately, however, many of the development areas cannot or do not offer any such security. In fact, their past records of nationalization and confiscation often force the opposite conclusion. Some of these countries have clearly demonstrated a tendency to expropriate outside capital once it has operated for a short period or at least to restrict its use and movement considerably. Examples exist behind and on our side of the Iron Curtain. In Czechoslovakia, coal mines, certain sections of industry, banks, and insurance companies were nationalized by law in October 1945. Important industrial areas in Poland were nationalized in January 1946, the government taking all of the assets but only portions of the liabilities. Two major Argentina power companies, controlled almost exclusively by Swiss and Belgian interests, were deprived of their licenses on July 23, 1957. While the picture is still unclear, it is apparent that Indonesia has recently taken over the property of Dutch investors and owners and so far no payment has been made or offered. These are only a few illustrations of the great barriers which must be overcome in order to encourage the substitution of private world investment for direct aid by governments. This brings me to conclude that in the context of current history bankers and lawyers should pool their resources to develop a mechanism to provide the universal security for private export capital which is requisite to a healthy system of world investment. I believe that such mechanism can be created under the rule of law.

Writers and scholars in the field of international law have long drawn a distinction between expropriation and confiscation. The basis for this distinction is compensation. As a general rule, expropriation is not prohibited for, obviously, under certain conditions the public interest may demand it, as where private land is taken for a new expressway, airport, or other essential public use. And where adequate compensation is granted equally to all private interests in return, this is acceptable in our country as well as in others. The constitutions and expropriation laws of most western nations conform to those principles. It is further agreed that under general international law all nations have the right to impose indirect sanctions on private property without compensation such as taxes, licenses, or property restrictions. Here, the line may be fine indeed between measures in the public interest and concealed confiscation, as in the Argentina case cited. Further complications arise in determining exactly what represents a just definition of adequate compensation and in assuring that no unjust discrimination exists between nationals and nonnationals where private capital is involved. This discrimination is not a new or novel problem as in our own country, States and cities have often sought advantage for their residents against outsiders, and our courts have quickly invalidated such discriminations.

LAWYERS AND BANKERS MUST MEET RESPONSIBILITIES

Just as scientists, doctors, and engineers have an obligation to meet the challenge of the changing times and keep abreast of their fields, we lawyers and you bankers must meet our responsibility in these times and provide the means by which world investment and export capital is guaranteed security. This can never be done until there is universay regard for the rights of private property whether under domestic or foreign control.

The rules and ideas which govern world investment today are grossly inadequate to meet the needs of the era in which we live. In a world where rapid communications and transportation have shrunk nations to neighborhoods we must be able to do business with our neighbors under legal rules that will allow us to develop to the full the potentials of a new and closer and potentially more fruitful relationship. We lawyers, directed by the advice and experience of your bankers and others in the fields of economics and commerce, must create new legal machinery under which the rights of export capital will be absolutely guaranteed so as to encourage world investment so as to achieve essential development for underdeveloped countries.

INTERNATIONAL TREATY WOULD CONSTITUTE CODE OF HONOR

The surest way to reach this goal is through an international treaty which would clearly set forth standards enabling world development through private capital. Such a treaty would constitute an effective code of honor among participating nations by creating protections so guaranteeing the safety of foreign investment that no person will hesitate to risk his funds in a participating country for fear of adverse governmental action. Such a treaty should provide for adequate compensation for all taking of private property, concretely define adequate compensation, and outlaw all discriminations between domestic and foreign interests.

Any participating country which nationalizes export capital without adequate compensation or adopts other repressive discriminatory economic legislation against foreign investors would by such action automatically subject itself to the jurisdiction of an international court and consent to have any disputes arising from the nationalization or repressive legislation decided by that court. Subsequent failure to comply with the decision would result in the imposition of one or more of a number of rather powerful sanctions such as: (1) All other participating parties would withhold public and private loans from the noncomplying na-

tion; (2) governmental guaranties against political risks to exporters and investors of the noncomplying nation would be denied by all other parties; (3) governments of all participating parties would recommend banks not grant credit or loans to enterprises wishing to invest in interests within the noncomplying nation; (4) most-favored-nation clauses which may be embodied in agreements with the offending nation would be revoked; (5) all governmental assets of the violator located in all nations who are participating members in the plan would be frozen when so ordered by the court in cases where this is necessary to bring about enforcement of its judgment. Few nations would risk their good name by incurring such sanctions.

Few nations indeed would care to flout the court's decree and thus stand alone economically. And, what nation desiring private investors from abroad is worth investing in if it refuses to agree to abide by such a code of honorable dealing herein proposed? I have no doubt that an international convention incorporating the principles of honor, justice, and equality set out earlier would be well received by friendly nations, truly desirous of cooperative action which will promote world investment.

INTERNATIONAL CONVENTION NOT A NEW IDEA

Such an international convention or code of honor is far from a new idea. It has received support from several significant quarters. As early as 1931 a resolution of the International Chamber of Commerce suggested that this sort of code be drawn up under general international law. This resolution further embodied the idea of an international court to decide disputes arising thereunder. Following World War II the need to secure the rights of foreign capital received renewed emphasis. The United Nations Conference on Trade and Employment recognized that world investment was essential to economic development and made an attempt to promote it by suggesting the protection of export capital. In 1949 the International Chamber of Commerce drafted a code directed toward achieving fair treatment for foreign investments.

The background has been laid. The time has come to take concrete action and the first big step toward positive establishment of the rights of foreign investors.

The international court itself is of vital importance to the success of this program. It must be readily accessible to all nations and must be so designed that it is capable of sitting at any one of a number of strategic locations. Since the entire plan rests heavily on the voluntary support of its participants, we must assure the worldwide favorable reputation of the tribunal by appointing our most eminent and capable jurists with excellent compensation and lifetime tenure to insure independence of judgment. This is the plan for the just created court which will decide disputes under the treaty creating the new European economic community.

SECURING PROTECTION WOULD BE CONTRIBUTION TO MANKIND

Securing protection for private world investment would be, in itself, a magnificent contribution to mankind. Private world investment offers in my view the best way to bring the full capacity of the financial and technical resources of the "have" nations in the Western World to the aid of Latin America, Africa, the Middle East, and Asia. But, in addition, I firmly believe that the legal machinery proposed for this program and the public opinion which can be harnessed in support of it can furnish a testing ground from which we can move along to the point where all international disputes will be settled in tribunals of justice under the rule of law rather than by the bloodshed of war. To prevent the holocaust of atomic-missile-satellite warfare, law must replace weapons as the ultimate decider of disputes between nations. The precedents created by decisions of an international court in the world investment field could well lay the foundation for decision of all disputes between nations. Such precedents may have a usefulness extending to the broader needs of the international community.

MUST LEARN TO LIVE TOGETHER

As we listen to the roar of current history, it is absolutely clear that we must learn to live together or see our civilization go up in the senseless devastation of war. The atomic and hydrogen bombs, the sputniks, and the ICBM's have attuned the people of the world to an overwhelming desire for peace which is probably stronger than any such desire in all history. There is a common realization that under present conditions every man, woman, and child will be in the frontline trenches if the holocaust of world war explodes. This most urgent desire to prevent war thus offers a unique and unparalleled opportunity to grow from the protection of world investment under the rule of law to the use of the same law as the decider of all international disputes. As such law grows so will, also, a lasting world peace. Here we have a field where bankers and lawyers can promote such growth by cooperative effort in so developing a mechanism of world law to govern world investment as to make it possible to use the genius of free enterprise to pave the road to peace under law.

Chemicals in Our Food—The Consumer Is Not Protected

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. MULTER. Mr. Speaker, in 1906 the Food and Drugs Act was passed by the Congress to safeguard the consumer. Despite several amendments to the law since then, overwhelming evidence indicates that full protection still does not exist. With the increase in the use of chemicals in all phases of food production it is entirely possible that the consumer today enjoys less protection than 50 years ago.

I submit that Congress has been remiss in fulfilling its obligations in this area. I am convinced that most consumers eat their food with complete confidence, assuming the Government has provided for the necessary protection. The days are long gone when the individual consumer was qualified or in a position to assess the purity of the food he consumed. With the present complex and farflung system of food production and distribution the Government must assume the responsibility of assuring the safety and purity of the food which goes to the Nation's dinner tables. New laws are required for the Government to discharge this vital task.

Two articles in the January and February issues of Consumer Reports tell the story. The 1938 Federal Food, Drug, and Cosmetics Act did not solve the problem. I am sure that we are all shocked to know that of the 700 or so chemicals now used in our daily food, more than 150 have not been adequately tested for safety. The problem lies in the fact that the law forbids only the addition to food of a chemical known to be poisonous or harmful, but it does nothing to prohibit the addition of chemicals whose safety is unknown. The urgent need is for legislation requiring pretesting of chemicals before they are introduced into the food supply. Cancer experts have repeatedly emphasized that the absence of incriminating evidence is not a guarantee that a suspected chemical is safe. The danger is in the insidious, long-time toxic and cancer-inciting effect of small, daily amounts of food chemicals consumed over years.

I will not here go into this in any greater detail. I assure you that many of the details are quite alarming.

There is a bill before the House Committee on Interstate and Foreign Commerce which will provide the needed protection. I refer to the bill introduced by our good friend and colleague, the Honorable JAMES C. DELANEY, of New York.

Congressman DELANEY has performed an outstanding service in making the public and the Congress aware of this problem. As chairman of the House Select Committee to Investigate the Use of Chemicals in Foods and Cosmetics, 1950–52, Mr. DELANEY became the leading expert in Congress on this subject. He has introduced his bill in every Congress since the 83d. It is a good bill and I urge the committee to give the House an opportunity to vote on the Delaney bill and provide the necessary protection for the consumers of the country.

Extension of the Reciprocal Trade Act

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. WIDNALL. Mr. Speaker, one of the most important programs being considered by the Congress is extension of the Reciprocal Trade Act.

Karl H. Helfrich, president of the American Tariff League, presented the views of his organization on February 21, 1958, to the House Ways and Means Committee.

Under leave to extend my remarks the views of the American Tariff League, Inc., follow:

My name is Karl H. Helfrich, and I appear here as president of the American Tariff League, Inc., 19 West 44th Street, New York City.

We all realize, I believe, that 1958 is a year of basic decision in the foreign trade and tariff policies of the United States. Those whom I represent sincerely hope that the issues involved will be settled on the true facts of economic well-being and national security, and not through attempts to win the argument before it starts by invoking misleading definitions. Terms such as "high protectionist," isolationist," "reactionary," "free trader," and "visionary" merely tend to confuse our thinking. Nor should any man's patriotism be questioned because he may differ as to the most effec-

tive methods of achieving the objectives that we all desire.

During the past year the American Tariff League has been engaged in preparing the most complete, factual study of our country's foreign-trade problems and policies that we have ever attempted in the 73 years of our existence. This publication, entitled "the United States in World Trade—A Contemporary Analysis and a Program for the Future," is now completed and has been made available to the members of the Ways and Means Committee. It represents the hard work of many people, both lay and professional. We have had the benefit of the resource files and staff assistance of numerous organizations and corporations with long experience in this general field. We believe it to be the first time that data of this scope have been brought together at one point.

On the basis of this study, certain conclusions emerged which led to 13 specific recommendations that were adopted in principle by the members of the American Tariff League at their annual meeting in New York on October 30 last. This study will likewise serve as authority for the statements I make here today.

Those who favor H. R. 10368, calling for a 5-year extension of the Trade Agreements Act, including further tariff cutting powers in the hands of the administration, rely principally on four major arguments: (1) The administration needs these further powers to bargain for reduction in the restrictions levied against American exports abroad; (2) we must buy more from abroad so they can buy more from us; (3) more American jobs are created by our exports than are destroyed by our imports; and (4) increased trade with friendly foreign natios is necessary to win the economic phase of the cold war with Russia and her satellite countries. I would like to comment briefly on each of these four points.

1. Restrictions levied against American exports abroad. Ever since 1934, it has always been a principal objective of the Trade Agreements Act that other nations remove their barriers against United States goods. The act was specifically for the purpose of exanding foreign markets for the products of the United States. Yet the record shows that the barriers foreign nations raise against our goods have increased on a vast scale, computed either by numbers of countries or by types of restrictive practices used. It is very difficult indeed to secure complete statistical data on this subject, but the following table is a partial listing of the 16 principal restrictions found abroad and the number of countries identified as using them.

Major nontariff impediments to the flow of trade and capital imposed by 89 foreign nations (a partial list)

	Countries
Advance deposit for imports	13
Exchange licenses	33
Exchange tax	9
Existence of blocked nonresident accounts	10
Export licenses	46
Forced exchange of payments received in foreign currency	47
Import licenses	62
Import quotas (agricultural)	9
Import quotas (other than agricultural)	8
Multiple exchange rates	23
Preferential exchange systems	16
Preferential trade systems	21
Restrictions on incoming capital movement	28
Restrictions on outgoing capital movement	36
Restrictions on Payments for Invisible imports	45
State trading	13

In addition to the above, we have found 20 other restrictive practices the use of which has been documented in the case of one or more countries.

These latter restrictions, and those listed in the table, are frequently used in combination.

The growth of these practices has been occasioned by various factors; the creation of new nations that never before existed and their desire to secure economic as well as political independence, the shifts taking place in many parts of the world from an agrarian to an industrial economy, and the upheavals and destruction caused by the fighting of a world war. We have no quarrel with these reasons.

The important point today, however, is the fact that the operation of the Trade Agreements Act has not lowered these barriers; they have increased in spite of it. Nor have we basis for believing that the act would be any more successful if extended again.

While tariffs are perhaps the least important of the restrictions which foreign nations impose on United States exports, the facts reveal that even the tariffs are not established on a reciprocal basis. The following table shows the ratio of customs duties collected to the value of imports for the United States and some of her industrial competitors.

Duties-to-imports ratios, selected countries, year 1955

	Percent
United States	5.4
Germany	7.4
Italy	9.0
France	25.3
United Kingdom	30.4

Additional comparative data show that United States' tariffs are already lower than those of any other major industrial nation in the world, with the exception of Japan.

In 1955, a comparison of the average tariff rates of 36 countries of the world showed only seven nations, accounting for only 13 percent of United States' total foreign trade, with tariffs lower than ours, while 28 had higher rates.

The average ratio of customs collected to the value of imports for all 36 countries was 15; for the United States it was 5.4. The average ratio of those countries with higher tariffs than the United States was 18.1—235 percent above the figure for the United States—while the average of those countries with lower tariffs was 3.9—only 28 percent below the United States figure.

What has been the general trend of tariff rates during the past existence of the Trade Agreements Act? We have computed the relative tariff levels in 36 countries for 1937 and 1955. The figures show that a majority of the countries studied reduced their tariff levels in this 18-year interval, but the United States reducted its duty level appreciably more than did most of the others. The United Kingdom and France actually increased their levels by 43 percent and 37 percent, respectively. Canada reduced hers by 13 percent, Italy by 24 percent, Switzerland by 34 percent, and Japan by 39 percent, but the United States reduced hers by 66 percent. During this period only Venezuela, West Germany, Argentina, Sweden, and Brazil cut their levels to a greater degree, and all of these countries had much higher levels than ours to start with in 1937.

The Trade Agreements Act has not achieved true reciprocity in its avowed purpose of reducing tariff levels, nor is there cause to think that it would do so in the future.

There is much current discussion about the rapid development of the common market movement abroad, as it will be set up by the six countries comprising the European Economic Community. This European Common Market is to be formed on a gradual basis, the end result being the elimination of tariffs among the six member nations (Belgium, France, Italy, Luxembourg, Netherlands, and West Germany). But retention of tariffs and other regulatory measures against non-European economic community nations is the premise upon which the market is founded. Member countries having individual tariffs higher than the average for the community would correspondingly lower such rates toward outside countries, but member countries with individual rates lower than the average for the community would raise such rates toward outside nations. A question difficult to resolve is whether such discrimination will, in practice, militate chiefly against the commerce of the United States.

As our league's study states: "Insofar as the movement strengthens the economies and defense potentialities of these European countries, the United States will benefit. If it results in raising the living standards of the European peoples, the United States can only applaud.

"Side-by-side with these possible long-range benefits, the common market trend creates immediate, disturbing problems for the United States. Such a market is inherently discriminatory against United States trade, not necessarily by design, certainly not from malice, but because of the economic forces it unleashes."

Its earliest likely effect for the United States will be a loss of a substantial portion of the European market for many American exports, particularly manufactured products. idly—at an average rate of more than 4 percent a year between 1950 and 1955. This is much faster than any previous European growth rate, and faster even than the 3-percent average annual growth, long term, of United States industrial productivity. Western Europe's booming industrial plant already poses a serious challenge to United States supremacy in world trade. This challenge will mount in the years just ahead.

Moreover, the European Common Market concept is stimulating similar proposals in other areas of the world, namely South America, Central America, Northern European (Finland, Sweden, Norway, and Denmark) and the Far East. The basic principle behind such common markets is to place a common barrier against goods from outside the geographical area. As Dr. F. Mikesell, professor of economics at the Univesity of Oregon has commented, "First of all it must be recognized that by their very nature these arrangements will result in increased discrimination against United States exports."

We submit that on the basis of the past performance of our trade agreements procedure, and in the face of the tremendously powerful economic forces referred to above, it is not logical to place our faith in a further renewal of the Trade Agreements Act, nor in the further drastic cutting of our tariffs.

2. We must buy more abroad so they can buy more from us. This is the old, familiar story of the dollar gap. It is our contention that foreign nations will buy from us when they have need of the goods in question and when our quality, prices, and terms are competitively attractive, just as we will import those goods that we want and which are not otherwise available here. This is just good, common business sense. But returning to the dollar gap, permit me to quote from a recent speech given by Dr. Lewis E. Lloyd, economist of the Dow Chemical Co., before the Hardwood Plywood Institute in Washington.

Examination shows that those who become alarmed about the dollar gap are looking at only part of the picture—they are ignoring some important facts. The so-called dollar gap refers only to the balance between exported goods and imported goods. It ignores the dollars which foreigners get from services which they sell to us, such as shipping,

from tourism, from foreign investments and from our foreign aid program.

"When these other factors are taken itno account, the balance of payments between the United States and other countries shows that foreign nationals have been increasing their dollar credits by 1 to to billion dollars a year for the past 10 years.

"The problem is not that there is a shortage of dollars abroad, but rather that most countries prefer to use the dollars they have for other uses than the purchases of United States merchandise. Foreign nations hoard dollars to stabilize their own currency or for use as exchange with other nations. For example, Brazil, which earns huge dollar credits through sales of coffee in this country, prefers to spend them in Europe where manufactured goods can be bought more cheaply.

"In the past 10 years foreign nations have increased their dollar holdings until they now have claims on more than two-thirds of our total gold reserve. As a result, we are now in a very vulnerable position with respect to our money credit system."

In the light of these statements, it would not appear necessary to renew the Trade Agreements Act so that other nations could sell more to us and hence buy more from us.

3. More American jobs are created by our exports than are destroyed by our imports.

Various figures have been published, and some of them already presented to this committee, regarding the number of American jobs dependent upon our foreign trade, and the number of jobs lost through the competition of imports. We know from experience and considerable effort how difficult it is to develop reliable statistics in this field.

For example, the Committee for a National Trade Policy estimates that if all our tariffs were eliminated, only about 200,000 workers would have to be relocated in other industries. But the American working farm population, which numbers about 7.2 million, operates in a domestic market which for the most part is protected against imports. If this market were opened to foreign competition, it is reasonable to expect that a substantial drop in farm employment would result. Add to this the lists of those who have lost jobs because of the competition of lower foreign labor costs in the fields of textiles, ceramics, textile machinery, plywood, cordage, heavy electrical equipment, commercial fishing, to name but a few. These considerations make the quoted figure of 200,000 jobs at stake look highly debatable.

Administration spokesmen have stated that 4,500,000 American jobs are dependent on foreign trade. We recall that the Randall Commission set the figure at 4.3 million in terms of 1952 foreign trade. The current 4.5 figure is presumably linked to 1956 foreign-trade volume. But we know that in that period the total volume of our foreign trade increased from $26 billion to an estimated $32 billion. Thus a 23 percent rise in foreign trade apparently produced less than a 5 percent rise in jobs.

The American Tariff League, in its study, freely admits that many of our workers depend on exports for their employment, and that conversely, many jobs can be and have been lost here due to the inroads of imports produced with cheap-foreign labor. But the point at issue is what would H. R. 10368 do to improve this overall situation? Our economy is not strengthened in any real sense by the creation of a job at one point through the destruction of a job at another. Furthermore, it is our fear that the proposed measure would destroy more jobs than it would create, and at a time when employment in general is on the decline.

4. Increased trade with friendly nations is necessary to win the economic phase of the cold war. We recognize the great importance of a strong, healthy economy among the friendly nations of the free world. Such strength is necessary not only to enable these countries to help shoulder their fair share of the armament burden, but also to avoid those conditions of living which tend to nourish the seeds of communism from within. One of our major, positive proposals, referred to later in this statement, is specifically intended to encourage our friends abroad to strengthen their internal buying power, and to increase the scope and depth of their own markets.

But the most important stone in the economic arch of the free world is the economic well-being of the United States. If our economy seriously falters, if our strength is unduly sapped, the cold war will be lost.

Production is basically more important than foreign trade as such. Nevertheless foreign trade should be encouraged—the kind of foreign trade that arises naturally between a willing buyer and a willing seller—the kind of trade that benefits both and injures neither. We should continue to import those articles of commerce that we want and that we neither grow nor produce here. As our need increases, the volume will rise. Such articles primarily enter our country duty free. Conversely, and with all the salesmanship for which our businessmen are noted, we will endeavor to dramatize the advantages of our products to our foreign customers, and if the advantages exist, they will buy. If the advantages are nonexistent, or if our customers desire to develop their own productive plant, they won't buy. It is not necessary to renew the Trade Agreements Act to promote business of this mutually advantageous nature.

But if we import products which are comparably produced in ample abundance here, and American workmen are displaced, not because they are inefficient, not because the quality of their work is poorer, but merely because their foreign counterparts have a lower standard of living and receive lower wages, then we are weakening our economy at a most critical time in our history. In our zest to export goods, let us make sure that we do not export jobs. And in our rightful zeal to combat communism outside our borders, let us make sure that we do not induce unemployment here, which nurtures communism within.

Up to this point, my testimony has primarily been directed to reasons why the Trade Agreements Act, with its further tariff cutting powers, should not be renewed. You have a right to ask, and I shall now endeavor to set forth, what in the way of positive action do the members of the American Tariff League favor.

In our Tariff League factual study, completed during the past year and to which I have referred, there is a section entitled "Conclusions and Recommendations," covering pages 105 through 111 inclusive. It is my purpose now to briefly highlight these recommendations, but I respectfully ask permission of the chairman to include these 7 pages as part of the official record of this hearing at the conclusion of this statement.

As I have previously said, there are 13 recommendations in all, but I intend to comment on 6, and of these, to emphasize 3.

Recommendation No. 1. The Tariff Commission, properly augmented with adequate staff, should prepare a comprehensive revision of our entire tariff and foreign trade regulatory structure. Since such a task was last undertaken in 1930, whole new industries have been born and hundreds of new products have been perfected. Our tariff classifications and definitions are sadly out of line. It is encouraging to know that this huge but important task is being undertaken by the Commission. Such a modernization could be of far greater benefit to many other countries than a continuation of our present rates and classifications. Our present policy is to apply each United States tariff rate to the pertinent product from a particular, friendly country. A rate reduced by such agreement is then applied by the most favored nation clause to all other friendly nations, whether or not they have made reciprocal concessions on our exports. Such a generalized reduction accentuates the advantage which a low-wage-cost country has over a higher-wage-cost country in entering the American market.

Recommendation No. 2: We recommend that, in furtherance of a fair tariff structure, consideration should be given to the institution by the United States of an incentive, or sliding scale, tariff system which would recognize and reward any foreign country which improves its living standards or wages for its workers.

In practice, such a system would permit the reduction of United States duties below our basic rates, for any item originating in a country in which the workers producing the item have been paid increased wages. For countries contiguous to the United States, such as Canada, this system, over a period of time, could result in a North American common market. The time might come when a common border, now free of troops, would also be free of customs men.

Recommendation No. 4: The Tariff Commission, as an agent of Congress, should have the task of classifying and defining items, and assigning them to the dutiable and free lists, and designating rates of duty, or quotas for them, all in accordance with basic standards set by Congress. Such determinations, which could be announced in a series of major groupings over a period of time, could become effective, group by group, after the running of a 90-day period, unless Congress directed otherwise as to the group, or to any individual item, on its own initiative or on request from the President.

These, gentlemen, are our principal recommendations. I would like to refer in passing to three more, which are definitely a part of the program.

Recommendation No. 7: We suggest that provision should be made for the use of the tariff to meet special situations:

(a) To prevent dumping.

(b) To offset the use of foreign bounty or subsidy on exports to the United States.

(c) As a penalty for other unfair import practices.

Recommendation No. 8: We recommend that, when tariffs are not an adequate or effective mechanism for regulating our foreign commerce, quotas of a suitable nature should be employed to cover the following situations:

(a) A general or emergency situation in which the tariff rate, or a modification of a tariff rate, would be ineffective or inappropriate.

(b) The furtherance of governmental programs for agricultural products.

(c) To safeguard producers' organizations, research programs, and workers' skills immediately or potentially important to national defense or security.

(d) To counter effectively unfair practices of a particular country.

Recommendation No. 13: Because of a rapidly changing economic world picture for which insufficient data exist, we propose that there be created a special United States commission to prepare a report on foreign restrictions against American exports or investments abroad, and problems likely to arise from the common market areas. Such a commission should have the form and stature of the Hoover Commission, and a principal objective should also be to study how our tariff and foreign trade laws can be administered so as to raise the standard of living and improve the economic climate throughout the world.

We are sincerely convinced that such a program, administered within the framework set by Congress and under the ultimate control of Congress, would provide us with a body of tariff rates and foreign trade regu-

lations that would be attuned to modern industrial and technological development; it would be fair to those nations who stand with us in the cold war because it would be flexibly adjusted to encourage and reward their own efforts to raise their levels of wages, improve their standards of living, and broaden their own internal markets; and most important of all, it would prevent the deterioration of our own national economy, which is fundamental to the success of the whole free world. It would not protect inefficiency, indolence, or lack of imagination, because these should not be protected. It would merely compensate for the difference between higher labor costs here and lower labor costs abroad in the production, with equal efficiency, of comparable articles.

Improved Methods of Stating Budget Estimates

SPEECH
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8002) to provide for improved methods of stating budget estimates and estimates for deficiency and supplemental appropriations.

Mr. SHELLEY. Mr. Chairman, I rise to associate myself in opposition to this measure, H. R. 8002, and join with my distinguished and honored colleagues, the Chairman of the House Committee on Appropriations [Mr. CANNON] and the respected ranking minority Member from the State of New York [Mr. TABER] I believe that there is general agreement that in these two distinguished Members of Congress, the House has a great wealth of knowledge and past experience in the problem, and a vexing problem, of appropriating funds for the operation of the United States Government.

My purpose in opposing this measure is one of not only simple opposition, but also of offering some suggestions and proposals that have been on my mind since I first served in the House and particularly over the past several years I have been serving as a member of the Committee on Appropriations. First, let us take a look at this bill that is before us for consideration. The bill will require a return to the use of contract authority, which is a form of installment buying and installment appropriation. We tried this method of contract authority for years and found that it was more costly to the taxpayers, easier to get approved and subsequently abandoned its use. Another point that is made is one of savings—savings of $4 billion a year. Even the Budget Director admitted this was a phony argument and said he could not point to a single dollar of savings under this system. This bill will not save a single penny, it will not reduce unexpended carryover balances by a single cent, it will not secure closer scrutiny of these carryovers and it will not strengthen control of the purse, and in fact it will weaken control, because it is too late to stop raids on the Treasury after the obligation has been made.

This then is the measure that is before us today. Working on the Appropriations Committee, Mr. Chairman, affords one a magnificent opportunity to look into every facet of the Federal Government and to admire the effective and efficient work of the Departments and their year around budget officials, who work with, develop and promote the budget requests of their particular agency, department, bureau or what-have you. Throughout the Government there are hundreds of these officials working endless hours on justifications for their special responsibility. In fact, just today, there was delivered in my office the 1959 budget justification data for the Department of Commerce. These documents are contained in two large looseleaf volumes and run some hundreds of pages in length. Now, this is the kind of work that the members of the committee should have from our staff. The staff of the Committee on Appropriations is one of the hardest working, most dedicated group of professional people working for the Congress of the United States. They put in hours of overtime, and grind out a fabulous amount of work and information, but still cannot compete with the executive departments with their masses of material and data which are presented to the committee during our hearings. What we need is a system similar in nature to that which exists in the State of California and acts as a direct arm of the California Legislature. I refer to the joint legislative budget committee and the office of legislative auditor. If I may, I would like to give you a brief history of the foundation and development of this office in our State capital in Sacramento. In 1941 an impasse developed between the California Legislature and the Governor over the furnishing of fiscal information to the legislature. As a result, the legislature created a joint legislative budget committee with a staff headed by a legislative auditor. The first responsibility and primary job assigned to this staff was fiscal review and reporting on the administration of the State government. Each year, the staff of the committee, prepares a report on the annual budget bill and presents this report and recommendations of the senate finance committee and the assembly ways and means committee. The legislative auditor is required to analyze all items of appropriations, express or implied.

Since the time the joint budget committee was set up, many extra responsibilities have been added by the legislature. The staff has been given the task of performing reference services at the request of any member of the legislature or any legislative committee. This work has been extended to include frequently the task of outlining research programs for committees and the preparation of special reports on the operations of various branches of the State government. The State auditor himself has the duties of reporting on the estimated cost of all proposed appropriation bills, express or implied. This involves the analysis of approximately 1,000 bills. He recommends on all items of appropriation. The legislative auditor is instructed to make a recommendation for or against all items of appropriation. These recommendations are those of the legislative auditor and not the budget committee.

The auditor is instructed, following each session of the legislature, to prepare a summary of the effect of the legislative program on the financial situation of the State. He reports to the committee instances where the auditor feels that the administration is failing to carry out expressed legislative intent, and he also prepares an estimate of the ultimate cost of each new or expanded service proposed in the budget or in appropriation bills. He proposes changes in law to effect economies in operation or more effective administration and also recommends methods by which research studies designed to secure efficiency and economy should be made.

Another important function of the legislative auditor is to serve as a watchdog for the legislature in the executive departments of the State. His staff continuously and constantly looks into the operations of each of the various agencies and departments and oversees their operations by supervising these departments and making sure they carry out the legislative policy as set down by the senate and the assembly. This is what is necessary here at the Federal level by making sure that the Federal departments are closely observed on a continuous basis by the staff of the Committee on Appropriations.

So, Mr. Chairman, you can see that the post of legislative auditor is one of sweeping and powerful responsibilities. Over the years this position has become one of great stature in the structure of government in the State of California and has been of outstanding assistance and help to the members of the State legislature. It has been my feeling for a long time that if such a post was established at the Federal level, by the two bodies of the Congress, each operating either as a single unit or as a joint body, we would all benefit greatly by such a service and would find that our operations and effectiveness as a deliberative and legislative body would be improved.

Mr. Chairman, we as members of the Committee on Appropriations have been assisted in our deliberations by the GAO and by their staff people. But, if we are going to carry out the ideas that I have expressed here during this debate, we should have a full staff of people from GAO, at least 100 on the other side of Congress and possibly 200 here on the House side, so that we can do a job of really investigating and supervising the functions and operations of the executive branch of Government.

This will be a long program, I know, to have such a change made in the structure of the operations of the Committee on Appropriations, but I feel that during the discussion of this particular bill, we have been given an opportunity to fully talk about and consider all the ramifi-

cations of our present budgeting and appropriation procedures. It has been an especially opportune time for a discussion of improvements that could be made a part of the present system and it seems to me that the establishment of a congressional auditor working for the Committee on Appropriations would be a significant step in the right direction of improving our present method of budget and fiscal appropriation procedures.

And I would like to close by saying that if we don't do something like I have recommended today to the House which will adopt procedures and methods which will give us more information from our employees under control of the Committee on Appropriations, then such proposals as this bill, H. R. 8002, will be proposed again and again and more authority will be shifted to the executive branch and on that day I say, God help the taxpayers of the United States.

Propaganda Advertising Not Tax Deductible

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I desire to include the following in the RECORD:

PROPAGANDA ADVERTISING NOT TAX DEDUCTIBLE

Mr. Speaker, for many months past, there has been publicity by private power organizations in the press and in magazines throughout the country, large and expensive ads, by the American Independent Electric Light and Power Companies, practically all of which appear to me to misrepresent the facts, with the result that these ads cannot be justified on the grounds of rendering a public service.

Such ads appear in the October 1957 issue of Redbook and the Reader's Digest, and in the October 1, 1957, issue of Look magazine.

Mr. Speaker, these ads appear to be a series of propaganda ads sponsored by a national group of electric utility companies, and, of course, paid for by the customers of these companies. I understand that the space for the ads in these three magazines alone cost about $56,000.

Mr. Speaker, it seems clear that the purpose of these ads is to prejudice the people against the Electric Power Cooperatives—hoping to gain favor for the private power industry.

I think there's plenty of room in this country for both the private power industry and the REA network cooperatives of the Nation who have been doing such a splendid job in bringing light and power to rural America.

Mr. Speaker, some of these ads complain that, whereas taxes allegedly constitute 23 cents of every revenue dollar paid to private utility companies, "People who get electricity from Federal Government electric systems * * * are privileged people."

The ads claim that "electric cooperatives pay a far smaller tax—only a fraction of the taxes paid by private power customers" because, the ad concludes, "a strange twist in Federal law exempts them (meaning the cooperatives) from paying most of the taxes in electric bills * * * because they get their electricity from Federal electric systems," meaning the REA.

The facts are that the REA is a nonprofit organization and, like all other nonprofit organizations, is exempt from income taxes. Of course, the private utilities' organization publishing the ads knew this quite well, but left the misleading inference to the contrary. The private utilities pay income taxes because they are in the business for profit, and income taxes to corporations and individuals alike are assessed on profits.

Despite the claims of the advertisement, there is no law which exempts anyone from paying taxes merely because he is a purchaser of Federal power. If that were true, the very power companies which sponsor the ads, and which purchase much more Federal power than do the nonprofit cooperatives, would themselves be exempt from the taxes about which they most complain.

These advertisements are designed not to build good will, not to sell electricity, not to render a public service, but solely and exclusively to destroy whatever small competitive influence exists in the electric utility business. Their motivation is the destruction of the Federal power program which in many areas has made possible rural electrification, and which helps to make feasible the irrigation of arid lands, the abatement of floods, and the deepening of navigation channels in our major rivers.

Mr. Speaker, the Federal Power Commission, I understand, about a year ago set a precedent prohibiting such propaganda ads from being classified as an "operating-expense deduction before taxes." This action should reduce such propaganda advertising activities.

Jobs After 40—Resolution

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 8, 1958

Mr. GRAY. Mr. Speaker, one of the most serious problems facing this Nation today is the plight of our unemployed. Particularly those over 40 years of age. My congressional district of southern Illinois is one of those classed by the United States Department of Labor as having a very substantial labor surplus. I have repeatedly urged the Congress and the administration to help distressed areas. In this connection the Fraternal Order of Eagles has started a campaign to aid the jobless and have titled their crusade "jobs after 40." I join them in this effort and have introduced legislation designed to help provide jobs. Under leave granted I wish to include the following resolution unanimously passed by the Herrin, Ill., Aerie of the Fraternal Order of Eagles:

Whereas the Fraternal Order of Eagles is engaged in a nationwide jobs-after-40 campaign to eliminate age discrimination in employment as an unwarranted practice which is depriving many thousands of physically sound, skilled, and experienced workers of the means of a livelihood, and which is resulting in a tragic waste of manpower in the American economy; and

Whereas there is now pending in the United States Senate bill S. 3188, introduced by Senator RICHARD L. NEUBERGER, and cosponsored by nine other Senators, to prohibit discrimination because of age in the hiring and employment of persons by Government contractors; and

Whereas enactment of such proposed legislation would provide employment for many competent workers now barred by age discrimination, and would set an inspiring example by Government for all industry for the adoption of similar policies: Now, therefore, be it

Resolved, That Herrin Aerie of the Fraternal Order of Eagles hereby goes on record for support of bill S. 3188, and urges enactment of this pending legislation into law.

Adopted by Herrin Aerie, Fraternal Order of Eagles, on February 13, 1958.

Giant of History

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. PELLY. Mr. Speaker, under unanimous consent I include a most worthy speech which points up George Washington as a great liberal.

A careful reading of the text of this timely and ably presented analysis of our first President will prove most rewarding, I am sure, to the contemporary leadership of our beloved Republic.

The address follows:

GEORGE WASHINGTON, THE GREAT LIBERAL

(Address by Charley F. Embree)

Back in the 1920's while Calvin Coolidge was President, one of his visitors went to some length to play down the great importance of George Washington. President Coolidge listened with the patience for which he was noted until the visitor had finished his remarks. Then, Mr. Coolidge, who was the master of the succinct expression, stepped to the window of his White House study and observing the towering obelisk 555 feet 5⅛ inches high, dryly remarked: "I see his monument still stands."

While the obelisk which was the object of President Coolidge's pithy remark will always be identified in our minds as the Washington Monument, there are many others. Our Capital City in which the obelisk stands is a monument to his memory and it is only appropriate that it should be named Washington. It is also fitting that nearly every State in our great Republic has a city or town named in his honor. Thirty counties are so identified in his memory. Lakes, islands, parks, squares, rivers, and mountains have been honored with his name.

Our own great State of Washington is one of the most important monuments to his memory and it is only fitting that his picture should be the central feature of our State flag.

Some half a dozen colleges and universities have adopted his name and have been inspired by his example of research and respect for disciplined knowledge. It is most fitting that Washington's two hundred twenty-sixth birthday should be honored on the campus of the greatest of all of these schools to bear his name. It is a distinct tribute to this great university and to the patriotic societies sponsoring this ceremony that the date of his birth is honored here.

No other man in our history better deserves this outstanding recognition. He was a monumental person. Whether it was on the battlefield of our revolution, in the council chamber of our Constitutional Con-

vention or as the first President of a struggling young Republic, he was the monument of strength, inspiration and of leadership around which lesser figures rallied. His name and his influence are such a vital part of the founding years of our Republic that whether one looks at our Constitution, our Revolutionary War or the steps leading up to the great decision to seek our freedom—wherever one looks in those wonderful years of decision, there is the monumental George Washington providing the strength, the vision, inspiration and leadership without which the issue of our independence might well have remained in doubt.

Other nations have had their revolutionary leaders who have served bravely to lead their nations through bloody struggles to freedom but have not had the necessary qualities to stabilize the newly won freedom in terms of enduring government. It is significant that Washington did. Not only did he lead us through the Revolutionary War to victory but he also led our new Republic to a position where its sovereignty was respected among nations.

Even more significant is the fact that this Republic, which he first led, has proved to have the most stable and enduring Government in the world today. No other nation worthy of recognition as a power can point to such a long history without a fundamental change in its constitutional government. The very fact of our own revolution was perhaps the deciding factor leading England to change from the absolutism of George the Third to the liberalism of a limited, constitutional monarchy.

We are accustomed to other nations referring to us as young and immature. These are relevant terms. Certainly in the matter of years of governmental stability and the ability of a nation to withstand crisis, war, and the many other trials of history, our Republic holds seniority over all nations. We have proved in the crucible of experience that George Washington and the stalwarts he led, built solid foundations indeed. Our Constitution and the Republic which he helped form have proved the lasting value of his judgment. They are the greatest monuments to his genius for leadership.

In the face of such impressive facts, it is amazing that there are those who would adopt the role of the iconoclast and attempt to downgrade this great leadership and the monuments to it. Unfortunately it is true.

They would even attack the idea of the Republic which he helped found. It is significant that our Founding Fathers agreed on one thing and that was the absolute necessity for every possible protection of the rights of the individual against the totalitarian state. The Constitution, therefore, contains every conceivable check against every conceivable potential for dictatorship. For this reason, it establishes a Federal Government which is a Republic of delegated powers at the Federal level and not a democracy subject to direct vote of the people.

George Washington and others who framed our Constitution were true liberals who believed in and fought for the absolute integrity of the freedom of the individual as opposed to the collectivist regimentation of the totalitarian state. They recognized full well the dangers inherent in a system which would permit final decisions to be entrusted to a single vote of the masses of a nation's people who might be swayed by a demagog of the moment.

At this point all of us should be reminded that Hitler became a dictator through a democratic process. It took but one vote of the people of Germany to make the power of Hitler absolute and final to the extent that only a bloody world war could undo the tragic decision of one hasty vote. Similarly, Caesar, Napoleon, and Mussolini became absolute dictators in response to a shouting mob of people swayed for the moment to will away their freedom.

Our Constitution, which reflects Washington's leadership in so many ways, slows up the final decision and subjects it to the checks and balances of repeated examination and the maturity of delayed judgment before becoming final.

Those who speak glibly of democracy at the level of our Federal Government would do well to weigh these facts of the Republic which have been responsible for making this most stable Government and the greatest guarantor of individual liberty in the world today.

On the other hand, our Constitution provides the maximum of democracy at the lower level of government where all can know the candidates for office and be in a position to weigh their day-to-day decisions after election in the light of election-day promises and contemporary developments. At this level, the direct will and voice of the people is of fundamental importance. At this level, the people themselves can and should exercise the maximum of democracy which means the exercise of direct control by the people where they are in a position to know every detail of government and exercise their sovereign judgment in seeing to it that their will is carried out.

It is most significant, however, that there are many in our land today who would reverse these conditions and it is regrettable that they have identified themselves as liberals. These people would destroy democracy at the level where the people are in a position to exercise it effectively and would concentrate the powers, reserved by our Constitution to the States, in the Federal Government.

If anyone questions this, it is suggested that he but look at the many functions of government formerly committed entirely to the State, county, and local governments and school districts which have been either transferred to or are under the regimented, centralized control of the Federal Government today.

Each step in this direction has represented a loss of democracy although it has resulted from democratic process. This is the sad feature of free democracy: Like the free individual, it can commit suicide.

Even more alarming is the fact that these same people who have so unrightly identified themselves as liberals work determinedly to destroy democracy at the lower levels and to transfer the concept of democracy to the Federal level.

Having been so successful in influencing the people to transfer their democratic functions to a level of government where direct support of the people is compulsory but direct supervision by the people is an utter impossibility, these same individuals would now ask the people to forgo all aspects of the Republic which guarantees that supervision.

Should this be accomplished in fact, all that would be required would be a single vote of the people which could result in the same mistake which the German, French and Latin peoples have made after the functions of government had all been concentrated at top level in a collectivist state. From collectivism to dictatorship requires but one mistaken vote in a democracy at the federal level as Germany's experience with Hitler proved.

In this connection, there are many signs:

Dr. E. Merrill Root of Earlham University has made an intensive study of this and I have his written permission to quote his findings as published in Mercury magazine, December 1957 issue. Professor Root has analyzed 12 leading textbooks of American history now being used in our schools and he has this to say and I am quoting him directly: "In not one of these 12 histories that I studied is there any mention in the index of the word 'republic'. On the other hand, 'democracy' is in every index and mostly at great length.".

It should be of interest to note that not a single President of the United States ever referred to this great country of ours as a democracy until 1913. Every President prior to 1913 had uniformly referred to our country as a republic which was the intent of our Founding Fathers. Since that time, the meaning of the word "democracy" like the meaning of the word "liberal" has been abused and distorted. It is important that we pay more respect to and take fewer liberties with semantics.

George Washington was a true liberal and it is only right that we should refer to him as "the great liberal." Today, he undoubtedly would be identified as a libertarian.

One of the outstanding qualities of Washington was his integrity and the consistency with which he pursued a course of action. Dr. Homer Cunningham; professor of history at Whitworth College has pointed to these qualities which in themselves made Washington a standout success over the abject failure of Benedict Arnold who, though probably possessing considerably more ability than did Washington, yet failed because he lacked the essentials of integrity and consistent dedication to a course of action. Washington became the hero-patriot while Arnold became the villain-traitor.

But those who would downgrade our governmental system which Washington led in establishing would also downgrade Washington. As long as the memory of the founder stands out in monumental and heroic proportions he would continue to inspire the kind of individual freedom which is anathema to those advocating collectivist regimentation under the abused term "democracy."

The same authors of the American history textbooks referred to above as having been analyzed by Dr. E. Merrill Root have contributed wittingly or unwittingly to the downgrading of Washington. Again, I am quoting directly from Dr. Root as published in the same issue of American Mercury magazine: "If you will read these histories, you will learn that George Washington was a dreadful fellow for he belonged to 'the gentry'; he owned 'property'; he was an 'aristocrat'; he was against 'the common people'; he was a 'reactionary.'"

This is the man referred to as "of the gentry" who served his country without cost to the Nation—and so won freedom for all the people. This is the man of "property" who stubbornly presided over our constitutional convention and helped provide the basis for the greatest protection of private property with more people enjoying the blessings of ownership on a more equitable and broader basis than in any other nation of the world. This is the "aristocrat" who fought to destroy the right to inherit rank or title and helped establish a government where titles of nobility are constitutionally forbidden. This is the man who stands head and shoulders above all others for what he did for the common people. If he were a "reactionary" he led the most revolutionary movement which resulted in the most progressive government known to the world up to that time.

In the light of the criticism from the pygmies of today it might be well to see what the giants among our founding fathers thought of this man whose birthday we honor today. Patrick Henry, referring to the members of the Continental Congress, said "Colonel Washington * * * is a man of more solid judgment and information than any man on the floor."

Edmund Randolph described him in unglamorous terms but as "possessing a fund of qualities which had no specific direction to any particular calling, but were instruments for any crisis." As farmer, surveyor, soldier, statesman, Washington's talents provided leadership when leadership was vital.

John Adams was asked who nominated Washington to the chief command of our Revolutionary forces and he pointed out that "it might be affirmed that he (Washington) most unconsciously nominated himself." Washington was simply the only choice and everyone at the time knew it. To demonstrate the true bigness of Washington, he realized that he was the logical man to head the Revolutionary Army and he knew that whoever undertook this responsibility would have to do so at great sacrifice. In order to avoid having to be entreated to undertake the responsibility, he merely reported to the Congress in uniform and this act of acquiescence made further discussion unnecessary.

Adams once described Washington thus: "There is something charming to me in the conduct of Washington. A gentleman of one of the first fortunes upon the continent, leaving his delicious retirement, his family and friends, sacrificing his ease, and hazarding all in the cause of his country. His views are noble and disinterested. He declared when he accepted the mighty trust that he would lay before us an exact account of his expenses, and not accept a shilling for pay."

In our own day, Rupert Hughes has very well evaluated this giant of our history with these words: "George Washington is infinitely more appealing, pitiful, heartbroken, tragic, gay, witty, tender, gracious, tactful, fearless, ferocious, heroic, and at his loftiest, sublime than the dull gray bore manufactured by stupid dullards, stodgy politicians and mongers of untruisms."

There are many lessons which we can learn from a review of George Washington's true story and one of these is the value of prayer in time of crisis because Washington was a man of prayer. He was a Christian who recognized the brotherhood of man under Almighty God. In problems affecting men he sought the guidance of God.

On opening the Constitutional Convention there was a short debate as to whether the meetings should be opened with prayer. Alexander Hamilton led those opposed and acidly remarked that he felt the delegates were equal to any exigency and saw no reason for calling "in foreign aid." Washington led in rebuking Hamilton with a look that was more eloquent than words. Without further debate all the other delegates followed suit and a chaplain was appointed and the precedent established of seeking God's guidance over our Nation's business. What a contrast to the opening of the United Nations conferences in San Francisco. Who knows how much the course of history could have been changed had a leader with Washington's spiritual stature been there to rebuke those who arranged for the United Nations sessions to be opened without prayer and so destined that organization's deliberations to be conducted without first seeking divine guidance.

Those who would ignore the tremendous significance of this Republic's struggle for freedom and Washington's vital role of leadership in that conflict should be reminded of one of George Santayana's wisest sayings: "Those who cannot remember the past are condemned to repeat it."

On this heroic day, let all of us remember that past and the man, George Washington, who led us through those days of revolutionary crisis to the freedom of the Republic with which we are blessed today and thank Almighty God that, like Calvin Coolidge, we too can see his monument still standing.

Economic Outlook for United States

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, it gives me great pleasure to include the syndicated article by the noted and esteemed columnist and magazine writer, Mr. David Lawrence. The article appeared in over 275 newspapers, 1 of them being the Evening Star, Washington, D. C., Thursday, March 6, 1958.

The article follows:

PROPOSED 5-YEAR GRADUATED TAX PLAN HELD KEY TO NEW ERA OF PROSPERITY

(By David Lawrence)

The business situation in America has become the most important news story in the world today. It is more important than any summit conference or the launching of satellites. All Europe is anxiously watching the business trends here. For if America's economic strength is sapped by a deep depression, the Communists would be given an opportunity for victories in many parts of the globe without firing a shot.

Which way will business go? Here are 3 directions in which the economic curve in America may be charted in the next 12 months:

1. The declines could go deeper. The psychological effect of this might cause a mood of hesitation and reluctance to go ahead even in businesses that are fundamentally sound.

2. There could be an upturn this summer or this autumn. A steady recovery would then ensue throughout next year.

3. There might be a sidewise movement as business bumps along the bottom for a while, with no sign as to just when in 1958 the upturn would start.

The most important information that businessmen are eager to get now is in the answer to the question "When will the bottom be reached?"

If businessmen were convinced, for instance, that the bottom already had been reached—as a few observers seem to think—planning could begin now with real confidence. But it takes a little while to determine whether a bottom mark has actually been recorded. Too often the weekly or monthly figures are changed by statistics the following week or month. There must be signs of a continuous trend in order to be sure of what is happening. The February unemployment figures will become available about March 12, but the truly important figures are those for the month of March, which will not be ready for disclosure until the middle of April. If those figures show a decline in unemployment, the news will be heartening to the Nation.

Unfortunately, there has been an overemphasis on unemployment figures as the sole indicator of business conditions.

For the truth is there were only 340,000 fewer persons at work in January 1958 than in January 1957. There were, however, more than 900,000 workers added to the Nation's labor force in 1957, and these, together with the usual number out of jobs for personal or other reasons, brought the total of unemployed up to 4.5 million in January.

What can be done to create 900,000 more jobs a year and to absorb more and more workers from the normally unemployed total? There is only one answer—incentives to business enterprises.

Lots of talk has been heard lately about how the Soviets give incentives and stimulate their scientists by special treatment. But the principle is even more significant in a free economy. Tax revision of the right kind is perhaps the most important stimulus that could be given American business of all kinds. It's the policy that performed a miracle in West Germany, just as the lack of incentives has retarded Britain's postwar recovery.

What ought to be done in America probably will not be done because there isn't as yet a majority in Congress willing to take a long look ahead and plan not just for the few months of 1958 but for several years.

Prosperity—bigger than any the United States has ever experienced—would, for example, follow the passage of a measure like the bill sponsored by Representative SADLAK, of Connecticut, Republican, and Representative HERLONG, of Florida, Democrat. It would revise the whole income tax structure, to take effect over a 5-year period, so that eventually the country would have a rate schedule ranging from 15 to 42 percent for individual incomes and an overall rate of 42 percent for corporations. Referring to this bill, the First National City Bank Letter, which is noted among businessmen for its down-to-earth analyses of the business situation, says:

"It is doubtful if any action Congress could take would so brighten the economic outlook and revitalize efforts to produce and sell and go ahead."

This is echoed by Dr. Charles F. Phillips, an economist and president of Bates College. He says a plan of this kind would bring in enough revenue to keep the budget balanced.

For, by making the tax rates productive instead of restrictive, America would get more and more tax receipts from business. The new rates would encourage persons of high income to invest their savings in new enterprises. It would help all companies to build up surpluses so that they would have the money available to modernize plant and equipment.

The best way to get more tax revenues for the Federal Government is to give business—which has the major task of creating jobs—a tax rate that provides a real incentive to progress and expansion. It is the road to full employment.

This is sound economics, and it could be sound politics, too. But the majority in Congress will hesitate to favor such a plan until it is backed by an overwhelming public opinion.

Anniversary of the Birth of Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. MULTER. Mr. Speaker, tomorrow is the anniversary of the birth of Thomas G. Masaryk, the founder and first President of the Czechoslovak Republic. It is fitting that we commemorate this anniversary, not only because he was one of the great statesmen and democratic leaders of the century, but also because of his many close ties with this country.

Thomas Masaryk was a close friend of one of our greatest leaders, Woodrow

Wilson. Indeed, it was in part through President Wilson's policy of self-determination that the Czechoslovak Republic came into being. The Constitution of the Republic which Thomas Masaryk helped to frame was based in large part on the Constitution of the United States. In many other ways this great man helped bring our two democracies together.

A strong spirit and bond of friendship exist to this day between the peoples of the United States and Czechoslovakia. Unfortunately, the ruthless, aggressive actions of the Soviets have ended free communication with Czechoslovakia. We look forward to that happy day when the undying resistance of this brave nation will triumph over the oppressive domination of the Soviet tyrants.

Trinity River

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MILLER of Nebraska. Mr. Speaker, I sent a letter to the senior Member of the other body from California relative to the Trinity River project in that State. It seems certain that reclamation in California will be struck a deadly blow unless the partnership plan is adopted in which the power revenues would aid and assist reclamation in the Central Valley project.

The irrigators of the Central Valley project should be keenly aware that unless this partnership plan is adopted that there will be less money to assist them in the payoff on reclamation. If the Government develops the Trinity River power project, it will be selling power for less than the cost of production. The partnership plan would help reclamation in California.

The letter follows:

FEBRUARY 19, 1958.

The Honorable WILLIAM F. KNOWLAND,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KNOWLAND: It was with a great deal of satisfaction that I read your recent statement expressing emphatic approval of the partnership plan of joint development of the power facilities at the Trinity River project in California.

This indicates your usual sound and courageous thinking on matters of this kind. You have again demonstrated to my mind that you reflect the views of the majority of sound thinking people, not only in California but in the rest of the Nation.

In this connection, I would like to call your attention to an excellent factual study of the Trinity case which has just reached my desk. I refer to the last bill analysis, dated February 18, 1958, which has been issued by one of the Nation's leading nonpartisan economic research organizations, the American Enterprise Association of Washington, D. C. These are the same bill analyses which deal with the pros and cons of current legislation and which are regularly circulated among a large number of the Members of Congress.

Though there are points which can be stated on both sides, the bill analysis shows clearly that the only sound course is to pass legislation which will permit joint developments of the power features of the Trinity project. I might say that I was particularly impressed with this document on the views favorable to joint development by professors at Harvard University and University of Chicago—two of our top-ranking institutes of higher learning.

There is one feature of the bill analysis which was pointed up very forcefully and which disturbs me greatly. It is the simple fact that under all-Federal development the power feature at Trinity would actually be a drain on the California Central Valley project. The document shows that if this procedure is followed in California and other parts of the West, reclamation would receive a body blow.

You realize, of course, that historically power has been regarded as the paying partner of reclamation. As you know, the very act authorizing the Central Valley project provides specifically that power revenues shall aid and assist the water features of the project. I am also pleased to add that the Secretary of the Interior was specific on this same point when he appeared before our committee on February 3, 1958.

It is important for all of us who are truly interested in reclamation to recognize that an all-Federal project at Trinity would reverse this historical pattern and thus hit reclamation a deadly blow. I might illustrate in terms of a proposal now before our committee, which concerns the San Luis project in your State. This project, as you know, would require substantial financial assistance from the Central Valley project. If this assistance is jeopardized by an all-Federal Trinity development, the prospect at San Luis would be bleak indeed.

On the other hand, joint development would provide substantial additional revenues to the Central Valley project which, together with Federal tax payments, would assist materially other projects in California and the West.

This question of assistance to reclamation is no small one. For example, testimony by the Secretary of the Interior and others before our committee (the same matter is clearly analyzed in the bill analysis to which I referred before) emphasized the fact that Federal power at Trinity would be sold at an average of 4.6 mills per kilowatt hour which is only slightly above half its production cost of 8.9 mills. This is equivalent to a loss to the Federal Government of about $4 million annually which would be just the reverse of the intended function of power facilities.

Each of us is vitally interested in reclamation in his area. In my general territory, there are many projects contemplated in the Missouri Basin, the Upper Colorado River and so on. If the unsound principle of selling power from reclamation projects at less than Government cost is applied to other projects in the West, there can be only one result: Our water needs will go unfilled, and our States' economic growth will be stunted. That would be a terrible price to pay for a mistaken power policy. Let me add that the bill analysis already mentioned supports about the same conclusion.

Similarly, may I call your attention to the way in which joint development at Trinity would help meet the Nation's temporary unemployment problem. We have a huge national debt. This cannot be allowed to rise without limit. Joint development at Trinity would save the Government $60 million, which means that employment-generating reclamation projects now held back for lack of funds could get the go-ahead again to the extent of $60 million if Congress approves the partnership plan advocated by the Secretary. Some of the presently excluded reclamation projects are in my territory, and some are in your State. You know, for example, of the problems connected with California's Sacramento Valley canals. These canals were authorized by our committee, but I can't help wondering how the funds for the canals would be obtained when the appropriation committees of Congress realize that $60 million in reclamation funds were unnecessarily diverted to Trinity power facilities, especially when such division actually results in such power being sold at less than cost thereby draining off some of the financial assistance required for the canals unit.

Again, I want to express my appreciaton of your generous interest in reclamation and water conservation. I am sure your State and the West will be in much better position to secure needed reclamation funds if your counsel is heeded. I am sure that many thoughtful people in your State and throughout the West will applaud your forthright stand in the interest of reclamation and needed water resources development.

Sincerely yours,

A. L. MILLER,
Member of Congress,
Fourth District, Nebraska.

The Significance of the Bill of Rights Today—A Winning Essay by Junior High School Student, Compton, Calif.: To Wit, Miss Diane Olsen

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 8, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I have great pleasure in presenting to the attention of your own distinguished self and that of all my colleagues in this great legislative body, a brief, but very pertinent, essay by the winning junior high school student at Roosevelt Junior High School, Compton, Calif., to wit: Miss Diane Olsen, 16723 South Muriel Avenue, Compton, Calif.

Mr. Speaker, I am pleased to further inform you that a considerable number of junior and senior high schools in the great 23d District of California emphasize in their daily classes the importance of a knowledge of the Constitution of the United States and the Declaration of Independence to the education and daily experience of their students.

The essay here set forth was the winning essay as third place winner which brought a $50 savings bond award to the author in the Los Angeles County-wide Bill of Rights essay contest for junior high school students; the population of Los Angeles County being approximately 6 million people.

The distinguished instructor of the English class at Roosevelt Junior High School, Mr. Edwin Burk, has so thoroughly imbued his students with desiring a thorough knowledge of the Constitution of the United States and the Bill

of Rights portion thereof, that I am informed his class also produced first place and third place winners in the Los Angeles Examiner Bill of Rights contest in 1957.

Miss Olsen's essay follows:

THE SIGNIFICANCE OF THE BILL OF RIGHTS TODAY

These first 10 amendments continue to survive through the years because they symbolize and insure our democratic way of life. These 10 simple inalienable rights are also known as 1 to 10, inclusive, which represent an ironbound guaranty of freedom that has endured for many years. They provide a frame of government, offer a pattern for human society, a specific program for the present, a blueprint for the future, and they also represent the whole abiding truth.

The men that constructed the most trusted rights of the United States were men who planned for the future and who sought to find words that would express the rights of the citizens of the United States.

These 10 amendments really mean something to each loyal American, in the way that they express our freedom of religion, of speech, of the press, of assembly, and of petition to the Government. They were adopted to guide us in our time and to be used by our posterity in the future years.

If these rights should be misused they would come crashing down upon us like a scientific atomic bombardment. With the help of God, and these rights, we may maintain our standard of living to be a greater and more joyous world than it is now.

Manufacturer, 80, Trusts God, Sees Firm Grow

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. ABBITT. Mr. Speaker, in these times of large stock-holding corporations and industrial empires, I think it would be fitting and proper for us to pay our respects to the family owned companies that still do abound in our country and particularly in the Fourth Congressional District of Virginia. At this time, I am specifically thinking of the Titmus Optical Co., Inc., of Petersburg, Va., and its chairman of the board and founder, Mr. Edward Hutson Titmus.

This year, Mr. Titmus and his company are celebrating their golden anniversary in the optical business. The success of this business is indeed an inspiration to similarly determined men and a glowing example of America's free enterprise system. In the past 50 years, the Titmus Optical Co. grew from a three-man operation to the largest independent manufacturer of ophthalmic lenses in the world and today employs over 1,300 people. But even today, just as in its inception, the company is owned and controlled by the Titmus family. Mr. E. H. Titmus, Jr., company president and son of the founder, has demonstrated the same business acumen, the same high ideals, the same respect for his fellow man, and the same deep reverence for God as his Father. I am proud to say I can claim both of these men as personal friends of mine.

The growth of this concern demonstrates the soundness of the private enterprise system that has been the foundation stone of the republican form of government. Individual initiative and determination to apply one's capabilities has made America great. We must not forget that even today individuals must and can take care of themselves and forge ahead without depending upon a paternalistic government.

On Monday, February 10, 1958, there appeared in the Richmond News Leader, Richmond, Va., a very fine article by Mr. John Lee giving the high spots of the life of Mr. Edward Hutson Titmus and some of the background and development of the Titmus Optical Co. It is a most interesting article and one that should give encouragement to our young people and to those men and women who are struggling to maintain the private enterprise system in America.

Under leave to extend my remarks in the RECORD, I include the article which is as follows:

MANUFACTURER, 80, TRUSTS GOD, SEES FIRM GROW

(By John Lee)

"I, Edward Hutson Titmus, was born March 27, 1877, on Cross Street, Petersburg, Va. I do not know the exact tenement, but it was either No. 437 or No. 439."

So begins a thin, blue-bound volume of recollections written by the founder of Titmus Optical Co. of Petersburg. The title of the book is "Looking Through the Lens."

"You want to know why I wrote it?" Titmus said matter-of-factly. He rested in an old swivel chair in his plain, unassuming office in the main building of the sprawling plant in downtown Petersburg.

The office floor was highly polished hardwood. Over the door were mounted a half dozen or so fish, all bass. Family portraits crowded onto a bric-a-brac shelf in the corner.

Beneath a large piece of glass which covered the desk, was a card bearing the words, "Keep Smiling."

WANTED TO WRITE

Titmus looked at the card, smiled and said, "I just had it in my mind that I wanted to write a book for my children and my grandchildren."

He reached across the desk, took a copy of his autobiography off a pile of the books and thumbed the pages. His round face brightened and his keen eyes flashed as he warmed to his subject. He set the book down emphatically.

"I also wanted to give testimony on what a man can do," he said, "if he trusts God and stands fast in his faith and his labors."

Titmus, a compact man of 80, spry and good humored, has let religion play a great part in his life. He is extremely modest of his own achievements and prefers to point to the success of his company as an example of what one man and the Lord can do.

BOARD CHAIRMAN

He is now chairman of the board of the company that calls itself the world's largest independent manufacturer of ophthalmic lenses.

Titmus still goes to the office for a few hours every day, if the weather permits. But he has relinquished most of the executive duties to his son, Hutson Titmus, Jr., 44, who succeeded his father as president several years ago.

It was the elder Titmus who firmly established a small jewelry store 50 years ago and then built it into one of the country's leading manufacturing optical companies.

Titmus was 14 when he left school to go to work. He got a job in a jewelry and watch repair business and was paid $1.50 for a 60-hour week. Times were hard, but after a few years he managed to go to Philadelphia Horological College to study watchmaking, engraving, and optics.

He returned to Petersburg late in 1898, and continued his work for someone else until 1902. In that year—"with $35 in cash, my watchmaker's tools and some knowledge of the business," as he writes in his book—Titmus opened his own shop.

BUMPY MOMENTS

The business had some bumpy moments, but it survived. In 1908, Titmus—believing that there was an opportunity for a wholesale and prescription optical business in Petersburg—organized the Titmus Optical Co.

The firm began experimenting with the manufacture of lenses for glasses in the rear of the jewelry shop. Despite a disastrous fire that wiped out the stock, despite financial adversity and rugged competition, the company began to grow.

But there were some difficult times.

After World War I, for example the two largest optical companies in the country were buying up the independent jobbers, many of them Titmus customers. Business conditions were bad, and it was common gossip that Titmus was about to lose all that he had.

"During the darkest days of that period," Titmus recalled, with the air of a man reliving one of the significant events of his life, "I was one day in Mr. Ashby Hardy's barber shop.

SCRIPTURE VERSE

"I was lying in one of his barber chairs just wondering what would happen next, when, like a bolt of lightning out of a clear sky, the following verse of Scripture came into my mind:

"'In all thy ways acknowledge Him, and He will direct thy paths.'

"This passage gave me assurance," Titmus went on, "that if my friends would continue to have faith in me, everything would come out all right in time and it made me realize that for God to do His part, it is necessary for us to do all that we can."

Titmus said that event has brought him great peace of mind.

At one point during his business career, he was having labor troubles. But when he went home at night, he would go to bed and sleep soundly, not worrying about a thing. He was confident he had done all he could and nothing else could be expected.

It's such an attitude, Titmus feels, that has enabled him to build his business. He feels also that success carries with it obligations.

Now, when his days are quiet and he finds himself with a little time, he likes to visit friends in the hospital. His charity, however, also takes more material form through the Titmus Foundation, Inc., which he set up in 1950.

FINANCIAL AID

The foundation gives financial assistance to a wide range of religious, charitable, scientific, and educational organizations.

It is responsible for a cottage at Baptist Children's Home in Salem, and for the Titmus Eye Foundation which is doing basic eye research at Medical College of Virginia.

One of the major recipients of funds is Petersburg General Hospital. One of his gifts resulted in a nursing educational building which is named in honor of his first wife, the late Maud Huddleston Titmus.

Charity and business now are the two prime elements in Titmus' activities. He and his wife, the former Cecile Mayton of Petersburg, live only 2 blocks from the Titmus plant.

The company's founder, although phasing out of active management, still casts his shadow over activities there. Many of the employees have been with the company almost as long as it has existed and the almost paternalistic spirit that prevails is the way Titmus wants it.

But the days of individualism and the personal business are passing. In recent years, outside experts in optics have been brought in and the company now operates as a team.

LOOKING AHEAD

Titmus realizes that those are the methods which must be followed in today's business world and he is proud that the company is looking ahead.

Titmus Optical Co., now celebrating its golden anniversary, employs 1,300 persons and has 260,000 square feet of manufacturing space in its complex of red brick buildings.

It ranks fourth nationally in the overall optical business. In addition to its ophthalmic lens department, it has departments for the manufacture of frames and a full line of sun wear.

It now is entering the instrument field and is producing a vision tester for industrial use. Its manufacture of optical products for industry is growing.

And the first of the year it concluded an agreement with Polarizers International for the manufacture of Titmus products in Sydney, Australia.

It is more than 9,000 miles from Petersburg to Sydney.

Excessive Imports of Crude Oil Create Widespread Unemployment in Our Domestic Industry

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. REES of Kansas. Mr. Speaker, under unanimous consent I am including a copy of a resolution adopted by the Independent Oil Producers' Association of Kansas.

The resolution concerns a serious condition in the oil-producing business that has come about largely because of excessive imports of foreign oil into the United States.

Whereas due to decreased domestic consumption and continued excessive and unjustified imports of foreign oil, the supply of domestic oil substantially exceeds domestic demand, which has resulted in pipeline proration and sporadic price cuts, which will spread unless supply and demand are brought into balance; and

Whereas a general cut in the price of crude oil, coming at a time when the industry is weakened by constantly mounting costs which have not been offset by any increase in the price of crude oil would necessarily result in drastic curtailment of exploratory activities, with accompanying widespread unemployment within the industry and damage to the economy of the State as a whole: Now, therefore, be it

Resolved, by the Board of Directors of Kansas Independent Oil and Gas Association:

1. That this association recommends to the State Corporation Commission, Conservation Division, that the daily allowable production for the month of March 1958, be reduced 10 percent below the daily allowable for the month of February 1958.

2. That this association deplores the continued excessive imports of foreign oil and urges the Federal authorities to take such action forthwith as is necessary to enforce a like reduction in the amount of imports.

3. That a copy of this resolution be sent to each Senator and Representative from Kansas.

Plywood Industry Needs Protection From Japanese Plywood Imports

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MACK of Washington. Mr. Speaker, the Portland Oregonian, of Portland, Oreg., one of the largest newspapers in the Pacific Northwest, carried a top-of-the-column front page news story last Friday which said, "widespread plywood plant shutdowns will idle thousands of Oregon, Washington, and northern California workers."

The Oregonian news story went on to say that some of these plywood plants are closing for an indefinite period and that others have announced a shutdown of 1 week to 10 days. Other plywood plants, says the Oregonian, are working on a curtailed workweek basis.

Reason for the shutdowns, says the Oregonian, is that the price of plywood—one-fourth inch AD grade—dropped from $80 last fall to $72 by January 1, 1958, and by March 1, 1958, to $64. The price of plywood today is the lowest in 20 years and plywood mills no longer can be operated at a profit. When a plant is down and idle its expenses, in some instances—taxes, management, watchmen, interest on loans, maintenance, and so forth—still continue. The management finds that it costs less to be closed down than to operate and so are closing their plants.

What has brought the plywood industry to this low level in employment and prosperity? One of the main reasons is too heavy imports of plywood produced by Japanese labor which is paid only 11½ cents an hour compared to a wage of $1.85 an hour in the plywood industry of the United States.

The Oregonian in its news story on plywood plant closures which are idling thousands of Oregon, Washington, and northern California workers, gave a list of the plants which have closed for indefinite periods and for 1 week to 10 days. This list includes the following plants scattered in widely scattered areas:

Oregon: Pacific Plywood, Dillard; Grants Pass Plywood, Grants Pass; Coquille Valley Lumber Co. plywood plant at Milwaukie; Coquille Valley Lumber Co. plywood plant at Swisshome; Medford Valley Plywood, Medford; Oregon Veneer, Medford; Custom Plywood, Grants Pass; Industrial Plywood, Coos Bay; Brookings Plywood, Brookings; Cascades Plywood, Cascades; and Western States Plywood, Bandon. Most of these plants employ 100 to 400 workers each. The idled Cascades plant is the largest plywood plant in the world and employs about 1,000.

Washington: Centralia Plywood, Centralia; Mount Baker Plywood, Bellingham; Hoquiam Plywood, Hoquiam; Elma Plywood, Elma; Hardel Plywood, Olympia; and Totem Plywood, Olympia.

Northern California: Interstate Container, Red Bluff; Durable Plywood, Arcata; Lund Plywood, Crescent City; and Northern California Plywood, Crescent City.

American plywood producers obviously cannot compete with the low-wage rates of Japan.

Japan last year shipped $60 million of plywood into the United States. These shipments were the equivalent of the output of 12 large American plywood plants employing 150 to 400 workers each. The Japanese plywood imports took away the jobs of 5,000 American plywood plant workers and also the jobs in those allied industries such as the loggers who supply the plywood mills with logs.

This breakdown in employment in the American plywood industry can be speedily corrected if the Democrat majority which now controls both Houses of Congress only will act and report to the floor of Congress a bill to limit imports of foreign hardwood plywood to 15 to 20 percent of the American consumption.

Foreign plywood last year supplied 54 percent of the domestic demand for hardwood plywood. Limit this to 15 to 20 percent of that demand, and Japan still can sell $20 million a year of her plywood in the United States which will be more plywood than Japan ever sold in the United States prior to World War II.

By limiting Japanese imports of plywood to 15 or 20 percent of the domestic hardwood plywood market, jobs for some 3,500 American plywood workers will be restored immediately, domestic production will be brought into balance with domestic demand, and plants that are idle will go back into production.

Oversupply of Domestic Oil Plus Huge Imports Has Created Unemployment and Damage to the Economy of Kansas

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. REES of Kansas. Mr. Speaker, I am including a copy of a resolution approved by the Eastern Kansas Oil and Gas Association, Inc., protesting excessive importation of foreign oil into the United States:

Whereas the supply of domestic oil exceeds domestic demand by a substantial margin; and

Whereas foreign oil continues to be imported into the United States at an excessive and unjustified rate; and

Whereas the oversupply of domestic oil, plus the huge imports of foreign oil has resulted in pro ration and price reduction on domestic oil; and

Whereas any general reduction in the price of crude oil, coming at the time when the oil industry is paying higher prices for material and labor, would result in drastic and immediate curtailment of oil exploration which will obviously result in widespread unemployment and damage to the economy of the State of Kansas: Now, therefore, be it

Resolved by the Board of Directors of the Eastern Kansas Oil and Gas Association—

1. That this association regrets that the importation of foreign oil should require any reduction in the daily allowable production.

2. That this association deplores and condemns the continued excessive and unjustified imports of foreign oil and urges the Federal authorities and in particular the Kansas Members of Congress to take immediate action to enforce a reduction in foreign-oil imports.

3. That a copy of this resolution be sent to each Senator and Representative from Kansas in the United States Congress.

J. O. COUCH,
President, Eastern Kansas Oil and Gas Association.
CHANUTE, KANS.

Peace Conferences or War Corpses—Which?

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. COOLEY. Mr. Speaker, Dr. Clarence Poe, of Raleigh, N. C., who was editor of the Progressive Farmer for 50 years and who is now senior editor and board chairman and one of the most distinguished citizens of the congressional district which I have the honor to represent, wrote an article entitled "Peace Conferences or War Corpses—Which?" which appeared in the February edition of the Progressive Farmer. The article contains much food for thought. I have obtained permission to have it inserted in the RECORD to the end that it might be read and considered by men and women throughout the Nation.

Dr. Poe's life is a blessing and a benediction to our people. He is dedicated and devoted to the cause of peace, and as a distinguished editor he is known throughout the Nation. He regards the question of war and peace as paramount to all the perplexing questions of the day and generation in which we live. Here, Mr. Speaker, I present the article by Dr. Poe:

PEACE CONFERENCES OR WAR CORPSES—WHICH?

As 1958 gets underway, there is nothing more important than the question of war or peace. Our readers, like other citizens, are asking many questions. I should like to give my best judgment about eight of them. What are your views?

I. What is the outlook for world peace as 1958 begins? War may not be a probability this year. But under present conditions it will continue to be a threat until the United States, the United Nations, and a more truly united Christianity work more zealously for world peace. This may be a year of destiny for you or your son or brother or husband. Equally, it may be a year of destiny for your wife, or sister or daughter. This is true because nuclear warfare would show no distinction between men and women, children and adults, combatants and noncombatants.

Yesterday two men were talking about the possibilities of world peace. One said, "The question of world peace may be decided either by peace conferences or war corpses." That is to say, it may be decided either by conferences or agreements among nations that will insure disarmament and save us from world war III. Or it may be settled by the numbers of men, women, and children slain in battle or by intercontinental ballistic missiles.

II. What was accomplished at the recent NATO Conference, and what leadership for peace did America display? First of all, it is plain that America and its allies were divided not in their desire for peace, but in their opinion as to how to insure peace. One group would depend almost entirely on military preparedness. The other group does not oppose increased military preparedness, but declares we should first make every possible effort to work out with Russia some plan for peaceful coexistence.

At times President Eisenhower has seemed to take one side and then the other. He appointed Harold Stassen to help work out a great program of disarmament, and then placed Stassen under Secretary Dulles whose hostility or indifference seemingly drove Stassen from office. Just before the NATO Conference, two men of worldwide influence spoke out vigorously and hopefully about the possibility of at least making a start toward some sound disarmament agreement with Russia. One of these men, George Kennen, had long experience as an able American Ambassador in Moscow, and probably knows more about Russian conditions and attitudes than any other American. Taking the same viewpoint was Lester B. Pearson, long Minister of Canada and who recently received the 1957 Nobel peace prize for having done more than anyone else to promote world peace.

III. What is the general feeling of other nations and their leaders about the year ahead?" Many fear, if Mr. Dulles has his way, that America will push military programs wholeheartedly and negotiate peace programs halfheartedly or not at all. "We push war programs like giants but peace programs like pygmies," says Mr. Pearson. We hope more American leaders in politics and religion will protest against such a course.

IV. How will war change with the use of nuclear missiles and weapons? War has become almost incredibly more disastrous than at any time in the past. In a recent appearance before a congressional committee, it was said that one all-out bomb attack on America might kill 82 million people. There has always been danger of war when two hostile nations of almost equal power faced each other. These countries could make war and hope to survive—at least the stronger of them have such a hope. But now the nature of war has changed. As Gen. Omar Bradley and other great military experts agree, "There can be no victors in modern war—only mutual suicide by both contestants." This fact is now not only accepted in the United States, but in Russia also. Russian leaders have used virtually this same identical language.

It is this change in the ruinousness of war which makes necessary a change in methods of settling disputes between nations. Not a mere layman, but the great scientist Arthur Compton tells us: "Science has created a world in which the Christian spirit is an imperative." In other words, science has given the world's military leadership colossal new powers which may destroy mankind unless we turn to a Christian spirit to save it.

V. Has dependence on military might saved other nations in the past when two nations of almost equal power have faced each other in war? No greater truth was ever uttered by Christ than His declaration, "They that take the sword shall perish with the sword." Certainly it would seem that this has been proved abundantly in our own time. Christ did not even modify His statement by saying that nations that will take the sword wil perish by the sword unless they are strong. The strong also perish. Let us consider what has happened to so-called strong nations since 1900. England was supposed to have won a great victory in World War I and again in World War II—and yet was virtually ruined. France underwent losses which have ruined it as a world power—the billions on the so-called Maginot line, by which it had thought to make itself unconquerable, wholly wasted. Highly armed Germany, Austria, Japan, and Italy were almost or quite ruined by war. The United States, in spite of only shorter participation, registered such losses in men, materials, and in its national debt as may burden us for generations.

VI. "Suppose war should come—might not America prove itself so much more powerful than Russia in men, missiles, and weapons as to insure us a quick victory?" This is what Secretary Dulles and others have seemed to be believing for several years—while our position in nearly all foreign countries has grown progressively worse. If we fail to convince other nations that we are sincerely anxious and determined to avoid war, we may lose the wholehearted support of our European allies. Millions of people in Asia and Africa may join Russia in the struggle against us.

We too often think of Russia and America as having around 180 to 200 million people each, and that therefore the balance is about equal. But two colossal facts make the risk of war with Russia so dangerous. One is that Communist Russia's 200 million people might immediately be joined by Communist China with over 600 million people. Second, the 2 form 1 solid united block, whereas the United States and its allies are separated both by oceans and vast distances and varying governments with varying opinions.

VII. "Secretary Dulles says in effect that we cannot trust the Russians, therefore there is no use or hope in trying to deal with them." Several answers may be made to this position. One is that we would certainly not act except after thought and study by the wisest leaders of our Western World nor have to agree to anything in advance. We could simply explore the possibilities of any program and then decide about it.

But, what is more important, is it not to the self-interest of Russia as well as our own self-interest to keep our two countries from being devastated by war, with possibly half their peoples killed and their industry and progress set back for a generation? With its vast area and great population, Russia can become for centuries a country of great prosperity and power if it does not commit suicide by war. Why should it wish to do so? Certainly there would seem to be a possibility that it might agree on some carefully thought out and wisely safeguarded formula that would start us toward peace and disarmament. In any case, who would say that it is not worth while for us to try it and find out?

VIII. "What about the costs of trying to find peace by (1) negotiations and disarmament, as compared with (2) the costs of depending on military weapons?" Any effort to win safety by military might is a desperate gamble. Of course, we should stay strong militarily and try to get other nations to join us in all sound military programs, but we in the South at least know that an all-out war effort is no guaranty of victory. Furthermore, with the enormous

multi-billion-dollar cost of nuclear weapons, is there not reason to ask whether ever-increasing military expenditures and Federal taxes may spend our Nation into bankruptcy and reduce our people to comparative poverty? Of course we may agree that if necessary this would not be too great a price to pay for freedom. What we are saying is this: "Is it not folly to neglect the possibilities of conference and arbitration to see if we cannot save our freedom without resorting to either war or poverty?" And if our people resolutely decide to try for peace through disarmament, America may indeed set an example not only of freedom but of the peace, progress, and prosperity for which America confidently voted in 1956. That would make both the backward nations of the world and the captive peoples of Russia likely to follow our example. They certainly will not follow us if they believe that we have no hope or plans for anything but war.

It is indeed a gruesome thing to say that the issue of war and peace is likely to be settled by conferences or corpses. But is it not folly to ignore the fact that nearly all scientists proclaim that nuclear warfare could make America one ghastly ruin and continental graveyard? In such a situation, is it not the very least we should consider to try to "agree with thine adversary quickly" (to use Christ's own phrase) by efforts at peace and disarmament, no matter how much patience may be required? And may we not try for disarmament and peace with some hope of success because peace will be equally good for ourselves and our opponents? The only alternative to coexistence may be no existence.

Unjust Criticism of Ike

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 27, 1958

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include the following editorial from the Arizona Daily Star of February 25 in the RECORD:

UNJUST CRITICISM OF IKE

It is time that Americans pulled themselves up short and asked whether they are showing proper respect for good people in high office.

These offices impose great responsibility and make great demands. Even people who do not like the incumbents should show understanding for them, and respect for their offices.

A sad example of the reverse occurred over the weekend, and concerned the President's use of the *Columbine* to fly Mamie and two of her friends to Phoenix so that she could spend a few days at Elizabeth Arden's Maine Chance Farm.

Some newspapers have tried to find out how much that trip actually cost the taxpayers.

President Roosevelt wasn't thus criticized for his frequent use of airplanes, warships, and other modes of transportation—including travel of his family. Nor should he have been.

President Truman underwent no such criticism for his similar use of a yacht-type vessel for cruises down the Potomac, nor should he have been.

One could go back into history even further. Several Presidents, including the frugal Calvin Coolidge, did the same thing, particularly during the years when the presidential yacht *Mayflower* was commissioned.

The public needs to remember that the President and his wife are both on duty every hour of every day. This is no mere figure of speech. The Presidency, and the First Ladyship, are jobs which observe no 8-hour day or 40-hour week.

Mamie evidently wanted to get out of the cold East and come to a place where it was warm and the sun shines and where the top-flight hospitality of Elizabeth Arden is available.

If Ike insisted on accompanying his wife to Arizona, and playing a round of golf before he returned to the East, no one should criticize him. He should be praised for the gallantry he showed his wife and for his wisdom in coming to a spot where there is real sunshine. The trip shouldn't be treated as something Ike and Mamie shouldn't have made or the taxpayers couldn't afford.

Rumanian Independence—Russian Destruction

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. KEATING. Mr. Speaker, we commemorate today another in the tragically long list of Soviet power-grabs. Thirteen years ago today the Kremlin reached out the clutching claw of Communist despotism and enslaved the people of Rumania.

Few acts of history can be more truly described as a stab in the back. Although forced in the earlier stages of World War II to fight at the side of the Nazis, from September 1944 until the end of the war the Rumanian armed forces turned on their oppressors and fought gallantly with the Allies. No more fitting tribute to their ability can be found than the statement by the London Times that, despite the small size of their forces, they were the fourth most important force in the allied camp.

Despite this, despite the fact that Rumania was spending its blood and treasure to destroy the forces that had beseiged Moscow and Leningrad and Stalingrad, the Soviets took advantage of this very fact to crush the newly won independence of the Rumanian nation. Stripped of their defenses by reason of the army's absence at the front the people were overwhelmed by the masses of the Red army. By any standard this was pure, unadulterated treachery.

Even for a regime with a history so replete with deceit, deception, and hypocrisy as the Kremlin's this was unbelievably callous. Only 2 weeks before at the Yalta Conference Stalin had made pious pledges of support for democracy and free elections in all of liberated Europe. In cynical disregard of these pledges the hoards of the Red army moved in to create their own special brand of terror.

The years of occupation have more than lived up to the portent of this rape of Rumanian sovereignty. Systematic regimentation has been established by a rule of terror. The Rumanian people live in constant dread of the tramp of booted feet, the sharp knock on the door, the sudden trip to the grim walls of the concentration camp. Thousands have been torn from the arms of their loved ones for no more than an uncautious word; torn away to become human fuel for the Communist industrial machine.

Mr. Speaker, we live today in a time of strange contrasts. Our knowledge of ourselves and our physical world is growing by leaps and bounds. We have begun to tap the unknown of space. Soon the human race will soar from this planet, no longer earth bound. Yet at the very time that the human body is being unleashed there are vast areas of the world where the human spirit is being systematically crushed, brought to the level of the basest animals. The very knowledge that has been employed to free man has been perverted to debase him.

Despite the inroads made through this diabolic use of modern knowledge, the people of Rumania remain dedicated to democracy. Enslaved as they are, their minds still hold the bright hope of freedom. Many, in the face of death, have retaliated. Through sabotage and espionage they have kept alive the glimmer of resistance that perpetuates their faith in life, liberty, and the pursuit of happiness.

We must be ever mindful of the tragedy of these fine people and of others like them around the world. So long as they remain entombed in the marble mausoleum of atheistic communism our own freedom is in jeopardy. So long as tyranny remains extant anywhere in the world, the cause of freedom is threatened. The virulent disease of despotism must be ruthlessly stamped out, wherever it is found, before the liberty we all prize so highly will be secure.

I join with all freedom-loving peoples everywhere in the fervent hope that the day may not be far off when the torch of liberty will burn away the ropes that bind the Rumanian people, and all peoples now caught in the net of tyranny.

Gen. Casimir Pulaski

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. BOSCH. Mr. Speaker, March 4, 1958, marks the 211th anniversary of the birth of Count Casimir Pulaski, who left his homeland to fight in the cause of our independence during the Revolutionary War.

I want to join with patriots everywhere in paying tribute to the memory of the "Father of American Cavalry," who died at the age of 31 when he received a mortal wound at the head of the Pulaski Legion of Cavalry in its valiant assault upon the city of Savannah.

In our preoccupation with the problems of the present, let us not forget

those courageous men who fought that we might have the right to "life, liberty, and the pursuit of happiness."

Curbing the High Court

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. ABBITT. Mr. Speaker, many of us who are interested in preserving our form of government realize that if we are to retain constitutional government in America we must curb the United States Supreme Court from its all-out effort to usurp power and authority it does not have. The Court is determined to remake and remold our country and take from the people rights and privileges that they have had since the founding of our Nation.

There is now pending in the Judiciary Committee of the Senate a bill introduced by Senator JENNER, which is Senate bill 2646, which has for its purpose the curtailment of the authority of the Supreme Court of the United States in certain fields of activities. This bill does not go far enough nor cover all of the fields in which the Court should be restrained but if enacted into law it will be a long step in the right direction toward curtailing the Court in some of its attempts at usurpation and return to the people, the States and the legislative branch of the Federal Government some of the rights that have been taken from them by the so-called Supreme Court.

On March 3, 1958, there appeared in the Richmond News Leader, Richmond, Va., an editorial entitled "Curbing the High Court." This is a splended editorial and points out the dangers confronting our people as a result of the Supreme Court's activities and the necessity of curbing its powers.

Under leave to extend my remarks, I include this editorial which is as follows:

CURBING THE HIGH COURT

It has been nearly 90 years since the Congress of the United States, attempting to preserve a Federal statute from the probably unsympathetic hands of the Supreme Court, designedly invoked its constitutional power to limit the Court's appellate jurisdiction. Now, to the consternation of liberals and left-wingers across the country, this almost forgotten power is being revived. The Senate Judiciary Committee is giving serious consideration to a bill sponsored by Senator JENNER that would clip the wings of the highflying Justices. It is a good bill and we hope it passes.

The provisions of article III of the Constitution on which the bill is based, are little known. Most persons, if they think upon such matters at all, may imagine that the Supreme Court of the United States has some inherent or automatic power to hear all appeals from lower Federal courts and from the highest State courts. In practice, it often seems to work this way, for there are few significant cases in State courts where a Federal or constitutional question cannot be alleged.

But the fact is, of course, that the Constitution does not convey any sweeping appellate jurisdiction on the Supreme Court. What the Constitution says is that the Federal judicial power shall extend to 12 different classes of cases or controversies. In four of these clauses (cases affecting ambassadors, public ministers, and consul, and controversies in which a State may be party), the Court is to have original jurisdiction. But in all cases arising in the other eight fields, "the Supreme Court shall have appellate jurisdiction both as to law and fact, with such exceptions, and under such regulations, as the Congress shall make."

"What such exceptions and regulations should be," the first Mr. Justice Harlan once observed, "it is for Congress, in its wisdom, to establish, having of course due regard to all the provisions of the Constitution."

Generally, the exceptions and regulations established by Congress have been of a technical or procedural nature. For example, Congress in 1889 gave the Supreme Court direct appellate jurisdiction from Federal district courts in criminal cases in which the death sentence could be imposed. But in 1891, such direct appellate jurisdiction was knocked out. For another example, Congress in 1891 permitted direct appeals to the Supreme Court from district courts in cases involving the construction or application of some provision of the Constitution, but in 1925 this regulation was revised.

The one time in which Congress deliberately invoked its regulatory powers against the Court was in the spring of 1868, just 90 years ago this month. Then a Mississippi editor by the name of McCardle filed a petition for a writ of habeas corpus to compel his release from custody of military authorities acting under the Reconstruction Acts. His appeal was argued before the Supreme Court on March 9. The Congress, apprehensive that the Court would throw out all the Reconstruction Acts if it got its hands on any part of them, rushed into action. Within 18 days it passed, over Johnson's veto, an act specifically withdrawing the Court's appellate jurisdiction in such habeas corpus proceedings. The Court tamely submitted. "Without jurisdiction," said Chase, "the Court cannot proceed at all in any cause. Jurisdiction is the power to declare the law and when it ceases to exist, the only function remaining to the Court is that of announcing the fact and dismissing the case."

The broad principles acknowledged by Chase in the McCardle case, and emphasized by Harlan in the 1908 opinion quoted above, remain unquestionably the law of the land. Thus, Senator JENNER's pending bill is wholly within the power of Congress to enact. He would deny appellate jurisdiction to the Supreme Court in these 5 fields: (1) The investigative functions of Congress or congressional contempt cases; (2) the Federal employee-security program; (3) State anti-subversion laws; (4) State regulations relating to subversive activities by teachers, and (5) State laws governing the admission of persons to practice law.

Obviously, these five fields were chosen with an eye toward rebuking the Court for some of its more outrageous opinions of recent months. And just as plainly, the Court richly deserves such a rebuke. Under the leadership of Earl Warren, the Court has usurped the powers of Congress, transgressed the reserved rights of the States, emasculated laws relating to internal security, and warped the Constitution beyond recognition. It is high time the Court were disciplined.

Yet it is worth emphasizing that the Jenner bill would deny justice to no one; it would infringe no constitutional rights. Defendants in State courts in these cases simply would stop at the highest State level; defendants in Federal proceedings could go no farther than a Federal circuit court. "The constitutional requirements are all satisfied," Chief Justice Waite once commented, "if one opportunity is had for the trial of all parts of a case. Everything beyond that is a matter of legislative discretion, not of constitutional right." If as a result of the Jenner bill, constitutional questions arising from these cases were decided differently in different States or circuits, there would be no grievous national loss; in any event, there would be no judicial anarchy, as some critics have charged, to match the chaos the Supreme Court itself has created.

The significant thing about the Jenner bill is that it represents a vigorous attempt to restore a governmental balance the Warren court has arrogantly upset. Opinions of the Supreme Court, contrary to the bland assumptions of that body, do not constitute the supreme law of the land. It is the Constitution itself, and the laws and treaties of the United States made pursuant thereto, that comprise the supreme law of the land. By failing to assert its rightful powers in the past, the Congress has invited the very sort of judicial despotism from which the Republic now suffers. The assertiveness of the Jenner bill is a counterstroke against judicial tyranny, and as such it merits warm support.

Statement by Hon. John Lesinski, of Michigan, Upon Introduction of the Bill To Provide That Only 32 Hours of Service Need Be Performed by Postal Employees During Any Week in Which a Holiday Falls

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LESINSKI. Mr. Speaker, I introduce, for appropriate reference a bill which would provide that no more than 32 hours of service would be required from postal employees during any week in which a holiday falls.

Mr. Speaker, on February 5, the Comptroller General of the United States ruled that employees who rendered service on a Saturady which also is a holiday are entitled to compensatory time and also to holiday benefits.

Under this ruling the Post Office Department has held that the benefits of the ruling could be applied only to those people actually scheduled for duty on the holiday. The Post Office Department has informed employees that the law does not grant Saturday holidays, and that accordingly the day cannot be treated as it would were it to fall between Monday and Friday. At the same time, the Comptroller General has said that to deny holiday benefits to employees working on holidays is contrary to the basic concept of the law.

In the postal field service, the handling of the mail on a 24-hour around-the-clock basis frequently disrupts what otherwise would be a holiday schedule. Employees who work on "swing" and "graveyard" shifts find it difficult to understand that just because they may be scheduled off on a holiday which also is a Saturday, they should be required under the Comptroller General's decision of February 5, to perform an additional period of service.

Accordingly, I have introduced today a bill which would make sure that holidays would be granted equally to all postal employees, regardless of the day of the week upon which they happen to fall. This would be accomplished through the simple expediency of requiring that no more than 32 hours of service would be required during any such week. In the event that more than 32 hours of service were to be required, compensatory time would be granted within the benefits and provisions of existing law.

Mr. Speaker, I believe that the idea embodied in my proposed amendment is necessary to the smooth functioning of the postal service. I hope that early action can be taken.

Aircraft Nuclear Propulsion

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. PRICE. Mr. Speaker, the apparent decision by the administration once again to throw the ANP program into the jaws of indecision and confusion is a major blow to the prospects for this Nation to place the world's first nuclear-propelled aircraft in the skies.

Before the entry of the Killian committee into the matter, many of us on the joint committee had considerable hope that the ANP program was, at long last, being placed on a definite course of action with the concrete objective of achieving a useful nuclear flight capability at the earliest moment.

It is generally agreed by those who are actually working in the program that the achievement of such a capability is vitally important not only from the point of view of national security but in terms of world confidence in America's scientific abilities. It is this latter point which I believe the Killian committee completely overlooked in its deliberations, such as they were. It seems to me that the Killian committee, instead of expediting scientific advancement in this country as I understand it was supposed to do, is actually serving to "unexpedite" matters.

The net effect is that we are right back where we started from before sputnik. It is questionable how long the Nation can afford the luxury of such vacillation and inaction. It is high time that we faced up to the realities of the Soviet challenge and proceed on a vigorous program to insure that the United States, not the Soviet Union, achieves the first nuclear-powered aircraft.

Under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the St. Louis (Mo.) Post-Dispatch on March 5, 1958, entitled "Why Not Beat Moscow to It?"

Until a manned station in outer space becomes reality, the nearest approach to it would be an atomic-powered airplane. Not having to refuel for weeks, the atomic plane should be able to cruise the skies of the world at will just as our atomic submarines now cruise the seven seas.

Yet, the Administration, after months of consideration, is reported to have abandoned a "fly early" plan in favor of what might be called a "fly later but 100 percent militarily" plan. This means a delay of at least a year, maybe three.

Congressman Melvin Price of East St. Louis warned after a visit to Russia last fall that Moscow was pressing ahead with development of an atomic plane. And United States military agencies have received a Soviet technical book Nuclear Engines for Aircraft, which they admit shows a high degree of competence in the field. Moscow already may be close to flying the first atomic plane.

Does the Administration really want to lose this race, too? Has it so soon forgotten the bruises inflicted by the two sputniks? Somebody decided that it wouldn't matter if America lost the satellite race, either; but once the race was lost, it mattered a great deal. Is the same process at work on the atomic plane?

Auto Excise Tax Repeal Should Be Made Retroactive

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to an editorial entitled "No Quick Action on Auto Tax Cuts," which appeared in the Flint Journal of March 3, 1958.

The editorial points out that the efforts being made by several Members of Congress for the repeal or reduction of the excise tax on vehicles may possibly have the effect of slowing down automobile sales because people may postpone buying new cars in the belief that prices will go down in the coming months. This point has been made by a number of automotive writers as well.

This concern is, in fact, a measure of the encouraging outlook for some kind of action on the automotive excise tax this session. However, I share the concern of the Flint Journal over the possibility of a slowdown in automotive sales which in turn would aggravate the already serious problem of unemployment.

Because I am anxious to do all I can to avoid giving rise to this possibility, I am urging that any action on reduction or repeal of the excise tax during this session be made retroactive to March 1 of this year and that the manfacturers refund to purchasers the taxes collected subsequent to that date. My purpose in urging the repeal of this tax is to stimulate sales and help unemployed automobile workers, not to retard the activities of this important industry.

The Flint Journal's editorial expresses very well the reasons why motorists should not put off buying cars now in the hopes of an eventual price reduction, and I include it with my remarks in the RECORD:

NO QUICK ACTION ON AUTO TAX CUT

In an effort to stimulate the sale of automobiles, some Members of Congress are working for the reduction or removal of the excise tax on cars.

The removal or reduction of this tax, providing the savings were passed on to the buying public, would lower the sales prices and thus, undoubtedly, stimulate sales.

But the efforts to bring this about have had a rather odd effect, according to information from Washington. Some people, in the hope that the excise tax will be removed or reduced, have postponed buying new cars in the belief that prices will go down shortly.

The desire to take advantage of any tax reduction is understandable. However, postponing the buying of a new car for this reason reveals a lack of knowledge of legislative processes.

Even if the tax proposal were to meet with immediate acceptance in Congress, it would be a long time before the tax reduction would have any effect on the price of automobiles.

At present, the proposal is still in the talking stage in a House committee. Probably the proposal, even if accepted, would be part of a general tax bill. That means that all phases of the bill would require detailed study by the committee. Then it would have to be considered by the House, and more time would elapse while all aspects of the bill were being studied and debated there.

A similar process would take place in the Senate which last week began hearings on the general tax picture. Undoubtedly there would be differences in Senate and House treatment of the proposed legislation. This would require further study and rewriting of the bill as a compromise in conference committees. Then there would have to be acceptance by both Houses. Next, the bill would go to the President for his approval or veto and, if the latter, another vote would be required to override.

Thus, even if the proposal to eliminate or reduce the excise tax met with no opposition at all, the fact that it probably will be part of a general tax bill will result in delay, because other aspects of the general bill certainly will encounter some obstacles.

At best, several months probably will pass before the proposed legislation, passed by both Houses of Congress, will reach the President.

So anyone who has postponed buying a car for this reason can expect to keep right on driving his old car for a long, long time.

Address by Bishop Sheil

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. ROOSEVELT. Mr. Speaker, in the press of work I am sure that we all have on occasion fallen behind the backlog of reading that we would like to do. The following address by Bishop Bernard Sheil before the fund raising banquet of the University of Jerusalem in Chicago last December 10 was one of those things that I had overlooked in the opening days of the session. His words are so obviously worthwhile both in their statement of philosophy and the correctness

of their approach that I include them for the pleasure of my colleagues:

ADDRESS BY THE MOST REVEREND BERNARD J. SHEIL, D.D., AUXILIARY BISHOP OF CHICAGO, AT THE FUND-RAISING BANQUET OF THE UNIVERSITY OF JERUSALEM AT THE COVENANT CLUB, DECEMBER 10, 1957, CHICAGO, ILL.

It was the great Irish poet, Yeats, who once wrote:

"Things fall apart; the centre cannot hold;
Mere anarchy is loosed upon the world."

These words have a special meaning for us today in this age of what may be called anxious inertia. For, these are days in which man is acutely conscious of a strange inner conflict between his sense of power and his feeling of insecurity. Seeking security, he wanders in a wasteland of universal insecurity, a prey to an anxiety he can neither define nor mitigate. Possessed of power undreamed of in humanity's past, he, the contemporary heir of all the ages, lives out his daze in a nightmare of uncertainty. Never has human ambivalence found expression in such a contradictory equation as, "the greater the power, the greater the insecurity."

The Russian satellite is the perfect symbol of this inner conflict in man. Hailed as the beginning of man's conquest of outer space, its appearance lacked the expected note of triumph and exultation. And why? Because deep within us is the feeling that the satellite is not a herald of a fuller life but of death. Its scientific shape does not conceal that it is the Pale Rider in the sky, banding earth with the circlet of death. Its light shines eerily on countless gravestones bearing the one inscription, carved in Russian, Polish, German, and Jewish: Here died human freedom. The message that it beams across the world is not a call to liberty but to slavery, not to truth but to falsehood, not to hope but to despair. Pridefully it carries within itself Nietsche's proclamation of the death of God, which is also the prophecy of the death of man. For all the free world the satellite is at once a symbol and a challenge.

It is a symbol because it externalizes in dramatic fashion the possible causal link between man's conflicting sense of power and insecurity. The scientific and technological achievements of modern man have hurtled us away from the past with the speed of a jet. We stand on the threshold of a new ago, a new era. The wondrous book of creation, page by page, is being reinterpreted in a language, symbolic and difficult, which testified to both the unfathomable power of God and the capacity of the human mind. Steadily our horizons are being forced back. Soon man shall make his entry into outer space, a new Adam, come to measure out a claim in a virtually new universe.

Nor has this wonderfully creative work of man remained only a theory and an abstraction. It has not been confined to the laboratory or the experimental center. It has poured out a flood of instruments and techniques capable of recreating the entire earth. And the earth itself awaits patiently, even joyously, the touch of man's fashioning hand. For it is his hand which can render the barren soil fertile and make the whole earth a fit and fruitful place for man to work, to dream, to weave his destiny as child of God, as citizen of both time and eternity.

Given the sureness of his knowledge and his amazing scientific resources one may ask: Why is modern man still the victim of a haunting anxiety? The answer, I believe, is that man himself is acutely conscious of the link that joins his power and his insecurity.

Modern man is guiltily aware of a deep moral failure. Charged with the awesome responsibility of making the choice between using his power for either constructive or destructive purposes, man has made his decision. The nuclear weapons are the expression of that crucial choice. But the decision has proved a boomerang. The very symbol of his creative power is now the instrument of man's possible destruction. Thus, we find man, poised at the abyss of annihilation, holding in his frail hands the very weapon which can hurl him into that abyss.

After much philosophical discussion and literary posturing, man, the alleged master of his destiny, the lord of the world, stands in terror before his own creation. No longer is there possibility of flight or evasion. Stripped of all the comforting support of self-excusing, man is faced with another historical decision. Nothing now intervenes between himself and annihilation except his own moral sense. But it is precisely this moral sense about which man has the deepest misgivings. He is no longer sure that it will sustain him in this, his hour of truth, that it will provide him with the strength necessary to choose existence rather than destruction.

This I believe to be an accurate and realistic picture of the present predicament of man. If it be true, I also believe that it has a very particular relevancy for America. For, it is here that the tension between power and moral responsibility has been progressively heightened and tautened. One senses in the knowledge of our vast technological achievement the rather nostalgic awareness of a traditional obligation to use this achievement for a moral purpose. And this purpose is, and ever remains, to give an example to all the world of a social system which would best provide for the free development of the free person in a free society.

This is the genesis and meaning of the American experiment. For, democracy here not only draws inspiration from liberal philosophy; it also reflects the biblical doctrine of the dignity of man, of the sacredness of the human person. Hence, its insistence on personal freedom and integrity, on the inalienable right of every person who dwells within its borders to seek freely all those things which answer his profound human aspirations. Any doctrine, any regional or personal tenet, any philosophy of a group or organization that denies or mutilates this basic democratic principle is un-American in the fullest sense of that term. Nor do any external trappings of legalism, or sentimental recalls of a faded feudalism, or emotional resurgings of discredited racial theories, hide this taint of un-Americanism.

The image of such a society of free men was the ideal and the hope of those who set the patterns and laid the foundations of this country. They were not fanatical visionaries, obsessed with utopian dreams. They were balanced and practical men. In a word, they were courageous intellectuals, who sensed the significance of America for the future of the world, and who grasped the meaning of that moment in a Nation's life which is surcharged with historical consequences. The eyes of many, friendly, and hostile, were upon that early America.

Today, the eyes of the entire free, and thus far uncommitted, world are fixed upon America. But the eyes are sharper, more knowing, more questioning, even more sophisticated. The minds behind the eyes are quite capable of penetrating to the realities that lie below the surface. They are not moved by the pious word that cloaks the unjust deed. To them, Little Rock is not an unfortunate incident. It is the revelation of a spiritual failure, and a serious one. To these minds, no semantic twist can turn moral surrenders into patriotic deeds. To them, McCarthyism still remains a dangerous symptom of an irrational fear of rational freedom.

Above all, these people are conscious of the fact that the conflict between power and moral responsibility which is present in America today is of crucial importance. The solution which this country finds to the modern dilemma will set the course of history for centuries to come. These people are not interested in military adventures, nor in armament races endlessly prolonged and leading only to destruction. Rather, they are looking for moral leadership, for that leadership which can be most helpful in their quest for a satisfying and humane way of life.

Many of these people are emerging from the darkness of centuries—old oppression into the disconcerting daylight of freedom. They are searching for a political and social doctrine which, while preserving the spirit of their varied cultures, will best insure and fructify this new freedom. Thus far, the alternatives presented to them are totalitarianism, as represented by Russia, and democracy, as portrayed by America. Behind the eversharpening struggle for military superiority, the peoples of the world see the more important conflict of ideologies, the continuing debate as to which system can more quickly and efficiently provide a better way of life. I may add that the present status of the debate allows for no complacency nor assurance of ultimate success on our part. Nor do I think that people, whose aim is focused on the immediate means to economic and social betterment, are too interested in confusing and endless talk about military pacts and alliances. This is especially true when there may be suspicion that these are judged desirable and necessary solely by the standard of our own security.

Amid the conflict and debate, one thing is certain. There shall be no return to the past. These people are determined that the future, under whichever system they choose, shall bring to them the long-deferred opportunity for a place in the sun, for a reasonable share of those good things of life which are indispensable to a truly human existence. Any doctrine or policy which ignores this fact, shall certainly meet with failure.

It is at this point that the real challenge of the symbolic satellite becomes clear. The traditional task of America is to help the peoples of the world make their historical decision in favor of man, his dignity, his freedom, his rights, his responsible participation in government. But America can fulfill her historic role only if she continues to create and enlarge her own system. It is one which has been dedicated to the common good, in which every political institution and social structure shall be so fashioned that the benefits of these shall be shared by all.

In our response to the challenge of the satellite two dangers must be avoided. The first is that America, intent on equaling or surpassing Russian strength in certain fields, would be tempted to suspend or even depart from her historical task. The second is that America, in an effort to make freedom secure, would be tempted to limit or curtail the basic rights and freedoms of her people. Nothing could better serve the purposes of communism than to yield to either or both of these temptations. For, one of the more subtle strategies of communism is to force its opponents to take on its own coloration, to adopt its own techniques, or to use its own weapons.

This is a grave hour for America. It is also an opportunity for greatness, even for imaginative boldness. It is the moment for America to take the lead in turning power to peaceful purposes, to rededicate herself to the task of helping to make this world a more fitting dwelling place for man. This is not an impractical dream, a utopian vision. It is an attainable goal. We have the knowledge and the techniques. We could have the

cooperation of awakened people everywhere who sense the dramatic significance of this moment in history, which is nothing more nor less than the struggle for man.

A decision, motivated by moral responsibility, to make power the servant of man and his needs could shift the Soviet challenge to another level, namely that of concern for human betterment. This level, and not that of military prowess, is the only one on which the debate as to the superiority of the two conflicting ideologies and systems can ultimately be resolved. Military supremacy of itself proves nothing. In fact, it is irrelevant to the fundamental issue involved in the present struggle between totalitarianism and freedom.

Behind the admittedly impressive facade of Soviet scientific and technological achievement, there lies a vast and gloomy prison of the human spirit, in which every human right, including that to existence, is at the mercy of a monstrous and monolithic bureaucracy. Slavery remains slavery, even when it is euphemistically called discipline and order. There is no doubt that the uncommitted peoples of the world have been impressed by the Communist accomplishments.

One reason for this reaction may be that the alternative of a free society, in the terms of human values, has not been adequately presented to these people. Western culture has much more to offer man than gadgets and gimmicks, the pseudopsychology of the hidden persuaders, or the depressing genealogy of the organization man. It possesses an inclusive philosophy of man, based on reason and inspired by faith. Its point of departure is the dignity of man as image and child of God. It is a dynamic philosophy which opens out, beyond merely human horizons, into the timeless realm of eternal values. Human freedom is the very breath of this philosophy, because fulfillment and freedom are the indispensable terms of the human equation. This is the reason that western culture, during its long historical test of trial and error, has always envisioned a free society as the only one that can provide made with the possibility of fulfillment. This is also the reason that totalitarianism, whatever be its form, and even if it attempts to clothe itself in pseudoreligious garb, is both alien and destructive to our culture.

If we have failed to create such a society in which all men might have equal opportunity for fulfillment, then the fault lies not in our inherited philosophy. It lies within our own hearts, which we have allowed to become the silenced victims of greed, hatred, indifference, selfishness, and arrogance. We have given but lipservice to the ideal of human opportunity. We have failed to translate it for all peoples into the tangible and simple terms of food and shelter, education, health, participation, even the sense of belonging. These things are what man, all men, need if they are to fulfil their nature as men.

Instead we have erected a society in which a majority of our fellowmen are forced to live out their lives in an atmosphere of crippling frustration, of destitution, both physical and spiritual, which does violence to the free spirit of man. It is an illuminating commentary, I think, on the sensibility of our times, that those who advocate and dedicate themselves to the cause of human betterment and solidarity generally merit the epithet of do-gooders, bleeding-heart, idealist, and visionary. My only observation would be: That, if this present age of conflict and disorder, or alienation and despair, be the result of compromise, expediency, and the substitution of know-how for intellectuality—then the world is badly in need of idealists. For, idealists are primarily concerned with spiritual values, and these are indispensable, if man is to live at all on a truly human level.

I repeat: This is an hour of crisis for us Americans. Upon our response to the challenge depends our future as a free people. But we can only respond if we are fully aware of the real nature of the present danger. An uninformed America could be an impotent America. It is the inescapable obligation of our political leadership to speak the facts, no matter how harsh or difficult of acceptance they may be. The American people are looking for truth, not tranquilizers. They know that truth alone can furnish the foothold necessary for whatever common effort must be made in defense of their common heritage and for the cause of human freedom in the world.

It is neither my task nor my desire to specify what this common effort shall require of Americans. Perhaps I may be permitted to touch upon one quality that must infuse this effort, and that quality is seriousness.

We are no longer mere spectators at a game of theoretical dialectics, a contest in which, I fear, we showed but little interest. We have been for too long a time much more concerned with the furnishings of our homes than with those of our heads. Our attention has been centered too much on pink Americans and too little on red Russians. Now, however, we are forced to become active participants in a battle, if not for survival, at least for survival on our own terms and within the framework of our traditional beliefs.

This lack of seriousness has led, I believe, to two grave mistakes in our immediate past. The first is that we have underestimated the ability, the intellectual toughness, and the passionate dedication of our opponents. They possess seriousness to an almost inhuman degree. Nothing, no person, doctrine, nor event, has ever swerved them from the path to their announced objective. They will use every resource and every human potentiality to reach their goal. They are strong and confident. For us, they are no longer merely a challenge; they have become a very real threat. Their seriousness must be met with an equal seriousness on our part.

Our second mistake has been our attempt to put a price tag on freedom, to think complacently that freedom is ours, fully and irrevocably, because we have purchased it. The truth is that freedom, like a human being, can never be bought, never completely possessed. The best we can do is to give freedom a blank check, which is never filled in. For freedom must be continuously sought for, even fought for; otherwise it disappears. It may be even true to say that freedom never completely is. Rather, it is endlesaly reborn in the spirit of each generation. For its survival, vigilance is not enough; tyranny can also be vigilant. Each generation must pay it whatever tribute of mind or heart or even blood that it requires for life and growth.

At this point we might well ask ourselves two questions: How seriously have we valued our freedom? What personal sacrifices have we made to nourish and extend it? An honest answer to these questions may well serve as a partial explanation of why our childish complacency and our assumed superiority have been so completely shaken by recent events.

It is the voice of freedom itself which now urges us Americans to a new seriousness, a new awarness of what is really at stake in our world today. I have said that the conflict represents a struggle for man. For us that can only mean a struggle for those religious, spiritual, and human values which alone give meaning and purpose to human life. Among those values is a belief in God as our common father, in all men as our common brothers. This is a belief which demands of us the lived response of faith and justice and love.

These values are part of the soul of America. She must now rediscover her soul. If she does, then I am confident that the center will hold, that things shall not fall apart; and that in place of more anarchy man may look forward, with hope, to a world in which power has become the servant of man, bringing to him that measure of peace and security and leisure, without which the spirit of man shrivels. Then, and only then, could man raise his eyes to the heavens, without fear, and see there a thousand satellites, circling the earth, and breaking the stillness of outer space with man's hymn of praise to God, Who has made man to be not only His creature, but His cocreator.

Cleveland News Raises Important Questions on Mutual Security Program Which Should Bring About Better Legislation

---

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mrs. BOLTON. Mr. Speaker, Jack Kennon, asssociate editor of the Cleveland News, has written a series of articles bringing out certain questions and criticisms of our mutual security program. I would like to take this opportunity to commend the News for raising these questions in the public interest, although I am concerned lest undue emphasis may have been given the negative aspects of the program. However this may be, a sounder and more effective program should evolve as a result.

We on the House Foreign Affairs Committee have been making every effort to dig out the facts around such charges. We are especially gratified this year to have clear and concise presentations from the administration.

Acting Chairman MORGAN has requested Director Smith, of the International Cooperation Administration, to furnish the committee with definitive answers to a list of 85 criticisms which have been compiled by the committee staff under his direction. In open session this week Mr. Smith touched on several of the criticisms and arranged to appear again for the purpose of giving all the answers in open session at 2:30 p. m., Wednesday, March 12. These should be of widespread public interest.

Mr. Speaker, under leave to extend my remarks, I include a number of questions raised in the News articles, and the answers given by Mr. Smith:

Mr. SMITH. Sir, we have had a variety of criticisms, some of which are fundamental and some dealing with specific items. I would talk more about the specific items which have come up a number of times in the press. Such a situation is the question asked, "Have we provided dress suits for Grecian undertakers under the foreign-aid program?"

This question has been asked a dozen times. We have not done any such thing. The only clothing we have ever furnished to Greece under this program is footwear for the Grecian army, and civilian clothing has been specifically ineligible from aid financing in Greece.

We have been asked, are we financing the planting of wild grass along public highways in Lebanon.

Now, the manner in which the question is asked makes it look as though it is a ridiculous process. The fact is in the United States, in the arid areas, not only here, but all over the world, grasses are planted to stop soil erosion and we are doing this in Lebanon and we are doing it in a number of countries and this is a perfectly proper program to engage in.

You will find every agriculturist in the world, every soil conservationist, fully in support of it.

We have been asked, "Have we financed public baths for Egyptian camel drivers?"

Now, someone has enough time to develop this kind of a question. The fact is that we were engaged in a health and sanitation program to try to eliminate a disease in Egypt called bilharzia, which is a form of hookworm, and we have set up sanitary baths in that country.

Now, naturally, camel drivers and everybody else is eligible to use those baths and I see nothing improper about it at all.

It was an excellent health program we were undertaking at the time.

Free Rumania

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MADDEN. Mr. Speaker, March 6, 1958, marks the 13th anniversary of Soviet aggression which ultimately enslaved the nation of Rumania.

These heroic people have constantly fought for independence and self-government against powerful conquerers for over a thousand years. Their determination for liberty and freedom will continue in spite of the powerful Soviet secret police and military pressure until Rumania's independence is won.

As a member of the Committee To Investigate Communist Aggression in the 83d Congress, we took the testimony of over 200 witnesses recording the duplicity, treachery, and military pressure of the Communists to enslave Rumania.

The following communication from Mr. Mihail Farcasanu, president of the League of Free Romanians, reveals further facts which will be of interest to the Members recalling this enslavement:

THE LEAGUE OF FREE ROMANIANS,
New York, N. Y., March 4, 1958.

Hon. RAY J. MADDEN,
United States Representative from Indiana.

DEAR MR. MADDEN: The 13 years which have elapsed since the brutal seizure of Rumania on March 6, 1945, have meant an atrocious ordeal for the Rumanian people. These years mark also the long duration of Soviet occupation and tyranny in Eastern Europe.

The events which characterized Rumania's subjugation constitute an example of ruthless Soviet interference. An independent and prosperous country of nearly 20 million Latins—geographically isolated—has been seized and incarcerated behind the Iron Curtain by the Soviet Union. And this but 2 weeks after they had put their signature to the Yalta agreement.

The procedure of Soviet seizure in Eastern Europe is essentially the same for each victim country, although differing somewhat in detail. In the case of Rumania, who had put her army at the disposal of the allies, while all her military forces were fighting on the front side by side with them, the Red army took control of the country and installed through violence a Communist puppet government. They attempted to assassinate the legal Prime Minister, Gen. Niculae Radescu, who courageously opposed to the last minute the Russian takeover.

Since that moment the sovietization and despoiling of Rumania has been pursued without mercy by the Soviet Union. Religious persecution, mass deportations, arrests, and executions are among the methods used for the crushing of a nation. The two biggest slave-labor camps of postwar Europe have been organized in Rumania. One is the famous Danube-Black Sea Canal of a few years ago and the other the Danube Delta camp, where thousands of people are slaving in the swamps of the river at this very moment.

But even such brutal oppression has not deterred the wide resistance through which the will for freedom of this courageous people expresses itself against overwhelming odds.

Their faith in the United States has remained unshaken and their so long disappointed hopes still form the mainspring of their existence. As in the other parts of the subjugated area of Europe the Soviets are aware of the permanent threat which this state of mind engenders for their domination. The formal recognition the Russians have obtained from the West for their puppet regimes has not been sufficient to insure that hopeless resignation of the people, so necessary for their expansionist schemes. This fact explains the eagerness of Moscow to extract from the United States an official abandonment of the East European issue in any future summit talks. The same motivation lies behind the "disengagement" slogans.

Hence, moral and political support for the enslaved peoples could but serve the cause of freedom.

Yours respectfully,
MIHAIL FARCASANU,
President.

Chins Up, America

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MOORE. Mr. Speaker, the First Congressional District which I have the privilege to represent, is largely industrial, and like many other manufacturing centers in our country, we are today faced with some unemployment and cutbacks in productive capacity of our plants. I have been following the economic trends in West Virginia and bending my efforts to encourage new industries and opportunities for the people of my district.

While I am concerned with the problems which this recession has created, I refuse to be panicked or to believe that this downturn in business is the forerunner of a serious depression. I believe that it is of utmost importance that everyone "keep a level head" and not resort to histrionics or dire predictions. But, conversely, it is not a time for sitting on one's hands and doing nothing. The economy of our country is a complex mechanism wherein the stock market is subject to great fluctuation by such unrelated happenings as a presidential toothache or a one-quarter percent change in the interest rate charged by the Federal Reserve banks.

Consequently, the economy of our country is a subject which must be under review and consideration 24 hours a day, 7 days a week, 365 days a year. I am convinced that the President and the administration advisers have their fingers firmly on the economic heartbeat of the Nation, and are prepared at a moment's notice to take the necessary action to prevent any undue or prolonged economic loss from occurring. Recent recommendations emanating from the White House for a stepped-up public works program, new housing starts, and more liberal interest rates, are indicative that the public interest is being protected by the men at the helm of the Nation.

In line with my views on this matter, I would like to call the attention of the House to the following editorial entitled "Chins Up, America," which appeared on March 4, 1958, in the Grafton Sentinel, an outstanding daily newspaper in Grafton, W. Va.:

President Eisenhower had landed in Washington at 6:50 a. m. after an overnight flight from Phoenix, Ariz., aboard his special plane, the Columbine III. It was after 7 when he reached the White House. A few minutes after 8, he was at his desk. He had asked Vice President NIXON to take his place and make a speech to the National Food Conference. A little after noon, he dropped in for an off-the-cuff talk. After discussing our foreign affairs, he gave the conferees the kind of "chins up, America" talk we all need to carry us through these uncertain days.

America is strong, America is healthy, the President repeated again and again. Like all healthy individuals, we have our ups and downs. For instance, he had been suffering from a cold. That is no sign of despair. Similarly, America is not at the tip-top of its form. But, he added, "the economy of this country is a lot stronger than the spirit of those people that I see wailing about it and saying that it is not good."

However, the President did not confine himself to dismissing his critics in this manner. Government must do something, it is doing something to help reduce the unemployment of some 4,500,000 people, and will do more if it becomes necessary. But he ruled out any form of boondoggling "that have no useful purpose except that of helping a man exist for the moment." Instead, he proposed to do it with projects that need to be done and that will help the country.

There are today on the shelves of Government all sorts of worthy projects, some of which have already been approved by Congress and have annual or partial appropriations. The President urged that this time of slack employment is the time to start these projects to give the unemployed work. These projects will be under way, he promised, as fast as they are needed.

"But basically, here is the problem: Are we going around with our chins up? Or are we looking at the ground thinking of our own dismal troubles rather than putting our eyes straight forward and pushing in that direction?" the President asked. He answered himself: "This is no time to listen to the people who are men of little faith and of little spirit. Now is the time when courage, commonsense, and soundness will-

prevent a slackness in employment and a dip in the economy from becoming serious."

It is a time for chins up, America. We've survived many more crises. With courage and confidence, we can take this one in stride.

Mack's Resignation Doesn't Solve All

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. HOLTZMAN. Mr. Speaker, two daily newspapers in my district editorialized on the current hearings by the Subcommittee on Legislative Oversight yesterday.

The Long Island Star-Journal and the Long Island Daily Press, both part of the Newhouse publications, published an editorial entitled "Mack's Resignation Doesn't Solve All." I agree wholeheartedly with the caption, and the conclusions.

Just as the resignations of Secretary of the Air Force Talbott, General Services Administrator Mansure, and others in the administration who resigned "under fire" solved nothing, this current resignation of Federal Communications Commissioner Mack solves nothing.

I like particularly the suggestion therein about establishing a strict code of ethics, and compelling the registration of interested parties before all regulatory agencies.

I commend the short but meaningful editorial to all my colleagues, and urge the committee especially to read it and give it every favorable consideration.

The editorial follows:

MACK'S RESIGNATION DOESN'T SOLVE ALL

The resignation of Federal Communications Commissioner Richard A. Mack, welcome as it is, does not solve everything.

Questions and problems remain.

One question is to find out if others in the Federal regulatory agencies look upon their jobs as Mack did, and who they are.

Mack says he "did no wrong" in accepting loans and free stock in two companies from a long-time friend who was interested in a TV channel case, and that it didn't affect his vote.

Nonetheless he showed poor judgment to say the least.

His actions hardly jibed with what the public expects in the way of personal conduct in high appointive office. The Federal regulatory agencies are quasi-judicial bodies. The public looks upon them much as it looks upon the courts, which it expects always to be beyond reproach.

The problem now is to set up safeguards against situations such as the Mack case illustrates.

One logical step would be for Congress to establish a strict code of ethics, with teeth in it, for the agencies. Another would be enactment of a lobbying law to compel the registration of all parties interested in cases before the commissions, a law similar to the one that applies to lobbyists before Congress.

Both these steps have been proposed by Dr. Bernard Schwartz, the ousted counsel of the House Investigations Committee who got the current investigations off to a flying start.

Favorable Prospect for Action on Food Stamp Plan

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mrs. SULLIVAN. Mr. Speaker, I want to take this opportunity to express my thanks publicly to the distinguished chairman of the House Committee on Agriculture [Mr. COOLEY], for arranging for early consideration by an appropriate subcommittee of the proposal which I have been urging for so many years for establishment of a food-stamp plan for the distribution of some of our vast stores of surplus food to needy Americans.

Congressman COOLEY went on record in the House last year in favor of this legislation at the time I attempted to have it enacted as an amendment to Public Law 480, the law under which we now give away surplus foods here and abroad—particularly abroad. He promised me then he would see to it that the committee took up the bill this year, and he renewed that promise to me in recent weeks.

Now I am very pleased that Chairman COOLEY has turned this matter over to the Consumers Study Subcommittee headed by Representative VICTOR L. ANFUSO, of New York. Mr. COOLEY, Congressman ANFUSO reported to us yesterday, has given that subcommittee "the green light," to proceed on this issue.

And I am also pleased that the subcommittee chairman has demonstrated his personal interest in this matter by introducing a bill based on the measure which I drafted and first introduced 4 years ago last month, and which I have been reintroducing with some modification in each succeeding Congress.

FOOD STAMPS WOULD GO AUTOMATICALLY TO NEEDY

This is the type of food-stamp plan, incidentally, which most of the Democratic Members present on the House floor last year voted for when I submitted it as an amendment to the bill extending Public Law 480. It is the type of plan which I am happy to say the Democratic platform of 1956 promised.

The idea incorporated within the bill is simplicity itself. In each State or political subdivision participating in the program, needy persons meeting eligibility standards would automatically receive food stamps redeemable for specified quantities of whatever surplus foods were available for distribution.

Primarily, the food stamps would be intended for persons and families on various forms of public assistance, but other needy persons would also be included, particularly during periods such as the present recession when many families are in real want but cannot qualify for public assistance if they include employable persons—even if the employables cannot find employment.

PRESENT DISTRIBUTION PROGRAM UNSATISFACTORY

The plan outlined in my bill would replace the present hit-and-miss program now in effect—a very unsatisfactory program—for distribution of some surpluses to the needy in States which have substantial unemployment. The unsatisfactory nature of the existing program has been pointed out time after time by officials of the States and localities which are participating in it. In many instances, it costs the State or city more to distribute occasional packages of free food than the food itself is worth.

A national food stamp plan would not only get the food to more of the people who really need it—and I have some amazing figures covering that point which I intend to present to the subcommittee at the appropriate time—but it would do it a whole lot more efficiently and at less cost than this present hit-and-miss program which is primarily a food dumping program rather than an aid-the-needy program.

The Department of Agriculture seems interested only in finding the quickest way of disposing of as much of its surplus as possible, rather than in having this food used to maximum advantage by the needy here at home. That is apparently why most of the Department's emphasis on surplus distribution has been on shipping huge quantities of it abroad to whatever country will "buy" it with local currency which is then returned to the "customer" in the form of additional foreign aid.

I am not against the Public Law 480 program. But I do think the Congress has up to now been too quick to go along with Mr. Benson's foreign dumping programs without insisting at the same time that he also help feed our own hungry through a sensible food stamp plan.

That may be a little harsh to say, Mr. Speaker, particularly since my purpose in making this statement is to congratulate the fairminded chairman of the House Committee on Agriculture for starting the ball rolling on this and turning it over to a subcommittee for early action.

I hope all Members who are conscious of the large number of needy persons in their districts will take the time and trouble to look into this matter and join in support of legislation to launch a meaningful program of surplus food distribution to our needy.

MUCH BACKGROUND MATERIAL AVAILABLE

There is a lot of material available on this subject for those who care to look into it.

In addition to the many speeches I have made on it in the House since introducing the bill originally on February 12, 1954, including the debate on my amendment last year on the extension of Public Law 480, further information can be found in the testimony which I presented to the Committee on Agriculture during special hearings on this matter in both the 83d and 84th Congresses. Two years ago, furthermore, we had a day of hearings before the Senate Finance Committee on proposals to include this plan as part of the pub-

lic welfare programs under the social-security law. And last year I testified on it before the Humphrey subcommittee of the Senate Committee on Agriculture when that group was holding exploratory hearings on long-range proposals for improving the Public Law 480 set-up.

I am grateful that many Members over these past 4 years have joined me as cosponsors of this legislation, either using the same bill which I drafted in 1954 or the revised version which is H. R. 949 in this Congress, or else using the overall features of my bill but revising it to incorporate additional ideas. Substantially all of these bills are identical, however, in proposing a plan which would give to all of our needy—and there are unfortunately millions of persons in our Nation who could be included in that term—an opportunity to share in our great abundance by receiving regularly on a systematic basis some of the surplus foods we are acquiring under the various Government-aid programs for agriculture.

NEEDY IN ALL STATES COULD SHARE IN PLAN

Every State has many, many persons who would be eligible under my bill. In most States, most such persons are not now receiving surplus food. In some States, distribution is very broad in some localities, but does not include other localities. A national food stamp program would make it possible for all States and all local communities to participate, thus assuring some of this food for each eligible person.

The best way to achieve this distribution, of course, is through the regular channels of trade, although I leave that detail open in my bill. The point is we are trying to get food to people not now getting enough to eat.

Mr. Benson has refused to show any interest in or concern for this type of program. The administration generally opposes it. I am afraid we will have to force it upon them.

Mr. Speaker, because of the growing interest in the food stamp plan in all parts of the country and, I am sure, in every congressional district, as a result of widespread distress in our economy, I include the text of H. R. 949 in these remarks so that it can be seen how the plan would actually operate.

The bill is as follows:

(In the House of Representatives, 85th Cong., 1st sess., January 3, 1957, Mrs. SULLIVAN introduced the following bill; which was referred to the Committee on Agriculture.)

H. R. 949

A bill to provide for the establishment of a food stamp plan for the distribution of $1 billion worth of surplus food commodities a year to needy persons and families in the United States.

Be it enacted, etc., That in order to promote the general welfare, raise the levels of health and of nourishment for needy persons whose incomes prevent them from enjoying adequate diets, and to remove the specter of want, malnutrition, or hunger in the midst of mountains of surplus food now accumulating under Government ownership in warehouses and other storage facilities, the Secretary of Agriculture (hereinafter referred to as the "Secretary") is hereby authorized and directed to promulgate and put into operation, as quickly as possible, a program to distribute to needy persons in the United States through a food stamp system a portion of the surpluses of food commodities acquired and being stored by the Federal Government by reason of its price-support operations or other purchase programs.

SEC. 2. In carying out such program, the Secretary shall—

(1) distribute surplus food made available by the Secretary for distribution under this program only when requested to do so by a State or political subdivision thereof;

(2) issue, or cause to be issued, pursuant to section 3, food stamps redeemable by eligible needy persons for such types and quantities of surplus food as the Secretary shall determine;

(3) distribute surplus food in packaged or other convenient form on the local level at such places as he may determine;

(4) establish standards under which, pursuant to section 3, the welfare authorities of any State or political subdivision thereof may participate in the food stamp plan for the distribution of surplus foods to the needy;

(5) Consult the Secretary of Health, Education, and Welfare, and the Secretary of Labor, in establishing standards for eligibility for surplus foods and in the conduct of the program generally to assure achievement of the goals outlined in the first section of the act; and

(6) make such other rules and regulations as he may deem necessary to carry out the purpose of this act.

SEC. 3. The Secretary shall issue, to each welfare department or equivalent agency of a State or political subdivision requesting the distribution of surplus food under section 2 (1), food stamps for each kind of surplus food to be distributed, in amounts based on the total amount of surplus food to be distributed and on the total number of needy persons in the various States and political subdivisions eligible to receive such food. The food stamps shall be issued by each such welfare department or equivalent agency to needy persons receiving welfare assistance, or in need of welfare assistance but ineligible because of State or local law, and shall be redeemable by such needy persons at local distribution points to be determined by the Secretary under section 2 (3).

SEC. 4. Surplus food distributed under this act shall be in addition to, and not in place of, any welfare assistance (financial or otherwise) granted needy persons by a State or any political subdivision thereof.

SEC. 5. In any one calendar year the Secretary is authorized to distribute surplus food under this act of a value of up to $1 billion based on the cost to the Federal Government of acquiring, storing, and handling such food.

SEC. 6. The distribution of surplus food to needy persons in the United States under this act shall be in place of distribution to such needy persons under section 32 of the act entitled "An act to amend the Agricultural Adjustment Act, and for other purposes," approved August 24, 1935 (7 U. S. C., sec. 612c), as amended, and section 416 of the Agricultural Act of 1949, as amended: *Provided, however,* That nothing in this act shall affect distribution of surplus food presently provided for in such sections other than to needy persons as defined in section 7 of this act.

SEC. 7. For the purposes of this act, a needy person is anyone receiving welfare assistance (financial or otherwise) from the welfare department or equivalent agency of any State or political subdivision thereof, or who is, in the opinion of such agency or agencies, in need of welfare assistance but is ineligible to receive it because of State or local law.

SEC. 8. The Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare and the Secretary of Labor, shall make a study of, and shall report to Congress within 6 months after the date of enactment of this act, on the feasibility of, the costs of, and the problems involved in, extending the scope of the food stamp plan established by this act to include persons receiving unemployment compensation, receiving old-age and survivors insurance (social security) pensions, and other low-income groups not eligible to receive food stamps under this act by reason of section 7 of this act.

SEC. 9. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this act.

Cultural Exchange Opposed

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. BOSCH. Mr. Speaker, it has just come to my attention that the Department of State has invited the Red Banner song and dance ensemble of the Soviet Army to visit the United States in the fourth quarter of 1958 under the cultural exchange program. It is my belief that a majority of the American people care for no part of such a visit.

Under leave to extend my remarks, I include a letter which appeared in the February 8, 1958, edition of the New York Times:

CULTURAL EXCHANGE OPPOSED—PROPOSED PROGRAM SEEN AS AFFRONT TO ANTI-COMMUNIST PEOPLES

To the EDITOR OF THE NEW YORK TIMES:

While it is more than doubtful that the United States-U. S. S. R. agreement on cultural exchanges will ever really improve relations between the American people and the peoples oppressed by the Soviet Government, there can be no doubt that it will shatter the last hopes of the anti-Communist peoples in the U. S. S. R. as well as in every satellite country.

If it is our Government's honest view that we should achieve "cultural" peace and coexistence with the Kremlin's butchers at the cost of our spiritual relations to the oppressed millions, it should at least say so. In that case it should discontinue the useless broadcasts to those peoples behind the Iron Curtain who must—after the conclusion of the exchange agreement—feel bitterly offended by even the slightest theoretical hint at liberation.

There is one paragraph in the American-Soviet agreement which must have the most shocking effect on the free as well as on the oppressed peoples of the world. It is paragraph 5 of section VIII, which reads: "The Soviet side will send the Red Banner song and dance ensemble of the Soviet army * * * to the United States in the fourth quarter of 1958."

That provision means a great victory for the Soviets in the cold war—if we can still speak at all of a "cold war." Have we forgotten that it was the same Soviet army now invited to this country, which committed genocide in Hungary, an unprecedented crime in modern history? Have we forgotten the various resolutions adopted by the United Nations condemning in the strongest language possible the Soviet crimes in Hungary?

How could our State Department maintain the rather childish notion that an American invitation of any Red army unit could bring about a better understanding of the Soviet Union? We have seen the Soviet Army at work in Hungary as well as in other places and do not need its visit to our shores. Such visit would only destroy the last vestiges of respect and confidence in American declarations of freedom and liberation.

May I express the hope that a storm of protests will sweep our country and ultimately prevent our Department of State from carrying out paragraph 5 of section VIII of the just-signed agreement?

JULIUS EPSTEIN.

NEW YORK, *January 28, 1958.*

Prize-Winning Oration in American Legion's Contest

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of the prize-winning oration given by Miss Thea Socha, senior student at Foster Township (Pa.) High School, in the American Legion oratorical contest based on a theme from the United States Constitution or the Bill of Rights:

[From the Hazleton Plain Speaker of February 27, 1958]

TEXT OF THEA SOCHA'S ESSAY WHICH WON TOP HONORS IN LEGION CONTEST

(EDITOR'S NOTE.—"Fulfilling the Aims of the Constitution" is the title of the prize-winning oration delivered by Thea Socha, Foster Township High School senior, in the American Legion oratorical contest based on a theme from the United States Constitution or the Bill of Rights.)

(Miss Socha's oration won her the championship of the Legion's District 12, which embraces Luzerne County. Following is the text of the oration:)

"Man has battled through the ages that we might have peace. He has studied that we might know. He has slaved that we might be free. He has left us the heritage of the ages that we, in our turn, might carry it on to posterity." On to posterity—this was the thought that 55 men entertained that morning in May 1787, when they assembled at Convention Hall in Philadelphia. They had gathered to frame a constitution which would govern their 13 young States. This Constitution was to become the studiest, yet the most flexible, the most criticized, and yet, the most respected governmental document in the history of the world. It was written for America, for posterity, forever.

Their's were conflicting ideas and conflicting desires; nevertheless, after 115 days of bitter deliberation, they drafted and signed what has been the most controversial constitution in history. The fundamentals were laid down; they are as changeless as the fundamentals of mathematics; but their application was then to be, has been, and will continue to be extended.

During a period of less than 200 years, the United States has forged ahead more fantastically than any democracy known to man. Americans are the best fed, best dressed, and most comfortable people in the world today; but, more important, they are the freest and the most willing to defend their freedom. This liberty has given us a stimulation of thought, and as a result, initiative and ingenuity have been released. From our forefathers, we have inherited the right and the duty to govern ourselves.

Self-government—from one perspective a blessing, from another, a curse. The fundamental aim of the Constitution was the guarantee of a free, self governing nation which would be strong enough and wise enough to attain the height of prosperity without sacrificing liberty. Thus far, it has been successful. America has become a better place and Americans, better people because of their masterpiece—the Constitution. This Constitution was instituted primarily for posterity and posterity must pledge to preserve, protect, and defend it eternally, as we have.

Surely, this can never be done unless we have at least a working knowledge of the Constitution. Our Constitution is more than just a few words written on parchment; it is a living thing, adapting itself to the constant growth and shifting circumstances caused by progress. Truly, the first duty of every American citizen is to master both the facts and the spirit of the Constitution. The American citizen must realize, deeply and sincerely, the genuine meaning of life in a free nation. Each individual must instill into himself the knowledge that, without our Constitution, we, too, might be the victims of dictatorial machines or frenzied revolutions; he must not risk his liberty on indifference and apathy; his reaction should awaken a sense of responsibility towards his government. He must understand that, if he expects the Constitution to continue blessing him with rights and privileges, he must reciprocate by carrying out his duties as a citizen, and by giving the Constitution his infallible support.

By support I don't mean that he should write long orations dedicated to independence and lay them aside to be forgotten; nor do I mean that he should passively agree that, something must be done about it, the next time his neighbor relates a story about an unfair councilman. I ask for support that is alive, active. Stand up and take notice. Do more than your share. Don't only vote, make sure that everyone you know votes, too. Don't only complain about crooked politicians. Run for office and get rid of them. Unless America stays active and alert, it will soon lose its top notch positions and be trampled by some foreign power.

Our Government guarantees everyone a free education; therefore, it is the responsibility of every individual living in America to utilize his country's resources so that he can learn to think clearly and intelligently. Before one can act, one must think; and, in order to think clearly, one must be able to discern between that which is wise and that which is foolish. Ignorance is not bliss; it creates inertia and dullness. For this reason, one of the foremost responsibilities of every American is to provide a good education for children, today, and in the future. Schools and teachers must be provided so that the intellectual development of our country does not reach a standstill.

The future of America shall be determined by the people and their exercising of constitutional rights in selecting their leaders. The right to vote is among man's most cherished liberties; and yet, how many Americans do not go to the polls on election day just because they're too busy or not interested enough to pay attention to the candidates. Yes, most people do vote; but those who do not comprise a weak timber in the foundation of Americansim. Should our country become weak in a few spots from neglect and corruption caused by careless voters, it wouldn't take long until the very walls of its structure would begin to collapse.

Another element essential to the well being of our Government is listed under the distasteful title, "taxes." This particular duty causes more complaining and more arguing than any that can be named; and yet, when Mr. Average Citizen finds his conscience beginning to quirk, this is the duty that he uses to rationalize. "I've done my share, I've paid my taxes." This familiar echo is as true a sign of the guilt felt by the poor little man who wants to do good, but doesn't take the time or trouble. Nobody likes to have his money taken away from him, especially by one who doesn't appear to need it; nevertheless, taxes should be paid in a spirit of good feeling and loyalty. Without them, it would be impossible for our Government to operate efficiently. They finance such projects and services as investigations, superhighways, defense, industrial development, research. Of all the things that could be mentioned here I believe that research, especially in the fields of atomic energy and missile development, would be the most timely. The free world must be assured that American supremacy in science and defense stands incontestable.

Today, more than ever before, the cause of liberty needs strong defenders prepared to combat aggressively all forces that seek to destroy it, forces that are at work within the very gates of America. These forces have no allegiance other than to Moscow; their creed is in the writings of Marx and Lenin, not Jefferson and Lincoln; their goal is the destruction of God and our belief in God; they do not rely on men and their human frailties; their power lives as automatons, cold and unfeeling, in the forms of satellites and missiles. This is what modern America must learn to recognize—hatred, greed, violence, fear. Not only destruction, annihilation will result from a weakening of American influence caused by indifference and apathy within our country's boundaries. America must be alert, ready, and willing to defend this freedom. As free Americans, it is our solemn duty to extend to the world an inspired ideology to guide other freedom-loving nations to democracy. This has been the aim of America since its very beginning. It is our wish to share it with the entire world.

The aims of the Constitution—universal peace, prosperity, and liberty—can be fulfilled simply by knowing the Constitution and adhering to the fundamentals that it sets down for us. It is our duty, and our privilege to preserve the heritage which is ours. But we must remember that liberty cannot be written ready made into a charter; it must be written in our hearts, and sent on by us, as a living force to the next generation, so that hundreds of years from now, our countrymen can repeat, as proudly and as reverently as we have, "I am an American."

National Library Week

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Rochester Courier, Rochester, N. H., on Thursday, February 27, 1958, entitled "National Library Week."

The editorial follows:

NATIONAL LIBRARY WEEK

With television presenting a stiff challenge to reading as a source of entertainment and information, the observance of National Library Week is of special significance.

Perhaps one of the prime reasons that the Soviet Union has surpassed the United States in many fields of endeavor is the fact that its peoples are only recently becoming aware of the deep social importance of extensive reading and are finding the answer to their hunger for knowledge.

To us in America where the ability to read and understand is a part of our national heritage, there has been an increasing neglect of the free public library system. As a nation we are becoming mentally lazy, while less fortunate people are discovering with delight and profit the companionship and profit in a good book.

Anything which can be done to encourage the more general use of our libraries ought to be done as an answer to the great questions which face modern society.

Start of the New Deal

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mrs. GRANAHAN. Mr. Speaker, 25 years ago the New Deal was born when Franklin D. Roosevelt became President of the United States.

We remember those days as a time when our country was literally flat on its back, when commerce and industry had come to a standstill and unemployment was of such vast proportions as to constitute a national calamity.

We did not have television in those days to enable those of us living away from Washington to watch the historic moment when Chief Justice Charles Evans Hughes and the President-elect raised their right hands for the swearing in ceremony at the Capitol.

But all of us who could were glued to radios around the country, listening to the ceremony and to the stirring, masterful inaugural address of the man who was to lead our country out of the wilderness of despair into a new day of happiness and prosperity for the American people.

Twenty-five years is a short period of time as history is measured. For all of us who remember those days of 1933, it was one of the most dramatic moments of our lifetimes, and one we shall never forget. We tend to forget, however, that to millions of Americans born shortly before then or after 1933, including many who are now voters, the depression of 1929–33 might have been generations ago—something completely remote from them.

Yet we know that the prosperity we have enjoyed in these last 2 decades could never have occurred if the President who was inaugurated on March 4, 1933, was not determined to end poverty and misery in our midst and was not also determined to act with speed and with wisdom and courage in meeting the problems of depression.

President Franklin D. Roosevelt earned a place in our history among the greatest leaders our country has ever had. And he earned a place in the hearts of the American people that few men have ever matched.

To the extent that we have prospered in this country in the last 25 years—and compared to depression days, today's recession is mild, indeed—we can be thankful for the great leadership and the great humanitarianism demonstrated by one of our greatest Presidents.

To the extent that we are now suffering economic dislocation, which is truly tragic for millions of Americans made jobless by present conditions, I think we can honestly say that we can point to failure on the part of our present national leaders to recognize the danger and to act against it—failure to follow the example set by Franklin D. Roosevelt in launching the New Deal and restoring America's spirit.

Resolution of Board of Directors of Wilkes-Barre General Hospital Concerning Hill-Burton Funds

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the board of directors of the Wilkes-Barre General Hospital expressing its concern over the possible reduction in appropriations under the Hill-Burton Act:

CERTIFIED COPY OF RESOLUTION OF BOARD OF DIRECTORS OF WILKES-BARRE GENERAL HOSPITAL

I, Charles N. Loveland, secretary of Wilkes-Barre General Hospital, hereby certify that the following is a true and correct copy of a resolution adopted by the board of directors of said hospital at a meeting thereof duly held in the city of Wilkes-Barre, Luzerne County, Pa., on Monday, February 24, 1958:

"Whereas the Wilkes-Barre General Hospital is in the midst of completing plans for an addition to its facilities in the city of Wilkes-Barre, Luzerne County, Pa., in order to provide for the needs of the people of our community; and

"Whereas, from all indications, the anticipated cost to provide such facilities will total approximately $3 million; and

"Whereas preparations have been made for the conduct of a campaign in the area serviced by the Wilkes-Barre General Hospital during the early part of 1959 in order to raise the sum of $2 million, which, together with the sum of $1 million which was anticipated in accordance with the provisions of the Hill-Burton Act, would provide the necessary sum for the construction of such facilities; and

"Whereas the Wilkes-Barre General Hospital is located in a community which is in a depressed economic state and is faced with ever increasing unemployment; and

"Whereas the Wilkes-Barre General Hospital is most desirous of embarking on its contemplated building program, which would thus provide the facilities so urgently needed by our people and likewise provide employment and the means of livelihood for so many of those in our community who are in need thereof; and

"Whereas it has come to the attention of the Wilkes-Barre General Hospital that His Excellency, the President of the United States, has recommended that the appropriation of funds in accordance with the Hill-Burton Act shall be reduced; and

"Whereas the adoption of the recommendation of His Excellency, the President of the United States, with regard to the reduction of such appropriations would be most unfortunate, both from the standpoint of supplying the needs in the area service by the Wilkes-Barre General Hospital and in curtailing the possible employment of so many on the unemployed rolls: Now, therefore, be it

"*Resolved*, That Wilkes-Barre General Hospital shall convey to the Committee on Appropriations of the United States Government its deep concern over the possibility of the reduction of appropriations in accordance with the provisions of the Hill-Burton Act and its most earnest wish and desire that the appropriations as originally made shall be continued."

Certified from the records of the Wilkes-Barre General Hospital this 4th day of March 1958.

CHARLES N. LOVELAND,
Secretary.

The National Guard

EXTENSION OF REMARKS
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. DEVEREUX. Mr. Speaker, before the Armed Services Committee of this House, representatives of the Department of the Army are unfolding their plans for a drastic reduction in the Reserve forces of this country to meet the limitations imposed by the budget of the Department of Defense.

The Army National Guard is the principal victim of the proposed force reduction. In April 1957 as the result of intensive efforts to increase the strength of the National Guard, it stood at an all-time high active strength of 434,000 men and officers. The Department of Defense then ordered it reduced to 400,000 by December 31, 1957. It is now to be cut a further 40,000 men and officers during the fiscal year 1959. Thus by June 30, 1959, its strength will be not more than 360,000 and 74,000 trained men and officers will have been turned out of the military service of our country. This means that in these dark days, when our enemies are busily enhancing their military strength, the Department of the Army is proposing that we turn away volunteers for military service to the equivalent in number of almost five full-strength combat divisions, and deny them the opportunity to prepare themselves to defend their country. And mind you, these are men who have come into the National Guard under the urging for the past several years of our national leadership.

Mr. Speaker, the proposals now being made to the Armed Services Committee gravely and irretrievably weaken the ability of our country to defend itself and those portions of the free world upon which our security depends.

Mr. Speaker, 3 years ago—February 1955—General Gruenther told the Armed Services Committee:

In my position as Supreme Allied Commander, Europe, it is my responsibility to study the effectiveness of the reserve systems of the various nations of NATO. It has become increasingly clear to me that the present Reserve system of the United States is one of the weakest in the entire North Atlantic Treaty Organization.

I have studied the national Reserve plan and the choices which it offers. I consider that it is a feasible plan and better than anything we have had before. If I were to offer any criticism of it, it would be that it does not go far enough toward providing combat-ready units soon enough. I, therefore, sincerely hope that if any changes are made in the program by the Congress, they will not be of such a nature as to weaken or dilute the present plan.

Three years ago General Ridgway, then our Army Chief of Staff, told the committee:

The Army's need for effective Reserve forces is greater today than ever before.

General Maxwell Taylor told us in July 1955:

The present weakness of our Reserve forces is the shortage of trained participating enlisted men.

Has the face of things, in your judgment, so changed for the better that the equivalent of five divisions of trained men can be cut from our first line of defense? For the Army National Guard, you must remember, is, under our law, a part of our first line of defense.

Are you satisfied that missiles, still imperfect and no one knows how far away as practical weapons of warfare, can justify the elimination by the end of the coming fiscal year of five combat divisions of trained manpower? Do you believe that we have come to the point where we cannot afford to train our young men to defend their country, and this at a time when the deadly possibilities of strange new weapons makes training a more vital necessity than ever before in history?

Less than one year ago when a controversy over the effect on the strength of the National Guard, of a requirement for 6 months active duty for training for all enlistees, was before our committee, it was agreed that the strength of the Army National Guard would be maintained at 400,000 through the fiscal years of 1957 and 1958 and that thereafter everything possible would be done to maintain the guard at its appropriated strength.

The President of the United States, in a message to the National Guard Association only last year said:

As Commander in Chief I subscribe fully to the statutory declaration that now and in the future we must maintain and assure the strength and organization of the National Guard as an integral part of the first line of defense of the Nation, to the end that your organizations shall be ready to discharge their historic role at the very outset of any national emergency * * *

And when appealed to personally by a delegation of State Adjutants General, including Maj. Gen. Milton A. Reckord of my own State of Maryland, he assured them directly that the National Guard would not be weakened.

No longer ago than last October, Secretary of the Army Brucker told the National Guard Association:

I am determined that the guard shall not be reduced below the 400,000 level at which it is set.

Mr. Speaker, the proposals for reduction in the strength of the Army National Guard break faith with all of these high assurances and shut the door in the faces of thousands of young men who wish to serve their country in the traditional manner of American citizen soldiers. This is unthinkable. It is an action which conveys to young American manhood the understanding that they are not needed for the security of this great Nation. It is an action which is evidenced in a most extreme manner for not only will the National Guard be required to refuse to accept the offered services of fine young men, but it must go further and turn out thousands upon thousands who are already in uniform.

There is every evidence of a purposeful design somewhere in the Department of Defense or in the Department of the Army to weaken the National Guard and to ultimately remove it from its time-honored and lawful place in the military structure of our country in deliberate disregard of the assurances I have quoted to you. I say this because I find that when reductions similar to those proposed for the National Guard are applied to the United States Army Reserve, no existing strength is lost from the Army Reserve. No men now serving will be required to leave the Army Reserve. In fact, it will continue to have room to expand its active drill strength, indeed beyond any such strength achieved in the past, and apparently even beyond the budgetary provisions being made for the Army Reserve in fiscal year 1959.

It is no secret that the Regular Army has been drastically reduced in strength over the past year and is now hard put to fulfill all of the worldwide commitments placed upon it. But it is proposed today to carry this reduction of forces into the Reserve components as well, directly contrary to the hitherto prevailing conception of the relation of the Reserve components to the Regular Establishment.

Gen. Maxwell Taylor, Chief of Staff of the Army, told us a year ago:

Really we should view our Army as a combination of the Active Army and the two Reserve components. As one goes down presumably the other should go up. The world situation changes and the whole aggregate should be adjusted. * * *

Admiral Radford, when he was Chairman of the Joint Chiefs of Staff, also said:

The size of the Regular forces, as I tried to say in my message this morning, was geared to the size and composition, organization of the Reserve forces. In other words, if we cannot get an organized Ready Reserve, then we would have to review the size of the Regular forces.

What is it that now justifies this change of front to a proposal to drastically reduce the Reserve components of our Military Establishment at the same time that a reduction is made in the Regular forces?

It has been widely stated in the public press that the proposed slash in the strength of the Army National Guard will be accomplished by complete elimination of some 5 or 6 existing National Guard divisions along with more than a thousand other organized formations throughout the country.

Gentlemen, consider what this means: If the Army puts its proposals into effect many States which, under urging from Washington to build up its National Guard, have made large investments in facilities and have made great contributions toward the building up of a strong National Guard, will suddenly find they have little or no National Guard at all. Many citizens who have served long and loyally in the National Guard and have attained military competence of great value to our country, will be discharged. No statement has yet been made by the Army describing the means by which the planned elimination of units will be accomplished. Reflect, then, if the plan now being placed before the Armed Services Committee receives our approval, any one of you may find your State bereft of most or all of the National Guard which it has supported and of which it has been proud for generations, in many States even back to the beginning of the country.

Mr. Speaker, it is unlawful to make any change in the plans, organization, or allocation of units of the National Guard without approval of the Governor of the State—title 32, United States Code, section 104. To accomplish such a result indirectly by withdrawing Federal funds applied to the support of the National Guard is a violation of the spirit, if not of the letter of the law, and it is an action which no Federal authority should be permitted to take.

I am happy to report that just the other day the subcommittee on which I serve unanimously reported two resolutions which in essence favors the retention for the National Guard strength at 400,000 and further provides for the Army Reserve to build up to 300,000. These resolutions have not yet been considered by the whole Armed Services Committee, but I feel certain that they will be favorably considered, and I trust and hope will be passed by the House of Representatives.

The courage, patriotism, and enthusiasm of the young men of this country, as exemplified by their voluntary participation in the programs of our Reserve forces, must not be dampened for lack of a comparatively small number of dollars. This fundamental resource must be nurtured, whatever the cost. As I have pointed out, the United States Army Reserve faces no problems of strength or funds in fiscal year 1959. On the other hand, the National Guard does face most serious deprivations. I am confident that this House will not permit this segment of our first line of defense, which is so much a part of the history and traditions of our States, to parch amidst the great wealth of this Nation.

And when we have provided the funds which will sustain the National Guard with the strength and vigor it now employs to the obvious benefit of our overall military strength, no destruction of its organizational integrity can be justified, and will not be tolerated by the American people.

Mr. Speaker, I urge the gentlemen of the House to give careful heed to the proposals being made to the Armed Services Committee and consider them in the light of what I have said today. Elimination of a part of the first line of defense of this Nation from whatever design or purpose or considerations it proceeds must not be permitted.

Spending Showdown

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. MOORE. Mr. Speaker, since coming to Congress, I have consistently urged and supported legislation which would enact into law many of the recommendations of the Hoover Commission. In supporting this legislation, I have recognized that these recommendations were made only after painstaking study and careful scrutiny of all phases of our governmental operations. The Hoover report recommendations which have been enacted into law have helped reduce Federal expenditures and have eliminated much waste and duplication.

Today, as we have under consideration H. R. 8002, I have great difficulty in understanding the objections which have been raised by a number of the members of the Appropriations Committee to this legislation which would employ sound accounting and managerial principles to Government. It is difficult to be sympathetic to the objections which have been raised, especially in view of the overwhelming support which this legislation has received from fiscal and accounting experts throughout the Nation. The measure also has been urged by the executive departments, the Director of the Budget, the Comptroller General, and the Senate passed this bill last session without a dissenting vote.

I want to urge my colleagues to support H. R. 8002, and enact this measure into law without further delay. In this regard, I would like to call the attention of the House to a most timely editorial, entitled "Spending Showdown," which appeared on March 4, 1958, in the Wheeling Intelligencer, a leading newspaper in my district.

The editorial follows:

SPENDING SHOWDOWN

At long last, it now would appear, the House of Representatives is to be given opportunity to pass on one of the major recommendations of the Hoover Commission Report—year-to-year congressional control of all governmental spending. Agreement has been reached for a vote tomorrow on this vital proposal, terminating a protracted series of behind-the-scenes maneuvering.

Here is an excellent example of how abuse of the committee system is permitted to obstruct the course of legislation and either delay or prevent entirely decision by the main legislative body on important matters of public policy.

The proposal is aimed at the waste inherent in the present system of financing long-term projects. The money is authorized and earmarked for an undertaking, after which Congress virtually loses control. The money is spent by the agency involved substantially as it sees fit. Over the years carryover funds from undertakings of this type have accumulated to the total of some $70 billion, constituting, in the judgment of competent accounting authorities acquainted with the situation, a temptation to waste and representing a serious congressional surrender of the power to control the purse strings.

To correct this condition, the Hoover Commission proposed that year-to-year progress reports be submitted to Congress and the money made available only as the work progressed and as Congress authorized. Thus the agency of Government responsible for taxes and the use of their proceeds would be given an annual look at and control over all long-range programs.

The proposal, reduced to bill form, received immediate approval of the President, of the Budget Director, of the Comptroller General, and of high-ranking Members of Congress in both parties. The Senate version, introduced under bipartisan sponsorship as the Kennedy-Payne-Byrd bill, was passed by the Senate last year without a single dissenting vote. The House version, known as H. R. 8002, was approved by both the House Committee on Government Operations and the powerful Rules Committee. Yet for all these months action on it has been blocked by opposition from within the House Appropriations Committee, led by Chairman CLARENCE CANNON, Democrat, of Missouri, and Congressman JOHN TABER, Republican, of New York, the ranking minority member.

If Messrs. CANNON and TABER and their supporters in Congress have legitimate reasons for opposing this legislation, let them make known their objections on the floor of the House and persuade, if they can, a majority of their associates to go along with them. They do not have, it is submitted, a moral right to block action, as they have succeeding in doing up until now, on any matter of public importance, especially one which has won so large a measure of public and official approval. Procedural rules which make possible obstruction of this sort should be revised. No committee should be permitted to hold back any measure beyond the time required for reasonable study and the formulation of an informed recommendation.

Resolution by Kassab Joseph Veterans' Post of Wilkes-Barre Concerning United States Citizens Held as Prisoners in Communist China

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Kassab Joseph Post, No. 1487, Catholic War Veterans, Wilkes-Barre, urging action by the United States Government to accomplish the early release of United States citizens now being held prisoners in Communist China:

RESOLUTION

"Whereas the Kassab Joseph Post, No. 1487, Catholic War Veterans of the United States of America, in the city of Wilkes-Barre, county of Luzerne, Commonwealth of Pennsylvania, has been informed that there are citizens of the United States unlawfully held as prisoners in China by the Communist government of China; and

"Whereas the members of said post strongly believe and urge that it is the responsibility of the United States Government to continually use all proper means to secure the immediate release of such citizens of the United States: Now, therefore, it is hereby

"*Resolved*, That the members of the aforesaid Kassab Joseph Post, No. 1487, of the Catholic War Veterans of the United States of America hereby urge that the proper officials of the United States Government take immediate and continued action to accomplish the early release of the citizens of the United States unlawfully held as prisoners by the Communist government of China, and that a copy of this resolution be forwarded to the President of the United States, United States Senators from Pennsylvania, and the Members of the House of Representatives from Luzerne County."

I hereby certify that the aforesaid resolution was duly adopted at a regular meeting of the Kassab Joseph Post, No. 1487, Catholic War Veterans of the United States of America, on Sunday, February 23, 1958, at Wilkes-Barre, Pa.

LEO GEORGE, *Commander.*

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Lincoln and American Foreign Policy

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the Lincoln Day address delivered by the distinguished senior Senator from Ohio [Mr. BRICKER] at Toledo, Ohio, on February 12, under the title "Lincoln and American Foreign Policy."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LINCOLN AND AMERICAN FOREIGN POLICY

(Lincoln Day address of Senator JOHN W. BRICKER, Toledo, Ohio, February 12, 1958)

'We live in the midst of alarms; anxiety beclouds the future; we expect some new disaster with each newspaper we read. * * *" These were Lincoln's words in a speech at Bloomington, Ill., on May 29, 1856. Today, 102 years later, the alarms, the anxiety, and the expectancy of disaster have increased manyfold. My remarks here tonight will be more in keeping with the somber background than with this festive occasion.

What should be the response of the Republican Party, the response of the American people, to the looming threat of global annihilation? There is no possibility, of course, of turning back the clock; of pushing back into the bottle the destructive capabilities of human intelligence. To believe that scientific inquiry having military applications can be suppressed is a form of idle daydreaming. It is our destiny to explore the infinitely small recesses of the atom and the infinitely vast distances of outer space and yet somehow avert a catastrophe springing from finite limitations on human wisdom and morality.

I do not know of any better way to keep freedom from going under than by drawing upon the profound wisdom shown by Lincoln during his ordeal. This will not be easy. It will be necessary to separate the real Lincoln from the Lincoln of myth and legend. In addition, analogies between the events of one century and those of another are often imperfect or misleading. As Lincoln himself said:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so must we think anew, and act anew. We must disenthrall ourselves, and then we shall save the country." (Annual message to Congress, December 1, 1862.)

The perils of the present are also unprecedented. I believe, however, that the world's best hope of peace and freedom lies in a thoughtful, modern adaptation of Lincoln's political philosophy.

Stripped to its fundamentals the survival of the free world hinges on the foreign and defense policies of the United States. The long-term effectiveness of these policies depends in turn, wholly and absolutely, on the quality of American education.

In what President Eisenhower has aptly described as total cold war, a host of domestic issues—Federal spending and taxation, civil rights, internal security, agricultural production, industrial employment—are extremely important in the mortal struggle against international communism. However, an unwise decision on one or more domestic issues is not likely to prove fatal. On the other hand, a basic miscalculation in foreign or defense policy may easily spell the difference between life and death.

Because foreign and defense policies are of such crucial importance many well-meaning people have said they should be taken out of politics; that they should not be subjected to extended political debate. Let me say right here and now that I am in 100 percent disagreement with this curious notion. I am not one who believes that politics must stop either at the water's edge or outside the doors of the Pentagon. The people have a right to know and a duty to decide. Only in a crucible fired by political controversy can we formulate policies which are sound and durable.

Of course, there are all kinds of politics—good, bad, and indifferent. This is true whether the issue is paving a street or testing nuclear weapons. The people of Ohio are smart enough to detect any demagogic handling of political issues.

Ordinarily, there is not much political mileage in crying over spilled milk. But so long as Democrats insist that the Truman-Acheson foreign policy is a model for the future or that their national defense policies were far sighted, we should not hesitate to prove them wrong. We did it in 1952 and we can do it in 1958. However, new issues affecting the next generation are vastly more important than old issues debated in the last election.

In urging that the great issues of our time be settled by political debate, Lincoln is the only witness we need to call. If there was ever a time for a moratorium on politics it was in 1864. The outcome of the war was still in doubt. The North was divided into three hostile groups: the supporters of Lincoln; the forces of appeasement; and the faction demanding unconditional surrender and harsh retribution. Two days after his victory at the polls Lincoln cited the election as convincing proof that a government not too strong for the liberties of its people can be strong enough to maintain its own existence in great emergencies. And then he said, "If the rebellion could force us to forego or postpone a national election, it might fairly claim to have already conquered and ruined us." I see a great difference between conquest by the Confederacy and conquest by communism, but I see little difference between foregoing an election and holding one in which issues intimately related to the survival of the human race cannot be discussed.

No one has suggested that the problems of American education should be taken out of the political arena. In fact, the leftwing of the Democratic Party hopes to capitalize in this year's election on what most people agree is a crisis in education. The solution of these New Deal retreads at least has the virtue of simplicity. They merely take all the proposals of the Department of Health, Education, and Welfare and then multiply all the figures by 4 or 6 or 10 depending on the degree of their irresponsibility. However, the most serious weakness of American education is due to an organic illness, what the progressive educators praise as life adjustment but diagnosed by Dr. Arthur Bestor (and by most scientists and scholars) as perilously close to death adjustment for our Nation and our children. How reckless it is to pretend that this illness can be cured by splints of gold or bandages made of greenbacks.

In our justifiable concern about the quality of American education let us never come to regard those who do not go on to college as second-class citizens. Remember Abraham Lincoln. He educated himself with a few classics of history and literature, the Bible, and apprenticeship at the bar. Yet he turned out to be the most profound political thinker in our history. Jefferson was more brilliant and his intellectual range was wider, but there has never been anyone who could reduce a problem to its bare essentials so well as Lincoln, or whose actions correspond so closely to his principles. That such a man appeared on the political scene at the time he did must be accounted the nearest thing to a miracle in American history.

In recent years we have tended to emphasize only a certain side of Lincoln's character. Of course he was inspired by humanitarian impulses, by a hatred of oppression, by confidence in the people, and by faith in God. But, unfortunately, we seem in recent years to have forgotten other characteristics which tempered those mentioned and which were perhaps more important in the preservation of the Union.

We might look first at the matter of passion. If we did not detest communism we could not hope to remain free, nor would Lincoln have returned to politics had he not hated the institution of human slavery. But this is what Lincoln said on the subject: "Passion has helped us but can do so no more. * * * Reason, cold, calculation, unimpassioned reason—must furnish all the materials for our future support and defense. * * *" Lincoln was always ready to negotiate with the South upon one condition. The condition was not unconditional surrender but simply the return of the Southern States to the Union. At the bottom of our policy of unconditional surrender in World War II was passion, not reason. Hitler's atrocities make that passion understandable, but because passion was not restrained by Lincoln's cold and calculating reason we have today a divided Germany, a Red China, and the enslavement of Eastern Europe. As a result, America has never been in greater danger. I am not trying to put all the blame on the Roosevelt administration. The policy of unconditional surrender was generally approved by the American people. What I do want to stress is that we dare not make the same mistake again.

I do not know any man less likely to be consumed by passion than Dwight D. Eisenhower. His temperament is a precious asset for the free world. Moreover, the people of the world know that President Eisenhower, notwithstanding all manner of Soviet provocations, is not going to abandon the quest for peace. Still, there are many Americans who seem to believe that we should negotiate with the Soviet Union only on the terms of its dissolution. The best help we can give

President Eisenhower in his crusade for peace is to stamp out, wherever we find it, the idea that the only alternative to the cold war is the unconditional surrender of the Soviet Union.

Lincoln's confidence in the commonsense of the people was tempered by a profound understanding of the flaws in human nature. His law partner, W. H. Herndon, no doubt exaggerated, but Herndon said that Lincoln always took the negative position in their discussions on the subject of unselfish human actions. We do know that Lincoln advised young lawyers not to take the whole fee in advance as that would put too great a strain upon a natural inclination to be lazy. Also, Lincoln opposed a bank bill solely on the ground that the duty and the self-interest of the custodians of funds did not coincide.

We could use more of Lincoln's skepticism about the innate goodnes of human nature. The man who advised young lawyers always to link duty and self-interest would be quick to see that in any unenforceable agreement banning the production of nuclear weapons the moral duty of the Soviet Union would not coincide with its declared self-interest.

We need, too, in this hour of crisis a greater measure of Lincoln's humility. How strange it must appear to many people today that Lincoln never placed God in the corner of the Union. Instead, in 1862 he conceded that in the present civil war it is quite possible that God's purpose is something different from the purpose of either party. In a letter written in 1864 he suggested that the war was divine retribution on both North and South for their toleration of slavery. And in his second inaugural address he supposed God's will to be to continue the war until every drop of blood drawn with the lash shall be paid by another drawn with the sword. Only with this tremendous perspective is it possible to say with Lincoln: "I shall do nothing in malice. What I deal with is too vast for malicious dealing." This generation deals with something much more vast and the necessity of humility and honest self-appraisal is thus even greater.

There is a very close parallel between a nation half slave and half free in 1858 and a world in that condition a century later. We can learn much from the cool reason and rigorous logic which Lincoln applied to his problem. It was territory, rather than morality or legislation, on which Lincoln built his case. The territory of a nation, Lincoln said, is the enduring part, whereas generations fade away and laws can be repealed or amended. Slavery he regarded as a moral wrong, but knew it to be a legal right. His strategy, therefore, was to confine slavery to the territory it already blighted. Knowing that if slavery could not grow it must wither and die, he would thereby put it in course of ultimate extinction.

Soviet oppression is a moral wrong, but in the present state of international law a legal right. Communism, too, will wither away if it cannot grow. A vital part of the East-West conflict is a dispute over territory, primarily that of Germany. If we concentrate on the territorial problem, rather than on international moral and legal reformation, we may be able to put communism in course of ultimate extinction. As Republicans we can be very proud of the record of the Eisenhower administration in avoiding war while at the same time confining communism to virtually the same territory it held 6 years ago.

In Ida Tarbell's Life of Lincoln there is a moving chapter on the journey of Lincoln's funeral train and this conclusion: "The result was a demonstration which in sincerity and unanimity has never been equaled in the world's history." Ninety-three years ago this April the train carrying Lincoln and his son Willie on their last earthly journey rolled slowly through Ohio, not a bell ringing or whistle sounding. The grandparents of many Ohioans were eyewitnesses. I want to read a few sentences of Ida Tarbell's description of the scene as an indication of how deeply the American people revered a leader who never sacrificed principle for expediency:

"At many points arches were erected over the track; at others the bridges were wreathed from end to end in crape and evergreens and flags. And this was not in the towns alone; every farmhouse by which the train passed became for the time a funeral house; the plow was left in the furrow, crape was on the door, the neighbors were gathered, and those who watched from the trains as it flew by could see groups of weeping women, of men with uncovered heads, sometimes a minister among them, his arms raised in prayer. Night did not hinder them. Great bonfires were built in lonely countrysides, around which the farmers waited patiently to salute their dead. At the towns the length of the train was lit by blazing torches. Storm as well as darkness was unheeded. Much of the journey was made through the rain, in fact, but the people seemed to have forgotten all things but that Abraham Lincoln, the man they loved and trusted, was passing by for the last time." (Tarbell, Life of Lincoln, vol. 2 (1917 ed.), p. 258.)

That was the first Republican President; the man who in life saved the Union; and whose principles long after his death may save the world if we have the courage to act upon them.

Lincoln's Day Address by William J. Tepsic, Commander, Department of Pennsylvania, Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. MARTIN of Pennsylvania. Mr. President, William J. Tepsic, Commander of the Department of Pennsylvania, Veterans of Foreign Wars, delivered a most interesting and instructive address on Lincoln's Day, February 12, 1958, at Beaver Falls, Pa., and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY WILLIAM J. TEPSIC, COMMANDER, DEPARTMENT OF PENNSYLVANIA, VETERANS OF FOREIGN WARS OF THE UNITED STATES, AT THE DINNER OBSERVING THE 149TH ANNIVERSARY OF ABRAHAM LINCOLN'S BIRTH, AT THE LT. COL. J. EDWARD BOYLE POST, VETERANS OF FOREIGN WARS, BEAVER FALLS, PA., FEBRUARY 12, 1958

Comrades and fellow Americans, annually at this time, members of the Veterans of Foreign Wars of the United States assemble to pay solemn tribute to one of the world's truly great men—Abraham Lincoln.

In every community in our Nation, at every outpost of civilization wherever Americans might be serving their country, or are present as travelers, they too, will pay reverent respect to the memory of this immortal man.

All Americans can pause and reflect upon the great character that Lincoln embodied in that gaunt frame; contemplate the humanity hidden deeply in the recesses of his penetrating mind and wrapped in his soul. He is the symbol of all that is human.

The processes of his thinking and the end product of his thoughts are closely enough related to the supernatural to cause us to wonder how one man could possess all the noble attributes that were his.

All humanity now needs another Lincoln to guide us through these times of great stress and recurring crises brought about by confusion, animosities and deep hatred.

I believe Lincoln could find the solution to our ills if he were alive today for he brought unity where there was disunity; inspired honesty where there was dishonesty; raised superhuman courage in men who despaired, wrought victory out of defeat, and combined all these to preserve our Republic.

No Athenian rose to save Athens and all her glory. No Roman rose to save the Roman Empire from destruction. But Lincoln rose, guided our Nation through the greatest crisis in our history and until then, the greatest crisis of free government in all history, including Greece and Rome.

This is why I believe Lincoln's genius would guide us today. My belief that this is true, is strengthened by his own wisdom expressed in his last public address at Washington, April 11, 1865, when he said: "Important principles may and must be flexible."

Much of today's troubles remain unresolved primarily because of the inflexibility of world leaders in assuming they alone are right.

Lincoln's flexibility, yet keeping his purpose and principle in the forefront was expressed in this penetrating thought about the Civil War: "My paramount object in this struggle is to save the Union, and is not either to save or destroy slavery. If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that."

We are confronted with retaining unity in the North Atlantic Treaty Organization, probably the last bulwark against encroaching communism. Yet, this organization is involved with misunderstandings that are magnified through unwillingness by some of its members to compromise—to adjust their difference through application of Lincoln's flexibility to remove frictions that start simply enough in initially minor matters of opinion that accumulate, multiply and are magnified until they become major obstacles to unity so essential to the free world's survival.

We need only to recall the grave differences between Britain, France, and ourselves over the Suez Canal that led to Soviet penetration of the Middle East and just a few days ago to union between Egypt and Syria, with ultimately probably other Arab nations that can spark a third world war. Behind these moves is Soviet Russia.

But let us remember we live in a world confused by two illusions. One is that a world opinion already exists on a given problem and that the problem can be readily solved by an appeal by one disputant nation to the other. This may be true with respect to Britain and ourselves because of common heritages. But, even this assumption failed utterly in the Suez crisis. It fails elsewhere most of the time because different nations, although bound together by a common danger, such as we find ourselves in today, have different national priorities of interests outside the common danger. Unless compromise is found, the appeal fails and the collaboration, such as NATO can be weakened and can possibly be destroyed.

The second illusion is that a common national memory exists among former war allies in a postwar period. All of us in the free world and even the Soviet Union itself, made common cause toward World War II victory. To think since this common unity once ex-

isted it will continue indefinitely is the fallacy that today also threatens the free world.

I believe Lincoln's penetrating mind would probe until he found the applicable compromise and apply it without abandoning the principle that must be retained if unity is to be preserved.

These thoughts came to me a few days ago in Washington where we attended the midwinter conference of the Veterans of Foreign Wars, when I had the opportunity to again stand in reverent respect before the impressive Lincoln Memorial on the banks of the Potomac on the route to Arlington National Cemetery, where lie buried side by side in eternal peace the Nation's heroes—Union and Confederate alike, who fell in the Civil War.

As I stood before the memorial, I read as millions of others have read, part of Lincoln's second inaugural address. I was stirred to deep emotion by these words carved deep in the stone:

"With malice toward none; with charity for all; with firmness in the right as God gave us to see the right, let us strive to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Even in that address, he was thinking of a just and lasting peace among ourselves and with all nations.

Lincoln's phrase, "to care for him who shall have borne the battle, and for his widow, and his orphan," is the basis for the Veterans of Foreign Wars existence. Those immortal words are our constant guide in relations with other veterans, their widows and their orphans. No more noble guide can be found in all the writings of history to point our way through life.

What ideals those words inspire. What noble goals for all men everywhere, and particularly now in our own country after the appalling losses of two world wars and Korea and possibly a third world war approaching. Some are now considering cutting veterans' pensions and benefits.

Think of this proposed abandonment of the veteran in contrast to much of Lincoln's greatness that can be found in six cardinal attributes: his unshakable belief in unity; his love for humanity; his patience; his superior commonsense; his mercy, and his confidence in God.

These qualities sorely tried by poverty; by handicaps; by disappointments, shaped his character and guided the hand and mind that determined our Nation's destiny.

Lincoln is one of the paradoxes of all times. Let us think of the great achievements of this man, who, deprived of his mother, neglected by his father, reared in abject poverty, unschooled and left to his own devices, his was a boyhood in which the records reveal little but struggle and suffering.

Sociologists would say delinquency was knocking at his mind's door. But, from misfortune, from these handicaps, emerged a man who towers above most men of history. There is enough in any one of his deeds and in his profound thinking to bring virtual immortality to any public man.

In the first place, he was chosen for the Presidency on a compromise platform and was a minority victor. In 1862, 3 years before his death, he said he would be commander in chief of a million soldiers and that his steps to the Capitol would be dogged by assassins. Despite this premonition, he went to Washington.

In his first year as President, Lincoln made the most momentous decision any American President ever made, and that was: if necessary to preserve the Union, brother Americans must fight against each other. He took this decision in a mind tormented by the implication of what would occur, but he did it with a fervent appeal to God for a sign of His intention.

Conduct of the early part of the Civil War was a source of dissatisfaction to Lincoln. He looked fervently for a general comparable to the Confederate genius, Robert E. Lee. Eventually he found him in Grant, but despite his ability in the field, Lincoln was urged to remove him both for, as was said in the streets and in high places, being unfit by conduct and temperament for important military command. John Hay, Lincoln's private secretary begged the President to remove him, but Hay later said: "Lincoln remained silent for what seemed a very long time. He then gathered himself up in his chair and said in a tone of earnestness that I shall never forget, 'I can't spare that man; he fights.'" Time has proven his wisdom at this critical juncture in our history.

Amid all the trials, reverses, and the disloyalty of some of his Cabinet, Lincoln sufferd the death of one whom many considered his favorite child, little William. This grief-stricken President worked harder than ever trying to forget his tremendous loss. The cries of dying soldiers and the pleas of widows and orphans were ever in his ears. Yet, with all his sympathy for suffering humanity, there was not the slightest deviation from duty as he carried the tremendous responsibility of the imperiled Republic.

When peace came, and with it, the clamor for the hanging or long imprisonment for southern leaders, Lincoln told his Cabinet on April 14, 1865: "Enough life has been sacrificed, we must extinguish our resentment if we expect harmony and union." To think in this vein would in itself make any man great. The next day he was dead.

Had Lincoln lived, there is little doubt that the difficulties of the reconstruction period after the Civil War, some of which remain with us, would have been minimized if not completely avoided. That this is true is found in the fact that in his inaugural address he said the Union could not be broken by a pretended secession. In a proclamation of August 1861, he said the people of the Confederacy were in rebellion, not the States of the Confederation.

In all his deeds and speeches, Lincoln held this view. His bitterest enemy in his reconstruction plans was not a southerner, but a Vermonter become Pennsylvanian—Thaddeus Stevens, the vindictive invalid who was determined that the Democratic Party would never rise again.

This was the atmosphere in which Lincoln found himself. It was pathetic, for in his heart there was no vindictiveness, only compassion; there was no hatred, but deep love for his fellowman; there was no rancor, but only good will. When he died the course of our history set by him, drifted without his guiding genius.

On Good Friday of 1865, the mortal life of the savior of the Union ended. He never regained consciousness. Some about him on his deathbed said a look of unspeakable peace came over his tired features. Others added, "Now he belongs to the ages."

He was prophetic in his assassination. He did his utmost to finish nobly the task he started. He kept the faith to the end.

This is why we Veterans of Foreign Wars of the United States find inspiration in Lincoln's own words to carry on our work among those who have borne the battle, his widow and his orphan, ask you to study and to reflect upon the life of Lincoln—the preeminent advocate of the dignity of man.

As we stand today at the crossroads of history in a world half slave and half free, we can ponder what Abraham Lincoln would think of humanity's plight. He once said, "As I would not be a slave, so I would not be master. This expresses my idea of democracy," he said, and added, "whatever differs from this to the extent of the difference is no democracy."

This is far from the conception of the Communists who are abroad in our land and elsewhere on earth making every effort to destroy the dignity of man. They would destroy us too, given the opportunity, and with our destruction, the last strong citadel of democracy and civilization as God and man has boldly created it would disappear. There are more than 200 Communist organizations operating in the United States ready to help in our destruction.

We can be confident that tolerant Lincoln would commend the Indian members of the Veterans of Foreign Wars who led the rout of the intolerant Ku Klux Klan at their attempted anti-Indian rally near Maxton, N. C., about a month ago. Who, he would say, has the right among us to deny these only real Americans the right to live wherever they wish in their native land?

In World War II, no other combat group won so many individual battle honors than Indians and we are proud this major defeat of the shameless, faceless Klan, was inflicted by Indians who apparently have a deep sense of Americanism that might be emulated by some other Americans.

We are proud we can reflect in the great honor they brought to our great organization by their active opposition to American unity and in defense of all that Lincoln stood for. Pennsylvania on this Lincoln's birthday should suitably cite our Indian comrades whose leader was a North Carolina district commander.

I think you will agree with me, that if Lincoln were with us tonight, he would repeat what he said at Cleveland, February 15, 1861, which is as applicable now as then:

"If we do not have common cause to save the good old ship of the Union on this voyage, nobody will have a chance to pilot her on another voyage."

Corrections and Additions

EXTENSION OF REMARKS
OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. O'KONSKI. Mr. Speaker, I ask permission to insert at this time corrections and additions to previous speeches appearing in the CONGRESSIONAL RECORD.

In the speech appearing on Thursday, March 18, 1954, I ask that the following sentences be added at the bottom of the speech:

The living conditions of the aged are far worse than living conditions in many parts of the world that our leaders are so concerned about. In fact, many of the countries we are giving billions to have a better old-age pension system than we ourselves have. Where is the heart and conscience of America to treat others better than we treat our very own? Most unfortunately, the majority of Congressmen have toured to other parts of the world, but they have never toured the small communities of our Nation to see the sad conditions under which our aged people are struggling to survive. America would look better in the eyes of the world if we turned our attention to taking care of these people who no longer can care for themselves.

To the speech of Friday, June 23, 1957, I wish to add the following sentences to the end of that speech:

The planes we gave France killed hundreds of innocent women and children in Tunisia. This is just one example of the many where our foreign-aid program has led to murder and has turned the people of the world against us. Yet in the light of this condition, our leaders are urging more and more giveaways of the same type. What a tragedy. Today we are being asked to vote more billions for a foreign giveaway program. I wish to report to the people I represent that I have never voted for this monstrosity, and the more the world sees of it the more my position has been proved right. How can anyone in good conscience justify giving away more than $130 billion of the people's money only to have the world getting worse and worse instead of better and better?

To the remarks of Thursday, Jun 17, 1948, I would like to add this sentence:

Since these figures were compiled, we must add another $5 billion our Government gave away last year. So the amount that we actually gave away since 1941 is $136 billion. This appears to be just one-half of the national debt staring into the faces of our children and our children's children.

Corruption Is Seeping Into All Walks of Life

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 27, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from Labor, official publication of the Railway Labor Unions:

CORRUPTION IS SEEPING INTO ALL WALKS OF LIFE

Is a cynical standard of morality spreading through all walks of life in the United States? That question was raised and answered with a positive "Yes" by two well-known editors of daily papers during the past week—that is, Ralph McGill, of the Atlanta (Ga.) Constitution, and William T. Evjue, of the Madison (Wis.) Capital Times.

Both pointed out editorially that the decline in standards isn't something affecting labor unions alone, though that's been the most publicized.

McGill cites officials who regard their office as a "license to use public moneys as they please and profit thereby where they can"; also, members of Federal commissions who draw "expense money" from the Government "and at the same time from some public source."

Likewise, he points to the fact that many State legislatures "are producing their usual malodorous fare." Also, many county and State officials have secret and lucrative interests in firms selling goods and services to the State.

Among other examples he lists are "gross immorality" in the awarding of State contracts and "shakedown of liquor dealers by threatening loss of license." He refers likewise to public officials who "enter office without means and quitting it well off by reason of having shrewd 'within the law' machinations at the expense of the taxpayers." In the South, he adds, the situation as to "rascality" in public office is "often so utterly cynical as to be preposterous." In other words, "anything goes" so long as it doesn't violate a law.

Summing up, McGill says: "Without much question, there is the greatest cynicism with regard to public money and public morality," and too many people think that "doing wrong" means "merely doing something that causes one to be arrested—if caught."

Evjue, in even stronger terms, declares that "one of the most deplorable aspects of American life today is the deepening indifference of the American people to the low moral standards that prevail and the widespread corruption that prevails in a government that is infested with political opportunism."

He blamed the situation on "rampant materialism that has supplanted the moral values that have given substance to the free way of life throughout our history." The real trouble, he says, is that "the dollar sign, instead of the cross, is the star toward which American eyes turn today."

Clearly, as these noted editors pointed out, what's needed in this country today is a new moral revolution that will sweep through unions, industry, government, the professions, and every other facet of American life. Idealism must replace cynicism, if the vaunted American way of life is to survive.

Is Baseball Big Business?

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. TEAGUE of Texas. Mr. Speaker, I know that many Members of this body are interested in the future of professional sports. In view of recent decisions of the Supreme Court and later action by a subcommittee of the House Judiciary Committee in this field, I think the Members of the House will be interested in reading the following article, written by Mr. Harold Weissman, which appeared in the February 25, 1958, edition of the New York Daily Mirror:

NATIONAL FOOTBALL LEAGUE BASEBALL'S BEST FRIEND

(By Harold Weissman)

Off the record: Baseball, as even Hilda Chester now reluctantly concedes, is big business, but did it ever occur to you that professional football is a big part of that business? Who said it doesn't figure? Well, go out and bet on this figure: $725,000. That, in round figures, is what National Football League tenants paid to seven major league landlords last year. And that's not a figure of speech.

Keep in mind that the total is confined to rental revenue. The annual bill from concessions accruing to the baseball managements from pro football is conservativly estimated at "a minimum of $300,000" by an authoritative National Football League source. That adds up to a million dollars plus, a year, even if you use your fingers. A nice, tidy sum to finger, at that.

Fact of that matter is the footballers have provided the difference between red and black ink in two big league ledgers: the Pirates and Senators. Pittsburgh received $87,000 last year from the Steelers for the use of Forbes Field, while the Redskins turned over $70,000 to Washington for the privilege of occupying Griffith Stadium on 6 Sundays. Top rental fee was the whopping $203,000 charged the Lions in Briggs Stadium for 7 games—which included the $53,000 payment for the championship pairing.

Second highest contributor was the Giants, with $130,000 to the Messrs. Topping and Webb in Yankee Stadium, followed by the $115,000 with which the Chicago Bears enriched Wrigley Field. The Eagles were taxed $60,000 by the Phillies for Connie Mack Stadium, a figure matched by the Chicago Cardinals for Comiskey Park. The remaining five National Football League teams—Los Angeles, San Francisco, Baltimore, Green Bay, and Cleveland—sell their merchandise in municipally operated arenas, beyond the reach of the diamond magnates.

The moral: Not only is there a foot in football, but football also foots a great part of the bill for baseball. It's just another illustration of the squeeze play.

Telephone Company Executive Opposes Increase in REA Interest Rates

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
Monday, March 10, 1958

Mr. PROXMIRE. Mr. President, the farmers who have written to me concerning the President's recommendation that REA interest rates be increased have been unanimous in opposition to any such increase. What farm leaders have said about the importance of the REA electric and telephone programs to rural life has been most convincing. It is, therefore, all the more convincing to have an executive of a privately owned telephone utility declare himself in favor of the REA program.

Mr. President, the Badger State Telephone & Telegraph Co., at Neillsville, Wis., is one of the finest independent telephone companies in the Nation. It is a small business concern, and it has made a great effort to provide its custom with adequate telephone service. In my estimation, Mr. President, it is of critical importance to the preservation of our free economic system to maintain and promote small, independent business like this fine telephone utility. Its difficulties in competition with a giant monopoly in this field are great. The difficult of securing adequate financing is one of the most serious.

Mr. Smith has written to me concerning the importance of maintaining the REA program on the present basis, to provide adequate financing at reasonable interest rates. I ask unanimous consent that this extremely significant testimony about REA interest rates be printed in Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BADGER STATE TELEPHONE
AND TELEGRAPH CO.,
Neillsville, Wis., February 24, 1958.

Senator WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR PROXMIRE: Present legislation before Congress proposes a change regarding REA loans for extending and improving power and telephone service.

We have recently taken advantage of REA financing. As a matter of fact, we had no other place to go. The Public Service Commission of Wisconsin holds pretty closely to a 50-50 ratio of equity versus debt limit. A recent Wisconsin Legislature made an exception for REA borrowers by setting a 10-percent equity requirement. We were able under this provision to engineer for and propose to build a completely adequate and modern, dial system. Our present 1,750 subscribers are greatly enthused over this project which will be completed in early 1959.

Small public utilities found long-term financing difficult even before inflation; since inflation we have used up our borrowing capacity merely keeping up with demands for service. A much needed rehabilitation and modernizaiton was only possible through REA borrowing.

If anything to be done will greatly alter present procedure, I would certainly suggest caution and a thorough examination. Large utilities can issue bonds, and so forth, but we small operators have not the facilities to go into the money market on bigtime scale. As for the interest rate—we must pass that on to our subscribers, but if at all possible, I sincerely recommend a continuation of the present rate.

If you have any specific questions, I will do all I can to furnish you the answers.

Sincerely,

H. M. SMITH, *Secretary.*

Commentary by David Lawrence on Unemployment

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. MARTIN of Pennsylvania. Mr. President, the commentator, Mr. David Lawrence, has made some very fine observations on the bank crisis of 1932 and 1933. He also has commented on unemployment in our country, and stated that in 1932 there were 12,060,000 unemployed and after 6 years of New Deal pump priming, in 1938, there were still 10,390,000 unemployed, and even after World War II broke out in 1941, there were 5,560,000 unemployed.

The fair way to make comparisons is by percentages. At the depth of the 1930 depression 28.6 percent of the labor force was unemployed, while at the present time only 7.4 percent is unemployed. This should be compared with the postwar high of 7.8 percent in 1950.

I ask unanimous consent that the article be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BANK CRISIS OF 1932–33 COULD HAVE BEEN AVOIDED

(By David Lawrence)

WASHINGTON, March 4.—A quarter of a century has elapsed since the Nation experienced a bank holiday that closed all banks for a week beginning March 6, 1933. It signalized the start of the New Deal—a reform era that continued for many years. To this day, the leadership of the late President Franklin D. Roosevelt in that crisis is often extolled, especially the reassuring words of his inaugural address: "The only thing we have to fear is fear itself."

Little was said then, however, and little has been said since about how the bank crisis could have been avoided. Nor was it learned until many years later that the American banks on the whole were really solvent. Only about 22 percent were forced into liquidation, and even these paid out 85 cents on the depositor's dollar. Persons with less than $5,000 on deposit in these banks actually got 90 cents on the dollar.

The bank holiday should never have occurred, and it would not have been necessary if there had been real leadership on the part of Mr. Roosevelt in the period between the election in November and his inauguration in March. Herbert Hoover, who was the outgoing President, pleaded in vain with the President-elect to cooperate in working out a formula for the transition period that would have established confidence in the financial institutions of the country.

But Mr. Roosevelt, who was poorly advised, was told by his political friends that, if he sat down with the incumbent President, there would be a certain political responsibility attached to his record for the events of that period and that he had better wait until inauguaration day before assuming any responsibility. Although Mr. Roosevelt came to Washington for a perfunctory visit with the outgoing President, it did little good. For the air was filled with rumors about Mr. Roosevelt's intention to revalue gold and to call in all the precious metal for the Government to hold. Gold has not since circulated in this country.

It is difficult to estimate in dollars the damage done by the 1933 bank holiday. The economic and financial machinery of the Nation was paralyzed. Since then a system of Federal insurance of bank deposits has been established; but even before this it would have been easy for the Federal Government, if Congress had approved, to extend promptly the authority of an agency like the Reconstruction Finance Corporation so as to enable the banks to borrow from the Government temporarily to cover their frozen assets.

It will always be a matter of great puzzlement to historians as to why this wasn't done earlier. The only conclusion reached by many of us who witnessed at first hand the events of that period was that partisan politics prevented immediate action. The Democrats who controlled Congress at the time also wanted to wait for the new administration to take over. The politicians fiddled while millions of Americans lost their jobs and for a considerable time were deprived of the use of their savings.

The transition period nowadays between the presidential election in November and inauguration day—January 20, as fixed by constitutional amendment—is somewhat shorter, but the dangers are just the same. An incoming administration does not have the obligation to cooperate with the outgoing administration in an emergency. Incidentally, the British parliamentary system provides for an instantaneous transfer of power after an election.

There can be little doubt that had proper steps been taken in November and December of 1932, with the cooperation of the incoming administration, the Roosevelt depression which followed could have been avoided.

The unemployment figures for those years are significant. The number of persons out of work rose from 1,550,000 in 1929 to 12,060,000 in 1932 during the Hoover depression. But, with Mr. Roosevelt in office, the unemployment figure of 1933 went up to 12,830,000. There were still 10,390,000 unemployment in 1938—after 6 years of the New Deal. It was only when World War II broke out that the figure came down appreciably—to 5,560,000 in 1941 and finally to 670,000 in 1944.

But most people have forgotten that there were 2,270,000 unemployed again in the year after World War II ended and that in early 1950—just before the Korean war—the unemployed total rose to 4,828,000 during the Truman recession.

There are more people now in the total labor force than ever before, so unemployment statistics should really be examined in terms of percentages. About 28.6 percent of the labor force was idle at the bottom of the depression in 1933. Although about 5 million are out of work today, this represents only 7.4 percent of the total labor force as compared with the postwar high of 7.8 percent in 1950 during the Truman administration. Anything below 10 percent is nowadays called a recession, whereas anything above is likely to be termed a depression.

Protection for Small Business

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. PROXMIRE. Mr. President, on March 4 there apeared before the Senate Select Committee on Small Business a man whose name has become synonymous with small business in America. I refer, of course, to Mr. George J. Burger, vice president of the National Federation of Independent Business.

As an independent businessman in the rubber tire industry, Mr. Burger learned firsthand how price discrimination can be used to favor one business, as against another, and to make it impossible for the small-business man to compete against the will of the giant enterprise. As an executive officer of an organization of independent businessmen, Mr. Burger has helped to prove the truth of the maxim that the Lord helps him who helps himself.

As a spokesman for small business, Mr. Burger is almost unique among the representatives of private groups who come before the Congress, in that he knows, and can prove, that he is speaking for his organization. The National Federation of Independent Business does not take a position until its members have voted on it directly, through mandate ballots. I think it is significant that small business, which is democracy in the economy, should show how a nationwide organization can conduct its business democratically.

Mr. President, I ask unanimous consent that Mr. Burger's remarks be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

(Statement by George J. Burger, vice president, National Federation of Independent Business, before the Subcommittee on Retailing, Distribution, and Fair Trade Practices, Senate Small Business Committee, March 3, 1958)

PROTECTION OFFERED BY ANTITRUST STATUTES TO SMALL BUSINESS

I am George J. Burger, vice president, National Federation of Independent Business, 740 Washington Building, Washington, D. C.

Our head office is located at Burlingame, Calif., with division offices in Chicago, Cincinnati, and New York City, and the legislative office here in Washington, D. C.

We are the largest organization of independent business and professional people in the country from the standpoint of directly supporting individual members. The number is growing daily. We are unique because our members themselves determine our position on every issue by their direct vote through mandate ballots. It's safe to say we have our fingers on their pulse.

First of all, Mr. Chairman, at this moment we are not testifying for or against Senate bill 3079, as the procedure of the federation is that the entire membership must be polled on the proposition before any executive officer can appear and give testimony for or against.

It goes without saying that due to the importance of the proposed bill it will be taken up in a nationwide poll of the National Federation of Independent Business and an argument for and against the proposition will be presented to the members.

However, it is very important to note that we are appearing, following out the implicit instructions of our members, to use every power within our means to protect the antitrust laws, and when any weakness comes into the laws through proposed amendments, court decision, etc., further following out the instructions of our members, we will move in and take a definite position to protect the overall good of the antitrust laws because the truth of the matter is, without the antitrust laws there can and will be no future for independent business no matter how efficient and well financed they may be. In fact, this is the keystone of the federation's action to protect our nationwide membership—all independent business and professional men—and more important, through our action to protect the millions of small businesses in our domestic economy.

Our position, by instruction, was carried out to the fullest degree in our appearances before the platform committees of both the Democratic and Republican National Conventions in 1948, 1952, and 1956, where we made our principal recommendation in behalf of small business consistent, vigorous, impartial antitrust enforcement.

When the Robinson-Patman Act was enacted we in small business believed that the time had arrived at last when small business would be afforded protection where deliberate price discrimination was taking place—that small business would have their day in court to bring the necessary relief. Without that help to small business they remain powerless to help themselves. We say this in view of our experience this past decade or more as to the enforcement of the antitrust laws, which, in substance, has not brought immediate relief at the local level.

Well do I know in my private capacity as a member of the rubber tire industry when I advocated the full utilization of that section of the Robinson-Patman Act that would give the necessary relief to injured small business in the rubber tire industry, that I can say without fear of contradiction, directly or indirectly it cost me my position in that industry.

Bear in mind I was not deliberately urging lawsuits but was advising small business what that section of the law meant to them in the way of corrective relief.

Mr. Chairman, let me cite something even more important as to the overall value and protection to small business through the enactment of the Robinson-Patman Act.

The ink wasn't dry on the law (1936) before there was some extensive maneuvering in the cancellation of two major contracts in the rubber tire industry due to the fact that the seller, in both instances stated publicly that they couldn't justify the heretofore price under the Robinson-Patman Act. In other words, special price to a few of their customers and not to all of their customers.

I have to cite the rubber tire industry because the pattern prevailing in that industry is similar to patterns prevailing in many major industries even today. I come to this conclusion from reviewing the correspondence every so often from our nationwide membership in the federation, representing all types of businesses.

At the time of the cancellation of these two major contracts in the rubber tire industry a third major company took up one of the contracts which was cancelled, giving that company 100 percent of that major buyer's requirements of tires and tubes. In fact the action of that company at that time aroused the interest of many other industries as their announced planning was revolutionary—but, at the same time they claimed it was in accordance with the full provisions of the Robinson-Patman Act.

Some industry leaders at that time questioned the good faith of the planning. In fact one leading business publication intimated that in their opinion it was a subterfuge to bypass the Robinson-Patman Act.

At that time, due to my exclusive conference with the heads of that company—even by invitation bringing in a Member of Congress to confer with them (in fact, the coauthor of the Robinson-Patman Act) we gave them the benefit of the doubt and would judge their action on the performance under the new announced planning.

This new arrangement was not in existence over a few months when I found that violations of the Robinson-Patman Act were taking place, and charges were filed accordingly with the Federal Trade Commission. The outcome of these charges was that a cease-and-desist order was issued by the Federal Trade Commission on January 6, 1939, and I quote the communication I received from the trial attorney at that time:

FEDERAL TRADE COMMISSION,
Washington, January 6, 1939.

Re docket 3685, United States Rubber Co.

Mr. GEORGE J. BURGER,
National Association of Independent Tire Dealers, Inc., New York, N. Y.

DEAR MR. BURGER: In reply to your telegram of even date, I can now advise you that the Federal Trade Commission has authorized the issuance of a complaint against United States Rubber Co. and United States Tire Dealers Corp. charging violation of the Robinson-Patman Act. The complaint has been issued and served upon said respondents.

Price discrimination in violation of section 2 (a) of the Clayton Act is charged in connection with the sale of special brand tires to Montgomery Ward & Co., Atlas Supply Co. and others; in connection with the granting of large discounts and rebates to oil companies and large distributors which are not available to small tire dealers; and in connection with retail sales by company owned stores. Payment of overriding commissions to certain large oil companies is also charged as a violation of section 2 (d) of the Clayton Act.

I trust that this information will be of interest to you, and hope that your coming trip will be a pleasant and successful one.

Very truly yours,

CYRUS B. AUSTIN,
Trial Attorney.

It was the hope of small business in the rubber tire industry at the time, and I would also say of most of the tire manufacturers, that here was a grand opportunity to start long overdue corrections through the law, but I am sorry to say we could find no evidence that the order was vigorously enforced by the Federal Trade Commission, and I have so charged in repeated appearances before congressional committees this past decade or more. In fact, we still hold the same opinion at this very moment. In other words, this action in itself was the guinea pig as we look upon the Robinson-Patman Act, and it is self-apparent that the failure of the FTC to vigorously follow through on that order of January 6, 1939, has resulted in continual violations of the law by others in that major industry. Through this it has resulted in not alone that industry but other industries as well coming to the conclusion that the Robinson-Patman Act is a dead-letter law.

The Senate Small Business Committee and the House Small Business Committee in their recent investigations through public hearings in the petroleum industry have been advised that deliberate, consistent violations are taking place, and that the Federal Trade Commission is, at this very moment, pursuing investigation against certain major oil and rubber companies as to their secret and special concessions, in violation of the Robinson-Patman Act, and if that section of the order pertaining to override commissions, as the Federal Trade Commission charged in their cease-and-desist order of January 6, 1939, had been enforced there would not now be a continual repetition by others, all in alleged violation of the Robinson-Patman Act.

Finally, Mr. Chairman, citing this case as an example showing evidence of the failure of the antitrust agencies to follow through, definitely discloses a need for the injured party, small business, to be given the privilege to institute civil action so that they may be compensated for the damages they have sustained through the secret pricing methods of their suppliers. To deny this help to small business, and to allow the heretofore policy which has and is existing on antitrust enforcement to protect small business to continue means the ruination of small business of this Nation. On the other hand, if small business has the power to institute civil action this in itself could throw the fear of God into those suppliers who are carrying on a secret pricing system to a few of their customers and not to all of their customers.

What we are saying here is reaffirming our position from the first instance in carrying out the will of our nationwide membership.

Business Balks at Business Regime

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 27, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading (Pa.) New Era:

BUSINESS BALKS AT BUSINESS REGIME

History has an unhappy faculty for making people eat crow.

This subject came to mind last week when the editor of Business Week magazine appeared in Reading and declared that businessmen are losing confidence in the Eisenhower administration.

You don't have to teach history to remember how Eisenhower condemned the Truman administration for lack of business administration. Eisenhower appointed nine millionaires and a plumber to his Cabinet. Later the plumber quit and that left all millionaires.

All the best business brains in the Nation were recruited for the grand and glorious crusade. Remember?

Then, too, Eisenhower in 1952 attacked the Truman spending spree. Remember how

they were going to bring economy to government and balance the budget?

Well, what's been happening under this Republican business administration? Take a look:

1. Unemployment is skyrocketing past 5 million.

2. Business is screaming for immediate public works and more Government spending.

3. Everybody wants tax cuts.

4. The budget is way out of balance.

5. The national debt limit was just raised at Eisenhower's request by $5 billion.

Is it any wonder that business—and farmers and factory workers and housewives and office help and virtually everyone else—has lost confidence in the Eisenhower administration?

Foreign Aid Scrutiny

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Aid Security," which appeared in the Concord Daily Monitor, Concord, N. H., on March 4, 1958.

I think this editorial comes right to the point, and deserves to be read by the Members of Congress and the general public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID SCRUTINY

Senator BRIDGES has given his support to foreign aid since its inception under the Marshall plan, but he is unhappy over some aspects of Eisenhower's plea for nearly $4 billion for a foreign aid program now being debated in Congress.

New Hampshire's senior Senator is critical of a proposal to give $98 million in foreign aid credits to the Communist regime of Polish Premier Gomulka. He also opposes continuance of foreign aid to the Yugoslav dictatorship.

So far as Poland is concerned, the Senator has some strong arguments to support his stand. The Gomulka regime was set up under an agreement with Moscow that obligated Russia to provide Poland with food, machine tools, and other commodities. Russia has failed to live up to this agreement and Gomulka is looking to the United States for funds over and above those already granted.

Senator BRIDGES opposes aid to Yugoslavia because Tito is friendly to Moscow. He says he can see little difference between what is called a good or bad type of Communist.

In addition to foreign aid, Congress has before it a related program, reciprocal tariff agreements legislation. And despite bipartisan backing, both are in trouble. Many of the difficulties both programs face are the result of the downward trend in the economy of the United States.

Foreign aid is opposed as a giveaway to people in other countries while millions in this country are unemployed. This reciprocal tariff bill is fought on the ground it helps foreign countries sell products in this country while those who could be making these products here are out of work. About $13 billion worth of goods was sent into the United States last year by foreign nations.

Foreign aid is a prime target at this time for Republicans and Democrats in Congress who want a budget cut. In some form, Eisenhower's program eventually will be approved, but not before Senator BRIDGES and others have given it a closer examination than it has had for some time, an examination that may be long overdue.

Case Against Foreign Aid

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Case Against Foreign Aid," published in the Griffin, Ga., Daily News of March 3, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CASE AGAINST FOREIGN AID

The President has again asked for billions in foreign aid for the next fiscal year—$3,942,100,000 altogether. Of this, $2,635 million would go for military assistance and $1,307,100,000 for economic aid. These amounts, added to what has already been appropriated for this purpose, would bring our foreign aid bill up to some $70 billion since the end of the Second World War.

This whole program of foreign aid is completely fallacious and illogical—regardless of the propaganda being grandiloquently shot at us—at our own expense—by political leaders of both parties, by the one-worlders and the do-gooders. Yet we have been brainwashed and scared to such an extent as to what would happen to us if it were discontinued that it is very rare any more that we hear anybody taking the side of the American taxpayer or representing the philosophy of an independent America.

There were two basic misconceptions in the foreign-aid program to begin with: (1) That we could buy friends, and (2) that we could cure the ills of the world with dollars. Neither is possible.

You just cannot go out and buy love of democracy and love of freedom like you can buy a ton of coal or a bushel of wheat. It must first exist in the hearts of the people themselves, and if it does not exist there, no number of our dollars will put it there.

Who is to say that we did not have just as many, if not more, friends at the end of World War II than we have right now? Who is to say that, instead of curing the ills of the world with our dollars, we have not added to them—by aiding communism in many instances, by subsidizing socialism in even more instances, by destroying the independence and self-reliance of many nations, by upsetting the way of life of peoples when they did not want it upset?

This viewpoint has nothing to do with the value of the United Nations; our participation in that organization proves that we are not isolationist. It has nothing to do with military alliances; we should always be ready for military alliances when it seems to our mutual benefit. (It should be pointed out, though, that a nation that is not willing to defend itself against communism by its own efforts is not likely to make a very good ally.) It has nothing to do with foreign trade; we have always been ready throughout our history to trade with foreign nations and should continue to do so.

What we are saying is that it is fundamental folly to continue under the conception that we can solve the problems of the world if we will only spend enough of our money. We have made entirely too many mistakes, both domestic and foreign, under that conception to keep it up any longer. Most of our foreign economic aid should be discontinued immediately; our foreign military aid should be thoroughly reviewed.

We mentioned the American taxpayer and the fact that no one seems to speak for him any more. If he is not too brainwashed and scared by the politicians and the one-worlders, he should speak up for himself. He should advise his Government that at least he is not scared of what Russia might do if our foreign aid is discontinued. Any such fear is all in our minds. Let's wait until Russian foreign aid also totals $70 billion before we begin to worry—then we'll never worry. Neither should the American taxpayer fear any lack of allies against communism if our foreign aid is discontinued. Those who are against communism will still be against it, with or without our aid; those who are not against it will not be changed anyway.

In fact, the greatest safeguard in this world against communism is a strong United States of America—and certainly we would be much stronger if we quit dissipating our material resources over the face of the globe. At least our national debt would have been $70 billion less if we had never started on the program—and it would be hard to prove that the rest of the world would have been in any worse shape than it is now. The chances are the world would have been in much better shape—because nothing destroys like dependence upon someone else to take care of you.

Blacklisted at 40—Discrimination Against Workers on Account of Age

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. PROXMIRE. Mr. President, The Machinist, which is published weekly by the International Association of Machinists, recently carried a very fine editorial on the serious problem of discrimination on account of age in employment. This is a very serious problem at all times, and of course it strikes with particular severity during a period of recession as at present.

The International Association of Machinists is one of the finest trade unions in the world. Its president, Mr. A. J. Hayes, is an outstanding labor statesman who has contributed much to the cause of organized labor, as well as to the welfare or unorganized workers and the public generally. Mr. Hayes and the IAM are deserving of high commendation for the interest they are taking in this serious problem.

Mr. President, I ask unanimous consent to have the editorial from The Machinist printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Vic Bonaventure was laid off last month at Farmingdale, N. Y., by Republic Aviation Corp.

Vic has a lot to recommend him. He is skilled, reliable and has 30 years of experience in the aircraft industry—since 1926.

But the employers he visits ask first about Vic's age. As soon as they find out that Vic is past 45, it's: "Sorry, no openings."

There are hundreds of thousands of Vic Bonaventures all over North America. Many, like Vic, are union members caught in recent layoffs in aircraft, railroad and other industries. They are healthy, dependable, experienced.

But they are blacklisted by industry because they are over 45, 40, or even 35.

"Why is it," one of them recently wrote the Machinist, "that employers think we are too old to hire but the Government thinks we are too young to retire?"

To help answer this question, the Machinist is publishing this special section on age discrimination.

Here, now, are the facts about age discrimination:

In the years between 46 and 64, a man's chances of getting a job are only half as good as before 45.

Once out of work, the older worker usually stays unemployed longer. Even in good times, most workers over 45 take almost twice as long to find new jobs as younger workers.

Older workers often exhaust their unemployment insurance benefits before they can find jobs. One New York survey showed that those 45 and over made up only one-third of the labor force in the State but two-thirds of those who had exhausted their 26 weeks of jobless benefits.

The problem and consequences of age discrimination are growing as a larger and larger portion of the working population moves into the 45-and-over age group.

During the first half of this century, from 1900 to 1950, the United States population doubled. But during the same period, the number of persons 45 and over tripled. Some experts now predict that in another 30 years, nearly half of the Nation's adults will be 45 and over.

By 1965 alone, the United States labor force is expected to increase by about ten million. Less than 1 million of these additional workers will come from the 25-to-44 age group. But there will be nearly 5 million more in the 45-plus group. In other words, for every increase of 2 workers in the age group considered most eligible for employment, there will be 11 new workers in the 45-plus group.

"We are convinced," said the New York State Joint Legislative Committee on Problems of the Aging recently, "that great strides can be taken if employers will recognize the situation. * * * We doubt that any economy can long survive supporting large numbers of able, still vigorous men and women excluded from production not on the basis of ability but on the basis of age. * * *."

EFFECT OF DEPRESSION

The problem of employment for so-called older workers first attracted serious attention in the depression of the 1930's. During those years, jobs were scarce and the idea became popular that older people should move along and give younger persons a chance to make a living and support their families.

The idea had great appeal, not only to younger workers, but also to many employers who—in the absence of strong union contracts—used the chance to get rid of high seniority employees and hire younger workers at lower wages. Industry's age barriers have been up ever since.

Latest evidence of such blacklisting is contained in a recent survey conducted by the United States Department of Labor. The survey covered seven major cities—Detroit, Los Angeles, Miami, Minneapolis-St. Paul, Philadelphia, Seattle, and Worcester, Mass. Employers in these cities advertised 21,386 job openings with public employment offices during April 1956. The findings:

In 5 of the 7 cities more than half of the jobs advertised with public employment offices contained age restrictions. In three of the cities three-fourths of the job orders specified age barriers.

The most frequent maximum age was 45. It was set for 41 percent of the job orders in the 7 cities. One in five of the requests (20 percent) even included "Don't bother to apply," signs for men and women who had reached their 35th birthday.

The Labor Department research team dug even deeper. After studying the jobs advertised by employers at public employment offices, the team kept records on the actual hiring practices of employers in the seven cities over a full year's period. The pattern was the same.

WASTING HUMAN RESOURCES

During an entire year, so-called older workers made up 40 percent of those actively looking for work. But employers filled only 22 percent of their job openings with men and women 45 and over. To put it another way, there were twice as many 45-plus workers looking for jobs as employers were willing to hire.

A United States trade union official declared recently:

"In this country we have done a great deal to conserve our natural resources. We have launched programs to safeguard our lands, our forests, and our fisheries. If there is a threat to any of these, we have often acted quickly to protect them with conservation programs and emergency measures.

"Yet," he added, "the human resource, one of our most important natural resources, has to a large extent been ignored and wasted because we have failed to come to grips with the problem of age discrimination."

Relief for Senior Citizens

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. NEUBERGER. Mr. President, a major injustice has been the fact that social-security annuitants are permitted to earn only up to $1,200 a year. This ceiling stems from 1937, when $1,200 had 2 to 3 times the purchasing power of today.

Representative EDITH GREEN, who ably represents my home district of Portland, Oreg., in the House of Representatives, has urged persistently that the $1,200 limit be removed, and a thoughtful editorial in support of her proposal appeared in the Oregon Daily Journal of Portland some weeks ago.

I concur in the statements of the editorial, and I request unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RELIEF FOR SENIOR CITIZENS

Representative EDITH GREEN has introduced a measure, H. R. 9656, which will interest many senior citizens. The bill proposes to amend the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder.

It is one of the several proposals to be considered in the current session of Congress along this line. Some bills would raise the limit to $2,000, while others set the maximum at $1,800 or $1,500. Present limit is $1,200. After that the recipient of social-security benefits loses one check for each $80 earned.

Obviously this is most unfair. Monthly checks for many individuals recently pensioned range from $98.50 to $108.50. On these checks no Federal or State taxes are paid. But on the $80 which the recipient gets in lieu of his larger social security check, he must pay both State and Federal taxes and expenses incurred in earning the $80, such as bus fare or gasoline for his car, if any.

When a pensioner obtains a position of some sort to splice out his income—no one can hope to support a home on his social security check—he has to assure his employer he won't walk off the job the day his earnings total $1,200. But he is out of pocket at present if he stays on the job, since each $80 earned costs him perhaps half that sum in difference between his earnings and his Government check, plus the double taxes incurred.

If the reader seeks more specific examples, here is one group: Each year seen tens of thousands of teachers in public schools turned out to grass under retirement plans, generally inadequate to guarantee comfortable living. Many of these teachers are still in full possession of their teaching capacities. There is a shortage of veteran instructors in nearly every level—elementary, secondary and college fields. Their skills and professional capabilities are largely lost at present because naturally schools that wish to hire them must have some guarantee they will finish out the year. Most of these teachers still have the fire of ambition to teach. Some are teaching until they reach the $1,200 mark and then serving free—actually serving free, because it costs them too much to take their pay. Others are reluctantly turning down urgent opportunities to teach because "they can't afford it."

It is to be hoped that Congress doesn't get so much engrossed in bewailing "the shortage of scientists and other teachers" that it does not see in Representative GREEN's bill a genuine opportunity to help relieve this shortage. Besides, it will restore many a person to the Federal (and State) tax roll. Remember that while the bill would present some cost to the social security funds, it would let Uncle Sam reach the pensioner's pocket with his tax fingers.

Maintaining the Values of a Free Society

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. IVES. Mr. President, for more than a year the hearings of the Senate Select Committee on Improper Activities in the Labor or Management Field have drawn attention to wrongdoing in labor-management relations. Sooner or later, the Senate may be called upon to vote on proposed legislation resulting from the select committee investigations.

In the same period of time, and earlier, another important group has been most active in preventing or punishing the sort of wrongdoing exposed by the select committee as it may occur or threaten

to occur within the labor movement. I refer to the AFL–CIO ethical practices committee.

Last February 19, Mr. Al J. Hayes, president of the machinists union, and chairman of the AFL–CIO ethical practices committee, made a speech before the City Club of Rochester, N. Y. I think it is important for all Senators to have the full text of that speech available, and to study it, in the interest of fair play and an objective approach on the part of my colleagues to the issues they will face when new legislation affecting labor-management relations may come before them.

In making this statement, I must note that I personally take exception to a number of Mr. Hayes' inferences and conclusons. In particular, I cannot go along with Mr. Hayes' assertion, near the end of his speech, that the McClellan committee hearings appear to have been designed for the specific purpose of paving the way for legislation that would put organized labor under Government control. I introduced the first resolution calling for an investigation in this field when Victor Riesel was blinded, and the select committee resulted. My purpose then was, and my purpose now is, to expose bad conditons and help labor clean its own house. And I have repeatedly pointed out that the great bulk of American labor leaders are decent, honest, God-fearing men who are just as concerned as is anyone else with ridding the labor movement of gangsters, racketeers, and criminals.

Al Hayes is conspicuous among those in the labor movement, who are doing their utmost to clean labor's house. Thus, even though I cannot subscribe to all that his address contains, I feel that his views should be placed before the Congress. For this reason, I ask unanimous consent that there be printed in the Appendix of the RECORD, following these remarks, the full text of Mr. Hayes' February 19, address before the City Club of Rochester, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

(Address by A. J. Hayes, international president, International Association of Machinists, at the City Club of Rochester, February 19, 1958)

MAINTAINING THE VALUES OF A FREE SOCIETY

I appreciate the opportunity that your kind invitation gives me to talk to you frankly and informally about problems that face the American labor movement today.

From the information and reports I have received about the City Club of Rochester (you see, I checked up on you, too), I understand that this is the first time you have ever invited a representative of a national labor organization to be your guest.

I am deeply honored. Although your current interest in union affairs may stem from the adverse publicity the organized labor movement has received as a result of the Douglas and McClellan committee investigations—still, I am pleased to be here.

For, the fact that you are willing to listen to our side of the story— indicates that the American people have not lost their sense of fair play—that they still want to hear the other side of any story.

That is what I hope to give you today. But let me make it clear at the start that I have not come here as an apologist—or as a propagandist. Rather, I want to try to set the record straight—to talk about corruption in the labor movement—yes—but also to put it into perspective.

I am told that most of you represent the business, professional, political, and intellectual life of Rochester. Since that is so, it is fair to assume that most of you do not have any direct knowledge of trade unions or trade union activity. (This, of course, does not apply to the labor representatives who are your guests here today.) And it follows that your mental image of organized labor has been formed by newspaper reporters and radio and television commentators.

Without imputing the motives or questioning the integrity of the working reporter or the commentator who brings you the 7 o'clock news—I can still say that such a picture is a distorted one. As Adlai Stevenson told the Gridiron Club of Washington a few years ago:

"It is the habit of journalists * * * to see the world in terms of crisis rather than continuity. The big story is turmoil and disaster, not the quiet spectacle of men working * * *. Bad news sells papers."

Thus the story of organized labor—when it appears on the front page of your newspaper—is likely to be the story of strikes, picket lines and violence—and recently corruption—not the story of men working quietly together as they carry on the normal functions of labor unions.

My own union—the International Association of Machinists—is a large union, in fact, it is the fourth largest in this country and the third largest in Canada. We have almost a million members. About 10 percent of them—almost a hundred thousand in all—live and work in this State. Many are your neighbors in the city of Rochester.

Throughout the entire country we have contracts with more than 14,000 employers—large and small. By actual count made over a 10-year period, our records show that between 98 and 99 percent of those contracts were negotiated or renewed peacefully, without strikes or work stoppages. The workers they cover generally receive fair wages, enjoy decent working conditions and can be sure of equitable treatment in layoffs, promotions and grievances.

It is these workers—and their officers and representatives—who have made a contribution for the betterment of life, and who have set the real pattern of trade union conduct.

But this kind of union activity—and the kind of business agent or international representative or officer who does an honest job day in and day out isn't news. You seldom read about him—even though he is the true rule of trade unionism in America—and the Dios, the Dorias and the Becks are very much the exception to that rule.

Unfortunately, however, because of these exceptions—as they have been ferreted out by congressional committees, and publicized by the channels of mass communication—many Americans today believe that organized labor as a whole is corrupt and undemocratic. If I accomplish nothing else today, I hope that I may at least cause some of you to question the premises on which such a belief is based.

I can think of no better way to do this than to give you the facts—without any sugar-coating—facts which I have yet to see in any newspaper or magazine such as you might receive in your homes.

For example, few people realize that organized labor has been the subject of intensive congressional investigations for more than 5 years. Beginning in 1953, a succession of committees, including the Hoffman committee, the Ives committee and the Douglas committee, and now the McClellan committee, have all taken turns at putting labor through the investigative wringer.

Each of these committees was well financed and well staffed. The McClellan committee alone—at this time—has 86 full-time investigators beating the bushes around the country—investigating almost every situation directed to its attention by disgruntled and dissident members—many of whom have, themselves, been guilty of embezzlement, fraud and improper conduct. And many of whom are openly and admittedly antiunion because they have been disciplined for such activities.

It is interesting to note that though the McClellan committee was established to investigate racketeering in business as well as racketeering in labor, little has been done about that phase of its work. (And what little has been done has received very little coverage in the press and on the air.) In contrast, the investigation of activities of organized labor has been pressed with a vengeance.

In fact, in some instances the committee's investigators have gone so far as to provoke and encourage intraunion strife and bitterness. For example, we know that in Waukegan, Ill., in the investigation of the bakery workers union, a committee investigator drafted a petition and turned it over to dissindent members for circulation and signatures. I am not making these statements out of prejudice. But rather to point out the danger to all segments of our society of congressional investigations which are not objective. The ethical practices committee of the AFL–CIO itself investigated the bakery workers union—and found enough evidence of corruption to warrant expulsion from the federation. But the proper role of a congressional investigator is to investigate, not to instigate.

An even more pointed example of the committee's bias is shown by reports received from rank and file UAW members in Sheboygan, Wis., and its vicinity. At the present time the McClellan committee is investigating the long-drawn-out Kohler strike. That strike has been marked by unusual bitterness, and there has undoubtedly been violence in the locality as the strikers have reacted to the company's efforts to destroy their union.

But the investigators assigned to this case have made it clear to many of the UAW members that they are only interested in incidents that will discredit the union. When workers tried to talk about unfair and unethical practices on the part of management, they were told that the investigator was interested only in the misconduct of union personnel and representatives.

Then, too, not long ago the Textile Workers Union of America presented the committee with fully documented evidence of scores of incidents in the South where labor organizers have been beaten up, jailed, and run out of town by employer-hired goons, where ordinary workers and their families have been intimidated, fired from their jobs, and evicted from their homes because they tried to exercise rights supposedly guaranteed them by the Labor-Management Relations Act. The union asked only that this kind of racketeering, this denial of workers' rights, be investigated and given the same publicity as has been given the other side of the story.

However, there has been no response to this request. And I don't think there is going to be. The committee shows no disposition to investigate employers in the South or elsewhere. And lest I be misunderstood, let me assure that my mention of these incidents does not indicate opposition to objective investigation of corruption or unethical conduct in the labor movement.

In fact, the officers of the AFL–CIO offered support and cooperation to the McClellan committee in an objective investigation.

The further fact is that we have openly acknowledged that many of the corrupt practices exposed by the Douglas and McClellan committees could never have been brought to light by any investigative body within the

labor movement. Insofar as this is true, the McClellan committee has rendered a service to the good elements in organized labor.

But the good the committee has accomplished does not justify the injury which has resulted from the improper conduct of some of its investigators and the open prejudices of some of its members.

In fact the public pronouncements of certain members and staff personnel of the committee have convinced many of the reputable leaders of organized labor that the primary purpose of the investigation is to injure rather than help the membership of all labor unions.

Now what are the facts regarding the extent of corruption and unethical practices in the 140 unions affiliated with the AFL–CIO? What has been the foundation of all the headlines, news stories, editorials and radio commentaries that have succeeded so well in convincing so many of the American people that the labor movement is indeed a honeycomb of corruption and a hiding place for racketeers?

It may surprise you to know that all of these committees together—over a span of five years—have uncovered acts of dishonesty—proven or probable—on the part of less than 40 trade-union officers.

Perhaps even one would be too many. But I ask you to consider that in the 140 unions that are affiliated with the AFL–CIO alone, there are more than 16,000 full-time paid national and international officers—and more than 420,000 local officers.

And even if we assume—as we must—that the McClellan committee will find new cases of corruption and racketeering in the future—I would still contend that such a ratio of dishonesty and unethical practice is no higher in the house of labor—than it is in the world of business, law, medicine, journalism, advertising, or politics. I could cite many examples of corruption in these other groups, but I will cite just a few to support my statement.

Not long ago, I noted an article, in Fortune magazine on thievery in business and industry. According to this source, business and industry lose from $5 million to $3 billion every year because of embezzlement in the ranks of management. In fact, according to FBI estimates, embezzling businessmen steal more money each year than all the Nation's burglars, pickpockets, armed robbers, and auto thieves combined.

Of course, there are many other types of corruption and unethical conduct in business and industry—such as the furnishing of call girls by companies such as General Electric at a recent business convention, the bribery of Government officials and employees, and the scandalous pressure tactics of the oil and gas lobby, and as a general proposition, the policy of caveat emptor (let the purchaser beware) has been considered ethical, rather than unethical, by far too many advertising companies and business and industrial firms.

With such an ethic is it any wonder that expense accounts are known as swindle sheets?—That much of what advertisers tell us must be discounted automatically?—That sincere men in the medical profession are concerned about the increasing number of unnecessary surgical operations that are performed by unethical doctors for the money involved?—That respectable and honored institutions of higher education prostitute themselves by undercover subsidization of semiprofessional football teams?—That most States have had to enact special legislation to protect the widows and orphans of men killed in industrial accidents against shysters in the legal profession who would otherwise take 50 to 60 percent of their workmen's compensation or employer liability awards?

I could go on—giving you further and even more drastic examples of corruption and unethical practices in nonlabor institutions. But I do not want to belabor the point. Neither do I want to defend the trade-union movement on these terms. Two wrongs do not make a right. And though I can get just as indignant as anyone about a union officer who fattens his purse by selling his principles, I object to the hypocrisy of those who pretend that corruption is a phenomenon unique to the labor movement.

In fact, as of this moment, I think organized labor has gone further than any other group in our society to establish and enforce a meaningful code of ethics for itself. As chairman of the AFL–CIO's ethical practices committee, I have helped develop the six codes of ethical practices that establish standards for trade-union practice and policy today. These codes regulate issuance of union charters, conflicts of interests of union officers, democratic practices, fiscal procedures, administration of health and welfare funds, and racketeering. They set high standards—standards that are consistent with the proper objectives and high ideals of the labor movement. These codes are being—and will continue to be—strictly enforced within the framework of the AFL–CIO.

With these codes—with the ethical practices committee acting as a watchdog—and with the help of law enforcement agencies on the Federal, State, and local levels—there is no reason why the labor movement should not be trusted to perform its legitimate functions without being shackled by restrictive and punitive legislation.

However, there is a real and present danger that it is not going to be permitted to do so. The McClellan committee hearings appear to have been designed for the specific purpose of paving the way for legislation that would put organized labor under Government control. No other inference can reasonably be drawn from the legislation that has been proposed over the past few months by the NAM, the chamber of commerce, the administration, and some of the antilabor Senators on the McClellan committee.

The ideas and the philosophy that are summed up in these proposals reflect the kind of thinking that made free trade unions an instrument of the state in Nazi Germany, Fascist Italy, and Peronistic Argentina.

These proposals are not intended merely to rid the labor movement of undesirables (I might say, parenthetically, that existing legislation is quite adequate to do that), but rather seek to install functionaries of the United States Government as overseers and directors of what is now a free institution. Under the proposed legislation, bureaucrats—in no way answerable to the membership—would regulate and control the internal affairs and activities of the Nation's labor organizations.

I can hear the roar of disapproval that would sound from coast to coast in the press, in the pulpits and elsewhere, if such laws as are proposed for trade unions were proposed for the regulation and control of the American Legion, the American Medical Association, the chamber of commerce, the National Association of Real Estate Boards, or similar private organizations.

If such legislation were proposed, it would immediately be recognized and exposed for what it is—a direct assault on the freedom of the people to form, to join and to operate organizations of their own choosing and for their own betterment.

But since it is organized labor that is being assaulted—many business and professional groups are applauding—when they should be quaking in their boots. For when government usurps its power to control the internal affairs of a voluntary organization, it is only one short step away from control of the policies and programs of that organization as well. Today, Government might control only the form of collective bargaining, but tomorrow it could just as well control the substance. And, from regulation and control of wages, hours, and working conditions on the side of labor, it is but another short step to regulation and control of prices, profits, and marketing policies on the side of maangement.

Labor and management may—and often do—disagree on economic matters—particularly on how the fruits of production should be divided, but I think we would all agree that control of both business and labor must be kept out of Government hands—if we are to continue as a free society.

There seem to be many well-meaning people today who are not basically antilabor, but who are nevertheless concerned because—in their opinion—unions have grown too big. These people are nostalgic for simpler days when businesses were small, when farms were family operations and not factories in the field—and when Government did little more than maintain an army and carry the mail. In those days employers had more face-to-face contact with their employees and unions were small because most business and industry was small.

Perhaps we would all like to go back to a simpler kind of life—and a simpler kind of economy. But we can't. We are living in an age, and in an economy, which is marked by rapidly changing technology and which is overshadowed by nuclear energy, automation, and the eminent conquest of space.

The challenge before us is to transplant the freedoms that grew up in the simpler economic system of yesterday, and maintain them in the dynamic, complex economic system of today.

We must have unions—free unions—if we want to retain human values in a push-button, IBM-card industrial system.

But unless we retain human values, democracy and the free-enterprise system will fail.

We must not let that happen. And it will not so long as we maintain and preserve the basic freedoms of all our political, social, and economic institutions.

Chins Up Versus Dividend Cut

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. SPARKMAN. Mr. President, in the Washington Sunday Star of yesterday, Sylvia Porter, a well-known writer-economist, had a column which she entitled "Chins Up Versus Dividend Cut."

This article is such good sense that I commend its reading to everyone. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHINS UP VERSUS DIVIDEND CUT

(By Sylvia Porter)

On Monday, February 24, President Eisenhower arose before the National Food Conference in Washington to appeal to us to keep our chins up and to state that "confidence is what this country needs."

On the same day, George M. Humphrey, former Secretary of the Treasury and now board chairman of National Steel Corp., announced in Pittsburgh that National Steel was cutting its dividend for the first quarter

of 1958 from $1 to 75 cents—the first change in 2 years.

Was it an ironic coincidence that on the same day the President called for chins up confidence, one of his closest friends and advisers cut the dividend of his corporation? Yes, it was an ironic coincidence.

SEQUENCE AMUSING

Was it an amusing sequence that this should occur only hours after Mr. Eisenhower had returned from a quail-hunting vacation at Mr. Humphrey's Georgia estate? Yes, the sequence has caused some deep chuckles in the private luncheon clubs of Wall Street.

Yet, this was more than coincidence and amusing sequence. For it underlines some plain truths about the country, and about the futility of talk as a weapon to create confidence. For instance:

The President is wasting his energy when he tries to bolster confidence among businessmen of America by chins up speeches. They aren't influenced by talk of this sort. They either ignore it, criticize it or laugh at it.

What puts up and keeps up their chins are the practical facts of business and finance—the volume of orders and sales, the feel of the markets, the margin of profits, the figures on the balance sheet.

The last thing Mr. Humphrey wants to do is to embarrass the President. But as he and National Steel's board said, their first obligation is to insure National Steel's strong financial position. The President might have said be confident in 100 different ways but it wouldn't have changed the views of these businessmen on their own company's position, needs and outlook.

The President is also wasting his precious breath when he tells us average folks that confidence is what this country needs.

MANY ARE CONFIDENT

The wage earners and housewives of America are confident when their jobs seem secure, their personal future appears bright and they have money to spend. Talking confidence doesn't breed it. Talk about the need for confidence actually may undermine confidence by causing people who haven't been worrying at all to wonder what the shouting is about.

The President has no basis whatsoever for his implication that we are lacking in courage or commonsense right now.

The fact is that America's businessmen are still laying tens of billions of dollars on the line for plant expansion in 1958—as cold and clear an indication of courage as you could mention. The fact is that American housewives have been storming the stores for small appliances since giant General Electric abandoned the fair-trade policy—as cold and clear an indication of commonsense shopping as you could mention.

What we have run out of, for the moment, are new stimulants and what we have lost, temporarily, is exuberance. We won't get new stimulants or regain exuberance from chins up talk. To paraphrase the old saying, the confident don't need the talk and the frightened won't believe it.

Houston's Need for Missile Defenses

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. YARBOROUGH. Mr. President, the city of Houston, Tex., is one of the great metropolitan areas of the Nation, yet up to this point the Department of the Army and Department of Defense have failed to provide this area with adequate modern missile protection.

Many Houstonians and other area residents are deeply concerned about this apparent lack of defense. Among the organizations concerned about this matter is the Houston Junior Chamber of Commerce. The Houston Jaycees recently passed a resolution urging immediate action toward building Houston area defenses.

A copy of this resolution has been sent to me by Mr. Wesley E. Hooper, Jr., Houston Jaycee president, and I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas it has come to the attention of the disaster preparedness committee of the Houston Junior Chamber of Commerce that guided-missile defenses have been installed at numerous cities and locations within the continental United States which have in the opinion of the Department of Defense been classified as critical target areas; and

Whereas it is the understanding of the disaster preparedness committee that the Department of Defense has not so considered the Houston and Harris County areas, and as a result thereof considerable less critical areas of our country have such protection by reason of their classification; and

Whereas the Houston-Harris County industrial complex constitutes tonnagewise the third busiest port in the Nation and has along its banks one of the Nation's largest concentrations of oil refineries and storage facilities, chemical plants, manufacturing concerns, and the United States San Jacinto Ordnance Depot; and

Whereas all of the aforementioned activities along the Houston-Harris County ship channel are active in the furnishing, producing, and manufacturing of material which is necessary for the proper defense of our Nation and as such would be a likely target for enemy attack; and

Whereas in addition to these vast installations of industry, there is also concentrated within the boundaries of Harris County, Tex., in excess of 1,136,000 people; and

Whereas at the present time there is no adequate air defense installation in Harris County for the protection of these industrial installations and port facilities as well as the citizens of this community; and

Whereas the Houston Junior Chamber of Commerce is deeply concerned with the protection and the welfare of the people of Harris County and also concerned with the defense of industrial and petroleum installations of the Texas gulf coast area, such committee desires that its interest in behalf of the defense of this area be known to all concerned, and this committee finds no justification for the apparent low priority given the defense of the industrial complex of the gulf coast area and this committee considers the oil, chemical, and other critical industries within Houston, Beaumont, Port Arthur, Texas City, Freeport, and Galveston, Tex., as being necessary and vital to the defense of our Nation: Now, therefore, be it

Resolved, That the Houston Junior Chamber of Commerce calls upon the Department of the Army and the Department of Defense to give immediate consideration to the importance of the Texas gulf coast area and take the necessary steps to provide this critical area with the latest developments in the field of missile protection; be it further

Resolved, That a copy of this resolution be placed before the directors of the Houston Chamber of Commerce for their consideration and that a copy be forwarded immediately to all of our governmental representatives, and to those concerned in the Department of the Army and the Department of Defense whose responsibility it is to provide adequate defense of our vital cities and large concentrations of population.

In witness whereof I have hereunto set my hand and caused this resolution to be recorded in the minutes of the Houston Junior Chamber of Commerce.

WESLEY E. HOOPER, Jr.,
President, Houston Junior Chamber of Commerce.

Relationship Between Juvenile Delinquency and Employment Opportunities in Washington, D. C.

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that an excellent article from the March 9 Washington Post and Times Herald by Victor R. Daly on the relationship between juvenile delinquency and employment opportunities in Washington, D. C., may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIMPLE, SURE WAY TO END CRIME IN THE STREETS

(By Victor R. Daly)

Violence in the streets is even more indefensible than it is deplorable. Yet much of this crime could be averted by the untried process of putting more of the potential lawbreakers to work. Let's face the facts realistically and let the chips fall where they may.

Unfortunately, an overwhelming majority of the purse snatchings, the yokings and other assaults taking place by night in the streets of Washington are committed by Negroes. The number of these delinquents and criminals is out of all proportion to the nonwhite population of the District.

Take a walk into police court any Monday morning and you will be impressed by two startling actualities: Besides the fact that the overwhelming majority of those charged with street crimes are nonwhites, you will be amazed at the youthfulness of these defendants. Seventeen to twenty-three seems to be the prevailing age.

When a condition of this sort exists in the Capital of the Nation, there is something basically wrong at the heart of the community. The city streets may be broad and clean and well lighted. The buildings may be neat and trim. There may be an abundance of monuments and parks. But the system of handling human relations must be way out of kilter.

The trouble lies with the fact that the job opportunities for Negroes in general, and for Negro youth in particular, have not kept pace with the growth of the metropolitan area and the stream of graduates of the local public high schools.

Too many young men who should be working as apprentices or performing the simple semiskilled tasks are roaming the streets aimlessly, without employment, without funds, without hope. They are not employable in this community because of their race. They turn to crime.

Some progress is being made in opening new job opportunities for Negro youth in the District. Very little, if anything, is happening in this category in nearby Maryland and Virginia. It is not strictly a District problem, for the metropolitan area embraces Prince Georges and Montgomery Counties to the north and Alexandria and Arlington County to the south.

Many industrial plants are moving into these outlying areas, but employment opportunities for minority group workers, with rare exceptions, have been limited strictly to a handful of custodial jobs.

In the District itself, one of the chief bottlenecks to the Negro youth is the building trades—organized labor. Excepting one of the bricklayers' locals, which permits nonwhite members to work on small home and apartment house construction, virtually all of the other skilled building trades are unwilling, under one pretext or another, to permit young Negro apprentices to work with them on major construction projects.

With the possible exception of cement finishers who pave the sidewalks, it is ironical to look at the big construction jobs on the campus of Howard University and see not one skilled Negro workman employed anywhere on the job.

Yet local vocational high schools are graduating scores of well-qualified youngsters year after year who are eager to become journeymen electricians, plumbers, machinists, carpenters, plasterers, tile setters, roofers, and stonemasons. All have had years of basic training in the public schools, following the trades of their choice. The District of Columbia spends millions of dollars annually on their education.

But the apprenticeship training which will qualify them for suitable jobs in this community is barred to them. These young men drift into custodial jobs as porters, handymen, janitors or common laborers on construction work or even go into unskilled restaurant work if they can find it.

This bleak outlook discourages many other boys. The incentive to study and become qualified for a good job is destroyed a-borning. Soon they drop out of school and take to the streets.

A recent survey on school dropouts made for the District Office of the United States Employment Service by the Bureau of Social Science Research uncovered the alarming fact that one-fifth of all boys and girls in the District aged 16 and 17 are not enrolled in school. Of this group, better than half are not employed.

From applicant files of the USES in the District, it is estimated that 90 percent of these unemployed dropouts are nonwhite males. It is entirely safe to estimate that there are currently 3,000 Negro boys in Washington between the ages of 16 and 19 who are out of school and out of work.

This is the malignant source that feeds delinquency and crime in the District. The city is feeling the impact of this social monster which stalks its streets night after night. And it will grow with the mounting unemployment in the area.

The assignment of more policemen to night duty may apprehend more of these young lawbreakers, but it does not remove the basic cause. Only a more enlightened and realistic employment policy throughout the metroplitan area can appreciably improve this situation.

As examples of the employment inequity existing here among minority group members, consider these two cases:

Currently, there is an applicant registered with the District USES office, a young male Negro, who has had 4 years of training and experience on combustion engines in the Air Force. He was honorably discharged as a sergeant. Since his discharge he has had 2 years additional training in a civilian technical school.

He is now washing pots and pans in a local bakery, at $1 an hour. This is his home and he doesn't want to leave the District.

Another case in point is that of a doctor of philosophy in sociology, who works full time as a waiter in a downtown restaurant. He hates the job, but he has a wife and two children to support.

Department stores here frankly admit the difficulty of recruiting satisfactory sales personnel. By liberalizing their employment policies, these stores could help themselves by absorbing a substantial number of nonwhite graduates, particularly young women, from the city high schools each year. Many are unable to continue their education beyond high school. Many of those who go to college are forced to leave after a year or two, chiefly for economic reasons.

This is a tailor-made source of labor supply for local department stores. Up to now, they have failed to take advantage of it, and these young women remain at home—an economic and social liability on the community.

The same observations can be made regarding the failure of local financial institutions to give employment to qualified young Negroes. Yet the Treasury Department and the Internal Revenue Service employ hundreds of minority group workers to keep the records and balance the accounts of millions of Americans.

The local business community, which comprises the bulk of the employers, will eventually have to turn to a wider use of minority group members in the District, because they form a larger and ever-growing share of the available labor supply. Hiring the best-qualified candidate for a job makes good business sense.

As minority group workers obtain higher skills, they become increasingly more desirable as employees. Properly trained and fitted into the work force, nonwhites make good employees. They value their jobs more because they know the difficulty of finding another. Besides, they feel a sense of gratitude and loyalty to their employers for having given them an opportunity so long denied to members of their race.

There are problems, of course, in hiring minority group members, but these problems are not as great as usually imagined or feared.

A recent survey was conducted in a northern State which has a considerable Negro population. One hundred firms were selected—manufacturing companies, storage and warehouse firms, banking and insurance organizations, building and loan associations, department stores, and public utilities. All were known to hire nonwhites not only in traditional jobs, but also in skilled, clerical, professional, or supervisory positions.

The survey was designed to discover what procedures employers used in introducing minority workers into their firms and to evaluate the effectiveness of such programs. Most of the companies talked about precautionary educational campaigns for supervisors, other workers, prospective nonwhite employees, and the community, but few had actually put these plans into practice.

All agreed that the most successful approach is a forthright one—no discrimination in any way. The majority began with a staff meeting of supervisory personnel who were told by the management that they would be held responsible for the success of the program in their respective departments. All of the companies agreed that a firm policy at the top, accompanied by a determination to make the program work, was essential to success.

In the vast majority of companies, the changes took place with absolutely no reaction from the other employees. The general attitude was, so what? In only nine of the hundred was there a major hostile reaction, one in which there were some resignations or the firm was forced to alter its program partially. Union resistance was negligible. Five of the fifty-nine firms that were organized received minor protests from union officials. Twenty-three unions were actively in favor of the company plan.

Nine of the one hundred firms reported community resistance to the employment of minority group workers. Strangely, two of these were in manufacturing plants in small towns. The other seven were among the retail and public utility firms where employees had direct contact with the public. Only three of these companies felt that their operations were in any way hampered by community resistance.

A number of retailers stated that they were surprised at the community acceptance of nonwhite sales personnel. They reported that they expected some unfavorable criticism from their customers but had heard only good comments. The two manufacturing plants in small towns that reported some community disapproval stated that local residents feared the character of the neighborhood might be changed if too many nonwhites went to work in the plants.

There were a number of significant conclusions reached by the survey. Among them was the fact that all of the companies involved considered their merit employment programs to be successful.

They also found that there was no single method of overcoming problems. Employee resistance was expressed mostly in words, rarely in action. Resistance from the community was even more limited than that of the employees.

The survey confirmed the growing belief that companies which hire minority group members on a nondiscriminatory basis have been able to meet successfully, by voluntary action, both the real and imaginary problems of merit employment.

Residents of greater Washington are no different than other Americans who reside elsewhere in this land of equal opportunity. Their own ancestors, like the forebears of all Americans, came to this country in search of equal opportunity. The Nation is founded upon that bedrock.

Few local citizens realize the appalling absence of employment opportunities in this area, outside of Government, for minority group workers.

Nor do the employers here differ in any way from the average American businessman in other parts of the country. Area businessmen cannot fail to realize that they will have to use the available local supply at its maximum capacity if they are to sell their goods and services, attract depositors to their banks and savings associations, and collect their rent and insurance premiums.

The alternative is to see a continual increase in the outlay for public assistance, to watch a steady decline in the purchasing power of the community, and most deplorable of all, to witness a constantly mounting increase in crime and delinquency.

Many forces are at work in the District to blast the roadblocks preventing full employment opportunities for all who live here, without regard to race, religion or national origin.

The President's committee on Government contracts is active and alert in requiring all commercial firms who have business with the

Federal Government to adhere to a strict policy of nondiscriminatory hiring.

The United States Employment Service, with the strong support of the Department of Labor, is conducting a quiet but effective campaign of persuasion with local employers to adopt merit hiring programs by eliminating racial specifications in their job orders.

Other non-Government forces are also busy, among them the Washington Urban League, whose motto is "Equal Opportunity." The league, a biracial group of local citizens, has recently added a new staff member charged with the responsibility of opening new job opportunities for nonwhites in the metropolitan area.

Even more significant, during the past year a group of local business leaders has spontaneously organized a committee with the avowed purpose of obtaining wider opportunities for Negroes in private employment.

This group—the committee for job opportunities—confers with other private employers to create job openings for qualified nonwhites on the basis of merit and skill. Their discussions with their fellow businessmen are along hard, practical lines—backed, of course, by the ethical values of their objective.

The combined efforts of all of these agencies, heroic as they are, have thus far not been sufficient to create a major breakthrough in the curtain of custom and tradition that surrounds the employment of minority group people in this area. It is still one of the worst problems which confront the community.

Everything else has been tried in combating local crime. Perhaps the new approach of equal job opportunities might work where other methods have failed.

The Sad Plight of Southern Agriculture

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. TALMADGE. Mr. President, Drew Pearson, in his column which appeared in the March 8, 1958, issue of the Washington Post and Times Herald, accurately appraised the agricultural situation in a large portion of the Southeast. I ask unanimous consent that his column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALABAMA COTTON GROWERS SUFFER

(By Drew Pearson)

Ten grim-faced Alabama State legislators made a pilgrimage to Washington this week to lay before Congress the life-or-death situation confronting cotton farmers in the Southeast.

The picture was a solemn one, summed up in the words of a cotton farmer, E. F. Mauldin, of Leighton, Ala., now serving as a consultant to the State legislators.

"Our farmers are more demoralized than ever before," Mauldin told the House Agriculture Committee. "They find farm labor gone, their tenants vanished or barely existing, their plows rusting, their tractors down, their mules converted into dog meat, their fields vacated and lying idle, their rural communities disappearing, and their country homes, churches, and schools standing vacant like corroded monuments to haunt the memory of what once was a cherished and respected way of life."

The causes are low prices and a gigantic 35 percent slash, since 1953, in the number of acres allowed to be planted in cotton under Secretary Benson's flexible support system. For, as the Nation's cotton surplus mounts, the acres planted to cotton are cut.

Meanwhile, the Southeast—Alabama, Georgia, Mississippi, North Carolina, and South Carolina—has borne the brunt of the decline, while the acreage of such western States as California, Arizona, and New Mexico has fared proportionately better.

INDIVIDUALS IGNORED

This is because a State's share of the national cotton acreage is based upon its average acreage in the preceding 5 years. And with poor cotton farmers in the Southeast abandoning the soil for city jobs, Alabama's allotment has decreased, which has penalized farmers remaining on the soil. For, when their neighbors quit cotton farming, other farmers get their acreage cuts, so that some individual allotments have been cut 70 percent since 1953 in contrast to the national acreage decrease of only 35 percent.

The trouble, says Mauldin, is that Benson's plan reckons in terms of States and counties. The fate of the individual farmer is crassly ignored.

Result: In Alabama 125,000 farmers have signed up with the State employment service for off-farm jobs. One tractor dealer reports that he sold 60 tractors in 1955, only 32 in 1956, and just 14 in 1957. Most of the 14 he sold in 1957 had to be repossessed when farmers couldn't meet their payments.

Ginners, bankers, crushers, farm laborers, fertilizer manufacturers, warehousemen, and cotton merchants are all affected.

CITY JOBS DON'T HELP

According to Maynard Layman, farm editor of the Decatur Daily, the solution is not in moving farmers off the land. What Alabama needs, he says, is more marginal farmers, not fewer. He points out that it doesn't solve anything for farmers to sell out and move to the city. There they merely add to unemployment rolls, and create all kinds of social problems. Moreover, in many cases it's just plain impossible for a man who has been a farmer all his life to make the shift to city life at the age of 45 or 50.

Mauldin, before the House committee, proposed these solutions:

1. An increase in cotton acreage allotments, not across the board by State, but just enough to guarantee every farmer his historic share of the Nation's production.

2. A Brannan plan for cotton, whereby all American cotton would be sold without price supports at the normal level. By letting the price seek its own level, cotton would better compete with nylon, dacron, and other synthetics, instead of price supports, farmers would receive direct production payments to the extent necessary to raise their income to parity with industrial workers.

NOTE.—The soil bank hasn't helped. A total of 70,000 Alabama farmers were frozen out of the soil bank by insufficient soil-bank funds, many of them after they had sold their implements. Even if Congress appropriates more soil-bank funds it won't help the thousands of farm laborers and tenant farmers whose jobs disappear whenever an acre of land goes into the soil bank.

Modern Delusions and God's Design

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of Mr. John Bolten, of Lawrence, Mass., at the fellowship breakfast during the annual conference of the International Council for Christian Leadership, Inc., held in the Senate District of Columbia committee room, United States Capitol, on February 7, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MODERN DELUSIONS AND GOD'S DESIGN

Relatively few realize the complexity, the intensity, and the universality of the crisis in which mankind finds itself today. There is nothing comparable to it in history—neither in the days of the Renaissance, nor of the Reformation. If we can compare it at all with any period of upheaval and change, it would be with that of the destruction of the Roman Empire.

At that time, a whole world order collapsed—religion, morals, culture, manners, commerce, science, and a highly developed, world-embracing legal and political system. It was a debacle of such magnitude that we can hardly comprehend it. Nothing remained but ruins.

Without question there is a striking similarity between the time before the fall of the Roman Empire, and our own age. Again all realms of life are shaking, and again all values and traditions are being questioned, whether cultural, religious, political, or economic.

Yet, it is part of western man's credo that he must be irresistibly forward and that the future stretches out before him like a long road flanked with new developments, new progress, and new achievements reaching out to the distant horizon.

But we Christians are most curious about this journey and would like to ask a few questions:

1. Where is modern man going?

2. In what goal does western man really believe?

3. What will happen after he reaches his goal?

4. Is it a goal we can visualize and discuss seriously?

It would seem that the answers to these questions presuppose an industrial millennium or workless paradise far beyond our present state. Unions, industry, and science envision more and more production with less and less work through technical perfection in a pushbutton world.

When this has been accomplished, the end of the road and of their dreams will have been reached. The whole world will be perfect, but with one exception: man—unredeemed man—separated from God, left with his wicked heart and all his sin and guilt in a perfect world.

But what would this unredeemed, godless man do with his "perfect world"? Let us see what we have done with the perfection man has achieved thus far. From a technical point of view, we already have near-perfect products in a number of industries.

The radio has reached a point of practical perfection. Powerful radio stations broadcast across the country and to the farthest corners of the earth. But turn on this perfected radio and what do you hear? Crime stories, soap operas, and syncopated noise that accompanies words, mostly moronic in their utter senselessness.

Television. Is it any better? This modern miracle of technical achievement has certainly reached a high degree of perfection. Yet, Life magazine some time ago reported that an average of 163 murders per week are now committed in TV plays of one kind or another.

We have the most magnificent printing presses and we manufacture the finest paper. But what is man doing with this almost perfect combination? In the hands of man, these have become so debased that sometimes

we wish the radio, the television, the printing press had never been invented.

Some 15 million magazines that we print every month are of such a nature that they are not even permitted to cross our borders. The lurid and immoral material and pictures found in many magazines on our newsstands make one shudder.

How clearly we see that any perfection in the hands of unredeemed man soon becomes a curse. What man would do with a new paradise is perfectly obvious. In fact, the word of God comes right to the heart of the situation: "What shall it profit a man, if he shall gain the whole world, and lose his own soul?" Obviously, the answer is—nothing. Any other answer is nothing but a colossal delusion.

The leisure, comfort, happiness, and peace of mind as man planned actually resulted in a machine age and in dreaded unemployment, as well as wars of fantastic ruthlessness and destruction. Do any of us believe that man is really happy in this world that he, himself, has created? To build his own world, to be master of the world, to be God, has been man's dream since Eden's fall. Here we are now in command of it, and what a world it is.

But why is it that God is so far away from us—God, who should be closer to us than we are to ourselves? Is this our destiny that we have to accept as a matter of fact?

Unredeemed man does not understand that he is guilty before God, that he lives in a fallen world. He is feverishly occupied in seeking a way out of his troubles, seeking an island to which he can flee in order to escape from the engulfing waters of world tragedy.

What, then, is God's plan of redemption? John 3:16 brings before us in one, single verse this plan:

"God so loved the world that He gave His only begotten Son; that whosoever believeth in Him shall not perish, but have everlasting life."

God's word is not progress. God's word, which became flesh, is Christ. Christ is the only word God has to transmit to unredeemed mankind. Take this one word away from God, and God must remain silent. Therefore, Christ is the only possibility of reconstructing man with God.

Perhaps your hearts have never felt the full horror of sin. Then, let me lead you today to a place called Calvary. Here we see the full results of our sinful lives. Often we consider sin just a trifle in the eyes of God as well as our own. But it is He, the Son of the living God, who found out how horrible sin it. He drank the bitter cup for us. He bore our sin for us. If we do not understand the gravity of sin as Jesus did—if we still believes that sin is only a matter we can negotiate with God, then we have not at all entered into the mind of God.

Have you ever thought to prepare yourself to meet God? Have you had hours in which you know what the Lord experienced in Gethesemane where He was burdened with our sin? If not, you have not yet appreciated the love of Jesus nor the work of His suffering death.

Only if my soul was brought there where he suffered for me the wrath and justice of God—only when I have experienced that God's beloved Son, who had no sin, was made sin for me, that God had to smite sin in Him—only if I see Him there at the cross in my stead, in my place—then I will understand that God's justice and holiness could not spare His Son.

And if He could not spare His Son from judgment and death, do you think He will let you escape?

When I look at the cross, at the suffering of our Saviour, the wrath and the curse, can I think that my sins are unimportant or just a trifle? Why did Christ suffer on the cross the wrath of God? Because you and I deserve eternal condemnation.

Churchill said some years ago: "Our problems are beyond us." Look at some of our problems. There is Russia, communism, and atheism. There is the H-bomb. There are the race problems, sex problems, divorces, alcohol, economic problems, and military problems. Must I mention more? How are we going to solve all these matters? Churchill is right. Our problems are beyond us.

But if we want to sum them up—if we want to face the core of the issue—it can be reduced to one word: Sin, sin, sin. And if the question of sin is not answered, nothing is settled.

The only answer is God's answer to the question of man's sin. But we have rejected the One who came to solve our problems. We have put Him on the cross and this cross has stained all the glory of this world because the world became guilty of the murder of the Son of God and because the world nailed our Lord to the tree.

Man has tried almost everything, but he was never able to remove the affect of sin. We often believe: "My sins are in the past. I have developed into a better man." But our sins are not in the past. The deadly thing about our sins is that they are not in the past, but with us today. They are now part of us. They have made us what we are. They are alive and still in us today separating us from God.

Furthermore, sin is ever present and the effects of our sins are very clearly seen in our morals, our psychological makeup, our behavior, and our work, as well as on our face, eyes, health, nervous system, and conscience.

Everyone here knows that our past has left some marks on us. They have gone into the very fiber of our being. But thank God that the Saviour is greater than sin. Thank God that the Son of God, His only Son, has taken our place. Thank God that we do not have to worry about our eternal destiny—that He stepped into the picture—that He has solved all our problems—and that we are accepted in the Beloved, in Christ Jesus.

Christ is the only answer. If any man be in Christ, he is a new creature. Old things have passed. He is a new creation—a child of God. He belongs to a different society with a different faith. Have you experienced that change?

There are magnificent churches with Sunday schools, men's clubs, and missionary meetings, but I sometimes wonder if there is not something missing. Many of these churches could be compared to a ship. The boilers are going, the motors are running, the lights are burning, and everything is in working order, except one thing. The propeller is slipping and does not grip the water. That is what is wrong with our churches and our Christian lives today. Outwardly, everything is fine, but where is the Holy Spirit? Is He still here? Is He in you? Is He grieved—or is He a power in your life? Is the propeller in your life gripping or slipping?

If you heat water to 150° F., you will never generate enough power to drive a steam engine. You may say that if heated long enough, some power will be generated at 150° F. Just try it—for a year or even longer if you will—and see what happens. You need 212° F. to generate effective power—and so it is with your life. Too many Christians generate only 150° F. power in their work. It must be 212° F.

It must be a decision—a total surrender. Fifty-percent surrender will not do—nor 75 percent or 90 percent. You cannot bargain with God. He demands all your life or He will have no part of it. Jesus is not satisfied with less than all. He wants the first place. He is not a consultant for business, family, or private affairs. If He cannot be Lord and Master in your life, what place would you offer Him?

One thing should be clear in our minds. God will never play second fiddle in your life. He will either be Lord and Master or He will not live in you. There is no middle road. We must give all. He has given all—His Son, His only Son.

Oh, how I would plead with you to surrender your life to Christ. One hundred and fifty degrees F. will not create any power, neither will mere religiousness of human nature change your life or produce any power or fruit. It must be full surrender. Nothing else will make you a Christian. It must be a new birth, a new beginning, a new life, a new creation, a new conviction, a new direction: Heaven—a new Master—Jesus Christ.

If our life is totally surrendered, we certainly would not be satisfied to cultivate only the religiousness of human nature for God or to try to introduce sinners into Heaven who have not experienced a new birth and who have not been transformed into a new creation.

We are wrestling against the world, principalities, and powers. However, let us not forget that Christians are on the conquering side knowing that our Lord has already overcome the enemies and triumphed over them on the cross. The Devil is a defeated enemy. Only if we invite him, can he harm us.

In the last book, Revelation, many promises are made to them that overcometh. "To him that overcometh will I grant to come and sit with me here on My throne—even as I also overcame and sat down with My Father on His throne."

We see those in Revelation who overcame by the blood of the Lamb. We hear the triuphant step of God's redeemed. There is no uncertainty—no doubt—but joy everlasting. And from this mountaintop, the valleys of life are no longer visible. But in the distance, separated only by fleecy clouds, we already have a vision of the world above and nearby we hear the thunderous melody of God's redeemed. There will be a new song in which Heaven and earth will join with God's people in praise and adoration of the Crucified One—the risen and glorified Son of God and man—our Lord and Saviour, Jesus Christ.

Robert E. Lee—A Hero Even in Failure

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. THURMOND. Mr. President, a great many beautiful things have been written about Robert E. Lee. He is one of the most revered men in our history, fully deserving to be called, as he was, "the greatest gentleman of them all."

New tributes to Lee are being written even today. One of the finest I have seen recently appeared in the January 1958 issue of the Joanna Way published by and for the employees of Joanna Cotton Mills Co. of Joanna, S. C.

I ask unanimous consent that this article, entitled "Robert E. Lee—A Hero Even in Failure," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROBERT E. LEE—A HERO EVEN IN FAILURE

In his old age, Robert E. Lee wrote these pathetic words: "Life is indeed gliding away and I have nothing of good to show for mine that is past. I pray I may be spared to accomplish something for the benefit of mankind and the honor of God."

A failure in his own eyes, Lee may be judged by worldly standards as indeed lacking in success, for in his most spectacular undertaking—commanding the Confederate Army during the terrible years of the War Between the States—he was forced to surrender to the enemy, accepting the terms meted out to him. Why then does his memory live on, honored, revered, and loved not only by the southerners whose cause he championed but by freedom-loving people all over America and the world?

His greatness in defeat, his beautiful spirit, his devotion to duty, his kindliness to all—these traits lift him above failure in specific undertakings; they set him up as a worthy example for succeeding generations; they earned for him the title "the greatest gentleman of them all."

One of the guiding rules of his life was set down in a letter to one of his sons: "Duty is the sublimest word in our language. Do your duty in all things."

Another rule for self-government was voiced to a mother who brought her baby to him to be blessed: "Teach him he must deny himself." Great even in failure, Lee clung to the belief that human virtue should be equal to human calamity.

Born to wealth and position, Lee expected more of himself than of people of less opportunity. He felt that he owed unselfish service to the world. Graduating second in his class at West Point, he gave his best to the United States Army while he served there. Loving the Union and abhorring slavery, he still chose to cast his fortune with his home State in defense of States rights and against Federal intervention in local matters, rather than accept the command of the great Army of the United States. Though he was a brilliant leader, Lee found the odds against him, with a dwindling and weakened army, and so he finally surrendered to avoid unnecessary loss of life and suffering. With dignity he gained the best possible terms for his men and then turned his attention to healing the wounds of war and counseling burial of old hates and building anew a unified country.

Jobless after the war, with his fortune swept away and his estate (Arlington) confiscated by the United States Government, Lee nevertheless refused generous offers of cash for use of his name by business concerns. "My name is not for sale" was his firm reply.

Sought by Washington College as its president, his thought was not of its poor pay, but whether his representing a losing cause would hurt its standing. Convinced that he could help this war-weakened institution, he gave his all to build it up and to train its young students to go forward in hope, without bitterness, into life in the new United States. His great achievements there were recognized when his name was added to that of another illustrious American, and the school became Washington and Lee University, which is today one of America's most outstanding and respected institutions of higher learning.

Buried in a mausoleum in the chapel at Washington and Lee University, Lee still inspires not only the students at the university and others who flock to his resting place as if it were a shrine but all those who recognize the great spirit of this general who lost a war but won the battle of life through living up to the highest ideals and principles.

Today his guiding principles in life—devotion to duty, self-denial, modesty, accepting blames for errors, kindliness toward all, love of country, love of God—are beacon lights to lead succeeding generations to a better life. His firm belief in States rights and limiting of Federal power is still sustained, though the battle against Federal encroachment on States rights is becoming more difficult year by year.

On this 151st anniversary of his birth—on January 19, 1807—descendants of the loyal, courageous soldiers who loved him dearly may take new courage in their determination to maintain the sovereignty of States, and their local institutions and customs.

Though loving the United States as did Lee, they can turn their backs on Federal economic security and handout (as did Lee in ending a successful 30-year career with the United States Army) and stand proudly on the belief that the individual States should rule their internal affairs, that the Constitution of the United States is the law of the land (not the decisions of nine men who would put their socialistic judgments and sociological experimentations above the wisdom and purposes of the Founding Fathers of our Republic).

By casting his lot with the South, Lee lost his home—Arlington, now a national cemetery for America's honored war heroes; he gave up security in order to espouse a cause in which he believed; he rose above defeat to live a worthwhile life characterized by influence for good.

Where can we find a nobler example on which to pattern our lives?

Conditions in Schools in Portland, Oreg.

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. NEUBERGER. Mr. President, my home city of Portland, Oreg., has one of the outstanding school systems in this Nation. On February 28, 1958, an informative and thoughtful address was delivered on educational policy to the City Club of Portland by Mr. Herbert M. Schwab, Portland attorney, who is chairman of the school board of School District No. 1, in Portland.

Mr. Schwab stressed the urgent need for high and enlightened standards of education in America, and he emphasized that we must challenge the intellects and capabilities of our most intelligent and brightest students.

While I do not necessarily agree with every phase of Mr. Schwab's able address, I urge that he be heeded when he stresses that quality as well as quantity must be a goal of the educational systems, public and private alike, in our great democratic and free Nation.

I believe that portions of Mr. Schwab's able address will interest my colleagues, and to make them available, and because many of our committees are already considering education and Federal-aid-to-school bills, and I ask unanimous consent that these portions be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

I

School District No. 1 is one of several hundred school districts in Oregon and by far the largest; it is a self-governing body governed by seven school directors elected at large by the voters of the district on a nonpartisan ballot to serve on a part-time basis without pay. The district is financed largely by local property taxes which it has the power to levy through its board and in minor part by the State basic school support fund (a matter which I would rather not talk about after a good lunch). There are certain statutory requirements as to curriculum. For the most part the curriculum is the responsibility of the School Board. Actually the board only establishes the policy and leaves detail and day-to-day operation to the superintendent and his staff.

Our mission is established by State law. We must provide classroom education for all children from ages 7 through 18 who can benefit from education, except those who wish to attend private or parochial schools. We are equally responsible for the moron, the genius, and all between those two extremes.

Our job really breaks down into three broad categories—the physical plant, the teaching and professional staff, and the curriculum. I think it fair to say that all three were at a low ebb at the end of World War II so that is a good place to start.

In 1946 about 48,000 children were enrolled in Portland public schools—kindergarten through high school—today there are 72,000. No new buildings had been erected since 1932 and the existing buildings were in a state of disrepair for lack of maintenance. Lighting, flooring and acoustics were almost universally very bad. The tag ends of prewar building bond issues were still outstanding. Since then we have built 25 new full-size elementary schools, 9 primary schools, 3 high schools, 29 major additions to elementary schools, 5 major high school additions, and we have modernized the majority of our pre-depression buildings, all at a total cost to date of $54 million. This has been done on a pay-as-you-go basis. The old bonds have been retired and no new ones issued. We don't owe a dime, a distinction I understand we share with only one other large city system in the country—Cleveland, Ohio. Have we wasted money—building palaces? I think not. We have made some mistakes, of course, but we have profited from them. Square-foot costs are illusory and misleading. The only true measure of building cost is the cost per child capacity of an adequate building. Although building costs have risen over 40 percent since 1946 our cost per child has remained almost constant. A U. S. News & World Report survey places the average cost per child for new school buildings in Oregon at $965—in Washington and California about $1,350. In Portland the cost is a little higher than the Oregon average—this is due in part to a very stiff city building code, and in part to our firm belief that it is poor economy to save $1 in building costs only to spend an additional $5 to $10 in maintenance over the 50 years or so experience tells us we must use our buildings.

What about teachers. At the end of World War II a teacher started at $1,800 and could go to a maximum of $3,300 with a master's degree. Staffing the classrooms each fall was a nip and tuck affair. We gave very little credit salarywise to experience gained teaching in other school districts and for the most part the approximately 400 new teachers we hired each year were without any teaching experience and in many cases only partially trained. Employment of a certain number of beginners each year is not only acceptable; it is desirable—on the other hand, too large a percentage is detrimental. Today a beginner with no experience starts at $3,700 for a 185-day teaching year and a teacher with 14 years experience and a master's degree receives $6,600 a year. We now give full salary credit for teaching experience outside this district—something done by few if any other large city school districts in the United States—and practically without exception we are hiring teachers with a minimum of 4 years of college education. In most categories we have more applicants than vacan-

cies so that our personnel department can pick and choose rather than take anyone who comes along. The almost 400 new teachers we employed as of last September averaged 31 years of age and over 5 years of previous teaching experience, and our recruiting for next year is well ahead of where we were last year at the same time, with no diminution in quality of personnel.

II

Now let's look at the meat of the coconut—the curriculum, what we are teaching, how well are we teaching it; where have we been, why have we been there, and where are we going. In this area I doubt if we were any worse off at the end of World War II than we were at the end of the Civil War. This is a Nation of paradoxes so far as education is concerned. We revere, almost as an article of faith, the proposition that every child is entitled to a formal public school education, yet we have had an anti-intellectual tradition. We have always recognized that some people are fundamentally superior to others in physical abilities, but we have steadfastly refused to accept as equally valid the fact that there is a tremendous variation in mental abilities. In 1913 less than 5 percent graduated from high school in Portland. Now legislation requires that everyone be given a high-school education and there is the common complaint that high-school graduates have deteriorated; they can't read and write. If the concept that all have equal mental abilities were correct, this would be a valid criticism. It isn't correct—education can only develop basic abilities, not create them. Our legislators cannot legislate mental capacity, nor can the medical profession inject it in the arm. The public schools have done a good job, an ever improving one in teaching reading and writing. The United States probably always has led the world in educating the low average and the subnormal child up to his capacity. But we cannot change his capacity.

In terms of educating the top half of our society to a point reasonably approximating capacity, our American educational system, with a few notable exceptions, mostly at the college level, has never been very good; certainly it has lagged far behind European schools. Our educators can be blamed only for following the path of least resistance; for going along with an anti-intellectual tradition, dominant in our society. Things may be changing but we have a long way to go. For example, the newspapers have been full of stories about the gyrations of the Board of Trustees of Texas A. and M. college in trying to fill their football coaching vacancy—a job which pays, including perquisites of office, a sum reported to be as high as $60,000 per year. How many people are equally aware that Princeton University is trying to increase its endowment to the point where it can raise full professors' salaries from $9,200 to $10,000 per year? A tremendous affair was recently held here for the Oregon Rose Bowl team—and don't misunderstand me; I think it was a fine achievement and I think the affair was a god idea. But about the same time it was anounced that a University of Oregon student had won a Rhodes scholarship—if anybody even bought him a hamburger, I haven't heard about it.

Statistics show that Reed College turns out a larger percentage of graduates who go on to get doctor's degrees in science than any other college or university in the United States, that it has produced one Rhodes scholar for every 67 male graduates as against a national average of less than 1 in 3,000. I haven't heard of any dinners in honor of the Reed faculty who coached these winners in the intellectual Rose Bowl, and I am certain that the same holds true for the faculties of other colleges in this area who have made notable achievements in the academic field.

I don't agree with that small group of people who tend to sneer at any organized athletic activity. Human beings have bodies as well as minds and there is room in a good society for the use of both. I do feel, however, that in assessing the worth of an academic institution we should place first things first.

III

Another paradox is our national attitude as to the proper function of schools. On the one hand we hear that schools should cut out frills and get back to fundamentals, and on the other hand every pressure group with a pet project tries to dump it on the schools. We bow our heads in reverence before the altar of family sanctity and responsibility, while with both hands we try to shove more and more of what used to be the responsibilities and functions of the family into the lap of the schools, some of which are cooking, sewing, driver training, dental care (not just examining but the actual filling of teeth), safety in the use of firearms, happy marriage, and so on. I do not mean to say that none of these things is worthwhile or that some of them may not be proper functions of schools and other public agencies in present-day society. I do mean to say by way of quoting Arthur Bestor that the main purpose of schools should be intellectual training, not custodial care. Bestor, incidentally, is professor of history at the University of Illinois.

An interview with him reported in the January 24 issue of U. S. News & World Report is well worth reading.

Our real problem in education in the United States is to improve the quality. Our national obsession with quantity is a detriment in this regard. Last year 43 percent of our Portland high-school graduates enrolled in college. This would be a fine record if all were qualified both as to desire and capacity for 4 years of academic university training but it unfortunately is not so. Some colleges and universities have been complaining about the prepartion of the average high-school graduate they receive from us, but at the same time they enroll as freshmen some students whose records of achievement and capacity clearly show them to be dubious college material at best. To this extent educators at both the high school and college level have been equally guilty in not recognizing that human beings are unequal in capacities and motivation.

Adm. Hyman Rickover has been much in the news lately with regard to his views on our educational system. I think he is going overboard on some of his ideas; nevertheless, I would like to quote from a recent speech of his because, while the language may be extreme, it points up the problem pretty strongly. Here it is: "Everything is grist to the American educational mill. You, too, can have a degree. Every American child has the God-given right to march in a commencement procession, clad in mortarboard and academic gown, the rolled-up parchment degree clutched in his hot little hand. * * *" He went on to say that, "If we fail in our hold upon quality, the cherished American dream of universal education will degenerate into a nightmare. Let us each make a beginning, however small. It takes but the moving of a single pebble to start an avalanche." Now I'd like to come back to Portland. Here things are changing—we have long since made our beginning. We have moved more pebbles than most people realize and I think we are gaining the momentum necessary to move a lot more in the near future.

Here are some of our achievements of the past few years.

Ten years ago we had no counseling program and had never had one. Let me use a friend of mine as an example. In the early thirties he entered a Portland high school as a freshman, having graduated from a Portland grade school. All that preceded him to high school was a form containing some statistical information—name, name of parents, age, name of elementary school from which he graduated. No counselor interviewed him or aided him in selection of courses. There were no counselors. He had no official information or contact with anyone in the school system with regard to what high school had to offer or what it was all about. No information concerning the results of his I. Q. tests, or aptitude, or achievement tests preceded him. The reason was simple—no such tests had ever been made. Over the last 10 years we have developed a testing system whereby every child starting in the fourth grade is repeatedly and carefully tested for I. Q., achievement, and aptitudes, and a careful anecdotal history is maintained. During eighth grade each child and his family receives detailed information about what to expect and look for in high chool. Every eighth grade class is visited by high-school representatives. A folder known as the permanent-record file containing all of the test scores, grades and history precedes each child to his high school. Ten years ago this would have been useless because no one in the high school would have had time to make use of the information. Today we average nine counsellors in each high school, whose jobs are to counsel, guide and encourage each child to take work commensurate with his capacity, interests and aptitudes, and the testing and evaluation procedures continue through high school.

IV

Ten years ago no one in a high school had as his sole duty the job of working with classroom teachers as a watchdog of the curriculum. Today every high school has an additional vice principal whose sole duty is in the field of curriculum. In the past few years we have trebled the number of books in our high-school libraries.

Let's get back to my friend again. He was a good student. He was at the top of his class. When he took fourth year English he took exactly the same English course as did the senior who was at the bottom of his class in interest or ability or both. Only one fourth-year English course was offered. Today things are different. But at the elementary and high-school level we are rapidly expanding a program of separate classes for the mentally retarded. This leads to better education not only for the other pupils but provides a much more satisfactory and less frustrating situation for the retarded. In addition we now have available English courses ranging from what might be termed "bonehead" English for those of mediocre capacity or motivation to courses in English literature and composition designed to challenge the interest and capacities of those who are both bright and desirous of learning. The same is true in mathematics which has a 2-level system running through all 4 years of high school. This is true to a lesser degree in othe subject matter areas and each year more divisions of this nature are being accomplished.

Recently, we had a meeting with the presidents of nine major collegiate institutions of this State to present them with a proposition involving their cooperation in a thorough study of our high-school curriculum and teaching staff in preparing college-bound students for college. Shortly after a story about our intentions in this regard appeared in the newspapers, and even before the invitations to the meeting went out to the college presidents, I met Dr. Morgan Odell, the president of Lewis and Clark College on the street. His enthusiastic acceptance of the idea was indicative of the desire of his as well as other schools in Oregon to improve educational standards. The response from the other colleges and uni-

versities—namely, Reed, Oregon State, Oregon, Pacific, Portland State, University of Portland, Linfield, and Willamette—was equally gratifying. Dr. Meredith Wilson, of the University of Oregon, believes such a study will improve not only high school but college education, too. We are hopeful of great things from this project if we can obtain adequate financing for it from one of the large foundations—and in one way or other we are going to see it through.

With all of this we have only proceeded a short distance on a long climb. We have a long way to go in expanding the various types of classes I have already referred to. In addition, our staff is giving serious consideration to other major changes and innovations. Here are a few, some of which, at least, will probably be put into effect in the near future:

A modified platoon system in the seventh and eighth grades dividing those classes into faster and slower groups with special teachers in English and science.

Algebra classes under special teachers for the more able children in all elementary schools.

More foreign language courses at the elementary school level for those children able to handle them.

Extension of the competitive high school grading system into the seventh and eighth grades.

Elimination of automatic promotion and diplomas in high school, with diplomas to be issued only to those who obtain passing grades in required subjects, and certificates of attendance to the others. Distinctive types of diplomas which will give special recognition to those who do outstanding work and take the stiffer academic courses.

Experimentation with time allotments. For instance, instead of all subjects being allotted 5 periods per week, typing, just for example, might be cut to 3 periods per week and chemistry raised to 7 periods.

Elimination or at least minimizing of activities which remove students or teachers from their classes. By this I mean such things as having choruses sing at luncheon meetings of service clubs, students being excused from math classes to decorate cafeterias for dances, etc.

v

And now lastly a word about the board and the superintendent, who are largely responsible for initiating the improvements that have taken place and those which I am sure are still to come. In the 8 years I have been on the board, almost without exception every member from Dorothy Johannsen and Jim Yeomans, who have also put in 8 years, down to Arno Denecke, our newest valuable acquisition, has been capable, farsighted, hardworking, and remarkably impervious to the pressures to which the holders of public office are often prone to yield. We have no cliques and no personal animosities on the board. Each member invariably speaks up for what he thinks is right regardless of whether he is joined by the entire board or stands alone, and no matter how heated the issue when it is disposed of that's the end of it. As for Jack Edwards, appointing him superintendent has proved to have been a very wise decision. You have heard of President Eisenhower's original cabinet referred to as a bunch of millionaires and a plumber. We are proud of the fact that the National Merit Scholarship Board, in addition to a bunch of millionaires, has as a member one school superintendent; namely, J. W. Edwards.

Moving Against Recession

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. SPARKMAN. Mr. President, last Saturday there appeared in the Washington Post and Times Herald an editorial entitled "Moving Against Recession." I believe this editorial states the situation as it is, and that it would be good reading for everyone. Accordingly, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MOVING AGAINST RECESSION

At least part of the need in countering the recession is to renew confidence in an expanding economy. This is in considerable degree a matter of psychological attitude. One important way to encourage confidence is for the Government to convince the public and business groups that it is doing all it can reasonably do quickly to combat unemployment and stimulate an economic upturn.

This, as we understand it, is the principal purpose of the two resolutions introduced by Senate and House Majority Leaders JOHNSON and MCCORMACK which are scheduled for Senate hearings on Monday. These resolutions call upon the administration to expedite urgently needed military and civil construction projects. In present circumstances they would not involve additional net expenditures. All they would require is a speedup in projects that are to be undertaken anyhow.

Such measures are a good kind of economic stimulus, for they tend to have a multiple effect. Make-work projects, or artificial efforts to rescue particular depressed industries, are in many instances an expensive and dubious method. But where military and civil public works needs can be met by moving faster, a double purpose is served. Senator SPARKMAN's housing bill and Senator GORE's plan to accelerate Federal highway construction are expansions on this same idea.

President Eisenhower had a point in saying at his news conference that the largest impetus must come from consumer spending, although we question the wisdom of stressing this rather Hooveresque theme. Despite the President's emphasis, the administration has not been inactive; and clearly it is dedicated to the use of Governmental powers to keep the economy moving forward. It is proper that the administration should be careful in view of the possibility that, if additional expenditures place the budget greatly out of balance, inflation may again be the big problem.

In the meantime, however, there are some temporary stimuli that can safely be applied. The further easing of interest rates by the Federal Reserve Board is probably more symbolic than substantial, because demand for loans has slackened; nevertheless, it is a good move. More important, though, is the use of governmental programs to meet public needs faster.

It comes as something of a shock to learn, for example, that military expenditure ceilings still are in effect and actually are hampering procurement in instances in which production is ahead of schedule. No doubt this is a hangover from the troubles with the unrealistically low debt ceiling recently lifted. In any event, the situation ought to be remedied promptly.

If, beyond such measures, a tax cut seems advisable, we should like to see some attention given to the removal of nuisance excise taxes before there is a general income tax reduction. Taxes on automobiles, on transportation (a relic of wartime when the Government sought to discourage travel), on luggage and the like, might well be lifted. It would be unfortunate if such a move were viewed merely as an excuse to increase prices.

Particularly in the automobile industry, however, it might herald a needed reduction of net prices to customers.

In any new measures adopted, flexibility ought to be the rule. The virtue of the Johnson-McCormack proposal is that construction could be retarded if later conditions warranted it; this is also the principle with the monetary controls exercised by the Federal Reserve Board. For the moment, the very evidence that the Government was moving in determined fashion might turn out to be as important as some of the specific remedies themselves.

The Parker Pen Co.—A Remarkable Business in World Trade

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. WILEY. Mr. President, I have previously invited the attention of my colleagues to the increasing importance of American business operations throughout the world.

Today, for example, I am citing the important work of the United States Inter-American Council, representing leading American businesses in export-import trade.

Mr. President, we shall soon be discussing on the floor of the Senate the proposed extension of the Reciprocal Trade Act. We have been talking a great deal about unemployment. In evaluating the meaning of the Reciprocal Trade Act, there was brought to my attention a very unusual business in my own State, an outstanding business known throughout the world.

I refer to the Parker Pen Co., of Janesville, Wis.

The name "Parker" stands with other leading brand names as one of the most universally identified symbols of the quality of American products.

In addition to the acceptance on the American scene, the Parker pen has won for itself a unique business niche throughout the world.

The Parker Pen Co. advertises in no less than 1,700 newspapers of the world; in 42 languages. It has 89 distributors in all parts of the globe.

Here, therefore, is a splended example of American free enterprise at work; growing, selling more and more of its products, establishing mutually profitable business relations in country after country.

In each country, in its advertising and public relations program, it has due recognition of local interests, local needs, national cultural patterns, and the like.

I send to the desk two fine articles written by the chairman of the company, Mr. Kenneth Parker. These articles were published in the March 4 and March 5 issues of the Christian Science Monitor. I ask unanimous consent that both articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of March 4, 1958]

UNITED STATES FOUNTAIN PENS SELL TO LION'S SHARE OF WORLD MARKETS

(EDITOR'S NOTE.—The Christian Science Monitor invited Kenneth Parker, chairman of the board of the Parker Pen Co., to tell its readers about his firm, one of the oldest and largest producers of fountain pens in the world. Today, in the first of four articles, Mr. Parker outlines the growth in the use of this writing tool.)

(By Kenneth Parker, chairman, Parker Pen Co.)

JANESVILLE, WIS.—In a world that is growing ever more literate, the American pen has made its mark. Just as the people of the world look to France for perfume, Britain for woolens, Switzerland for watches, they look to the United States for sure writing equipment. Estimates place America's share of the world market as high as 75 percent.

Travelers tell us that the brand name "Parker" ranks with Singer, Ford, and Coca-Cola as one of the most seen and universally used of America's commercial terms. It is listed in the dictionary of one Far Eastern country. It is spelled "P.arker" and "Parcher" by imitators in Japan, Italy, and elsewhere. The Soviets have a Parker copy called Leningrad. Our particular experience symbolizes the extent of the dominance of the American pen.

It is improbable that the founder of the Parker Pen Co. envisioned this development when he introduced his first fountain pen 70 years ago. Fountain pens were the special property of the gentry at that time, although steel pens had been introduced into the American scene by one Peregrin Williamson in 1809 and fountain pens made their appearance 80 or 90 years ago.

Till the turn of the century, they had many shortcomings. One of them was that they had to be filled with an eyedropper. As recently as 40 years ago a scant 5 percent of the literate population of the United States owned fountain pens.

PORTABILITY NEEDED

In a dynamic and mobile society, however, the need for a writing instrument with its own portable ink supply persisted. The early fountain pen makers, including my father, George S. Parker, strove ceaselessly to perfect a pen which would: (1) carry a goodly supply of ink and (2) release it only upon the wish of the writer. That is to say, it should not leak.

Early inventions gave fountain pens a degree of reliability. Yet progress was slow; our first year to exceed a million dollars in sales volume came in 1910, 22 years after entering into business.

The use of fountain pens was stimulated during World War I by the letter writing of soldiers away from home. Our company brought out a sturdy little unit which carried small pellet of ink crystals which could be inserted into the pen barrel. By adding water, the soldier-owner could make his own ink even in the trenches. This trench pen won legions of friends. By 1920 annual fountain-pen sales for the industry were about 1 million units.

Many improvements had meanwhile been made on the early fountain pens. An important one was the side-lever-filling method. But it took a rather more dramatic product to bring the American fountain pen forcefully to the attention of the consuming public. Such a product made its appearance in 1921. It was called the Parker Duofold pen.

COLOR INTRODUCED

The Duofold had dash where its predecessors were severe or painfully ornate. It was orange-red in color, formidable in size, and boasted a large, gold point in an era when Spencerian and Palmer penmanship were important to millions. Furthermore, it was virtually unbreakable. United States fountain-pen production rose from a million to 25 million annually in the first half of the twenties.

At the same time, American writing instruments began in earnest to capture the foreign market. We augmented our capability abroad by establishing plants in Canada and England in 1923–24. Now a dozen subsidiary companies—including newly purchased Eversharp Pen Co.—join the parent operation in serving 157 distributors in every free land in the world. More than half of our sales volume derives from overseas sales.

A source of satisfaction in the writing industry is the knowledge that the pen often participates in historical events. President Eisenhower (then general of the Army) completed armistice formalities for the war in Europe with his "51" pen. Gen. Douglas MacArthur used Admiral Nimitz's Parker Duofold pen to sign the armistice with Japan on the deck of the *Missouri*. Gen. Mark W. Clark used a similar model in Korea at Panmunjom. The charter of the newest nation in Asia, the Malayan Federation, was validated by sultans using Parker pens.

Arabs have used fountain pens to sign blood agreements; businessmen to ratify international trade documents; movie stars to autograph boiled shirt fronts; students to complete theses. To each, primary features of the fountain pen were its dependability and ability to provide personalized handwriting.

BALLPOINT BOOM

Outstanding in an industry noted for its competitive zest is the ballpoint pen segment. Ball pens date back to 1888 when the idea of rolling ink on paper was first made known by Inventor J. J. Loud in his United States patent No. 392, 046. Virtually nothing was done about the ball pen by Loud or anyone else in this country until 1945, however. Since then the ball pen has altered the industry's makeup by adding a practical tool for casual notetaking.

From 1940 to 1951 the industry grew in number of participants, unit production, and in dollar value. In 1940 there were approximately 75 companies. By 1951 some 250 concerns manufactured or assembled end products.

In 1939 the industry produced 73,500,000 units. In 1947 this had grown to 149,500,000 units.

Likewise, production value increased from a 1939 figure of $21,744,000 to a 1947 figure of $137,574,000. Starved markets, the rising fountain pen (particularly the 51) and the ball pen combined to cause this growth. The ball pen caused a stir beyond its functional performance and merit at war's end, perhaps because it looked unusual. An old standby, the pen, had supposedly changed. The fact that early ballpoint models hardly wrote did not seem to dampen the ardor of consumers on the hunt for something new.

DEVELOPMENT AWAITED

By 1945 we had been looking into the ballpoint matter in research for a couple of years, but pending development of a genuinely sound product, decided to pass. When buyers put the early postwar models to the writing test, the item skidded, literally and figuratively. The priced moved, it is said from $12.50 to less than 50 cents in 50 months.

Ball points retained an ill repute until new inks, better quality control, and popular pricing entered the picture in the early fifties. In 1954 we had the ball pen we wanted and introduced our Jotter, which featured a choice in point sizes, large capacity, and rotating writing cartridges.

Daniel Parker should be credited with providing the impetus for Parker's ballpoint pen. Recently a textured ball was perfected eliminating the old consumer complaint about ball points skipping on the slick writing surfaces offered by checks, postcards, photos, and hand-soiled paper.

Where the fountain pen offered distinction and a finer kind of handwriting, the ball point offered convenience. Both types will be with us for the forseeable future.

The most significant innovation in fountain pens in the past few years has been the capillary pen, a self-filling, higher-priced product. The Parker 61 capillary pen required 12 years to perfect, startling penmen the world over with its use of the age-old principle of capillary attraction for filling purposes, and a new ink-shedding material which allows it to emerge from ink bottles clean and dry.

Milestones in our progress include: first slip-on cap (1898), clip added to pen for secure carriage (1916), colored pens (1921), desk fountain pen sets (1926), a pen-cleaning ink (1931), dry-writing 51 pen (1941), liquid lead pencil (1955), self-filling 61 pen (1956), and textured ball pen (1957).

PARKER PEN CO. PUSHES SALES ON GLOBAL MARKET FRONT—FOREIGN TRADE IMPACT ON UNITED STATES ECONOMY CITED

(EDITOR'S NOTE.—How the Parker Pen Co.'s foreign marketing program developed and what it has meant in trade and mutual understanding is discussed in the third article of this series written in response to an invitation from the Christian Science Monitor by Kenneth Parker, chairman of the firm's board.)

(By Kenneth Parker, chairman, Parker Pen Co.)

JANESVILLE, WIS.—We are inclined to view the world as a giant market place. We do this without misgivings as we concomitantly hold the view that trade, free and untrammeled, is a key to world peace.

Without existing trade of consumer goods between the United States and its allies, the character of everyday American life would change radically.

We would have to do without such foodstuffs as cocoa, chocolate, mustard, olives, tuna fish, figs, and bananas. Aluminum would be scarce; so would telephones, radios, and television sets. Cars would be hard to come by since they utilize more than 30 different imported materials. In addition, some of the minerals we use to keep our industries running are imported, too. Finally, our national employment and income would suffer seriously.

In fact, two-way trade with other nations, with an advantage and a profit at both ends

is the only really practicable way I can visualize to attain peace on this earth.

Two individuals, or two communities, or two nations, who mutually profit from trading with each other, do not tend to quarrel or go to war. Whether one sells pens, timepieces, or oil pumps on an international scale, the above reasoning is apt to evolve. So, foreign trade has become an integral part of the extensive corporate structure known as Parker Pen. This was not by accident. It came from careful design.

MULTILINGUAL PENS

There's a local aphorism around Parker which runs something like this: "Our pens can write in any language in the world." Word play aside, that is true because Parker pens can be found all over the world in the hands of princes and kings, farmers and mechanics, secretaries and business tycoons, regardless of what language they write. This is the result of a steady, conscientious effort to travel the world in search of customers.

The company founder, George S. Parker, began these Odyssean ventures. He traveled for 30 years into markets then virginal and underdeveloped. Thirty-nine times I have found myself on long trips abroad. Our global sales and advertising vice president, Frank W. Matthay, has in the past 30 years journeyed three times around the world and made over 40 individual trips to Europe and South America.

Even today this policy predominates. In fact, Daniel Parker, executive vice president, spent most of January in Europe, George Parker, another grandson of the founder and also foreign-sales director, has recently made several European trips.

Such examples represent Parker management's acute interest in the foreign-sales system. Parker also sends out travelers from the Janesville, Wis., and London, England, offices who continuously act to service our distributors and report back with their findings.

Janesville, Wis., may appear to be an unlikely location for a foreign-trade center, but it is constantly being fed with accurate, up-to-date information about world-market conditions.

PROVINCIALISM UNLIKELY

In fact, it has been said that some of our people know the streets of Hong Kong, Paris, and Johannesburg better than those of nearby places. We could not be accused, it is safe to say, of making provincial pens.

Speaking of Janesville, Parker has an unpretentious bit of ground there which further helps to dramatize this respect for international trade. We call it our path of nations.

Implanted there, fronting our newly constructad manufacturing plant, are 85 large stones from countries round the world. For each polished stone there is also the appropriate flag of that nation. On each of the national holidays of each country, their respective flag is flown in tribute.

That means, in our own way, we help observe Japan's Adult Day (January 15), Burma's Full Moon of Kasan (May 13), and Rhodesia's Boxing Day (December 26). Even though these holidays may have strange-sounding names, they are just as revered in their own countries as are America's Thanksgiving, Labor Day, or Washington's Birthday.

COHESIVE ORGANIZATION

Too, Parker's administrative organizational structure is arranged to emphasize global cohesiveness rather than separate entities operating autonomously. Seven men—called the international management staff—coordinate and advise the various segments of the Parker business network. Each man is an expert in his field: manufacturing, finance, sales and advertising, law, and so on.

The origin of such a foreign marketing program developed after the turn of the century. Attracted by advertising in American magazines, George S. Parker began receiving queries from overseas distributors. In 1903, Christian Olsen of Denmark was awarded the first foreign distributorship. Today, his son continues an unbroken string of years as Parker's representative in that area.

Such loyalty, spurred by mutually successful business dealings, is recurrent among the other 88 distributors who span the globe. A. William Zecha of the Republic of Indonesia joined in the Parker association in 1916. (His sons have taken on-the-job business training at our offices in Janesville during recent years.) William R. Rikkers, distributor in the Netherlands since 1925, is another example of a long-time Parker representative.

In fact, the average tenure among our 89 distributors is 20 years. This helps illustrate that Parker's relationship with its designated representatives in foreign lands is more than a mere business partnership. It is formed on personal relationships imbued with trust and appreciation of one another.

SALES PROBLEMS VARIED

Unfortunately, there is and was no standard formula for merchandising in these many countries. Each presented its own challenge; each had its own advertising and marketing idiosyncrasies.

In some countries, point-of-purchase materials are the main method of promotion. In others, radio is the dominant force. Print advertising in certain lands cannot contain the heads or faces of drawn characters due to ethnic customs. Language, naturally, is the largest single obstacle to foreign advertising and is therefore employed with extreme care. Advertising agencies and language translation centers are selected for strategic market locations. Naturally, the local distributor is instrumental in developing merchandising policy, too.

The result is that Parker foreign advertising appears in over 1,700 newspapers, in 42 languages, and costs over $2 million each year. Today, Parker competes to hold its position as the world's largest manufacturer of writing instruments. Our market place has been the world, and, for the moment, our pen is mightier than the rest. I say for the moment because ours is a dynamic industry with competition vying for every market and every sale.

Tribute to Citizens of New Hampshire Who Served at Valley Forge

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. COTTON. Mr. President, Clayton M. Wallace, executive director of the National Temperance League and a citizen of New Hampshire, represented Gov. Lane Dwinell at the New Hampshire State Sunday service in the Washington Memorial Chapel at Valley Forge on Sunday, March 2. I ask unanimous consent that the thoughtful remarks which Mr. Wallace made at this service be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Scripture reading: Acts 17: 1–9; text, verse 6, "These men who have turned the world upside down."

I am honored to represent Gov. Lane Dwinell, of New Hampshire, here today and to speak in memory of those sons of the Granite State who served their State and their Nation during the rigors of the winter at Valley Forge.

I am honored to speak at this spot made sacred to all Americans by those common soldiers who survived cold and hunger and lack of clothing and shelter as they proved to the world the sincerity of their devotion to the principles for which they fought—freedom from tyranny, and their inalienable right to life, liberty, and the pursuit of happiness.

Most of us are familiar with the story of the Apostle Paul at Athens as told in the 17th chapter of Acts. Paul, speaking in the Areopagus told the Athenians that they were a very religious people, for in addition to the altars for all known gods they had erected one to an unknown God, just to be sure they had overlooked no one. Paul proclaimed that unknown God—the God who made the world and everything in it. In the earlier part of the same chapter is a story with which some of us are less familiar. It tells of Paul and Silas in the Jewish synagogue at Thessalonica, preaching the strange new Christian gospel. After 3 weeks some of the Jews became disturbed and stirred up the rabble against them, attacking the house of Jason where they were staying. And when they could not find Paul and Silas they dragged Jason and some of the brethren before the city authorities saying: "These men who have turned the world upside down have come here also, and Jason has received them; and they are all acting against the decrees of Caesar, saying that there is another king, Jesus."

Paul and Silas, preaching the new gospel, telling the Thessalonians about the Christ who came that all men might have life and might have it more abundantly, who taught that God is our Father and all men are brothers, who taught that the great commandment is to love the Lord our God with all our heart and soul and mind and strength, and our neighbor as ourselves, who came to give his life as the Saviour of the world—Paul and Silas—preaching these things, were to those early Jews "these men who have turned the world upside down." Their whole religious world was upset and overthrown by this revolutionary new gospel. Their religious status quo was threatened. So Paul and Silas found their lives in danger and left the city under cover of darkness to carry the gospel of Beroea and Athens.

"These men who have turned the world upside down." How aptly that phrase describes those who come with new ideas, new truths, new convictions. And always, those who defend the status quo charge them with being "these men who have turned the world upside down."

And now we come to Valley Forge in that rugged winter of 1777–78, a winter as severe as the one we have been experiencing this year. But we have taken it in insulated homes with modern heating and warm clothing and with every creature comfort. They took it with scanty, bad food, and ragged clothing and poor shelter and bare feet and sickness and no pay—for long, cold, weary months. Just stood and took it—an endured. Can these ragged soldiers at Valley Forge be called men who have turned the world upside down? Indeed, they can—for they were the very backbone of the American Revolution. They were the hard core—the fighting heart—and came out from the slush and freeze and hunger of Valley Forge to bring victory for the new Nation. They were the dynamic force of the American Revolution. For what is a revolution if it is not a turning upside down—an overthrow of the status quo—the forceful coming of a new day and a new age. These, too, were

men who turned the world upside down, and brought into being the first great democratic Nation—our own United States.

What a debt of gratitude we Americans owe to those ancestors of ours of 180 years ago for the Nation and the heritage and the blessings which are ours today—these men of the revolution—these men of Valley Forge—these men who turned the world upside down in their time.

And down through these 180 years have come new men who have turned the world upside down—over slavery, in the Civil War—to save democracy in the two World Wars. And our men of science have turned the world upside down, conquering the atom itself. Until today we have the men who with the power of the atom, can literally turn the world upside down—and inside out—into total oblivion. With our scientific minds and our industrial skill and our military might we have piled up enough atomic destructive power to totally destroy our green and lovely planet together with every living thing. We live today in a balance of terror because of the stockpiling of nuclear materials—in the stark fear that as the result of an accident, or the order given by an enraged or drunken dictator, our world may be literally turned upside down—devastated—seared—destroyed by nuclear power in the hands of madmen.

Shortly after the first A-bombs were dropped on Japan, I recall speaking in New Hampshire of the dawn of the atomic age, and of expressing the hope that there would be rapid development of atomic power for peaceful purposes. I remember pointing out that man had reached that period in history where he could go on to total destruction of his world or could harness the power of the atom for peaceful purposes—using it to free all men from poverty and famine. Atomic power could bring us total oblivion or a new era of peace and prosperity and freedom and brotherhood around the world. That was where we stood a dozen years ago.

Where do we find ourselves today? What progress have we made toward peace? We have done some work around the world in promoting atoms for peace. We have made atomic or nuclear materials available and certain countries for power development and for medical and industrial research. But seemingly far more than 90 percent of our money, time, energy, and thought related to atomic matters has gone into military channels. We have stockpiled nuclear bombs and warheads at strategic spots around the world. We have built giant B–52's capable of flying H-bombs to any part of the world. We are keeping dozens of these great jets, loaded with H-bombs, constantly in the air, around the clock, alert against any surprise attack, and ready to carry their megatons of destruction to Russia on instant notice.

We find our newspapers and magazines full of talk about missiles and launching pads and liquid fuels and solid propellants and Thor and Jupiter and Atlas and Polaris missiles in the mad race for the ultimate weapon which can carry its mass of destructive force at meteoric speed straight to the heart and homeland of Russia. We talk of launching sites in England and elsewhere. We push for atomic-powered submarines which can launch Polaris missiles from under water, close to hostile shores. And by the same token, we live in constant fear of the Russian fleet of 400 submarines capable of bringing death-dealing loads of underwater missiles straight to our Atlantic and Pacific coasts.

On February 20, 1958, Senator HERMAN TALMADGE, of Georgia, inserted into the CONGRESSIONAL RECORD a 2½-page article entitled "Inside the H-Bomb Plant," written by the noted author, reporter, and commentator, Henry J. Taylor, who is presently serving this Nation as Ambassador to Switzerland. Describing the hydrogen-bomb plant in South Carolina as the largest construction achievement ever undertaken in the history of the world, Mr. Taylor says: "Every ounce of thought, every ton of steel or brick or mortar was put there to preserve the peace—peace for mankind everywhere by making the United States so strong that there can be no war."

And yet the threat of war does hang over us, year after year, like Damocles' sword. And we continue in the mad race for more military might, more military money, and more missiles, apparently oblivious to the fact that today nobody can win a nuclear war. How important that we remember what Martin Niemoller said in 1954 about our weapons of mass destruction and our preparations for total war, "the conqueror will not be the heir but in the last minute of that war he will perish with his opponent who was the defeated one. War is no longer good or bad, just or unjust. However you look at it, war under these circumstances is madness. Madness cannot be characterized by good or bad or just or unjust. There is no just madness and no unjust madness, no good madness and no bad madness. Madness is simply madness."

The famous German submarine commander goes on to say: "War is no longer a means of settling disputes. War is heading headlong for destruction. Reason, therefore, says there must not be any war. Unfortunately, while man is a reasoning creature, he is not always a reasonable one, and so war can happen by itself, if we do not watch out. We have to work for peace if we want to prevent war."

Thus we find ourselves today teetering on the edge of massive destruction because of these men who have turned the world upside down through the discovery of atomic and nuclear power and the production in thousands of A- and H-bombs. Where do we go from here? To total oblivion—or into a world of peace and brotherhood and mutual progress and prosperity?

I believe that in the face of the utter futility of our present situation we are coming slowly to realize that the solution of our world's problems lies not in physical but in spiritual force. How encouraging is the recent statement of Dr. Dahlberg, president of the National Council of Churches that "instead of massive retaliation we should have massive reconciliations"—a turning from physical to spiritual force. In these recent days with much talk of the ICBM as the ultimate weapon, it is being said that the ultimate weapon is the mind of man. If this be true, isn't it equally true that the ultimate instrument of peace is the heart of man?

The ultimate instrument of peace is the heart of man—the heart, the soul, that part of our being which is our real self, our attitudes, our intentions, our hopes, our desires—all these are what we mean by the heart of man. The heart of man is the ultimate instrument of peace. It is a matter of getting our hearts right with God—right with our fellowmen, with such patience and understanding and wisdom and tolerance that men will learn at long last to dwell together in unity.

Martin Niemoller, a great war hero as well as a great Christian, has said: "Christianity is not the hope of the world. Christ is the hope of the world. We may even say that Christianity has been a doom to the world for the last 2,000 years, not because of Christ but because of the so-called Christians who quoted Christ but did not follow him.

"Christ has said clearly that the only means of overcoming enmity is by friendliness, that the bad can be overcome only by good and not by retaliation. That was Gandhi's way of renunication of force. He has demonstrated that in a hopeless situation other means than violence can be devised to achieve something for the bettering of this world of ours. I do not see in the New Testament any encouragement for the use of force."

Here is one more significant statement of Niemoller: "The way of Christ is not to demand but to offer peace. And the way to put into action the love of Christ is to love our enemies. That is not just a sentimental matter but that is the way God brings about the good things in his world and development for the better among the human beings on this globe."

A few months ago I read a nine-word sentence from Mazzini, the great Italian leader, which has been going through my mind ever since. Mazzini says: "The man who spiritualizes democracies will save the world." What we need then is to find or raise up not one man but millions of men whose hearts are right, who will work at this all-important task of spiritualizing democracy. Democracy, we are persuaded, is the ideal form of government. Its superiority over dictatorship is evident daily. But democracy can only succeed if it is spiritualized—if it represents the hearts and hopes of mankind. When a democracy becomes mechanical and secular it is doomed. It is therefore so terribly true today that the men who spiritualize democracy—make it live with brotherhood and good will—these are the men who will save the world.

Who are these men who will spiritualize democracy? Are they not the same sort of men as Paul and Silas at Thessalonika, who preached and lived the new way which Jesus brought to earth—and the new Commandment He gave to us—to love the Lord our God with all our heart and soul and mind and strength, and our neighbor as ourselves?

What are some of the specific things which we must do as we work at this task of spiritualizing democracy? We must accept the responsibility of citizenship as Christian responsibilities. We must help the rest of the world understand that at heart we are not a militaristic nation but are working sincerely, in the words of President Eisenhower, to "wage total peace."

We must push forward to end nuclear tests by international agreement, and take further steps toward world disarmament now, instead of spreading nuclear weapons among all our allies. We need to make greater use of the United Nations in the area of inspection of nuclear arms and in the control of space. As we grow out of the atomic age and into the space age let our first steps out into the universe be steps of peaceful exploration—not of military conquest.

Let us use the huge sums which can be saved by banning nuclear tests, for technical assistance in the Middle East and India and the Far East and in Africa where new nations need our democratic experience and technical help. And let us work at this matter of brotherhood by greatly increasing intercultural programs of study and travel by students, farmers, teachers, business people to and from America and all parts of the world.

We need to spend more, not less, for foreign aid. We need to separate our military assistance from our nonmilitary expenditures. We need a bold, imaginative new program of technical assistance—making our agricultural and industrial skills available to all peoples who want and need them—in a spirit of Christian brotherhood. These are some of our great opportunities in the realm of spiritualizing democracy today at the dawn of the space age.

The men who will save our fear-torn world today are the men who will spiritualize democracy—who will turn our world upside down into a new day of peace and brotherhood. The ultimate instrument for peace is the heart of man. I challenge you to believe this and to work with all diligence at the all-important task of spiritualizing democracy. I challenge you to become one of

the men who will turn our world upside down into a new world of massive reconciliation and total peace.

Evils of School Desegregation Costly

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Evils of School Desegregation Are Proving Increasingly Costly," and published in the Anderson, S. C., Independent and Daily Mail of February 20, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EVILS OF SCHOOL DESEGREGATION ARE PROVING INCREASINGLY COSTLY

The spotlight again is briefly focused on Little Rock's unforunate Central High School. One of the nine Negroes attending school there under protection of Federal bayonets has been expelled.

This Negro girl has been involved in several incidents. Because of her several white students have been expelled or have quit school.

Now that the incidents have caught up with her the girl's mother is planning to take the case to the Federal courts. That should prove interesting. If a Federal judge can dictate handling of discipline in a school, then we will have reached the end of liberty in this Republic.

Meanwhile, in the schools of New York City more violence has occurred in the past few weeks than ever threatened in Little Rock. No Federal troops have been sent into New York, however, since desegregation there has the trappings of legality.

New York newspapers, top educators, politicians, and other leaders generally have gingerly skirted mentioning one of the basic causes of the crime and disorder in their schools—this cause being mixing of the races in the classrooms.

A thoroughly developed report on the situation by the Wall Street Journal, however, approaches the issue with more than usual candor. The findings are alarming and the proposed remedies would be startling, indeed, proposed in South Carolina.

First, as to some of the findings. To quote in part:

"For one thing, the highly sensitive race issue is of importance, because many school people say discipline has deteriorated most in areas of Negro concentration. Significantly, the most violent opposition to the New York suspensions (640 school troublemakers have been suspended) has come from New York Negro leaders such as Democratic Congressman ADAM CLAYTON POWELL, who called them a form of nazism." (POWELL supported Eisenhower in 1956.)

At Commerce and other difficult schools, minority groups present a special problem. "There's just no denying that Negroes in particular are our major shoulders," says a Brooklyn principal.

New York school authorities have encountered increasing difficulties in staffing Negro-dominated schools. Several months ago Superintendent of Schools William Jansen sent out out appeals to the city's 40,000 teachers to volunteer to staff difficult schools, many of which are in all-Negro neighborhoods. Some officials say he got 25 replies, some say 40. Says a New York Negro leader: "The failure of Jansen's appeal shows the extent of discrimination in the city." Comments a Harlan teacher: "Word has gotten around just to show how bad things are."

Now for one of the proposed remedies, unheard of in South Carolina or any other segregated State: the expansion of the so-called 600 schools.

These special schools—and there are already 16 in New York City—are set up to serve pupils who are violent, have criminal backgrounds or otherwise demonstrate antisocial behavior; i. e., they are punks and hoodlums.

The 600 school is so-named because the cost per pupil averages about $600 a year as against $400 at the conventional junior high school or $475 at a high school.

The punks and hoodlums infesting New York schools aren't restricted to Negroes, of course. The ratio is high among the whites. The situation is aggravated, however, when the two are mixed in a school—even if the percentage is only 1 percent. That 1 percent, schoolmen say, can prove exceedingly costly in time and effort devoted to trying to keep order.

On the record it is apparent that in the South the segregated-school systems are far more peaceful than New York's mixed schools or the enforced mixed situation in Little Rock. This means that they are more efficient in getting down the real job, which is the education of both races.

At the same time, southern schools are not without their punks and hoodlums and the problem tends to grow. There are instances of youths being sentenced by the courts to attend school. This poses a two-sided problem for school officials and teachers.

On the one hand, some so sentenced may be salvaged. That's the hope. On the other hand, there's always the danger that one bad apple may spread the disease of punkism among other pupils. No one has come up with an answer.

Meanwhile, with bayonet-toting troops standing guard in Little Rock and armed policemen patrolling New York's schools, there is some measure of gratification that in Anderson and elsewhere in South Carolina and the other segregated States the emphasis continues on improved learning and not on how to prevent bloodshed in the classroom.

Journeys To Great Homes—Henry Hastings Sibley, Minnesota Governor Who Built His Own Home

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. THYE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "This Minnesota Governor Built His Own Home," written by Louise Hubbard and published in the Washington Post and Times Herald on Saturday, March 8, 1958. The article refers to the history of the State of Minnesota.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOURNEYS TO GREAT HOMES—THIS MINNESOTA GOVERNOR BUILT HIS OWN HOME

(By Louise Hubbard)

Henry Hastings Sibley, son of Chief Justice Solomon Sibley, was only 23 years old when he was made a partner in the American Fur Co., and placed in charge of their Northwest Territorial post at Mendota in 1834. Educated as a lawyer in his birthplace, Detroit, Mich., he found an outdoor life which offered more adventure.

The youth's first year was spent in learning the language of the Sioux Indians with whom he traded, winning their friendship, and establishing his unquestioned authority. The latter was aided by an impressive badge worn as justice of the peace—an appointment received from Governor Chambers, of Iowa.

In 1835 young Sibley built his home, and its magnificence (for the times) was a psychological factor in his business and political success. There were no carpenters in the entire area, so the job had to be done with the help of Canadian voyageurs, trappers, and Indians. These amateurs were an ingenious lot and the finished product, the first stone house erected in Minnesota, is an ambitious piece of architecture.

The men quarried limestone from Pike Island and cemented the blocks together with mud from the river. They cut laths from willows and rushes, weaving them into shape with reeds and grasses. They chopped down great trees for the braces, joists, and beams, joining them with wooden pegs. Floors, windowsills, and doors were handmade, and the roof was covered with split clapboards. The interior was plastered with a combination of mud and clay mixed with straw.

The original building consisted of 6 rooms on 2 floors with a basement and attic. The basement held a long kitchen-dining room with an enormous fireplace, and two smaller rooms with rounded ceilings. These were packed with ice—an early version of a deep freeze for storing food. Drainage of melting water was accomplished by a wooden trough leading to the river below.

Sibley used the front room on the first floor as an office and store. He kept a supply of equipment needed by the settlers, and trinkets which appealed to his Indian customers. The first safe to be built in the northwest stood in one corner, a box made of solid oak planks bound with iron bars.

An outside stairway led to the second floor where Sibley had a storeroom for furs, his own bedroom and a guest room. However, he provided for his friends, the trappers and Indians, by putting in an inside stairs to the third floor so that they could always have shelter any time they desired. The door was never locked.

For 8 years Sibley and his mulatto cook maintained bachelor quarters; but in 1843, Sarah Jane Steele entered the house as a bride. She made the changes seen today. The office was moved to a side addition and its former space furnished as a parlor. This room represented the height of luxury. A Brussels carpet, factory-made furniture, a piano (the first in the region), fine pictures on the walls, and a huge Canadian stove from Quebec dazzled the many visitors.

In 1848 Sibley was sent to Washington as a Delegate to Congress where he successfully defeated Stephen A. Douglas' proposal to name the Territory Itasca instead of Minnesota. He obtained Federal grants for public roads and buildings, two sections of each township for schools, and concessions for Indians whom he considered to have been wronged by the Government. When Minnesota was admitted as a State in 1858, Henry Sibley was elected the first Governor, and designed the State seal—a white man plowing eastward and an Indian riding on horseback toward the West.

It was under General Sibley's command—he had been commissioned commanding offi-

cer of the State military district—that the Sioux Tribes were driven from the State, following a series of horrible massacres which they perpetrated in 1862.

General Sibley's home is now owned by the Minnesota chapter of the DAR, and is open to the public.

Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. SPARKMAN. Mr. President, recently I had a letter from Mr. H. L. Rice, of Florence, Ala. He was writing me from 2640 First Street, Fort Myers, Fla., where he spends the winter each year.

In his letter, Mr. Rice asked me some pertinent questions regarding TVA.

I ask unanimous consent to have printed in the Appendix of the RECORD the letter from Mr. Rice and my reply to him.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

Mr. JOHN SPARKMAN,
Washington, D. C.

DEAR SIR: My home is at Florence, Ala. I spend 6 months each winter down here.

It seems that everyone down here thinks that the TVA is a gift to that section and they are taxed for it.

I am not posted well enough to argue with them. They say that the TVA borrowed $20 billion and no interest.

I would like what TVA owes Government, what interest they pay, if any, and what amount they paid. And at what rate they are paying this money back.

Yours truly,

H. L. RICE.

FEBRUARY 22, 1958.

Mr. H. L. RICE,
Fort Myers, Fla.

DEAR MR. RICE: A good deal of misinformation has been spread by people who are hostile to TVA. I am glad you took the trouble to write me so that I, through you, may contribute some facts which every citizen should know about this great Federal agency.

Of course, as you and I know, TVA undertakes many programs in the region of its operation which are similar to activities carried out in other areas by different Federal agencies. TVA has made the river navigable. It has provided flood protection. Likewise it has promoted excellent programs in the field of agriculture, forestry, and so on. Such programs are undertaken by the Federal Government in all parts of the country. There should be no misunderstanding about that.

When people talk about the amount they are taxed for TVA, I believe they usually have in mind the TVA power system. In this area the Federal Government, through TVA, owns the facilities for power generation and transmission. The distribution systems, over 150 of them, which purchase power at wholesale from TVA for resale to their consumers are not owned by the Federal Government. They are locally owned and managed. Discussing only the investment in power facilities, therefore, I am amazed that anyone would believe that TVA had borrowed $20 billion. The money provided by the Federal Government for investment in TVA power facilities is not a loan to TVA. The Government is the owner of the properties and the figure of $20 billion as the amount invested by taxpayers is more than 10 times overstated. At the present time about $1,200,000,000 of the total power investment represents the net amount of funds made available through appropriations by the Congress.

You are probably aware that there is pending before the Congress a bill which would permit TVA to issue revenue bonds to provide future investment in power facilities. This means that the power consumers of the area would in the future provide the money for the capacity additions which are required to keep up with the growing loads. The Government would still own the property. Its assets would grow without the appropriation of further funds from the Treasury. As a matter of fact, the consumers of electricity have already provided over $350 million for investment in TVA power facilities, facilities which are operated for purposes and under policies laid out by Congress. And in addition to plowing back proceeds to increase power assets, TVA has made cash payments into the Treasury from power proceeds. To date $240 billion has been paid in cash to the Treasury. Under present law, those cash payments must in 40 years from the time a power facility goes into operation equal the amount made available by the Congress for investment in the facility. Under the pending self-financing legislation the schedule of cash payments into the Treasury will be changed and in the future the amounts will be, at a minimum, large enough to cover the cost to the Government of the remaining appropriation investment. This means that the Government, as owner, will always be kept whole, and that the assets of the Government-owned system will continue to increase by the investment of proceeds from bonds issued against future earnings.

It is important to remember that the benefits to the Nation from TVA power operations are not measured by the direct cash return to the Treasury. They are measured rather in the increasing economic strength of the region which means in turn that the people bear a larger share of the total national tax burden. National benefits can be measured in the stimulation of the economy of other areas as the TVA region becomes a better market for the goods and services of all parts of the country. Few people, for example, stop to realize that TVA itself has spent over $1 billion in States which lie outside the region and that since the end of the war the power consumers of the area have themselves spent over $1½ billion to purchase the electrical appliances which are made in other areas. They do this because Congress directed TVA to make power available to the people at rates which, while covering the cost of power production, would encourage the abundant use of energy on the farms and in the homes of the area. No one can measure the national benefit of this demonstration of the effect of the low rate-high use marketing policies which Congress directed TVA to adopt. Power systems and power consumers everywhere have benefited because TVA and its distributors took the risk involved in selling power at rates lower than people in the Southeast had ever enjoyed it before, depending upon increased volume of sales for adequate revenues.

We can estimate the direct benefit to the Federal Treasury which has resulted because TVA has served Federal installations with power at reasonable cost. The taxpayer pays the power bills of the Army, the Air Force, and the Atomic Energy Commission. The latter particularly uses power in vast amounts. It is reliably estimated that to date the Government has saved over $250 billion in its power bills because of TVA and that savings of $50 million a year will be realized as long as AEC uses power in the quantity it requires today.

These are some of the factors you will wish to keep in mind as you talk about TVA with your friends in Florida. I am enclosing a couple of pamphlets which may be helpful to you, and I hope you will be able to convince those with whom you talk that TVA is an asset to the Nation, that every citizen should be proud of its performance, and that it is contributing and will continue to contribute to regional and national strength.

With best wishes, I am,

Sincerely,

JOHN SPARKMAN.

A Solidification of Atlantic Unity Might Improve Western Hopes

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 10, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Providence Journal discussing the resolution introduced by Senator THEODORE FRANCIS GREEN, calling upon President Eisenhower to appoint American delegates to a citizens' conference composed of delegates from the NATO nations. As the Journal states there is a crying need for new ideas in our relations with the Soviet bloc, and in this atmosphere Senator GREEN's resolution calling for a new approach may be especially valuable.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Providence Journal of February 24, 1958]

A SOLIDIFICATION OF ATLANTIC UNITY MIGHT IMPROVE WESTERN HOPES

(By Barry Brown)

A feeling seems to be general nowadays throughout the Western World that there is a crying need for new ideas in our relations with the Soviet bloc. In this atmosphere, a resolution recently introduced in Congress by Rhode Island's Senator GREEN, calling for a new approach to the improvement of Atlantic unity, may be especially valuable.

In some part, the urge to seek a kind of breakthrough in East-West relations doubtless reflects mere emotional frustration, as the decade-long struggle wears on and the dangers of the nuclear stalemate are increasingly borne in upon us. To this extent, the feeling may even be dangerous, for it is almost certainly a mistake to expect that the cold war can be ended by some sudden and brilliant improvisations.

MEASURE OF MATURITY

The surest measure of the American people's rise to maturity, and of our Nation's claim to greatness, is likely to be our capacity to carry the burdens of world leadership over the long haul. However, much we need right policies and inspiring leadership, we may need even more a popular recognition—which is quite foreign to American experience and temperament—that problems in international relations are often by their very nature insoluble, and that the dangers and sacrifices involved in struggling with them

may be literally endless. A disturbing element of mere impatience and unrealism seems to be present in some of the current enthusiasm for summit negotiations and in some reactions to George Kennan's ideas on disengagement.

Yet the feeling of a need for boldness cannot be dismissed simply because it may involve risks. Another aspect of maturity is understanding that there are no riskless courses of action available to us. In the democracies of the West, it is a plain fact of political life that peoples need to be convinced that their nations are not being allowed to drift helplessly and hopelessly in the face of Communist pressures, that their governments are demonstrating initiative and imagination.

POLITICAL OPPOSITION

The importance of meeting this requirement is evident in the way the summit and disengagement proposals seem to have taken hold of many minds, especially among the opposition parties, in some of the Atlantic nations, notably Britain and West Germany. The Macmillan and Adenauer governments—and the Eisenhower government also—may be deeply convinced they are right in their cautious response to Soviet initiatives in these areas, but their rightness will serve no one's purposes if their own appearance of a lack of vigor and imagination causes the governments to fall and the policies to be changed.

A whole series of by-elections in Britain has suggested a loss of popular confidence in the Conservative government, and we have never faced up to the question of what will happen in Germany when the 82-year-old Chancellor Adenauer leaves the political scene. The American-supported policies of these governments on such vital issues as disengagement may thus be drastically changed at any time, simply because they have been permitted to appear stale and sterile. This prospect, more than any immediate and demonstrable dangers in the policies themselves, is why the conservatism that now dominates the Atlantic alliance so badly needs to be balanced with some elements of boldness and inspiration.

And this, in turn, is why a real and newly conceived effort to revitalize Western unity seems particularly valuable at this time. The NATO alliance was well described by its first secretary-general, Lord Ismay, as "something new and exciting and revolutionary, the most challenging and constructive experiment in international relations ever attempted." Surely we should be able to build on such a foundation a policy initiative that will serve the politically and psychologically imperative function of seizing the minds of people in the West, without incurring the risks of trying to apply new ideas simply for the sake of their newness.

Senator GREEN's resolution approaches this momentous task by calling upon President Eisenhower to appoint American delegates to "a conference composed of leading representative citizens selected on a nonpartisan basis and directed to convene as often as necessary in order to examine exhaustively and to recommend how greater cooperation and unity of purpose, as envisioned by the North Atlantic Treaty, within the Atlantic Community may best be developed." The third annual conference of NATO parliamentarians in Paris last November, where Senator GREEN and several colleagues represented the United States and were impressed with this idea, urged the calling of such a conference on all the NATO governments. Britain, France, and Canada and other countries are now likewise being pressed to name similar representatives to it.

The striking thing about this proposal is its recommendation that members of the conference should, as far as possible, be officially appointed but should sit in accordance with their individual convictions. In other words, the undertaking would be more than another exercise in diplomacy among sovereign nations, and much more, of course, than a private study group. Any findings would not be binding upon the member governments, to be sure, but the high sponsorship of the conference would presumably give its recommendations real weight. And most important of all, the unique composition of the body and of the circumstances of its mission might be expected to lead it to consider a genuine transformation of NATO from a military alliance into some sort of political and economic entity.

PARALLELS WITH 1789

The language of the Green resolution, and of the privately sponsored declaration of Atlantic unity which lies behind it, scrupulously avoids any reference to federalism, which might well be too radical an idea for most of the NATO governments to contemplate. Yet the form of the proposed conference inevitably suggests parallels with the gathering of leading representative citizens from the 13 American nation-states of 1787, from which our Constitution emerged more or less unanticipated as a result of the force of circumstances and the logic of debate.

In the present circumstances, it may scarcely be realistic to think about Atlantic federal union. Again, there is virtue in not expecting too much from radical and untried blueprint solutions to the intractable problems of international affairs, and this effort to rebuild NATO is wise in its modesty. But if the movement is to live up to its potentialities, it is difficult to see how it could avoid a forthright approach to the Atlantic nations' need for political and economic, as well as military, cohesion—and for supranational institutions to embody their lasting unity.

Even ambitious hopes in this direction may not be unrealistic, for there is some evidence that the logic of events and the response of public opinion may have outrun the progress of governments toward understanding the limitations of sovereignty in the nuclear age. Among the American sponsors of the declaration of Atlantic unity now appear the names of ex-President Truman and his ex-Secretary of State Marshall, neither of whom showed any comparable readiness to support such an expansion of NATO when they were in office. Similarly, Secretary of State Dulles, before he took office, gave vigorous support to far-reaching ideas of Atlantic union, which he has since scarcely moved to implement.

COMPELLING APPEAL

This may only prove that the responsibilities of office always have a sobering effect on men, as they doubtlessly should—or it may suggest that the evolution of the Atlantic world toward supernationalism has a compelling force, upon which political timidity hangs like a dead weight. The appeal of the idea to many able and realistic men—Adlai Stevenson is another recent supporter—seems to support the latter estimate. And the gratifying progress the cause of Western unity is now making in official circles, as evidenced by the Green resolution, makes it reasonable to hope that President Eisenhower will soon give a freer rein to the convictions on this subject that he likewise often expressed before he went into politics.

If there is a need for boldness, surely this is the way the President might be expected to meet it. If there is a realistic move America can make to rise to the accumulating demands of world history and world politics, this is it.

Federal Judges Assume a Terrible Responsibility

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. THURMOND. Mr. President, if the Federal courts persist in insisting on the racial integration of the public schools in the South, one inevitable result of this policy will be the closing of the public schools in many areas. Several State governments have indicated by legislation that they will refuse to give financial support to school districts where racial integration is attempted.

For these terrible consequences, the courts must assume a major share of the responsibility.

I ask unanimous consent that there be printed in the Appendix of the RECORD two enlightening commentaries from South Carolina newspapers bearing on this point. One, entitled "Federal Judges Assume a Terrible Responsibility in School Cases," is from the News and Courier of Charleston, S. C., of March 6, 1958, and the other entitled "No Change in Court" appeared in the State, of Columbia, S. C., on the same date.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Charleston (S. C.) News and Courier of March 6, 1958]

FEDERAL JUDGES ASSUME A TERRIBLE RESPONSIBILITY IN SCHOOL CASES

Last November the judges of the United States fourth circuit court of appeals, who are currently hearing cases in Charleston, ordered a Federal district judge in Virginia to fix a deadline for the end of school segregation in Prince Edward County. This week the United States Supreme Court upheld the circuit court's decision.

In its vain appeal of the decision, the Commonwealth of Virginia said: "The Federal courts assume a terrible responsibility when they order the closing of public schools. That is what the circuit court has done and what this court will do if the order appealed from remains in effect."

It is indeed a terrible responsibility. Surely, the judges must understand that they are dealing with the lives of people, not with cold abstractions in attorney's arguments. The school population of Prince Edward County is 54 percent Negro and 46 percent white. Under Virginia law, all financial support would be withdrawn from the county should it attempt to integrate.

But the white people of Prince Edward County have said they have no intention of integrating. The have prepared detailed plans for a privately supported school system for the children of their race. The necessary funds for a year's operation are in the bank.

Perhaps the judges close their eyes to these facts and say to one another: "This is not our concern. We deal only with technical issues of law." This is one point of view. But the United States Supreme Court itself chose in 1954 to enter the field of social realities—the class relationships between people.

The thoughts and emotions of white citizens in Prince Edward County are likewise

social realities. The only way to effect integration in Prince Edward County is to use force—and lots of it. Are the district, circuit, and Supreme Court judges willing to accept the terrible responsibility for bayonets? Are they prepared to jail school officials and fine parents who won't send their children to mixed schools? Are they prepared to direct a Federal school system staffed by Government employees from Washington?

Measures less than these surely will fail in Prince Edward County, a hard-core resisting rural county where the white people believe passionately in the rightness and necessity of racial separation.

We don't believe that Prince Edward County will back down. Outside observers, newspapermen from the North, agree that this Virginia county will do whatever is necessary to prevent integration.

A little prudence—a willingness on the part of the judges to wait to do what they believe is the right thing until conditions are favorable—could prevent a grave and perhaps a bloody crisis. Surely, in order to correct a practice alleged to be unfair to a small group of plaintiffs recruited by the NAACP to bring cases to court it is not necessary to shatter the lives of thousands of people.

[From the State, of Columbia, S. C., March 6, 1958]

NO CHANGE IN COURT

The Supreme Court, by declining to review a fourth circuit court decision that a deadline should be set for beginning of desegregation of Prince Edward County schools, has presented Virginia with a full-blown crisis.

Virginia must now either close the Prince Edward County schools or come up with a new plan designed to maintain segregated schools. And the chances are that no plan would be approved by the Supreme Court, which has consistently—since 1954—been making its own laws on this subject.

After all the trouble in New York, Washington, Kansas City, Chicago, etc., some writers speculated that the Court would hesitate to expand further its controversial direction of local school affairs. It seems this was a false hope.

Perhaps soon, as an NAACP spokesman recently bragged, Negro and white children in Virginia will be getting equal treatment—no education at all. Since the Supreme Court said in 1954 that equality of schools was inherently inequality, this will pose something of a dilemma for the nine young men.

Will they rule that this equality of no schools is also inequality?

Let's Set the Farmer Free

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article written by Earl M. Hughes, who is not only a real dirt farmer from northern Illinois, McHenry County, with which I am sure our Presiding Officer is familiar, but he was also a member of the Commodity Credit Corporation.

The article is an excellent farm analysis. I submit it because I think it is worthy of printing in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S SET THE FARMER FREE

(By Earl M. Hughes)

For a quarter of a century Congress has been trying to legislate farm prosperity by bribing the farmer not to produce. Via one futile farm program after another, it has attempted to hold prices up and production down. But the spending of more than 11 billion taxpayers' dollars has only put the farmer deeper in the hole than he would have been without such help, and resulted in inevitable demands for still more billions to bail him out.

Many Congressmen admit privately: "We have a bear by the tail. We cannot let go for fear it will bite us at the polls. Where do we go from here?"

I believe the cure which Congress so desperately seeks is plainly emerging. The solution, I think, is this:

Abandon the impossible job of trying to legislate farm income through direct price supports.

Stop the senseless flow of crops into the Government's bulging bins.

Make it Government's main job to help find new uses and markets for our farm products.

Then turn farmers loose to produce in response to free market prices.

But can we really use what farmers produce? Listen to what Dr. Herrell DeGraff, noted Cornell University food economist, says:

"Over the past 35 years, during which so-called surpluses have been almost chronic, a modest two-percent increase in livestock could have eaten up all of the surpluses. This would have happened had agriculture been free."

Let's take a hard look at where we are today after 25 years of controls on price and production:

Surpluses, caused by attempts to raise farm prices, are in fact depressing farm income (because they knock down the price of farm products) by $2 billion a year, according to Department of Agriculture economists. And because the handling of surpluses is costly, the taxpayer has been hit hard. When I was in Washington I helped sell, trade, barter, and give away $7 billion worth of farm surpluses; but at the same time we moved this out the front door, we had to take in $10½ billion worth of new surpluses at the back door.

Today, as we try to whittle down surplus pile No. 1, a Federal law is all set to build up surplus pile No. 2. To illustrate: If we can get rid of about 800 million bushels of Government corn, the Secretary of Agriculture must immediately raise the support price to 90 percent of parity and boost acreage allotments from 37 million to at least 58 million acres. Higher guaranteed prices and more acres, plus the often overlooked fact that higher prices automatically reduce the size of the market, would soon have corncribs spilling over again.

Federal farm expenditures are getting bigger; they totaled more than $5 billion last year. Borrowings by Commodity Credit, the Government Corporation set up to finance price supports and related programs, cost taxpayers close to a million dollars daily just in interest.

To run this bigger farm program, big government has gotten bigger: 11,412 full-time employees, plus thousands of part-time workers, have been added to the Department of Agriculture payroll since 1953.

The soil bank, our most recent effort to bail out previous bad programs, has many of the same old flaws. It has failed to reduce overall farm production: we had 28 million acres idle in the soil bank last year, yet equaled our biggest harvest in history. It is a nightmare to administer: can you imagine the difficulty of setting normal yields for each farm? It is expensive: it cost about $600 million last year. It masquerades as something it isn't: letting land lie idle doesn't save soil.

Despite the obvious bankruptcy of past policies, dozens of new cures which ignore these failures will be introduced during this session of Congress. There will be arguments for higher price supports—some from organizations which make millions off Government storage—and pleas for the two-price plan, which proposes to sell at a high price at home and dump what we can't sell abroad. The Brannan plan will be dusted off; it would make direct payments to farmers totaling at least $7 to $10 billion a year.

Have we learned anything from the past? I fervently hope so. Here are a few basic facts which I feel should be borne clearly in mind in mapping future legislation.

Free commodities are in a healthier position today than those under controls. Commodities for which Government has tried to do the most (corn, wheat, cotton, tobacco, rice, peanuts) are in the worst trouble today. Yet livestock farmers, unhampered by controls (although hurt by Government meddling in feed grains), are still relatively prosperous.

United States cottongrowers have lost markets both at home and abroad. Today they can plant only 40 percent of the cotton acreage they had in 1930. While the United States moved backward, the world cotton demand jumped 32 percent in the past 7 years. Our farmers got none of these new markets abroad and lost further to synthetics at home.

Meanwhile, soybean producers, with no acreage restrictions, beat the drums for markets at home and abroad. They're now growing 3,400 percent more beans than 12 years ago.

Food consumption can be increased and diet upgraded. Example: At the sharp break in the price of beef in 1953 there were howls that Congress should fix prices on beef cattle. But most cattlemen figured that the real answer was to sell more beef to the housewife, not to the Government larder. They joined with packers, retailers, farm groups, and Government in an intensive promotion effort. The housewife got a bargain, and we ate our way out of the beef glut. In the past 5 years beef consumption has jumped from 62 to 85 pounds per person per year. If the Government had stepped in to fix prices and control production, we would have had a beef scandal to dwarf the $500 million potato fiasco of 1947–51, when millions of bushels were given away or destroyed with kerosene. And we'd have a sick beef industry today.

Animal agriculture is the true ever-normal granary. Livestock gives farmers 54 percent of their income; it's the traditional balance wheel of our national food economy. Half of our total harvested crops are fed to livestock, which convert 5 to 7 pounds of feed into 1 pound of highly nutritious meat, milk, poultry, or dairy products. Our food supply is enormously elastic: we can stretch it by eating more grain and feeding less livestock, or we can shrink it by merely feeding more livestock. So we can use all of our food surpluses if we upgrade our diets to use more meat, poultry, and dairy products.

There is real farm opportunity today in a free market. We can learn something from Clarence Chappell, Jr., the hustling Star Farmer of America for 1958, a young

man of 21 who used this animal-agriculture approach to success. And what success. At 21, he paid income tax on $7,500; his net worth is $71,000.

Living near Belvidere, N. C., Chappell farms 225 acres of the home place with his dad, rents another 360 acres. He has no land in the soil bank—"I can't afford it." He raises hogs, dairy cows and beef cattle, plus the crops to feed them. He farms mainly outside the farm program because, he says, "This leaves me free to make my own management decisions and build a volume of business where we can operate efficiently."

There is no political solution to what is essentially an economic problem. Individual farmers can get more income by improving efficiency and their biggest single means of doing this is to increase their volume. Government can't increase individual farmers' income except by handouts.

When the Government encourages inefficient farmers, by handouts of a few dollars, to continue in poverty on a subsistence farm rather than to seek better opportunity off the farm, it hurts everyone concerned. There are more than a million farmers who gross less than $2,500 a year, and eke out a subsistence living of $15 to $20 a week net. No farm program has helped them, and none will, unless it is a direct cash handout. And then it become not a farm program, but a welfare program. The voluntary movement of such families off the land, or to jobs off the farm, will do more than any law Congress could possibly pass.

For the day of the small horse-and-mule farm is no more. Today's farm must make use of specialized machinery, which is best used on large acreage; the small farm is inevitably inefficient. Yet more than one third of all cotton farmers, for example, have been squeezed down to five acres or less. How can such a farmer afford a $5,000 (the lowest priced) cotton picker?

What, then, should our farm program be? What should Congress do in the present session?

We must quit trying to fix farm prices. It is politically impossible to set price supports low enough to stop the flow of commodities to Government. And Government is not a market. It merely holds the stuff for a while, then disposes of it in competition with farmers and private trade. Let's face it: The only sure way of getting Government out of our business is to get rid of price supports entirely.

We must free the farmer from the shackles of acreage controls and marketing quotas. Turn him loose to build a volume of business which will enable him to operate efficiently. Let him manage his own resources and make adjustments on his farm as the free market dictates.

We must get rid of our surplus hoard gradually, protecting the farmer against the price-depressing effects of this liquidation.

At the same time, the Government can help the farmer to enlarge his markets by action on three fronts:

1. Promotion at home. We claim to be well-fed, yet the United States is ranked 15th among nations in milk consumption, fifth in meat eating (per capita). Even in Iowa, heart of the food belt, Iowa State College nutritionists found that two-thirds of the women over 30 need an extra glass of milk daily to get sufficient calcium. It would take 25,000 gallons of milk per day just to give Iowa school girls the calcium they need.

Can we get people to eat more of the right sort of foods? There are many proofs that we can:

Poultry producers have jumped sales by packaging all white meat, all thighs, no necks. The citrus people have done an equally effective job with high-vitamin frozen juices. An automatic milk-dispensing machine sells 6,000 half-pints of milk monthly in a 450-student high school near my home. Thousands of schools, factories, office buildings are potential milk markets.

Says Dr. Herrell DeGraff: "If we ate half a pound more meat per person per week, it would bring full balance between our production and consumption, and nutritionists agree it would mean better health and more vigor for our people."

2. Promotion abroad. "There is a big opportunity to sell vast amounts of feed grains to many countries that have a rapidly growing livestock population," says Francis C. Daniels, vice president of the Commodity Credit Corp., who has just completed a round-the-world survey.

Here are two examples of how the Government is already using our surpluses to build markets:

It subsidized the export of surplus poultry products to Germany. The Germans like the taste of chicken and have now allocated dollars to buy more.

Japan has a rapidly growing population with little acreage to produce the rice she needs. We're now shipping surplus wheat to convert the Japanese into wheat eaters. It looks as though they may acquire a taste for it.

3. Finance research on new crops and new uses for old crops. Promising research now underway uses corn, for example, to make alcohol which in turn is used to make rubber. If successful, this may consume 200 million bushels of corn per year. Another project now in the development stage aims at taking the starch from millions of bushels of wheat and corn and using it to improve concrete for our highways. New crops—sesame, safflower, bamboo—may replace old ones on thousands of acres.

Industry now takes 5 to 7 percent of our farm production. Research is the key to increasing this volume. Both parties have already introduced bills to Congress to budget $100 million for such research.

No Secretary of Agriculture, no farm leader, can lead us out of the mess we're in. Only courageous leadership from within Congress can do this job. And if we voters don't back up Congress in repudiating price supports and acreage restrictions, we must share the blame for more wasted billions, more useless surpluses and, in the long run, higher food prices and a leveling of family farms to peasantlike mediocrity.

Ochs and Journalism—An Appraisal

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, March 10, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of March 9, 1958. Chattanooga is very proud of the fact that Adolph S. Ochs began his distinguished career as a publisher in that city with the Chattanooga Times. He made of that paper an outstanding example of sound and constructive journalism which served as the prototype of the New York Times. Both papers continue their distinguished careers. This article recalls their history on the 100th anniversary of the birth of Mr. Ochs.

Mr. President, I do not believe the article will exceed the limit of two pages. If it does, it will be very slight, and I ask unanimous consent that the article be printed in the Appendix of the RECORD notwithstanding any such extra cost.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OCHS AND JOURNALISM—AN APPRAISAL

(By Robert McLean)

When Adolph Simon Ochs assumed control of the New York Times on August 18, 1896, he published a declaration of principles which contained these lines:

"It will be my earnest aim that the New York Times give the news, all the news, in concise and attractive form * * * and give it as early, if not earlier, than it can be learned through any other reliable medium; to give the news impartially, without fear or favor, regardless of any party, sect, or interest involved; to make the columns of the New York Times a forum for the consideration of all questions of public importance, and to that end to invite intelligent discussion from all shades of opinion."

This is a statement of the creed that Adolph Ochs, born 100 years ago this Wednesday—in Cincinnati on March 12, 1858—was to follow scrupulously from the day he acquired the Times until his death 39 years later on April 8, 1935.

The creed was simplicity itself—yet at the time it appears to have been observed more in the breach than in the fact. Its application year in and out to the daily business of newspapermaking made a striking and lasting contribution to journalism in New York City, in the Nation, and to an extent throughout the world.

That contribution is still a potent influence in newspapermaking. Regardless of the failings of newspapers, there are few who will deny that the press is far better today because of Adolph Ochs' contribution.

Since the standards which he established for the Times have continued in force almost without change for more than half a century, and because they were originally breathed into the product by the genius of Adolph Ochs, it is wholly fitting at this time—a century after his birth and more than a score of years after his death—to examine the abilities which he brought to his task.

To understand how startling, even revolutionary, his announced policy was in New York City in that day, it is necessary to go back and look at the history of the time.

In the 18th century the Colonies wrested from reluctant governors the right to publish both fact and opinion even when hostile to established authority. The newspaper became a force to be feared by arrogant administrators. It thus became a powerful weapon of the American revolutionaries.

The years following the establishing of the young Government were years of violent partisanship and, when intense party strife developed, the newfound power of the press was too often dedicated to the success of a cause or of a party. It became the period of personal journalism all too frequently dedicated to the advancement of the particular interests of the editor.

Improved communications—the railroad, the telegraph, and the cable—enabled such publishers as James Gordon Bennett, founder of the New York Herald, to cut through the partisanship of the period and develop the sensational exploitation of the news. When there were no sensations, he made them. He was accused of bad taste, quackery, and even blasphemy, but he provided spice, enterprise, and aggressive news coverage.

When to the improved communications there were added both better technical methods—the steam-driven press, for example—and ultimately cheaper newsprint, aggressiveness seemed to carry the city away with it. The younger Bennett, who succeeded

his father, was outdistanced by Joseph Pulitzer with the World and William R. Hearst with the Journal in a circulation war of frenzied sensationalism that came to be known as yellow journalism.

News was subordinated to stunts, to special features, to unimportant items exaggerated for the purpose of scoring a scoop over their rivals. Their competition was bitter and personal. But it did get results. The 13 other morning and evening papers trailed far behind in circulation, in advertising, and in revenue.

The World and the Journal had circulations of close to 400,000. At the other end of the scale the Times, greatly diminished in influence and prestige from its heyday decades earlier, printed 18,000 copies a day, of which only 9,000 were sold; by all signs it was a dying paper.

It was at this point that Adolph Ochs entered the picture. But before doing so he had accumulated 24 years of newspaper experience which had been invaluable to him as a testing ground of the principles which he brought to New York.

At the age of 11 he was helping the family finances by delivering a newspaper route. At 14 he left school and for 6 years served an apprenticeship on Knoxville and Louisville newspapers as an office boy, printer's devil and journeyman printer, and in various positions in the circulation and business offices.

At the age of 20 he moved to Chattanooga and bought The Chattanooga Times, with $250 of borrowed capital.

He was immediately successful. He displayed industry and resourcefulness beyond the ordinary but, more important, an understanding of the needs of the community and how constructively to serve them. On the day he became publisher he made a declaration of purpose—the latest news, the freshest news, all the news—and independence of party or sect. Here in Chattanooga he tested—successfully—his beliefs of what a newspaper should be.

Nevertheless, Ochs, when he was negotiating the purchase of the Times, was impressed by the great men he was meeting. "Now for the supreme gall of a country newspaperman burdened with debt," he wrote his wife in early 1896. The reference to debt struck a painful chord. In Chattanooga, Ochs had invested considerable resources in real estate—and had been badly burned. When he came to New York, he had made up his mind to stick to his last—the newspaper trade—and to exclude all other enterprises. Thereafter he adopted an almost monastic policy. He had no outside interests beyond the New York Times and, as his enterprise flourished, he invested surplus earnings in Government bonds—and in a home.

He was, however, confident of success. In 1896 the traits that were to mark that success were already clearly imprinted. He was known as a man of great integrity. His business acumen was marked. He was a man who fixed his goals and drove toward them, scarcely looking to either side until the goal was reached. In the years that were to follow he used the talents of many men in driving for his ideal newspaper. But in a real sense the measure of success that he achieved was the result of his own single-minded purpose and unfaltering drive to give the news impartially.

The story of the rise of the New York Times under Ochs' guidance has been told many times. The application of his formula touched intimately every department of the organization and every person associated with the enterprise. The effects were noticeable almost immediately. Soon after he assumed charge, a trade journal of the era, the Newspapermaker, wrote: "A glance at the New York Times since it has been in the hands of Adolph S. Ochs is like a gleam of sunlight on a cloudy day. The professional sees at once the handiwork of a fellow artist."

The Ochs formula was at work. What was that formula and what made it click?

The Ochs contribution can be described under four major headings: First, the importance of news as a newspaper's major commodity; second, objective and unbiased presentation of the news; third, the responsibility of the newspaper to its readers; and fourth, a prosperous and efficient financial structure to provide immunity from the pressure of commercial and political interests. Now for a look at how these principles were applied.

1. The importance of news. Ochs believed that news—all the news—was the principal commodity of a newspaper. In 1921 he wrote, "The task undertaken * * * was to tell promptly and accurately the happenings and occurrences that were not sensational but of real importance in the affairs of the people. This supplemented the general news of the day intelligently and quietly presented."

He viewed with scorn what he described as "the coarse, vulgar and insane features * * * the muckraking and crusades of his sensational competitors. He eliminated fiction; he refused to print comics. He posted his slogan, "All the news that's fit to print"—a phrase that he often defended against critics—and made his paper the most comprehensive newspaper in the land. Early he branched out into news fields that other papers of the time frequently neglected—financial news, business news, the details of city, State, National, and international governmental affairs. He printed the full texts of important statements, of speeches, of important documents.

He established national and international news-gathering organizations larger than any of his competitors'. He made news the foundation of all departments of the paper, including the Sunday special section he immediately established, the Sunday magazine, the book review and other features. He clearly saw the importance of news about scientific progress and new inventions such as wireless and the airplane. Similarly, his interest in exploration led to a number of exclusive, dramatic stories, notably those of Peary's discovery of the North Pole in 1909, and the Byrd Antarctic expedition two decades later. He experimented in methods to speed the news from its sources to the reader. He was the first user of Marconi's wireless for news transmission and an early promoter of other inventions that shortened the time between the event and its imprint.

2. The importance of unbiased news. A fundamental in the Ochs creed was that the news should be objectively presented. He said in an address to newspapermen in 1891: "The duty of the editor and publisher who serves an intelligent and manly constituency is to give his patrons the facts, and attempt nothing with reference thereto beyond assisting to a clearer understanding of the same * * *. The people as they gain culture, breadth of understanding and independence of thought * * * more and more demand the paper that prints the history of each day without fear of consequences, the favoring of special theories, or the promotion of personal interests."

It was his special concern to keep opinion out of the news columns, to present both sides of every question and to ignore what criticism might come from those whose oxen were gored.

3. Responsibility: Ochs believed that the newspaper's responsibility to its readers was best served by an honest, fair, and intelligent presentation of the news. But he also believed that this presentation should be supplemented by a forthright discussion of this news in the editorial columns.

He had stated: "A journal conducted as a newspaper, being a fearless purveyor and, when needed, an equally fearless interpreter of the news, is, in the intelligent public opinion, the newspaper of the future." His editorial page reflected largely his own thoughts. But he made certain that no one in his employ would ever be forced to write an editorial in which the writer did not fully believe.

Ochs thought also that the readers were entitled to their opportunity to express ideas without regard to the paper's policy and instituted a Letters to the Editor department that printed all shades of view. "The editor," Ochs stated, "should * * * give the thoughts of the best informed man upon the topic under discussion—fairly giving all views with reference to it."

4. A sound financial structure: Ochs was aware that the kind of paper he wanted would require a large measure of support from advertisers. And he was insistent from the outset that advertising requirements should have no bearing on the paper's editorial or news policy. He sought advertising as assiduously as his rivals. And he recognized that advertising—aside from its value in the form of revenue—was news of a special kind in which his readers were keenly interested. He said: "Advertising in the final analysis should be news. If it is not news it is worthless * * *. In advertising truth should abide and be controlling * * *."

He tolerated no hint of interference by the advertiser. To one executive of a company that used the Times' advertising columns extensively, and who sought to influence the Times' editorial policy, Ochs wrote, "You must excuse me from discussing with you the policy of the New York Times. It is a subject we do not care to discuss with an advertiser. * * * If your York Times until you have some assurance other than the paper as it appears every day, as to tahe policy of the publisher, the Times, as long as it is under the present management, will endeavor to get along without your business."

He avoided even the appearance of outside influence. He declined city governmental advertising on the grounds that it would seem to tie his paper to political interests. Similarly, he rejected a South Carolina banker's check for several thousand dollars when the latter sought to have the Times delivered at his own expense to 450 bankers throughout the State.

The strict application of these principles over the years did not always win friends. The attitude of Ochs and his newspaper was well expressed in a book written in 1921 by Elmer Davis, then a member of the editorial board of the Times. He wrote:

"The readers of the Times represent a far wider range of political opinion than the ordinary newspaper constituency. A great many people who cordially despise the political and economic opinions of its editors feel that they have to buy the paper in order to get the news. If any one doubts this, let him observe that the radical weeklies, for example, cite the Times news columns as authority for most of their statements of fact. * * * Similarly, many stalwart Republicans and convinced opponents of the League of Nations have in the past 2 years started the day by hating the Times over the breakfast grapefruit; but they find that they have to have it in preference to papers which might better reflect their own political opinions, and thus start them to the office with a pleasant sense of rightness of the world."

The history of the Times reflects this philosophy. Late in 1898 Ochs dropped the price of the Times from 3 cents to 1 cent. Circulation, then 25,000, jumped to 75,000. In 1901 it passed the 100,000 mark. About the same time Pulitzer and the World ceased the war of sensation with Hearst, and never returned to it. With the Times' increases in circulation came advertising in like proportion.

Thus, Ochs demonstrated that in the most highly competitive market true values are the enduring ones. When the depression of the 30's came, it was further demonstrated that the newspapers that nurtured reader confidence by care and accuracy in the presentation of the news were the ones that held their circulations in the face of a general decline.

Ochs had sensed all this in advance of the event. In 1916 he commented: "I have brought no new journalism to New York City. We have practiced, as best we could, old journalism—the journalism that succeeds in small towns where the high standards of the profession are demanded and practiced by self-respecting men."

The views of many newspapermen are summed up in the words of David Lawrence, who wrote a quarter of a century ago that Adolph Ochs' "contribution to American journalism is inestimable. It represents a point of view which anticipated the development of reader interest in newspapers of serious purpose. * * * For generations to come the work that Mr. Ochs has done to inspire American journalism will endure as well as the achievement of a man who saw clearly that the real motive of a newspaper is to furnish all the news."

William J. Pape has observed: "Newspaper work seemed to be drifting helplessly downhill until Mr. Ochs reached New York. Not only did Mr. Ochs reverse the current, but he also demonstrated to newspapers, by the power of his example, just what the public really wanted. All newspapers are better, cleaner, and sounder in consequence. This is the obligation under which Mr. Ochs has placed both public and press."

William T. Dewart, then president of the Sun in New York City, wrote Ochs in 1926 on the 75th anniversary of the Times and 30th anniversary of Mr. Ochs' management: "You have * * * influenced hundreds of other publishers to plan more soundly and execute more efficiently and wisely."

To these tributes an editorial in the Journal, Milwaukee, added: "* * * More than the success of one newspaper is the influence the Times has had on the newspapers of the whole country. For at one time a great many reasonable men seemed convinced that artificial stimulation of the news had come to stay and were on the verge of jumping into the current and throwing away the ideas that made American newspapers. Principally through the Times they saw that honest, sober newspapermaking was still the way to newspaper success * * *."

But the heritage of the country from Ochs goes beyond his influence on American journalism; it is found in his abiding faith in the essential intelligence of the people and in his belief that only those newspapers and institutions that serve the people well will have their continued support.

Legislation for Nation's Children

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 19, 1958

Mr. POTTER. Mr. President, today, when we are assessing our scientific resources in an effort to advance our technology, when we are building our military resources for security, and when we are keeping our financial resources stable for increased prosperity, I wish to call attention to the greatest resource of all—our children. The destiny of this Nation lies in the hands of the boys and girls of today, who will become the men and women of tomorrow. What happens to our country in the future depends on what is happening to our children now.

I wish to insert in the Appendix of the RECORD an article from the January 1958 issue of Parents' Magazine. Mrs. Ada Barnett Stough, executive director of the American Parents Committee, has written an outstanding exposition entitled "The State of the Nation's Underprivileged Children." It outlines the challenge facing us in an area vital to our youthful citizens. Most children in the United States, Mrs. Stough points out, are healthy, happy, and well cared for. Unfortunately, grim statistics reveal that many are underprivileged, and it is this situation which Mrs. Stough ably describes in her story.

The purpose of the American Parents Committee is to work for legislation for children, and many of us have learned to know Mrs. Stough as she goes about that job up here on the Hill. In her work as executive director of the committee, and in her writings for the magazine, she is doing a great service to the Nation by serving and helping our children.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STATE OF THE NATION'S UNDERPRIVILEGED CHILDREN

(By George J. Hecht, publisher of Parents' Magazine, chairman of the American Parents Committee; and Ada Barnett Stough, executive director of the American Parents Committee)

Nineteen hundred and fifty-eight finds America's nurseries, playgrounds, and schools bulging with the largest family of children the country has ever known—an estimated sixty million. Because of the great advances made in medical research and practice, these children have a much greater chance of living out their natural life span. Our social security system has removed some of the economic uncertainty which once threatened a child on the death of the breadwinning father. Our present high level of prosperity brings showers of material advantages to brighten the lives of most young people.

Today's parents, increasingly aware of the many different elements that comprise their job of rearing children, read quantities of literature on child-rearing, take part in community parent-education groups, and assume leadership in groups and organizations with activities for children.

The children of 1958 reflect all of these advantages. On the whole, they are healthy and happy. But pleased as we are about the overall picture of our Nation's children, we cannot blindfold our eyes to the blotches that mar it.

SOME BABIES WON'T LIVE A YEAR

Even though the infant mortality rate has been reduced sharply since 1935, in 1956 fatalities in the first year of life numbered about 26 out of every 1,000. Deaths of infants during the period just before, during and soon after birth account for 71 percent of all mortality among children under 15.

Over half the babies who die during their first month are those born prematurely. What is causing the increasing number of premature births and what can be done to prevent them are important problems facing doctors, public health officials and society.

NOT ALL OF OUR CHILDREN HAVE PARENTS AND HAPPY HOMES
